PROCEEDINGS AND DEBATES OF THE 95th CONGRESS, FIRST SESSION

HOUSE OF REPRESENTATIVES—*Wednesday, March 16, 1977*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

The Lord is good; His mercy is everlasting; and His truth endureth to all generations.—Psalms 100: 5.

Almighty God, our Heavenly Father, who art everywhere and who dost fill all things with Thy presence, we pray Thee to keep us near You this day as we labor for our country. Help us to continue the onward march of Thy kingdom of righteousness and justice by an increase of courage and faith and with a growing concern for law and order and human rights on our planet.

By Thy Spirit may we learn the high art of getting along together that with good will in every life we may become one nation in mind and heart and will seeking the good of all. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Chirdon, one of his secretaries, who also informed the House that on March 10, 1977, the President approved and signed a bill of the House of the following title:

H.R. 3347. An act to rescind certain budget authority recommended in the message of the President of September 22, 1976 (H. Doc. 94–620), transmitted pursuant to the Impoundment Control Act of 1974.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment bills of the House of the following titles:

H.R. 1746. An act to amend the United Nations Participation Act of 1945 to halt the importation of Rhodesian chrome; and

H.R. 3839. An act to rescind certain budget authority recommended in the message of the President of January 17, 1977 (H. Doc. 95–48), transmitted pursuant to the Impoundment Control Act of 1974.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 489. An act to amend the Foreign Assistance Act of 1961; and

S. 925. An act to provide temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976–77 drought.

The message also announced that the Vice President, pursuant to Public Law 85–474, appointed Mr. SCOTT to attend, on the part of the Senate, the Interparliamentary Union Meeting, to be held in Canberra, Australia, April 11 to 16, 1977.

ELECTION AS MEMBER OF COMMITTEE ON AGRICULTURE

Mr. FOLEY. Mr. Speaker, as chairman of the Democratic Caucus and by direction of the Democratic Caucus, I offer a privileged resolution (H. Res. 407) and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 407

Resolution designating membership on a certain standing committee of the House

Resolved, That Charles Whitley of North Carolina be, and he is hereby, elected to the Committee on Agriculture of the House of Representatives.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PERMISSION FOR COMMITTEE ON SCIENCE AND TECHNOLOGY TO HAVE UNTIL MIDNIGHT, FRIDAY, MARCH 18, 1977, TO FILE REPORT ON H.R. 4991, NATIONAL SCIENCE FOUNDATION AUTHORIZATION, 1978

Mr. FUQUA. Mr. Speaker, I ask unanimous consent that the Committee on Science and Technology may have until midnight Friday, March 18, 1977, to file a report to accompany H.R. 4991, to authorize appropriations to the National Science Foundation for fiscal year 1978.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

PROPOSED FDA REGULATION BANNING SACCHARINE

(Mr. JONES of Oklahoma asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. JONES of Oklahoma. Mr. Speaker, like many of our colleagues, I am very concerned about the recent FDA proposed regulation banning saccharine. My concern extends not only to the many people such as diabetics who will be adversely affected by this ruling, but also to the broader question of credibility and commonsense within this most vital agency of government. It used to be that the whole world looked to the U.S. Food and Drug Administration for leadership in protecting public health and well being. In recent months, I have heard representatives of other countries say that they no longer consider the FDA rulings with the same credibility.

If the FDA explanation of its saccharine decision is accurate, Congress must share the blame for this loss of credibility and commonsense. It is up to Congress to help restore it. Today I am introducing legislation to amend current law to require that the FDA perform or to verify appropriate tests before banning a product from the market. Such performance or verification of appropriate tests was not conducted by FDA in the instance of the saccharine decision.

In addition, the bill I introduce today will give the FDA the flexibility to use commonsense by giving that agency the latitude to either ban the product entirely if the appropriate tests so warrant, or to require an appropriate warning label on the product if the risk of harm is slight as is the case with saccharine.

Certainly we cannot legislate commonsense, but we can take action to make it easier for people possessing this quality to come to the forefront of the decision-making process at FDA. I applaud our colleague, PAUL ROGERS, for promptly scheduling hearings on this matter and I urge this body to take quick action which will help restore the commonsense confidence of the American people in the Food and Drug Administration.

ANNOUNCING HEARINGS ON AMENDMENTS TO THE ADMINISTRATIVE PROCEDURE ACT AND ANNOUNCING LOBBYING DISCLOSURE HEARINGS

(Mr. DANIELSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DANIELSON. Mr. Speaker, I wish to announce that the Subcommittee on Administrative Law and Governmental Relations has scheduled hearings on H.R. 3361 and companion bills providing for an amendment to the Administrative Procedure Act to permit the awards of expenses and attorneys' fees

for public participation in Federal agency proceedings. These hearings will be held on Wednesday and Thursday, March 30 and 31, 1977, beginning at 10 a.m. in room 2141 of the Rayburn House Office Building.

Mr. Speaker, I wish to announce also that the Subcommittee on Administrative Law and Governmental Relations of the Committee on the Judiciary will hold 4 days of public hearings to consider H.R. 1180 and related bills to commence on April 4 and to continue on Wednesday, April 6, and on Thursday and Friday, April 21 and April 22, 1977.

These bills would require those who engage in substantial lobbying activities intended to influence the decisionmaking process of the Federal Government to register as lobbyists and to publicly disclose the nature of those activities.

The hearings will be held in room 2141, Rayburn House Office Building and will begin at 10 a.m. on April 4.

EMERGING AIRLIFT OF MILITARY AND MEDICAL SUPPLIES TO ZAIRE

(Mr. JOHNSON of Colorado asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. JOHNSON of Colorado. Mr. Speaker, the so-called emergency airlift of military and medical supplies to Zaire illustrates once again the folly of our military foreign aid programs. It really does not seem to matter whether a Republican or Democratic administration is in power. We cannot resist the urge to be involved in every conflict that occurs anywhere in the world. No fight is too big; no dispute is too insignificant; no conflict can be far enough away for us not to intervene.

In Zaire, we do not know who is fighting, or why, or where, or in what force. We have no treaty obligations to Zaire, but we accelerate our military aid, which was unjustified in the first place, at the request of the government there.

Our penchant for knee jerk intervention has had disastrous results in the past. There will be conflict in Africa during the foreseeable future.

Do we have to repeat the same mistakes in Africa as we have made in Asia? Let us avoid ensnaring ourselves by stopping the administration's aid program to Zaire.

TELEVISED FLOOR PROCEEDINGS CONSTITUTE MAJOR BREAKTHROUGH IN ACCURATE RECORD OF DEBATES

(Mr. STEIGER asked and was given permission to address the house for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. STEIGER. Mr. Speaker, the 90-day test of televising House floor proceedings is a major breakthrough in the effort to give the American people an accurate record of our debate. You are to be commended for undertaking this initiative.

If, as I hope, broadcasting of sessions is put permanently into effect, we will have an archival record of our proceedings that cannot be amended, revised or in any way altered. The dichotomy between this permanent record and the record of our proceedings represented by the CONGRESSIONAL RECORD will be considerable unless Members significantly alter the way in which the RECORD is currently used.

The public will for the first time be able to see the stark contrast between the appearance of debate, as embodied in the RECORD, and the reality of it, as recorded by the cameras.

The credibility of the House—and of each of us individually—will be on the line. Our constituents will now know whether those stirring speeches actually were delivered, and whether they may have turned the tide in the course of debate.

For far too long, we have permitted the RECORD to present its readers with a less than forthright picture of the way we conduct our business. Permitting televised broadcasts of our proceedings now alters this situation. Reform of the CONGRESSIONAL RECORD—and of our use of it—will be one more endorsement in our belief in accuracy and truth.

In conjunction with this, I am today reintroducing my resolution to precede and succeed all unspoken remarks with a clearly distinguishable symbol, such as brackets, bullets, or stars. The number of cosponsors is now 129.

I would like to pay special tribute to the 10 Members who have been principal cosponsors in the 94th Congress and again this year for the efforts they have made on behalf of the measure. They are DICK BOLLING, BOB ECKHARDT, DON FRASER, MARTHA KEYS, BERNIE SISK, JIM CLEVELAND, JOHN ERLENBORN, BILL FRENZEL, and LOU FREY, as well as JOHN ANDERSON, who introduced a RECORD reform resolution of his own and joined in cosponsoring mine. BERNIE SISK and JOHN ANDERSON also merit special praise for all they have done to make these televised sessions experiment a reality.

PERMISSION FOR COMMITTEE ON RULES TO FILE PRIVILEGED REPORTS

Mr. LONG of Louisiana. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

PROVIDING FOR CONSIDERATION OF H.R. 4877, SUPPLEMENTAL APPROPRIATIONS BILL, 1977

Mr. LONG of Louisiana. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 403 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 403

Resolved, That during the consideration of the bill (H.R. 4877) making supplemental appropriations for the fiscal year ending September 30, 1977, and for other purposes, all points of order against the following provisions in said bill for failure to comply with the provisions of clause 2, rule XXI are hereby waived: beginning on page 9, line 8 through page 10, line 5; beginning on page 11, line 15 through page 12, line 2; beginning on page 12, line 6 through line 16; beginning on page 12, line 22 through page 13, line 9; beginning on page 30, line 22 through line 28; beginning on page 31, line 5 through line 10; beginning on page 36, line 7 through line 12; beginning on page 41, line 11 through page 42, line 6; and beginning on page 44, line 1 through page 45, line 14.

The SPEAKER. The gentleman from Louisiana (Mr. LONG) is recognized for 1 hour.

Mr. LONG of Louisiana. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA), pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 403 makes in order the bill H.R. 4877, which as reported by the Committee on Appropriations would make supplemental appriations for the fiscal year ending September 30, 1977. House Resolution 403 waives all points of order against certain portions of the bill for failure to comply with the provisions of clause 2, rule XXI, which prohibits legislation in an appropriation measure and prohibits unauthorized appropriations. These waivers are necessary to enable the Committee on Appropriations to bring this bill to the floor today because these programs have not yet been enacted into law.

The committee bill recommends a new budget authority of $27,924,682,271 in this supplemental appropriation. A number of major programs are covered by this measure and include the following:

Increased pay costs for military and civilian personnel	$2,068,311,030
Food stamp program	720,000,000
Commodity Credit Corporation: Reimbursement for net realized losses	710,000,000
Inter-American Development Bank	276,000,000
Annual contributions for assisted housing	13,112,405,000
Federal Housing Administration fund	1,801,344,000
Environmental Protection Agency: Construction grants	1,000,000,000
Veterans Administration: Compensation and pensions (by transfer)	588,450,000
Higher education	3,206,418,000
Public assistance payments	1,225,197,000
Health manpower programs	404,826,000
Postal Service	500,000,000

The Committee on Appropriations has recommended reductions of $4,997,649,395 from the budget requests and has proposed $5,376,100 more in transfers than had been proposed in the budget estimate. In some cases where accounts have unexpended balances determined to be in excess of needs, the committee has recommended such transfers instead of providing additional new budget authority.

House Resolution 403 waives points of order under clause 2 of rule XXI of the rules of House for the following chapters of the bill:

Chapter IV—The language concerning

"Peace Corps" constitutes legislation in an appropriation bill since the bill amends the Foreign Assistance and Related Programs Appropriations Act, 1977. Necessary authorizations for the accounts, "Military Assistance" and "Migration and Refugee Assistance" are now pending in the Committee on International Relations.

Chapter V—The paragraphs titled Annual Contributions for Assisted Housing, Payments for Low-Income Housing and Federal Housing Administration Fund are not authorized, though the authorizations passed the House on March 10th in the Supplemental Housing Authorizations Act of 1977. The program funded under Environmental Protection Agency Construction Grants has not been authorized but is contained in a Senate-passed bill.

Chapter X—The amounts under Acquisition, Operation, and Maintenance of Buildings Abroad, and Contributions to International Organizations are not fully authorized—the authorizations are pending before the Committee on International Relations.

Chapter XI—The "Pollution fund" is not authorized and funds are made available subject to the enactment of authorizing legislation which is in the Committee on Public Works and Transportation.

Chapter XII—Under Federal Buildings Fund, Alterations and Major Repairs, there is an exemption to Sec. 210(f)(4) of the Federal Property and Administrative Services Act of 1949, which is technically subject to a point of order and a waiver is sought on this legislative provision.

Chapter XIII—An amendment is recommended to 31 U.S.C. 724(a)(1970) to provide that all properly adjudicated and certified claims and judgments be made a permanent, indefinite appropriation. This is designed to eliminate the current burdensome and time-consuming process for passing such claims. It will give the Comptroller General sufficient authority to deal with these matters without requiring unnecessary legislative action each time legitimate claims and judgments are properly certified to be paid by the government.

Mr. Speaker, the appropriation of these supplemental funds is an important element of the administration's economic stimulus program, complementing the measure passed by this body yesterday. It is necessary that we act immediately on this bill so that the desired effect of this $27.9 billion stimulus will be put in motion without delay.

I urge the adoption of House Resolution 403 in order that we may consider H.R. 4877.

Mr. LATTA. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this rule provides a waiver of points of order which is necessary for the orderly consideration of H.R. 4877.

The rule waives points of order for failure to comply with clause 2, rule XXI. Clause 2 prohibits appropriations for which authorizing legislation has not been enacted. This same clause prohibits legislation on general appropriation bills.

There are several provisions in the bill to be considered today which require that this clause be waived.

In chapter IV in the accounts entitled "Peace Corps," there is language which constitutes legislation in an appropriation bill. The military assistance and migration and refuge assistance paragraphs lack authorization.

In chapter V, the paragraphs providing funds for the following—annual contributions for assisted housing, payments for operation of low-income housing projects, and Federal Housing Administration fund—are not authorized. Also, in the paragraph covering the Environmental Protection Agency, construction grants—this program is not authorized.

In chapter X, the amounts included for acquisition, operation, and maintenance of buildings abroad, and contributions to international organizations are not fully authorized.

In chapter XI, the pollution fund is not authorized and the language in the bill makes funds available subject to enactment of authorizing legislation.

In chapter XII, under Federal buildings fund, alterations and major repairs, there is an exemption to section 210(f)(4) of the Federal Property and Administrative Services Act of 1949, which is technically subject to a point of order, because it is legislation on an appropriation bill.

In chapter XIII there is an amendment to 31 U.S.C. 724(a)(1970) to provide that all properly adjudicated and certified claims and judgments be a permanent, indefinite appropriation. This is designed to eliminate the current burdensome and time-consuming process for passing such claims. It will give the Comptroller General sufficient authority to deal with these matters without requiring unnecessary legislative action each time legitimate claims and judgments are properly certified to be paid by the Government.

Mr. Speaker, these waivers of points of order are necessary if the supplemental appropriations bill is to be considered today.

Mr. Speaker, this bill provides a grand total of $27,924,682,271 in supplemental appropriations for the fiscal year ending on September 30, 1977. In testimony before the Rules Committee this was described as the largest supplemental appropriation since World War II.

Mr. Speaker, the major items in the bill include the following:

Increased pay costs for military and civilian personnel	$2,068,311,030
Food stamp program	720,000,000
Commodity Credit Corporation: Reimbursement for net realized losses	710,000,000
Inter-American Development Bank	276,000,000
Annual contributions for assisted housing	13,112,405,000
Federal Housing Administration fund	1,801,344,000
Environmental Protection Agency: Construction grants	1,000,000,000
Veterans' Administration: Compensation and pensions (by transfer)	588,450,000
Higher education	3,206,418,000
Public assistance payments	1,225,197,000
Health manpower programs	404,826,000
Postal Service	500,000,000

In spite of all the rhetoric about a balanced budget during the last campaign, it should be noted that the deficit proposed by the new Carter administration is substantially larger than that projected by the former administration for both fiscal year 1977 and fiscal year 1978. If the goal is a balanced budget, we are starting out in the wrong direction.

Mr. SISK. Mr. Speaker, will the gentleman yield?

Mr. LONG of Louisiana. I yield 2 minutes to the gentleman from California (Mr. SISK).

(By unanimous consent, Mr. SISK was allowed to speak out of order.)

DEMOCRATIC STUDY GROUP REPORT ON CONGRESSIONAL PAY RAISE

Mr. SISK. Mr. Speaker, I take this brief time to call attention of my colleagues to a document that was circulated in the last day or two, and to commend an organization which I am sometimes a little critical of, although I am a member of it. I am talking now of the Democratic study group. I want to say this: I think they have done an outstanding job of research in connection with some of the squabbles we are having about our recent salary increase.

I am not going into detail, but I would like to suggest to my colleagues that they read this document. Yes, I am speaking to my Republican colleagues, too. We would be happy to get copies of it for them so that they can read it. I think the Democratic study group has done an outstanding job of outlining really what the facts are regarding the recent salary increase. If the Members do not agree with what is in the document, fine, then they can raise questions.

But, Mr. Speaker, I think the time has come either to put up or shut up, and I mean that so far as the news media is concerned, and particularly so far as Members of Congress are concerned. I want to commend the leadership, and particularly the Speaker of the House, for having been willing to take onto their shoulders the responsibility of carrying forward the burden that they have in connection with what was a desperately needed pay raise.

Mr. Speaker, I urge that my colleagues look at this particular document. For instance, it contains the following statements to prove that the pay raise was justified:

> Congressional salary increases tend to appear unreasonably large because they are few and far between and have lagged far behind those for comparable jobs in the private sector for most of our history. For example, during the entire history of Congress, Members have received only 11 permanent pay increases (including the 1977 increases)—an average of one every 17 years.
>
> All but one of the 11 increases was in excess of 25 percent and the average increase was nearly 50 percent. The 11 permanent increases were:
>
> 33 percent in 1818.
> 138 percent in 1856.*
> 67 percent in 1866.
> 50 percent in 1907.
> 33 percent in 1925.

*Members pay was increased from $8 per day to $3,000 per year. During the 38 years from 1818 to 1856, Congress was in session an average of 157 days per year. Thus, Members' pay averaged $1,256 per year.

25 percent in 1947.
80 percent in 1955.
33 percent in 1965.
42 percent in 1969.
5 percent in 1975.
29 percent in 1977.

Overall, the 11 increases shown above represent an average of $5,200 each. Had Members of Congress received annual pay adjustments as do most Americans, the size of their pay increase would be only a fraction of that shown above. For example, if the total of all congressional pay increases since 1789 were divided into equal annual amounts, Members would have received pay raises of less than $300 per year.

Despite the size of the 1977 increase (29 percent), it is not out of line when compared to increases in the cost of living and pay increases received by other segments of society. The 29 percent increase is less than half the percent of increase in the cost of living since 1969 (61 percent). It is also less than half the percent of pay increase received since 1969 by blue collar workers (70 percent), civil service employees (66 percent), broadcasters and news reporters (over 80 percent), and business executives (60 percent). (See Appendix.) Had congressional salaries increased at the same rate as the pay of most Americans, Members of Congress would have received salary increases totaling $25,000 to $30,000 since 1969.

The pay of Members today, adjusted for inflation, is only slightly more than what they received in the 1930s when serving in Congress was only a part-time job. Today, Members are paid $57,500 per year—the equivalent of $13,750 in 1935 dollars—and Congress is in session for 10 or 11 months each year. In 1935, on the other hand, Members were paid $10,000 per year—the equivalent of $45,000 in today's dollars—and Congress usually was in session less than six months each year.

Thus in 1935 Members could spend half of each year augmenting their income through other occupations, which serving in Congress today is a full-time job with strict limits (effective next Congress) on the amount of outside income a Member may earn.

Also, as the length of the session has increased so has the workload of Members. In fact, the increase in workload over the past decade is unequalled in the history of Congress and has caused numerous Members to leave public service altogether. For example, the number of votes on which Members must be recorded has increased from about 200 per Congress during the early 1960s to nearly 1,300 last Congress. Since 1969 alone, the number of record votes has tripled, the number of committee meetings Members must attend has nearly doubled, and the volume of mail Members must answer has tripled—from an overall House total of 14 million in 1969 to more than 42 million in 1976. Finally, Members have had to increase by five-fold the number of trips home to meet with constituents and to attend to other matters in their districts.

There was nothing devious about the way in which the pay raise took effect. It became effective under the established procedure which was designed to take Congress out of the conflict-of-interest position of setting and voting on its own salary levels, while leaving Congress the power to veto pay recommendations.

The procedure—which was adopted nearly 10 years ago when nearly 70 percent of the current Members of the House were not in Congress—does not require any action whatsoever on pay increases recommended by the Quadrennial Commission and the President. Nor does the law permit Congress to either increase or decrease the proposed pay levels. All Congress can do is permit the pay raises to take effect or veto them.

House consideration of the recent pay raise went according to the law. A House Post Office subcommittee considered disapproval resolutions and twice voted against reporting one to the House—which was why there was no vote on the pay raise on the House Floor. The Senate voted 56 to 42 to table a disapproval resolution.

A three-judge federal district court ruled against a constitutional challenge to the pay raise procedure. Rep. Pressler challenged the procedure on grounds that the Constitution requires Congress to vote affirmatively on any pay increase. The suit is currently on appeal to the Supreme Court.

The concept of deferring congressional pay raises alone is based on two principles: 1) That Members of Congress should not personally benefit—or appear to benefit—from their votes in Congress, and 2) that elected officials should not receive a higher salary than that which existed at the time they were elected.

The first principle does not apply in the case of the 1977 pay increase because Congress did not vote to increase its pay. The pay increase took effect automatically, without an affirmative vote, in accord with the procedure established by law to take Congress out of the business of voting pay increases for itself.

The second principle might be made to apply to Members of the House, but it becomes unrealistic when applied to the Senate because only one-third of the Senate stands for election every two years. Thus, if the pay increase for Members of Congress were to be deferred until after their next election, it would mean that only one-third of the Senate would be eligible for the increase in 1979, while another one-third would not be eligible for the increase until 1981 and the 33 Senators who were elected or re-elected last November would not be eligible to receive the increase until 1983.

Thus, while an across-the-board deferral policy might make some sense, there is no justification for singling out congressional salary increases for deferral while permitting those for Federal judges and Administration officials to take effect immediately.

Mr. Speaker, I am also calling your attention to the following graph:

1. *News Media:* Average reporter top salary in all newspaper guild contracts increased 82 percent (source: American Newspaper Guild); base salary for television news reporters increased about 90 percent (source: American Federation of Television and Radio Artists).

2. *Blue Collar Workers:* Seventy percent. Average hourly non-farm earnings. This is the standard statistic used by the Bureau of Labor Statistics to measure earnings for non-salaried jobs.

3. *Civil Service:* Sixty-six percent. Average General Schedule Civil Service pay for grades 1–15. This does not include supergrades (16–18) which have been frozen along with congressional pay.

4. *Cost of Living:* Sixty-one percent. Based on the Consumer Price Index, the standard measure of cost of living used by the Bureau of Labor Statistics. It measures the average change in prices of about 400 selected goods and services.

5. *Business Executives:* Fifty-nine percent. Average executive pay in private business as measured a survey by the Hay Associates.

6. *White Collar Workers:* Fifty-five percent. Professional, administrative, technical and clerical workers survey, which measures pay in private business and is used to help determine pay levels for federal civil service employees.

7. *Governors:* Forty percent. Average salaries for governors and the five top officials in fifteen major states.

8. *Members of Congress:* Thirty-five percent. Five percent without increase.

Mr. LONG of Louisiana. Mr. Speaker, absent further requests for time, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. CONTE. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 331, nays 58, not voting 43, as follows:

The Clerk announced the following pairs:

Mr. Ambro with Mr. Montgomery.
Mr. Dent with Mr. Jones of North Carolina.
Mr. Ichord with Mr. Teague.
Mr. Hollenbeck with Mr. Dornan.
Mr. Florio with Mr. Guyer.
Mr. Jeffords with Mr. Stockman.
Mr. LaFalce with Mr. Vander Jagt.
Mr. McKinney with Mr. Dickinson.
Mr. Staggers with Mr. Stump.
Mr. Rosenthal with Mr. Andrews of North Carolina.
Mr. Wright with Mr. Clay.
Mr. Vanik with Mr. Derrick.
Mr. Richmond with Mr. Pepper.
Mr. McCormack with Mr. Miller of California.
Mr. Neal with Mr. Roe.
Mr. Simon with Mr. Gephardt.
Mr. Gammage with Mr. Gonzalez.
Mr. Harkin with Mr. Applegate.
Mrs. Collins of Illinois with Mr. Bedell.
Mr. Bonker with Mr. Nolan.
Mr. Tonry with Mr. Tucker.

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill H.R. 4877, supplemental appropriations bill, 1977, and that I may be permitted to include extraneous material in my remarks.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

TENTH ANNUAL REPORT ON OPERATION OF AUTOMOTIVE PRODUCTS TRADE ACT OF 1965—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Ways and Means:

To the Congress of the United States:

I hereby transmit the Tenth Annual Report on the Operation of the Automotive Products Trade Act of 1965, relating to developments under that act during 1975. This report was prepared prior to the beginning of my term in office.

JIMMY CARTER.

THE WHITE HOUSE, *March 16, 1977.*

SUPPLEMENTAL APPROPRIATIONS BILL, 1977

Mr. MAHON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4877) making supplemental appropriations for the fiscal year ending September 30, 1977, and for other purposes, and pending that motion, Mr. Speaker, I ask unanimous consent that general debate be limited to 2 hours, the time to be equally divided and controlled by the gentleman from Michigan (Mr. CEDERBERG) and myself.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Texas (Mr. MAHON).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 4877, with Mr. FLOWERS in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the unanimous-consent agreement, the gentleman from Texas (Mr. MAHON) will be recognized for 1 hour and the gentleman from Michigan (Mr. CEDERBERG) will be recognized for 1 hour .

The Chair recognizes the distinguished gentleman from Texas (Mr. MAHON), the distinguished chairman of the Appropriations Committee.

Mr. MAHON. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, it is not inappropriate when a committee of the House presents a bill to the House that some statement be made toward establishing the credibility of the bill. This is a 72-page bill. The report in explanation of the bill is 185 pages. The 4 volumes of hearings on this bill conducted by the several subcommittees of the Appropriations Committee contain 4,300 pages. The markups took place in the subcommittees, and there was a 4-hour meeting of the full Committee on Appropriations in consideration of this bill which provides in supplemental appropriations about $28 billion in spending.

It would be, of course, impossible at this moment to discuss the 4,300 pages of hearings or to read the 185 pages of the report or even to read the 72-page bill. This is the way we operate in the House, by having the committees of the House conduct the hearings, mark up the bills, and provide the copies of the bills and of the reports, and then we, of course, work our will.

It seems to me first we might talk about some of the reductions which we have made. To some they may appear to be valid and to others they may not appear to be valid. The administration had requested, for example, in the field of housing $17.3 billion. We provide $14.9 billion, making a reduction of $2.4 billion. This could all be well explained and documented by the members of the subcommittee and by the gentleman from Massachusetts (Mr. BOLAND) and the gentleman from Pennsylvania (Mr. COUGHLIN) and the report is available for Members.

The Environmental Protection Agency request was $4.5 billion. We made there, because of lack of authorization and otherwise, a cut of $3.5 billion.

In foreign aid we made a reduction below the budget of about $200 million.

Some of the money in the bill—$2 billion—is for pay increases for Government employees. The pay increases for Federal workers were put into effect last October. The departments have been able to absorb some of these pay increases but nevertheless it is necessary for us to provide $2.1 billion in pay increase money, a reduction of about $200 million below the President's budget, but this is made possible by reason of shortfalls and otherwise.

Where have we made increases? The

Commodity Credit Corporation requires Federal funds to support farm programs and to accommodate for the drought, and pestilence, and floods, and what-have-you.

We provide in this bill $700 million for the Department of Agriculture, for Commodity Credit. This budget estimate was submitted to us last year. We provided a portion of the budget submission last year in the regular agriculture program and we are providing the remainder in this supplemental bill of $700 million.

In the field of education we provided increases of about $400 million.

As I said earlier, the overall reduction is in the area of $5 billion.

Someone has said, and this is correct, that this is the largest supplemental appropriation bill that has been considered by the Congress since World War II. It is the largest supplemental bill from the Committee on Appropriations that has been considered by the Congress since 1942.

The bill yesterday, the economic package, likewise was larger than any supplemental bill we had presented to the House since World War II.

So, Mr. Chairman, this is where we are at the moment. For a quick view of what the bill does or does not do, if one will turn to page 2 of the committee report he will notice the bill's highlights and he will notice the increased pay costs of $2 billion plus.

In the food stamp program, we provide $720 million. An effort was made to streamline and modify the food stamp program and certain legislative recommendations were made, but they were not implemented. There was a court action that intervened, so there was no way for us to avoid providing about $720 million additional for food stamps.

I have already mentioned the Commodity Credit Corporation.

Then the Inter-American Development Bank, there are additional funds here for that purpose.

Funds for the annual contribution to assisted housing is the largest single amount in the bill. The subsidizing of housing is, of course, a very momumental long-range spending program. For this we are providing some $13.1 billion, $2.4 billion less than the budget request.

We are providing additional funds for veterans' programs as a result of new legislation.

Higher education and some of the health manpower programs that were in last year's budget were not financed in our regular appropriations bill under the gentleman from Pennsylvania (Mr. FLOOD) because of a lack of authorization; so it was necessary to place these funds in the supplemental. These supplemental funds run to several billions of dollars.

We are committed to the Postal Service. There is an authorization of $1 billion additional for the Postal Service. We had provided half of the amount authorized. We are providing another half a billion dollars in this bill.

So I would assume, Mr. Chairman, that the House will want to pass the pending measure. This is not a stimulus appropriations bill. It is not calculated to stimulate the economy, but it does have stimulus effects in some considerable respects.

There will also be certain amendments offered to the bill, so I understand, by the subcommittee chairman and others, which would increase the job creating provisions of some of the measures included in this bill. Mr. Chairman, I would urge that Members support the bill, as the funds in it are necessary to continue operation of many of the present programs of the Government.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Pennsylvania (Mr. FLOOD), the distinguished chairman of the Subcommittee on Health, Welfare, and Education Appropriations.

Mr. FLOOD. Mr. Chairman, chapter VII of H.R. 4877 includes $5,624,931,000 for the Department of Labor, HEW, and Related Agencies. This represents an increase of $561,897,000 over the President's revised budget estimates. There are two principal reasons why we are obliged. To consider supplemental appropriations of such magnitude at this time. One is that, as usual, the requirements for public assistance payments were underestimated in the budget for fiscal year 1977 which was sent to Congress over a year ago. This is in keeping with tradition. Every year, at budget time, we are told that the Department of Health, Education, and Welfare is working on improving the accuracy of these estimates, but almost invariably a large supplemental appropriation is required later in the year. What it boils down to is that it is very difficult to predict the state of the economy 18 months in advance, or to predict how many people will apply for, and receive, aid to families with dependent children, or to predict how much 50 different States will decide to spend on medical assistance. For these reasons, we have before us a supplemental appropriation of $1,225,197,000 for the Federal share of public assistance.

The other major reason for the size of the supplemental appropriation lies in the fact that some important pieces of authorizing legislation extending ongoing programs for higher education, vocational education, alcoholism prevention, and training of health manpower were not enacted until the very last hours of the 94th Congress. Some of them were not actually signed into law until after Congress had adjourned sine die. We had to defer consideration of the budget estimates for these programs, and they are currently funded under a continuing resolution, which expires on March 31. The bill before us today provides $4,213,224,000 for these programs which could not be included in our regular Labor-HEW appropriation bill due to lack of authorizing legislation.

The remainder of the funds recommended in chapter VII, about $186 million, are primarily to deal with various contingencies which have arisen since the committee considered the regular appropriation bill last year. The largest items in this category are a revised estimate for special benefits for disabled coal miners, a revised estimate for Federal Employees Compensation Act payments, and a recommended appropriation of $82,500,000 for the Community Services Administration for assistance to low-income families for winterizing their homes.

I cannot possibly cover all the items in chapter VII in the time available. Here are a few of the other areas in which we think members will be especially interested:

$25,354,000 for the National Health Service Corps, to help get health professionals into communities and areas where they are needed.

$40,125,000 for emergency medical services to help reduce mortality and permanent disability resulting from accidents and sudden illnesses.

An additional $7,000,000 for venereal disease control to help combat the continuing alarming increase in the incidence of this type of disease.

An additional $3,000,000 for immunization of children against measles, rubella, polio, diphtheria, mumps, and pertussis—whooping cough.

$7,500,000 to prevent cutbacks in research on arthritis, digestive diseases, kidney diseases, and bone and skin diseases.

$111,000,000 for community programs to combat alcoholism, which is one of our most serious national health problems.

$119,100,000 for capitation grants for schools of the health professions, to help them meet rising costs.

$25,000,000 for construction at regional schools of veterinary medicine.

$66,400,000 for scholarships and loans for students in the health professions.

$134,436,000 for a series of special programs to improve the quality and distribution of health professionals.

$28,750,000 for educational assistance for Indochina refugees.

$211,605,000 for vocational education.

$2,934,793,000 for loans and grants to students in institutions of higher education, including $1,903,900,000 for basic educational opportunity grants, $430,000,000 for college work-study grants, and $300,000,000 for National Direct Student Loans.

$110,000,000 for strengthening developing institutions of higher education.

$85,000,000 for the "Trio" programs, which provide special assistance to the disadvantaged students.

$13,300,000 for foreign language training and area studies.

$10,750,000 for cooperative education.

$19,475,000 for libraries and instructional equipment.

$37,500,000 for the Teacher Corps, to train teachers to work with disadvantaged students.

$70,000,000 for the National Institute of Education, which supports educational research and development of new teaching methods.

$3,560,000 to strengthen the U.S. Office of Education's capacity to detect and prevent fraud and abuse in student aid programs.

$1,334,000 for enforcement of the child support provisions of the Social Security Act and to strengthen efforts to detect and prevent fraud and abuse in the Medicaid program.

$1,040,000 to start up the new office of the HEW Inspector General.

$1,350,000 for health cost control, and for planning new legislation relating to welfare reform and National Health Insurance.

Mr. Chairman, that concludes a very brief rundown of some of the more significant programs funded in this section. I have left out quite a few, just because of our time constraints. However, they are all discussed in detail in the report, which I urge members to read. I am sure you have been getting letters, telegrams, and telephone calls from your constituents about many of these programs. This is an extremely complex bill. The committee's recommendations were arrived at after careful consideration and discussion. I believe they are responsible and I urge their approval by the House.

Mr. MAHON. Mr. Chairman, I reserve the balance of my time.

Mr. CEDERBERG. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, after a busy day yesterday when we considered the $23 billion plus economic stimulus package, we are here today with a $28.4 billion supplemental appropriations bill. It is made up of $27.9 billion plus the other $1.5 billion, as I said yesterday, by transfer, increases in limitations and liquidation of certain contract authorities.

In this bill, we are providing roughly 2,100 new employees. After we had a very busy day yesterday, I went home, and before I decided to have dinner with my wife, I sat down and I opened up the Washington Star. I was reading it, and I could hardly believe it. There was an article there by Mr. Fred Barnes. It said:

Carter Message to Cabinet: "Less Government."

I read and I read, and in outline here are some of the things that are taking place:

Carter warned his Cabinet officers not to come to him with bids for more money. Budget increases for departments are "something we just can't do," he said, promising to be "tough" in reviewing any requests for increased funds.

"There is only so much of a deficit we can accommodate," he stated. "So I don't want you to get your hopes up too much." Moreover, his pledge to balance the federal budget by 1980 is serious, Carter said. "I did not make that commitment lightly."

So, here in 2 days we have got a total of over $50 billion. Yesterday we added 1,000 plus new employees. Today, there are about 2,100, roughly, so that is 3,100 new employees.

We had a Governor in Michigan who had a very difficult time because he claimed he had been brainwashed. Evidently, the Congress is either trying to brainwash the President, and probably he does not know what is going on here, or the President is trying to brainwash the public by these kinds of statements which just do not jibe with the facts.

So, if all of these Cabinet people are warned not to come up here and ask for more money, I have not found one yet who has not been up here asking for more money.

I might take that back. Secretary Brown from the Department of Defense did come up and gave the illusion that we are going to reduce the defense budget by $2.5 billion in new obligational authority.

Mr. MAHON. If the gentleman will yield, there was a revised budget reflecting a decrease in the Ford budget in the defense function. But, the Ford budget was about $14 billion, as my friend will recall, over the current fiscal year. So, the Carter recommended budget provides for an increase over the current year in the defense function of about $10 billion, so there is no real reduction below the previous figure, but a very sharp increase.

Mr. CEDERBERG. I wanted to be sure that was straight, because I did understand that they did come and ask for about $2.5 billion less in new budget authority, and of course as far as results this year in the total defense budget——

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. CEDERBERG. I yield to the gentleman from Texas (Mr. MAHON).

Mr. MAHON. I thank the gentleman for yielding.

Mr. Chairman, in the defense function it was about a $2.7 billion decrease in the Carter budget for fiscal year 1978.

Mr. CEDERBERG. A reduction in new obligational authority?

Mr. MAHON. Right.

Mr. CEDERBERG. Then am I correct that there does not show up one cent of reduction in spending for fiscal year 1977?

Mr. MAHON. The gentleman is correct.

Mr. CEDERBERG. I just want to make sure. Every Cabinet officer I have seen come up here has been asking for more money. Somebody is not getting the message downtown. When the Cabinet officers come up here, we will have to ask them where they got the authority to request the increases, when the Commander in Chief has instructed them that there are not going to be any more increases.

I do not know how many people are in the press gallery today. Probably it is time for lunch, so there may not be too many up there. But it seems to me that somebody ought to start reporting the facts as they are, not as the press releases come out of the White House; because if we compare the press releases with what the actual facts are, there is no relation between the two.

Mr. MAHON. Mr. Chairman, I yield 10 minutes to the gentleman from Michigan (Mr. TRAXLER).

Mr. TRAXLER. Mr. Chairman, chapter V of the bill includes supplemental funding for the Department of Housing and Urban Development, the Environmental Protection Agency, the Veterans' Administration, the Selective Service System, and the Office of Revenue Sharing.

For HUD, the new administration requested $508 million in annual contract authority and $15,530,400,000 in budget authority to provide an additional 164,200 section 8 units in fiscal year 1977. The committee is recommending $413,143,000 in annual contract authority, and $13,112,405,000 in budget authority to provide an additional 134,200 section 8 units in this fiscal year. This is a reduction of $94,900,000 in annual contract authority, $2,417,995,000 in budget authority, and 30,000 units below the supplemental request.

The 134,200 units of subsidized housing provided in this bill, together with the 235,800 units available from current authority, will provide for 370,000 units of subsidized housing in 1977.

The committee reduced the request by 30,000 units because of two simple factors.

First, during 1976 and the transition quarter, approximately 490,000 units of section 8 housing were reserved. Of these, 217,000 were reserved during the 3-month transition quarter. We believe that it is reasonable to assume that many of these units approved in the transition quarter will generate what are called paper reservations. That is a reservation that does not move to final approval and to a start. All contract and budget authority associated with these paper reservations is recaptured and will be available for use in fiscal year 1977 in addition to the authority approved in this bill. Second, and equally significant, through January, with one-third of the fiscal year completed, only 12,000 section 8 units had been reserved.

So it was these factors—the anticipation of additional recaptured authority being available in 1977 and the slow rate of reservations under current authority—which suggested that the full request of $508 million of annual contract authority could not be reserved efficiently and effectively before the end of this fiscal year.

In other HUD areas, we provided $411,500,000 for housing payments. These payments are mandatory and represent the annual cost of funding the various low-income housing programs. The amount recommended in the bill is $28 million less than the budget request and coincides with the reduction recommended in the assisted housing programs.

We provided the full budget request of $20 million to compensate public housing agencies for higher utilities costs.

We restored all the current cumulative losses incurred by the general insurance and special risk insurance funds of the Federal Housing Administration. That totals $1,801,344,000. Without this appropriation, the Department must borrow directly from the Treasury the money necessary to pay off these defaulted mortgages. So in a sense, this is basically a paper transaction, but the committee believes that the time is now to restore these losses and the full budget request is included in the bill.

For the wastewater treatment construction grant program under the Environmental Protection Agency, we have included $1 billion. At the proper time, I will offer a committee amendment reducing this to $500,000,000.

I know that some may be disturbed by the magnitude of this reduction, while other Members may be concerned that we should not provide any funds without an authorization. But what the subcommittee tried to do was attempt to provide enough money so that States which

have slowed construction obligations or which may run out of money soon, will be able to go ahead with many of these projects.

On the other hand, the committee also believes strongly that we should not take away the bargaining position of the House Public Works Committee before it reaches an agreement with the Senate on a number of very sensitive issues. It is the judgment of the distinguished chairman of the Public Works Committee that an appropriation of $1 billion could remove the leverage that committee needs in conference with the Senate. So, I will offer an amendment to reduce the amount to $500,000,000, and the committee will take another look at the need for additional funds for this program in the 1978 bill.

Also under the Environmental Protection Agency, a supplemental appropriation of $69 million was requested for the section 208 areawide planning grant program. The committee recommends no additional funding for this program. A total of $137 million of the original $300 million that was authorized on a backdoor basis remains impounded. The Government has continued to appeal lower court decisions ordering the release of these funds. It is the position of the committee that the EPA should recommend ending these appeals. The $137,000,000 could then be released and the program objectives completed. I should also point out, that of the $15 million provided in the regular 1977 appropriation for this activity, none has been obligated to date.

For the Veterans' Administration, the bill includes an appropriation of $28,942,000 for a number of various program requirements under both medical care and general operating expenses. In addition, the committee recommended a transfer of $588,450,000 from the readjustment benefits account to the compensation and pensions account to cover increased payments primarily resulting from new legislation.

Finally, the committee recommends $350,000 for administrative expenses for the Office of Revenue Sharing—also to meet new legislative requirements of the recently passed extension of the general revenue sharing program—and $870,000 for employee severance payments under the Selective Service System.

Mr. JOHNSON of California. Mr. Chairman, will the gentleman yield?

Mr. TRAXLER. I yield to the gentleman from California.

Mr. JOHNSON of California. Mr. Chairman, I thank the gentleman for yielding.

I was very much interested in what was said concerning the language of the bill on page 12 as it relates to the construction grants. At the present time the Committee on Public Works and Transportation is considering a program in H.R. 3199 to take care of the authorizations for Federal Water Pollution Control Act purposes. We were a little concerned with the amount of $1 billion, and I understood the gentleman to say that he would offer an amendment later cutting that amount to $500 million; is that correct?

Mr. TRAXLER. Mr. Chairman, I will say to the distinguished chairman of the Committee on Public Works and Transportation that that is correct, and that is as a result of a current understanding between the gentleman and the chairman of the HUD Independent Agencies Subcommittee of the Committee on Appropriations, the gentleman from Massachusetts (Mr. BOLAND).

Mr. JOHNSON of California. Very good. Mr. Chairman, I thank the gentleman.

Mr. BOLAND. Mr. Chairman, will the gentleman yield?

Mr. TRAXLER. Yes, I yield to the gentleman from Massachusetts.

Mr. BOLAND. Mr. Chairman, apropos of what the distinguished chairman of the Committee on Public Works and Transportation has said, this subcommittee will offer an amendment to chapter V which will reduce the amount for waste water treatment plants from $1 billion to $500 million. We do that at the request of the Committee on Public Works and Transportation, which has the legislative responsibility for this program.

As the chairman of that committee has indicated, H.R. 3199 does extend the Federal Water Pollution Control Act for 3 years. It was not extended last year because of differences between the House and Senate bills. It was the judgment of this subcommittee, after consultation with the chairman of the Committee on Public Works and Transportation, the gentleman from California (Mr. JOHNSON), and with other members, including the ranking Republican member, the gentleman from Ohio (Mr. HARSHA), that the item ought to be reduced so that we would be assisting the House committee in its effort to get a workable extension of the Federal Water Pollution Control Act.

This has been a very difficult problem for the House. Therefore, in a sense, what we are doing is giving some leverage to the House Committee on Public Works and Transportation to accomplish what it wants to accomplish in the extension of the water act.

Mr. Chairman, there are some very great difficulties between the Senate and the House with respect to some criteria and legislative provisions. Consequently, I think it is incumbent upon the Committee on Appropriations to defend the prerogatives of the House and to defend the right of the legislative committees, which is precisely what we will do in the offering of this amendment.

Mr. Chairman, I am delighted that the gentleman from Michigan (Mr. TRAXLER) will do that, and I hope that the members of this committee will support that action.

Mr. TRAXLER. I thank the distinguished chairmen for their contributions, and I yield back the balance of my time, Mr. Chairman.

Mr. YOUNG of Florida. Mr. Chairman, I yield such time as he may consume to the gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Chairman, on the surface, this massive $28 billion supplemental appears to be under the President's recommendations by $5 billion. However, when you eliminate the 40-year contract authority for the section 8 housing program, where there was essentially a paper reduction of $2.4 billion, and the waste treatment construction grant program, where $3.5 billion was in essence just delayed until after the authorizing legislation is enacted, we see that the bill is in actuality almost a billion dollars above the budget.

So, regardless of who is in the White House, the majority in this body are apparently still intent on continuing their free-spending ways. And once again I end up defending the President's budget, but this time we have the spectacle of a Republican defending a Democratic President against the excesses of his own party.

The Labor-HEW chapter is over $600 million above President Carter's recommendations, and also $1.1 billion above the Ford budget.

The amount of $300 million over the Carter request is included for the direct student loan program. The Carter people testified that with $265 million available from collections of prior year loans, and with the guaranteed loan program in full operation, there is no reason for continuing to provide more capital contributions for this program, but funds were included anyway.

The work-study program was increased by $40 million over the Carter budget, to a total of $430 million, and the incentive grants for State scholarships by $16 million, to $60 million.

The amount of $102 million was added over the Carter request for various health manpower programs. This includes an increase of $21.4 million for capitation grants, which are awarded on a formula basis to schools of medicine, dentistry, osteopathy, veterinary medicine, optometry, podiatry, and pharmacy. The total for this item is $119 million, still a million dollars short of what President Ford recommended. The Ford proposal was geared to support institutions willing to participate in a geographic or specialty redistribution initiative. The Carter budget recommendation deleted this criteria, which leads one to wonder whether the Carter administration is really intent on zeroing in on the maldistribution problem.

The bill also contains $66 million for health manpower student assistance, an increase of $10.4 million over the current level. Another $39 million is included for family medicine training, and $6 million was added to assist the training of emergency room specialists.

One million dollars is included for studying what exactly the supply, the requirements, and distribution needs of our various health professionals are. This ought to finally give us an accurate picture of the direction we ought to be

headed when we fund the various health manpower programs.

There is one innocent-looking item in here which, if decided on its merits, would not have been included. Entitled health teaching facilities, it really is a $25 million allocation for three specially earmarked veterinary schools.

There is no present evidence to show that we need any more veterinarians, but we are adding or expanding three schools. The claim is that we are seeking to develop regional schools, but two of the three are in the Northeast, serving much of the same constituency. We are circumventing the machinery that has been established in the executive branch to fairly evaluate grant applications on their merits, not on who has the most pull. The schools funded here are Tufts, in Massachusetts, the University of Pennsylvania, and the University of Washington. Need any more be said as to why they were included?

In running down some of the other items in the bill, we have included $25 million for the National Health Service Corps, and $40 million for emergency medical services, an increase of $6.5 million over the current level. EMS represents one of the better programs we are funding, with numerous examples of successful accomplishment.

Seven million dollars has been added for venereal disease, bringing the total for the year to $25 million. There is no question about the needs in this area, but I am a little concerned about the failure of States and localities to make a larger effort on their own.

We have added $7.5 million for the National Institute of Arthritis, Metabolism, and Digestive Diseases, to help restore funding to some of the disease areas that ended up being reduced when we earmarked increased amounts last year for diabetes and arthritis. That is what happens when you start down the road of providing earmarks for special diseases.

One hundred and eleven million dollars has been included for alcoholism community programs, an amount equal to last year's level.

A total of $212 million is contained in the bill for various vocational education programs, including another $38 million for basic State grants in the upcoming academic year. The total increase for vocational education covers 2 academic years, because we moved to advance funding for this program or the first time in the regular appropriation bill enacted last year.

Moving to student assistance under higher education, in addition to the items I mentioned earlier, we are appropriating $1.9 billion for basic educational opportunity grants, and $240 million for supplemental educational opportunity grants. The total student assistance funding for the upcoming academic year, in net terms, thus amounts to $2,723,000,000, an increase of $340 million over the current level. That represents a 13-percent increase at a time when student enrollment in higher education is actually declining, and at a time when the rate of inflation is less than 5 percent a year.

Eighty-five million dollars is included in the bill for special programs for the disadvantaged, which include Upward Bound, Talent Search, and the educational opportunity centers. This represents a $15 million increase over the current level.

For various categorical institutional assistance programs, $173 million is included in the bill. This includes such things as developing institutions, language training and area studies, university community services, State postsecondary education commissions, and veterans cost of instruction. President Ford sought to end funding for some of these programs, and rightly so, because several of them have outlived their usefulness. If the so-called zero-based budgeting approach is conducted in an unbiased manner, the Carter administration cannot help but reach a similar conclusion.

There is one last item in the educational field which requires mentioning: $6.1 million for Georgetown University, for a so-called intercultural center, a substantial part of which will be a gymnasium for foreign students costing $7 million. Try to explain that one back in your districts, to some of your hard-pressed colleges who are scrimping and scrambling simply to make ends meet. This item smacks of favoritism at its worst, and shows the benefits accruing to a school based in Washington and thereby having the ability to lobby full time at only half the cost.

Once again, we have a big supplemental increase for public assistance. This year it amounts to $1,225,197,000, bringing the overall total for the year up to $19.3 billion.

We have heard quite a bit recently about the funds lost through fraud and abuse and poor management in this field, and there is no question but that the problem is a serious one. I think a little recognition ought to be given, though, to the progress the Ford administration made in trying to bring the problem under control.

Since 1973, the AFDC error rate has been reduced by 44 percent, resulting in a savings of over a billion dollars. A great deal of this was due to the imposition of quality control penalties on the States, which forced the States to tighten up their administrative machinery. We would be making even greater headway if it were not for a court decision last year which struck down the penalties which were being imposed upon the States. I understand that the new administration is now in the process of developing some substantially watered down quality control standards and penalties.

I hope this is not going to slow down the progress we have been making in reducing the error rates, but I cannot help wondering in this regard.

The Ford administration also, with a little help from this Member, substantially increased the fraud and abuse investigations in HEW and established a central Office of Investigations to coordinate this activity. Congress subsequently created an Office of Inspector General to handle this activity, and in this bill, funds are included to launch this new Office and for other fraud and abuse activities.

I would be remiss if I did not report some disturbing developments occurring down at HEW in this regard. The head of the Office of Investigations has resigned, reportedly because the independence he was promised when he was appointed last year was being interfered with by the new Secretary. That individual came, incidently, from the majority staff of the Senate Government Operations Committee.

On top of this development, we hear word that the individual picked to become the new Inspector General, supposedly an independent position, was an old crony of the Secretary without a great deal of experience in the invesgative field. One published report indicates that the selection was based more on personal loyalty than investigative experience.

The Secretary has been making a lot of promises and claims about rooting out fraud and abuse, and there is certainly no one who wants that more than I, but I think his efforts in this regard bear close watching to make sure that there is not any manipulation over there that could result in future coverups.

Finally, the last item I want to mention involves $82.5 million for the winterization of energy conservation program under the Community Services Administration. This represents a threefold increase for the year, bringing the total up to $109.5 million.

I have always been a little skeptical about the effectiveness of this program, particularly as run through the Community Services Administration, but it does have the worthy goal of better insulating homes in order that fuel bills can be reduced. This represents the most sound overall solution to the problem of high fuel bills, particularly as they affect the poor.

It is also important to note, in view of the concern about fuel bills, that a portion of the winterization funds, some $5.6 million, is currently being used to help the poor with their fuel expenses, and substantially more could be so allocated out of the increased funds we are providing if the need is there.

So there is no reason to launch a brand new program at a cost of $200 million to pay fuel bills, as some people are advocating, when we already have substantial moneys in the bill which can be used to assist the truly needy and those in the most dire straits.

Mr. DEVINE. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I will be happy to yield to my friend, the gentleman from Ohio.

Mr. DEVINE. I thank the gentleman for yielding.

I appreciate the explanation the gentleman has made on these many items

contained in this legislation. I agree particularly with his remarks relative to the possibility of a new boondoggle in the area of fuel stamps that will follow the pattern of the food stamp program. My particular area of interest at the moment has to do with the area of student loans, which the gentleman mentioned during his presentation.

Mr. MICHEL. Yes.

Mr. DEVINE. We received information that there have been a considerable number of defaults—I do not know in what amount of millions of dollars or what percentage. But is the gentleman in a position to enlighten us about what is being done in the area of recouping some of these defaults on loans, and whether or not this affects the overall appropriation?

Mr. MICHEL. The gentleman will recall that the chairman of our subcommittee, the gentleman from Pennsylvania (Mr. FLOOD) and I engaged in quite an exchange on this matter, both last year and the year before, because the rate of default was running beyond 15 percent and close to 20 percent, and with the hundreds of millions of dollars involved here, we had to be concerned about it. We provided additional people to monitor the program and to increase the collection of defaulted loans. Frankly, a good part of the problem has been that the institutions themselves have not diligently pursued the collection of loans. Then, of course, the paper being peddled to the financial institutions and having been guaranteed, simply comes back to the Government, and we are left holding the sack to the extent of three or four hundreds of millions of dollars a year. That is why I keep coming down hard on this business of having investigations in-House and on the need to monitor closely so that we don't have another scandal of even larger proportions on our hands.

Mr. DEVINE. If the gentleman will yield further, I think some legislation was introduced in the last session—perhaps before—that if the Government did not make an honest effort to collect some of these defaults or move on them, perhaps they should be turned over to outside or non-Government agencies to seek collection on these, because so many of these students think all Federal funds are benefits, and then they disappear and they lose interest.

I thank the gentleman for yielding.

Mr. MICHEL. In concluding my remarks, I should point out that we are adding 695 Federal jobs in the Labor-HEW chapter alone. When coupled with the 622 added yesterday as part of the economic stimulus bill, it brings the total to 1,317 new jobs added to the bureaucracy, virtually all of them requested by the administration.

I am not being critical of this, but I do think the Members and the news media ought to be aware of it, particularly in view of the statements coming from the White House about how we are going to hold the line on increasing the size of the bureaucracy.

I am reminded of the remarks by my ranking minority member, the gentleman from Michigan (Mr. CEDERBERG), in the well when he was reading from the published account of the President admonishing the Cabinet that he was not going to be standing for increases, but here there are requests for 1,317 new jobs to be added to the bureaucracy in just 2 departments alone.

Mr. MAHON. Mr. Chairman, I yield such time as he may consume to the gentleman from Virginia (Mr. SLACK).

Mr. SLACK. Mr. Chairman, I thank the gentleman from Texas for yielding.

Mr. Chairman, chapter X in title I of the pending bill includes $330,894,709 for program supplements for the Departments of State, Justice, and Commerce, the Federal judiciary, and related agencies. That amount is $10,989,040 less than the total requested for these departments and agencies.

I should also point out that $113,766,000 is provided in title II of the bill for increased pay costs for fiscal year 1977 for these departments and agencies. That amount is $3,028,000 less than the total requested.

I would now like to address several of the more significant items in this area of the bill.

On February 7, 1977, the committee approved a request from the Department of Commerce to reprogram $30.1 million from funds appropriated to the Economic Development Administration to carry out title I of the Public Works and Economic Development Act. These funds will now be used for construction of athletic and related facilities needed for the 1980 Olympic winter games to be held at Lake Placid, N.Y., as authorized by Public Law 94–427. The committee approved the reprograming request in order to avoid delays in the construction of the sports facilities. We were, however, concerned about the diversion of funds appropriated for the regular EDA public works program. The committee therefore recommends the sum of $30,100,000 in the pending bill in order to maintain the level of resources originally provided for title I of the public works programs of EDA.

Another significant item in the Commerce portion of the bill is the $110,000,000 for a coastal energy impact fund, as authorized by the Coastal Zone Management Act, as amended. The fund will be used to provide loans, loan guarantees and repayment assistance for public facilities and services to communities affected by Outer Continental Shelf and coastal dependent energy activity.

The committee bill provides $39,154,999 for payment to the United Nations Educational, Scientific and Cutural Organization—UNESCO—to cover assessments for calendar year 1975 and 1976. Funds to pay the assessment for calendar year 1977 are not included. On December 29, 1976, the President made the certification, concerning UNESCO policies, required by the Foreign Assistance Act of 1974 before funding of dues for UNESCO could be resumed. That certification is supported by the present administration.

The bill includes $6,000,000, the total amount requested, to provide the U.S. Government contribution for expenses associated with the Eighth Pan American Games to be held in San Juan, Puerto Rico, in 1979.

Another item I would like to call to your attention is the $22 million included for construction of a Federal correctional institution at Ray Brook, N.Y., near Lake Placid. This facility, which will later house 500 offenders, will be used initially as housing for athletes participating in the 1980 Winter Olympics to be held at Lake Placid. The facility will then be converted for use as a youth correctional facility.

There are a number of other items included in chapter X of the bill, many of which are of an uncontrollable nature. I do not wish to take the time required to discuss all of these items. They are covered in detail in House Report No. 95–68, which accompanies the bill.

Mr. MAHON. Mr. Chairman, I yield 5 minutes to the gentleman from Illinois (Mr. YATES), the chairman of the Subcommittee on the Interior.

Mr. YATES. Mr. Chairman, I would like to address my remarks to the chapter of the bill which relates to the Department of the Interior and related agencies.

Mr. Chairman, the chapter on the Department of the Interior and related agencies includes new budget authority in the amount of $827,828,000, an increase of $35,284,000 above the budget request of $792,544,000.

This chapter includes $167 million for job creation programs. At the appropriate time, amendments of $80 million will be offered to provide additional job stimulus. I would like to touch on the highlights of the appropriations in this chapter.

For the Bureau of Land Management, the committee is recommending $145,225,000, an increase of $4,000,000 above the budget estimate. That sum includes $35,000,000 for forest firefighting in 1976 and 1977.

An amount of $4,000,000 above the budget was recommended for drought assistance programs of the Bureau of Land Management. The Bureau testified before the committee that they could put this money to work immediately in a manner which would improve the utilization of water on the public lands in the parched Western States. This will include such activities as range water improvement for both livestock and wildlife, snow management programs, and improvement of critical community watersheds.

The committee recommends $100,000,000 for the appropriation of payments in lieu of taxes. This amount will be in addition to the $6,350,000,000 received by the States from general revenue sharing and the $233,200,000 received by the States from other activities associated with public lands.

The committee commends the admin-

istration for having come forward with a major program for the improvement of the national parks and wildlife areas of the United States. The committee regrets that this program was not shared by the Forest Service recreation areas which have as much visitation as do the national parks. The committee will recommend by amendment to this bill that a similar program be initiated for the national forest recreation areas.

The committee recommends a total of $283,006,000 for this program, a reduction of $3,737,000 below the amount requested. The funding for fiscal year 1977 is the first of five increments which will provide in excess of $1.3 billion for the enhancement of the national resources embodied by our national parks and wildlife refuges. Of the total recommended, $140,743,000 is an appropriation from the land and water conservation fund for the acquisition of land for parks and wildlife refuges. This will provide acquisition for such areas as the Big Cypress National Park, the Big Thicket National Park, the Cuyahoga Valley National Recreation Area, and a number of wildlife refuge areas. An additional $27 million is provided for operation of wildlife refuges and for construction in those areas.

An advance of $10 million is made to the migratory bird conservation account for the acquisition of key wintering areas for wildfowl.

The sum of $105,263,000 is provided for operation of the National Park Service and construction in the national parks; $13 million of that amount is for the addition of 1,000 employees in the National Park Service. The committee has passed over without prejudice requests of $3,737,000 for projects such as construction of a golf clubhouse at Oxon Cove Golf Course, a Rock Creek Park bike trail, a 25-mile bike path at Cape Cod which would have cost in excess of $225,000 per mile, and visitor orientation facilities. The committee will reconsider these and similar projects during proceedings on the 1978 bill.

The committee is recommending $9,259,000 for the planning and construction of a metallurgy research center on the Fort Douglas Military Reservation, Utah. This will replace a research center which is now located in urgently needed space on the campus at the University of Utah.

For the Bureau of Indian Affairs, the committee recommends $10,040,000 for the operation of various Indian programs. This includes $6,000,000 for current and anticipated costs of forest fire suppression and emergency rehabilitation.

An amount of $19,700,000 is recommended for the administration of territories. This includes $10,200,000 for weatherproofing on Guam of public utility transmission and distribution facilities. The committee did not recommend $4,000,000 for relocation of natives to the Enewetok Atoll. The present plan is to take soil and other debris which are contaminated with plutonium, cesium, and strontium-90, to encase it in concrete blocks and place these blocks in a concrete-lined and covered crater on Runit Island. Until it can be demonstrated clearly that these long half-life wastes can be stored without leaking, the natives should not needlessly be endangered by resettling the atoll at this time.

For the Forest Service, the committee recommends $247,339,000, an increase of $39,130,000 over the budget. Of that amount, $3,650,000 is to accelerate expansion of nurseries so as to maintain progress on eliminating the reforestation backlog; $15,000,000 is provided for 9,500 summer youth jobs in the Youth Conservation Corps and $20 million is provided for roads which will enable timber cutters to get at in excess of 240,000,000 board feet of timber which will be needed in order to help meet the national goal of additional building starts. Additional amounts will be proposed by amendment later.

For the Federal Energy Administration, the committee is recommending $32,002,000, a decrease of $10,110,000 below the amended budget estimate.

The committee is providing $12,000,000 to States for development of supplemental State energy conservation plans and $2 million for funding of State consumer advocacy offices. These offices will represent the consumer in utility rate hearings at the State level. The committee denied a request of $5,000,000 for a program called innovative energy conservation because of inadequate justification. The committee recommended a $400,000 study for identifying areas that can be readily commercialized in the solar application. The committee did not recommend an additional $1,500,000 which was transmitted as an administration amendment. Agency witnesses testified that until they got the results of the $400,000 study to indicate what they ought to be doing, there was no point in providing them any additional funding.

For Indian education, the committee recommends $12,200,000, for which there was no budget request. The committee, in the 1977 bill, had reduced the program below the 1976 level. This action adds $12 million to part A to restore the program to the 1976 level and to meet the cost of inflation, and $200,000 for part C—adult Indian education—to meet the cost of inflation.

The committee recommended $100,000 to initiate a program for the Institute of Museum Services. The committee felt that there was no point in providing operating money for this program for which there is no director or board of directors. The funds recommended will permit development of a program for fiscal year 1978.

For the National Foundation on the Arts and the Humanities, the committee recommends a reduction of $10,575,000. Four million dollars of that would have provided for a photography and film project which was justified as a bicentennial program. The other $6 million was in the new challenge grant program. The committee feels that it is not likely that the endowments would be able to match more than an additional $18 million by the end of fiscal year 1977—just 6 months from when the funds will be available.

For the Pennsylvania Avenue Development Corporation, the committee recommends $29,081,000 to begin implementation of the development plan authorized by the Pennsylvania Avenue Development Corporation Act of 1972. I recommend to your reading the statement of the committee that is found on pages 68 and 69 of the report. The committee was troubled by this program and concerned with its cost, and recommended that an investigative study be made to get a better estimate of those costs.

The report showed that costs to the taxpayer over a 15-year period would be between $108 and $183 million with most going for street changes and public improvements. It is anticipated that private resources will be added to the program in the amount of $350 million. The point is, however, unless this Congress repeals the legislation which established the Corporation, a cloud will continue to hang over the development of Pennsylvania Avenue. This is the Nation's ceremonial corridor in the National City and deserves the dignity and beauty with which Washington is identified in the public mind. For that reason, the committee recommended the budget request.

The committee is recommending an unbudgeted appropriation of $4,700,000 for emergency repairs for the John F. Kennedy Center for the Performing Arts as provided for in legislation which passed the House on April 4 by an overwhelming vote. This amount will provide for repairs to the roof and to repair interior facilities which have been damaged as a result of the leaks.

Finally, the committee has recommended a minimum absorption of 5 percent in pay accounts for each organization under its jurisdiction.

The CHAIRMAN. The time of the gentleman from Illinois (Mr. YATES) has expired.

Mr. FLOOD. Mr. Chairman, I yield the gentleman from Illinois 2 additional minutes.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from Mississippi.

Mr. WHITTEN. Mr. Chairman, I want to say to the chairman of the subcommittee that I personally compliment the gentleman and the members of the subcommittee for taking this action.

Recently I have been reading a book often referred to by the late Speaker Sam Rayburn, "Reveille in Washington, 1860–65." Having been aware of the period when the late Speaker Rayburn was trying to clean up things around the Capitol property, and having reread the history of that period, it seems to me that letting the area from here to the White House go down would be a reflection on this Congress. When we look at what we have done in terms of foreign

aid, I am glad to see that under the leadership of the gentleman from Illinois that we are making an effort to have a section in this city of which we can all be proud. Coming at the end of the Bicentennial year, I think it is most appropriate that we take this step.

Mr. YATES. Mr. Chairman, I thank the gentleman from Mississippi for his contribution.

Mr. Chairman, I want to mention one other item. The committee has recommended an unbudgeted appropriation of $4,700,000 for emergency repairs to the roof of the John F. Kennedy Center. The committee was aghast at the fact that the John F. Kennedy Center was opened only 5 years ago, in 1972, and yet 5 years later, to all intents and purposes, a new roof must be constructed on that Center. The committee intends to go into the question of trying to find out why it should have to have a new roof constructed so quickly after the Center was opened.

Mr. ULLMAN. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the distinguished gentleman from Oregon.

Mr. ULLMAN. Mr. Chairman, I want to commend my friend, the gentleman from Illinois, and the members of the subcommittee for their very wise action in including funds for the Forest Service and the BLM and drought relief in the West.

Mr. YATES. Mr. Chairman, I thank the gentleman from Oregon.

Mr. YOUNG of Florida. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, as in the case of many bills, and especially a supplemental bill, there are those items that we could enthusiastically support and, of course, there are those items that we find it very difficult to accept.

In the foreign operations section of the chapter of this supplemental bill there are several new items that I do not find too much trouble with. One is the $30-million item for a binational foundation in association with the State of Israel for cooperation in development of certain technological and industrial capabilities that would be helpful to both nations; in fact, very likely to the world.

Another is the $15-million item for Portugal, to aid Portugal in developing a brigade that would become part of our NATO forces. I find I can easily and enthusiastically support these projects; but in the foreign operations section basically I should point out that most of the dollars we are talking about are dollars that this Congress had already rejected for fiscal year 1977 just a few short months ago.

Let me give just a couple of examples. For the United Nations we are being asked in this supplemental to appropriate $28 million more for the United Nations for their Relief and Works Agency for Palestine refugees.

We already have in this fiscal year 1977 appropriation $38.7 million for that purpose. The fiscal year 1978 request, already before the subcommittees for hearings, asks for $52 million for this project. I think it is safe to say that the $28 million being asked for in this supplemental really is not needed. There has been nothing shown the subcommittee or the full committee to indicate that there is a great need for this.

While I am talking about money to the United Nations, let me make this point: If the Members recall, it has been less than 2 weeks since the United Nations rejected—an appeal by England to have the U.N. investigate the question of the violations of human rights in Uganda by decisions and activities of Mr. Amin. That is the same United Nations to which we are now being asked to appropriate an additional $28 million. In fact, the largest portion of the foreign operations money in this supplemental goes to the multinational international financial institutions to which the American taxpayer contributes in fact makes the largest contribution. However, except in one very isolated incident, we have no veto as to how or where these moneys are spent. Yet $300,064,000 of this supplemental would go for those international organizations.

As a matter of fact, many of these dollars would go to the soft loan windows of those organizations. Let me tell the Members about this. The soft loan window of the World Bank is the International Development Association, IDA.

The soft loan section of IDA provides that once the loan is made, whether the United States likes it or not, that loan does not have to be totally repaid for 50 years. There is no repayment required at all during the first 10 years. Then, during the last 40 years, the loan is supposed to be repaid at no interest, but a very, very small, service charge. The truth is that right now there is over $980 million outstanding in past-due debts to the United States from some of these countries which have borrowed money from us and just have not seen fit to repay it.

Another concern I have about this soft loan window is this. If the Members have read the newspapers lately, they will see that IDA, which is the soft loan window of the World Bank, has already sent a mission to Vietnam for the purpose of considering a soft loan through IDA to Vietnam. Later on, as we get into reading this bill for amendment, I intend to offer an amendment which would eliminate those funds that would go to IDA. If I am not successful in that effort, I will offer a second amendment to at least state that we do not want any of our money going through IDA to Vietnam.

Mr. FLOOD. Mr. Chairman, I yield 3 minutes to the gentleman from California (Mr. MCFALL).

Mr. MCFALL. Mr. Chairman, the language on page 126 of the committee report, regarding the National Transportation Policy Study Commission, was amended in full committee. This amended language, however, was not printed in House Report 95–268. In order that the legislative history of this appropriation is clear, I will insert the amended language in the record. The language is as follows:

NATIONAL TRANSPORTATION POLICY STUDY COMMISSION

SALARIES AND EXPENSES

The bill includes a supplemental appropriation of $3,000,000 for the National Transportation Policy Study Commission. An initial appropriation of $1,000,000 was previously provided in the Department of Transportation and Related Agencies Appropriation Act, 1977. The Commission, which was authorized by the Federal-Aid Highway Act of 1976, is comprised of 19 members, including 6 from the House of Representatives 6 from the Senate and 7 public members appointed by the President.

The Committee realizes that the funding level recommended will require some restructuring of the Commission's original work plan. In undertaking such a restructuring the Committee believes that the Commission should rely on information which previously has been developed by the Department of Transportation. For example, one of the Commission's study areas was to project transportation supply and demand to the year 2000. Substantial funds have already been appropriated to the Department to develop this data and the Committee does not believe it is necessary for the Commission to duplicate these prior efforts. What is necessary, however, is the molding of this data into a meaningful national transportation policy. This, in the opinion of the Committee, can best be accomplished by a "think tank" operation and does not require extensive field hearings or additional supply and demand studies. The Committee believes that with such a restructuring the Commission will be able to meet the requirements of the enabling legislation and provide input for the major transportation legislative proposals which the Congress will need to consider next year.

Mr. MCFALL. Mr. Chairman, the gentleman from Mississippi (Mr. WHITTEN) is on the floor. He has in the report some language concerning the agricultural conservation program which reads:

Evidence has been submitted to the Committee that because of the severe drought in the West, the Department should allocate uncommitted funds to those areas where cost sharing practices are available to promote essential water conservation practices.

I would like to ask my friend from Mississippi, the chairman of the subcommittee (Mr. WHITTEN), this question: As I know the gentleman is aware from the work that he has done by putting this language in the report, California and the other Western States are presently experiencing a drastic drought. I notice on page 15 of the committee report the language which I have just been privileged to read has been included to direct the Department of Agriculture to allocate the uncommitted funds under the agricultural conservation program to areas where water conservation practices are feasible.

I would ask the gentleman, if I am correct, that these funds will be allocated to California and the other Western States where this drought has been so serious.

Mr. WHITTEN. May I say to my colleagues on the Committee on Appropriations it is because of the California

situation, which also applies to some degree to other States, that this language is included. The gentleman and other colleagues called this to our attention, and we studied the existing law and the existing program. As the gentleman will recall, on this agricultural conservation program for a number of years we have had extreme difficulty in getting the departments to use this program and to allocate the funds. I am told by the Department that something less than one-fourth of the funds that we have made available in the Congress have really been used. I am not thoroughly familiar with the limitations on allocation, but they do have authority to allocate between States; and within a State, they allocate within counties. I am told that they will meet this need, substantially.

In view of that, and with the urgent need to proceed, we have taken this course. It may be that the legislative committee will deal with other aspects of it, but we tried to move as rapidly as we could, and this is the way we could do it.

The CHAIRMAN. The time of the gentleman from California (Mr. McFALL) has expired.

Mr. FLOOD. Mr. Chairman, I yield 2 additional minutes to the gentleman from California (Mr. McFALL).

Mr. McFALL. Mr. Chairman, I want to thank the gentleman for his remarks in this regard. I know he is one of the best informed Members of this Congress on agricultural appropriations, and when he speaks I know he knows what he is talking about.

Mr. WHITTEN. We have checked with the Department and they have in mind what I have said.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. McFALL. I yield to the gentleman from California (Mr. SISK).

Mr. SISK. I appreciate the gentleman's yielding.

Mr. Chairman, I want to join my colleague, the gentleman from California (Mr. McFALL), in the concern he has indicated with reference to the drought. I want to compliment my colleague, the gentleman from Mississippi (Mr. WHITTEN), for his concern and for his indication in connection with the language in the report.

I have been asked by certain individuals to try to amend this bill. I am not going to ask that because, basically, I think it would amount to legislation on an appropriation bill.

I appreciate the comments the gentleman from Mississippi has made and has indicated here.

I would hope, if, in fact, there are any justifiable means for the funds in this regard, it might be considered in the other body.

Mr. WHITTEN. If the gentleman will yield, we were told that this would be done, and if it should develop that this action should be taken, we are certainly in accord with them.

Mr. YOUNG of Florida. Mr. Chairman, I yield 5 minutes to the gentlewoman from Nebraska (Mrs. SMITH).

Mrs. SMITH of Nebraska. Mr. Chairman, this supplemental for fiscal year 1977 has an interesting history. When the fiscal year 1978 Budget was submitted, the Ford administration indicated the need for a $17.6 billion supplemental for fiscal year 1977. That was on January 17 of this year.

Seventeen billion, six hundred million dollars is rather a considerable sum. It did represent 5 months experience, since the fiscal year 1977 budget was adopted, as to additional budget needs.

Roughly 6 weeks after the Carter administration took office, they had raised the total to $32.9 billion. Almost double the amount requested by President Ford.

Lacking the inner music, the inspiration to climb the highest mountain, my House colleagues did "trim" the Carter requests back to $28 billion. The taxpayers can be thankful for small favors, I suppose. Nevertheless, we still have, I am told, the largest supplemental since World War II.

And thus it is, as part of the drive to get the country moving again, our fiscal year 1977 budget deficit has taken wing and soared to $70 billion.

But, we are told, this is noninflationary because $4 billion of requests was "saved," and because many of the other programs added or increased will have a budget impact spread over a number of years.

Suppose we include in our inflation calculations the numerous public works-public service jobs programs in the Economic Stimulus bill passed on Tuesday, and the additional housing and construction grants in the bill today.

The combination of such spending programs cannot help but be inflationary. They will be competing with one another—making for a bureaucrats dream—and they will compete with private sector spending as the economy improves. The fires of more inflation have been ignited. Nor do I see any prospect of change in the fiscal year budget totals.

Now, I would like to comment on the work of the Foreign Operations Appropriations subcommittee, which I had the honor to join this year.

We recommended $441.6 million for various international programs, some $201.1 million—or 31 percent—less than requested.

Our principal cuts were in the requests—by both Presidents Ford and Carter—for replenishment of funds for three international financial institutions. Our able chairman favored additional cuts, and I would have approved these as well.

Our contributions to these institutions have increased sharply the last few years. I suspect this may very well be because the rate of lending by the International Bank and its affiliates has expanded so rapidly. In fact, lending in fiscal year 1976 alone amounted to one-sixth of the total lending during the Bank's entire existence. It was this rather reckless policy which caused our Secretary of the Treasury to "suggest" that sounder banking practices were necessary at the annual meeting in September 1975. As a result, the rate of lending was slowed and charges for so-called market loans increased to cover institutional expenses.

But more was involved. Congress should expect to have some control, at least indirectly, over the use of taxpayers funds appropriated for foreign assistance.

With the international lending institutions we have practically none. The Directors do not testify before our committee. Audits of loan accounts are not available. If Congress imposes guidelines in appropriating funds for these institutions, we find them consistently ignored. We seem to have created a highly paid international bureaucracy—average salary $57,000 per year, tax exempt—answerable to no one.

More and more funds have been going out of the soft-loan windows. These 50-year loans with only a minute service charge have been going to some OPEC countries, some middle-income countries, and to a large number of countries with repressive political regimes.

Certain countries seemed to be consistently favored. Thus, India received over 40 percent of the total funds loaned by the International Development Association in 1976. Our representative on IDA voted against such loan proposals, under the terms of the Long proviso against approving funds for a nation exploding a nuclear device but refusing to sign the Nuclear Non-Proliferation Treaty. Seven times he voted "no," and seven times the loan was approved. We have no internal control over loan decisions in such organizations.

We concluded there was only one way to impress these lending institutions: Cut their funding requests. Make it clear that lending policies must not favor one nation so openly, make it clear we were not interested in loans which propped up oppressive regimes, make it clear we were interested in genuine economic improvement. Make it clear they do not have an open pipeline to the U.S. Treasury.

I urge the Congress to sustain the cuts recommended by the Appropriations Committee.

Mr. MAHON. Mr. Chairman, I have no further requests for time on this side.

Mr. YOUNG of Florida. Mr. Chairman, I yield such time as he may consume to the distinguished gentleman from Pennsylvania (Mr. McDADE).

Mr. McDADE. Mr. Chairman, I rise in support of title VI of the bill. This is the title under the jurisdiction of the subcommittee chaired by my able colleague, the gentleman from Illinois (Mr. YATES), who has done an outstanding job. All members of that subcommittee have played an important role in shaping this section of the bill.

Mr. Chairman, While there are numerous activities of great value to all Americans contained herein, I particularly want to call to the attention of my colleagues our action with regard to a new and vitally important program, the Bicentennial Land Heritage Act.

Last year, President Ford announced a

major new initiative aimed at cleaning up and preserving our Nations green areas. Today we are appropriating funds, approved also by the Carter administration, to take the first step in implementing that program. This bill contains $283 million for land heritage; $140 million will be earmarked for the land and water conservation fund to acquire lands in the national parks, national forests, and on the lands controlled by the Fish and Wildlife Service; $93 million will go to the National Park Service to help alleviate their most pressing maintenance problems and to upgrade their existing facilities; $13 million more will help the Park Service meet its personnel needs at new and existing national parks.

This bill contains the money and the authority to enable the Park Service to have the necessary staff on hand at the newly created Valley Forge National Park in Pennsylvania. The committee took this action because of the very strong support and interest of two Pennsylvania Congressmen who have been the prime movers behind the Valley Forge Park, Congressman LARRY COUGHLIN of our committee and Congressman DICK SCHULZE in whose district the park is located. The quick action in opening and staffing Valley Forge can be attributed for the most part to their great diligence and perseverence.

Another $27 million contained here will make improvements at the Fish and Wildlife refuges across the Nation and another $10 million will be advanced to the migratory bird conservation account. This valuable program expedites the acquisition of wetlands and has proven to be a vital component in our Nation's efforts at preserving waterfowl and their habitat.

Mr. Chairman, this is merely the first installment in what will be a 5-year, $1.4 billion effort that is, is my opinion, one of the wisest moves the Congress could make in meeting the recreational and environmental preservation needs of our people and their resources. In the previous years, this committee has been in the forefront in advocating such a national commitment to our green areas. Today I know the Members of this Congress will lend their enthusiastic support of this program and to the funds contained herein.

Mr. YOUNG of Florida. Mr. Chairman, I yield 5 minutes to the gentleman from Ohio (Mr. MILLER).

Mr. MILLER of Ohio. Mr. Chairman, I would like to inform the Members of the House that I intend to offer an amendment in the amending process or as instructions in the recommital motion to reduce the expenditures in the bill by 5 percent. This amendment was offered last year to approximately 13 appropriation bills, providing the opportunity for every Member in the House to reduce at least by a small amount the expenditures that this House has approved.

I think it is very important that we understand one part of the amendment. It does not reduce mandatory spending.

Mr. Chairman, I would like to read the amendment because many times there have been misunderstandings about the amendment and what it will do. The amendment says this:

SEC. 305. Of the total budget authority provided in Title I for payments not required by law, five per centum shall be withheld from obligation and expenditure: *Provided*, that of the amount provided for each appropriation account, activity, and project, for payments not required by law, the amount withheld shall not exceed ten per centum.

Mr. Chairman, what that amounts to is this, that no one line item would be struck completely. Ten percent could be removed. The discretion would be there to reduce some of the line items, but that would leave 90 percent of that line item, and in total, it would be necessary to reduce the 5 percent for all the nonmandatory spending.

Some may ask why we would start something all over again which was not very successful last year. Where are we going and what have we done? The Secretary of the Treasury tells us that we will have an interest payment on the national debt this year of over $46 billion.

Mr. Chairman, I do not know how many Members may have conveyed that message to their constituents back home to the effect that that amounts to about $130 million a day interest on the national debt because of the expenditures that we make right here.

I think it is time that the American people become aware of this fact.

Yes, we have given this bill approximately $28 billion, and we will be driving that national debt up because we will have a deficit of some $70 billion this year.

The 5 percent will be a small amount; and believe me, there will be that much in the pipelines of most of the line items.

However, Mr. Chairman, I would like to go just a little further and express some of the things that I found out about one bill in particular, and we have about $13.1 billion in this bill for housing.

I attempted last year to find out about our housing bill, and I found out that under section 8 of our housing bill we are paying to families a maximum of $873 a month rent subsidy. That is how far we are out of line, and I am sure that this year we are paying a higher amount. I would be surprised if it did not go to $1,000 a month.

Mr. Chairman, I found out from HUD that $873 a month subsidy was being paid to families in New York City in high-rise apartments.

I think we had better take a look at the total picture as to where we are going and what we are asking our constituents back in our districts to pay so that someone else may be able to have an apartment where the Federal Government pays $873 a month subsidy.

Mr. MAHON. Mr. Chairman, I yield 5 minutes to the gentleman from Washington (Mr. DICKS).

Mr. DICKS. Mr. Chairman, I introduced an amendment accepted by the House Appropriations Committee adding $30 million to the Bureau of Reclamation's emergency revolving fund. This amount would be used this year to enable the Bureau to take immediate steps to help irrigation districts in the West lessen the impacts of drought.

The Bureau is authorized under the Emergency Fund Act of 1948 to spend funds to assure the continuous operation of irrigation and power systems because of unusual or emergency situations, including droughts.

Presently, there is only $2,356,161 in this emergency fund for use by existing contractors on reclamation projects. In view of the worst drought the West has faced since weather records were kept, this is a woefully inadequate amount.

Of the 9 million acres of irrigation served by Bureau of Reclamation projects, 4 million acres face severe water shortage. Two million acres are critically short of supply. Of 16 million people receiving municipal and industrial water from reclamation projects, 2 million will be adversely affected by drought.

I have been advised that the Bureau has already made a preliminary survey of the irrigation districts it serves and listed 20 projects where districts are up to 60 percent deficient in water supply to be in need of emergency work funded by the Emergency Fund Act. These projects are located in California, Oregon, Washington, Idaho, Montana, Utah, Colorado, Nebraska, Kansas, and Texas.

The Bureau identifies four categories of work it could perform using the additional $30 million this year in its emergency fund: drilling wells and supplying equipment, $12 million; furnishing and installing pumps, $12 million; lining canals and laterals, $5 million and construction of diversion structures, $1 million. Specifically, the Bureau would fund the drilling of wells, installation of pumps on drains and rivers, and pipelines, construction of canal lining to conserve and deliver water, installation of pumps to release water from the dead storage of reservoirs and lakes, construction of diversion structures in existing streams and provision of technical assistance to irrigation districts.

Mr. Chairman, this additional money is not another expenditure applied to regular reclamation operation and maintenance, but beefs up a badly needed reimbursable emergency fund. When an irrigation district formally requests the Bureau to perform an emergency service, it is done right away. While work is being done, the Bureau negotiates a contract for repayment of all funds expended under the Emergency Fund Act. Repayments are made under the same conditions of existing contracts and are scheduled in accordance with a district's ability to repay over a carefully negotiated time frame.

The need for additional Bureau of Reclamation emergency services is greater than any year in memory.

Without exaggeration, we in the Northwest are facing the driest year we have ever known. The Washington State Soil Conservation Service reports that

Washington's snowpack was 83 percent below normal on March 1 when 80 to 85 percent of the year's water supply should already have been on the ground. Our irrigation districts depend almost solely on the runoff we get from normal snow-fed streamflow.

We have had some rain in the past few weeks in the Northwest, but it has had the effect of a raindrop on a hot griddle. The soil under the snow we do have is very dry, and much of the rain we get this spring will restore soil moisture; we will get very little runoff to fill our reservoirs.

The Bureau says that water supply for irrigation this year will range from near-nothing to near-normal depending on storage carryover from last year and priority of water rights. The Bureau expects most irrigation reservoirs to be emptied by October 1, assuming the drought has ended and that normal weather conditions exist from now until July 1. Other estimates show that many of our reservoirs will be dry by mid-July unless we get a rain of Biblical proportions. The Bureau warns that this year's carryover supply cannot deteriorate much further for most projects.

Gen. Wesley Peel of the Army Corps of Engineers, North Pacific Division, says the main Columbia Reservoir system is about half full. Depending on the precipitation we are likely to get, the anticipated Columbia Reservoir refill will vary from 75 to 90 percent of full pool this summer, but will not refill unless we have a very unusual spring and summer rainfall. Nothing short of a miracle will turn 1977 into a normal water year. We expect the worst.

Vail Schermerhorn, chief hydrologist at the National Weather Service River Forecast Center in Portland, predicts the lowest Columbia River runoff in the nearly 100 years records have been kept. The lowest recorded runoff occurred in 1944 with 60.6 million acre-feet of flow, or 55 percent of average. This year's prediction is 57 million acre-feet of flow, or 51 percent of normal.

The impacts of a drought of this intensity will be staggering unless we begin at once to assure minimum water supply. The loss of the agricultural share of our State GNP alone would be the worst in decades.

We face a $425 to $550 million crop loss this year, and in my State it is estimated that every dollar a farmer earns is turned over seven times in our economy.

The Yakima watershed in south central Washington could be devastated by drought this year without attempts to provide a continuous supply to priority users.

The five reservoirs that serve the Yakima Valley have already been drawn down to 78 percent of their active capacity; 132,000 acres out of the 462,000 acres the Yakima project serves may get only 7 percent of normal supply this year. The entire watershed will be up to 55 percent water deficient without substantial rainfall. Under present allocations, Kittitas County and the Roza Irrigation District may get no water at all.

Roza's manager Randy Jackson estimates a loss of $56.9 million this year if the district does not get at least 150,000 acre-feet by mid-May when farmers make firm and final planting decisions.

Crop losses in Yakima County could be as high as $92 million. Drought-related job losses in the county could run as high as 20,000 at a cost of $1.4 billion in lost wages.

Losses to perennial growers would be immense. Apple, peach, cherry, and other fruit-bearing orchards in the Roza district are valued at $5,000 to $6,000 an acre on land valued at $1,800 to $2,000 an acre. This represents immediate drought losses if nothing is done to restore minimum water supply.

To replace this initial loss, several thousands per acre would be required to replant and nurse orchards to maturity over a period of up to 10 years; and 10 years of production loss adds another $5,000 per acre.

The effect of such losses border on the incalculable. When a box of apples leaves a farm, it costs $2 or $3. When it leaves the packer it costs $12 to $14. When this box leaves the grocer by sale of individual apples, the value goes up to $20. When such irreplaceable perennials as apples, peaches, plums, apricots, and pears are destroyed by drought, the losses can multiply 10 times.

If we fail to get enough water, we will lose a whole year's mint crop. Mint is a peculiar crop. It can be moved about and replanted in different soils as long as the roots still function. To protect this valuable crop, growers will move it to moisture soils when drought threatens. Half the mint growers in the Roza District have already moved out anticipating no water this year.

The Yakima watershed faces total losses this year of its sugar beet, sweet and savage corn, alfalfa seed, asparagus, grape and bean crops. Drought could also wipe out a year's supply of hops. We are the Nation's major suppliers of hops used to ferment and add flavor to beer.

Without enough water, the watershed will lose up to 50 percent of its hard-to-replace cattle, 50 percent of its timber and most of its dryland production.

To supply perennial growers in the Yakima watershed with enough water to get through this drought, we will need roughly 170,000 acre feet by June. The Bureau of Reclamation says with additional funding it can meet this demand by pumping all the dead storage out of two adjacent lakes. If this amount of water is properly allocated, it would reduce losses tremendously; but we need the water now.

In years of drought, we actually need more water than we do in normal years just to get things started. Heavier applications of water are required to get soil in tillable condition, or at least in a condition where fall plantings will not be lost. This year will be no different.

At present, all the reservoirs in the Yakima watershed would have to be discharged first. If we had the pumps in place by then, the watershed would be assured of a continuing and adequate supply.

I urge the House to support this budget amendment.

Mr. YOUNG of Florida. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Illinois (Mr. FINDLEY).

Mr. FINDLEY. Mr. Chairman, I have asked for this time in order to raise questions about two parts of the supplemental. First of all in the foreign operation supplemental on page 41 there is a provision for $4½ million for the payment to the Foreign Service retirement and disability fund.

I know a number of the Members have become concerned about the enormous growth of Federal retirement liability and I am wondering if anyone here today can tell me what the annual outlay for retirement to the Foreign Service is? Does anyone happen to have that figure readily at hand? I assume that $4½ million is only a portion of it. Is that a safe assumption?

Mr. LONG of Maryland. Mr. Chairman, if the gentleman from Illinois will yield, let me state that the Agency for International Development contributes $22 million per year to the retirement and disability fund but that does not include contributions made by the Department of State to the same fund.

Mr. FINDLEY. That is AID personnel retirement?

Mr. LONG of Maryland. Yes, that is correct and the annual contribution is $22 million.

Mr. FINDLEY. It is $22 million?

Mr. LONG of Maryland. That is correct.

Mr. FINDLEY. Can the gentleman tell us what the budget for salaries for AID for the same period will be?

Mr. LONG of Maryland. I can give the gentleman from Illinois a ball park figure. The operating expenses for AID run about $200 million per year, which includes salaries, travel, rent, and other services.

Mr. FINDLEY. But the gentleman does not know what the salary level is at the present time?

Mr. LONG of Maryland. The salary figure by itself I do not know. We can put that figure in the RECORD later if the gentleman from Illinois wishes.

The request for AID-operating expenses in fiscal year 1978 includes about $130 million for personnel compensation.

Mr. FINDLEY. That would be very helpful. The reason I mentioned this is because I have long viewed Federal retirement as sort of an economic time bomb that is going to explode one of these days. I learned during consideration of the 1 percent kicker in the last Congress that Foreign Service officers can retire at about 50 or 55 years of age, with a life expectancy of some 25 or 30 years, and by the time they die, they can be expected to be drawing as much as $100,000 in retirement pay. That has been adjusted considerably by the change from the 1-percent kicker to the semiannual adjustment in retirement pay, but it still leaves an enormous problem with which I think the Congress should deal.

I would like to ask a question or two

concerning the appropriations section for agriculture. There is an item of a $750,000 increase in the limitation on administrative expenses of the Federal Crop Insurance Corporation. The language of the report indicates to me that this $750,000 is in effect a loan, and it will be paid by increased premiums in time. Is that correct, I will ask the gentleman from Mississippi?

Mr. WHITTEN. If the gentleman will yield, that is correct. This goes a little beyond the gentleman's question, but with the drought in the Western States, and the flood damage and short crop in the Southern States, the Corporation has suffered some tremendous losses this year. Because of the heavy losses there is an administrative costs problem because of all the claims that have to be paid. So it has increased the workload tremendously.

May I say further that with regard to crop insurance, through the years I have always offered to help the insurance companies in case they wish to take over this responsibility. We have compared this approach with the approach we have in the disaster payment area, and crop insurance is by far the most economical. I will say we also have pending an additional $50 million in capital needs which will require authorization. So the administrative funds are there because of the workload. They have to adjust all of these claims. The money is going to be necessary, and to keep it there I think is the most economic way to try and pay for the damage.

Mr. FINDLEY. I share the gentleman's support for Federal crop insurance. I would like to see it expanded I do think the premiums ought to cover the losses, and I do not think we should see the Federal contribution for administrative expenses expanded.

Mr. WHITTEN. If the gentleman will yield further, I can agree with the gentlemen's desire, because I have the same desire. But may I say that we have an extremely difficult problem in getting enough people to sign up for it to be actuarially sound. In my opinion, we have to get enough folks to sign up in a given county to make the program actuarially sound. If we tried to raise the rates to reflect all the administrative costs, the rates themselves would be so high that a whole lot of folks would not sign for the insurance. Then we would lose the program.

Mr. FINDLEY. If the gentleman will permit me, I would like to ask a question about the food stamp program. As I read the committee report, it suggests that 17.7 million U.S. citizens are benefiting from food stamps currently. Is that correct?

Mr. WHITTEN. That was the testimony before the committee.

Mr. FINDLEY. That figure is not the number of households but the number of beneficiaries; is that correct?

Mr. WHITTEN. That is my recollection from the testimony.

Mr. FINDLEY. The provision in this supplemental brings the total outlay over $5 billion a year, which is quite a growth from the infant we saw several years back. I am intrigued with the last paragraph of the section on food stamps in which it is said:

> Therefore, a supplemental appropriation of $720,000,000 is recommended to finance the increased bonus cost until reform is effected, . . .

I wonder if the gentleman can give us any information on when we can expect reform and from whence that reform may come.

Mr. WHITTEN. May I say I have been fortunate in having a subcommittee that was pretty much in accord with almost everything that we have done. We did the best we could. But apparently reform now depends upon the legislative Committee on Agriculture. To review briefly, our subcommittee pointed out that the past Secretary of Agriculture had the authority under the law to make corrections in the food stamp program. He made those corrections, after we pointed that out. Then the Federal court restrained him from carrying them into effect. The new Secretary has withdrawn those regulations. As it now stands we are dependent upon legislation recommended by the legislative Committee on Agriculture, of which we are not members, passing the bill and getting it to the White House and getting it signed. So we are dependent on passage of that law.

Mr. YOUNG of Florida. Mr. Chairman, I yield such time as he may consume to the gentleman from Massachusetts (Mr. CONTE).

Mr. CONTE. Mr. Chairman, I rise in support of this bill providing supplemental appropriations for fiscal year 1977. There are a number of very important programs provided for in this bill, and I would like to highlight just a few of them.

The bill includes $3 million for home health services, which will allow for the expansion of the number of home health agencies eligible for medicare certification. This program, which provides an effective alternative to institutionalization for the aging, has proven its worth in a variety of areas.

This bill also provides over $40.1 million for emergency medical services and $6 million for emergency medical training, both of which have had dramatic effects in reducing the number of deaths due to traumatic injuries and burns, and have provided much-needed assistance to our towns and States in the provision of emergency medical equipment and services.

I was pleased that an additional $7.5 million was provided for the National Institute of Arthritis, Metabolism, and Digestive Diseases. Although much more than this could be effectively used, this amount will permit significant support for such research areas as cystic fibrosis, Cooley's anemia, skin diseases, and blood disorders.

For mental health research, we provided an additional $2 million for research on elderly mental health and mental illness. And at the appropriate time, I may offer an amendment to provide for a much-needed increase in funding for the community mental health centers program.

Under "health resources," we have provided for a variety of health manpower programs which were recently reauthorized during the last Congress. Included in that amount is funding for the development of two schools of veterinary medicine and for the expansion of a third. This is a valuable investment in our Nation's health, as there is presently a shortage of veterinarians; and the economic and health implications of such a shortage calls out for the solutions which are provided for in this bill.

Finally, we have provided slightly over $3.2 billion for various higher education programs—programs that will enable deserving students to have access to higher education regardless of their family's wealth.

In the transportation section of this bill, we have provided $10 million for the Coast Guard's pollution fund, an item which is all the more important and necessary because of the recent rash of oil spills and tanker accidents. And we have provided $25 million for Amtrak in conjunction with its purchase of the Northeast Corridor.

Mr. Chairman, this is a needed bill and a responsible bill, and I urge its approval.

Mr. YOUNG of Florida. Mr. Chairman, I yield 2 minutes to the distinguished gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. I thank the distinguished gentleman for yielding.

Mr. Chairman, I would like to propose a question either to the gentleman from Texas or an appropriate member of the committee who might wish to respond.

I refer the chairman to page 29 of the bill, which deals with the legislative branch appropriations. Let me put to you the question that has been raised with me. There appears there a paragraph, lines 17 to 20, which in effect allows the Committee on Appropriations, acting by majority vote, I assume, to approve the transfer of legislative appropriation funds and the phrase used is "among accounts." It has been suggested to me by some who have looked into this matter that while the committee claims that there is absolutely no money in this appropriation bill to implement the congressional pay raises which took effect in February as a result of the Commission recommendation, that the language in the bill will permit the use of other funds to finance those pay increases for Members of Congress. Perhaps using, if not the funds in this bill, then by transference among the various House accounts. I would like to have a response or explanation for the concern that I described.

Mr. SHIPLEY. Mr. Chairman, if the gentleman will yield, there is not any funding in this bill for the increased pay raise which became effective as of March 1.

With regard to the lines 17 through 20 of the bill, as I understand it this could be subject to a point of order. There is no authorization for this language.

Mr. BAUMAN. It may well be, I would say to the gentleman.

Mr. SHIPLEY. Yes. it may well be. Although there is no money in here for the raise per se, of course the gentleman knows very well that we will have to face this issue at a later time when we have the regular legislative branch appropriation bill for 1978 before us and we will have also another opportunity during another supplemental appropriations bill for 1977.

The CHAIRMAN. The time of the gentleman from Maryland has expired.

Mr. YOUNG of Florida. I yield the gentleman 2 additional minutes.

Mr. SHIPLEY. Mr. Chairman, if the gentleman from Maryland will yield further, as I just said we will have another chance in another supplemental appropriation because we will, as I understand it, need additional moneys in the compensation of Members appropriation accounts sometime in August, because we will have exhausted all of our funds currently available for the Members of Congress. Does that answer the gentleman?

Mr. BAUMAN. I think the gentleman has restated what I already knew to be the committee's position, that there is no money involved in this bill to finance the congressional pay raise. My question is whether or not this language would permit the transference of other funds either under this bill or under those previously passed to meet the increased cost of the pay raises. It would, would it not?

Mr. SHIPLEY. In my opinion I would say to the gentleman it would not.

Mr. BAUMAN. However potentially it could if the Appropriations Committee approved that; could it not?

Mr. SHIPLEY. I do not believe they would.

Mr. BAUMAN. But they could. That is what I am trying to ascertain.

Mr. SHIPLEY. I would not say to the gentleman that it could. I do not believe there would be a transfer other than in the allowances and expenses account which does not include the compensation of Members.

Mr. BAUMAN. I would say to the gentleman, it appears to me the language is plain, that a majority of the Appropriations Committee could act in a manner to allow the transference among accounts of moneys that were appropriated here or previously to satisfy the obligations placed against these accounts for the pay raise that went through in February. And while that might not happen and maybe the gentleman would not support it, certainly a distinct possibility does exist.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, as I interpret this section, this transferability of accounts is only limited to this particular section which does not include any money for our pay raise.

Mr. BAUMAN. It does not say it is limited to just this section or this bill.

Mr. CONTE. "Within this appropriation," and within this appropriation there is no money for the pay raise.

Mr. BAUMAN. If the gentleman will read the language carefully he will see that the transference sought to be effected is among all House accounts.

Mr. CONTE. I will.

Mr. BAUMAN. I would say we differ on interpretation.

Mr. YOUNG of Florida. Mr. Chairman, I have no further requests for time.

Mr. MAHON. Mr. Chairman, I yield such time as he may consume to the gentleman from Maryland (Mr. LONG).

Mr. LONG of Maryland. Mr. Chairman, the committee recommends a total appropriation in the foreign operations chapter of the supplemental bill of $441,555,000, which is a reduction of $201,100,000 below the budget requests. In addition, $3,431,000 in budget authority and $225,000 in administrative expense limitations are recommended in title II of the bill to cover increased pay costs.

I shall summarize briefly the details of the specific subcommittee recommendations but I recommend that each Member review pages 40 through 47 of the supplemental report for further background information.

We recommend an appropriation of $31,000,000 for "International organizations and programs" of which $28,000,000 would be for the UN Relief and Works Agency for Palestine Refugees to help alleviate its critical financial situation and $3,000,000 would be for the International Atomic Energy Agency to strengthen its safeguards program.

We recommend an appropriation of $4,570,000 for payment to the Foreign Service retirement and disability fund to pay the unfunded liability of AID foreign service employees which is required by law; $30,000,000 is recommended to be provided to the Israel-United States Binational Industrial Research and Development Foundation. The foundation is designed to promote and support joint nondefense industrial research and development activities of mutual benefit to both countries.

The subcommittee recommends an appropriation of $15,000,000 in military assistance to Portugal which would be used to strengthen its armed forces enabling her to assume a stronger role in NATO but we denied the $67,500,000 requested in drawdown authority to provide for immediate military assistance.

We have included language in the bill which would allow the Peace Corps an additional $2,077,000 in program support costs to provide support for the volunteer level currently planned in fiscal year 1977. This increase in support funds will not require an appropriation of funds and it would allow the Peace Corps to absorb pay costs of $667,000 previously requested.

The amount of $11,325,000 is recommended for the "migration and refugee assistance program" of which $8,325,000 would be for the care, maintenance and transportation assistance of refugees from the Soviet Union resettling in countries other than Israel and $3,000,000 would be for reception and placement of refugees from the Soviet Union and other Eastern European countries in the United States. This is a reduction of $4,400,000 below the request.

The subcommittee also recommends $3,660,000 for the U.S. Emergency Refugee and Migration Assistance Fund to finance unforeseen emergency refugee situations in fiscal year 1977. This is a reduction of $2,700,000.

The subcommittee has recommended an appropriation of $346,000,000 to finance U.S. contributions to three international financial institutions; namely, the Asian Development Fund—$15,000,000, the Inter-American Development Bank—$276,000,000, and the International Development Association—$55,000,000. This represents a total reduction of $194,000,000 below the budget requests.

The entire amounts requested by these institutions were to restore reductions made by Congress in past requests.

That concludes my brief summation of our recommendations.

Mr. CONTE. Mr. Chairman, Public Law 94–484 authorizes up to $103 million for the construction of health teaching facilities, construction, including schools of veterinary medicine. That law gave priority to regional schools in this category.

The committee has to provide $25 million in this supplemental for three schools: A New England Regional Veterinary School to be located at Tufts University in Boston; a Pacific Northwest Regional Veterinary School to be located at Washington State University; and the expansion of existing veterinary facilities at the University of Pennsylvania. While I cannot speak for the two latter schools, I would like to outline why the reasons that $10 million is needed by Tufts and, therefore, why the requested total of $25 million should be approved.

First of all, there is a national shortage of veterinarians. At present, there are only 21 schools of veterinary medicine in the United States. In order to keep pace with the demand, the number of veterinarians in this country would have to double by 1980. The National Academy of Sciences concluded that the existing schools cannot do the job, and that by 1980 there will be a shortage of some 8,000 veterinarians nationally.

In New England, the shortage is even more acute. Because there is no veterinary school in New England, the number of students from New England who can attend veterinary school is sharply limited to contractual arrangements between the New England States and veterinary schools outside of the region. Although the national acceptance rate for veterinary schools is 1 in 8 or 9—compared to 1 in 3 for medical schools—for New England students the acceptance rate is 1 in 50.

Largely as a consequence of the fact that less than 30 New England students per year can be accepted into veterinary school, it is estimated that the region will have a shortage of 1,064 veterinarians by 1980.

It is important to note that veterinarians aren't just dog and cat doctors. Some 220 diseases are known to be transmitted

from animals to man, including such things as swine flu, equine encephalitis, yellow fever, and sleeping sickness. Veterinarians have a major impact in safeguarding the health and productivity of food-producing livestock and fisheries, caring for and protecting laboratory animals for research, looking after the health of wild animals, and contributing to the conquest of human and animal diseases.

Specialized problems for New England which would be dealt with at the New England Veterinary School at Tufts include aquaculture, equine medicine, nutrition, public health, laboratory animal medicine, and toxicology.

The Tufts University proposal is truly regional in design and scope, representing a close linkage between an outstanding university with existing medical facilities and the six New England States and land-grant universities. Plans call for the basic medicine facilities to be located at Tufts, with animal clinical facilities affiliated with the land-grant universities. Students would do their basic sience work at Tufts, then rotate through the clinical facilities, each of which would specialize in areas of particular importance to that State. Examples would be swine in Massachusetts, cattle in Connecticut and Vermont, horses in New Hampshire, and poultry and aquatic animals in Maine and Rhode Island.

The $10 million in Federal construction funding requested by Tufts is necessary to begin work as soon as final planning is complete this spring. I urge this committee's approval of the full amount.

Mr. SEBELIUS. Mr. Chairman, I want to lend my support to the funds proposed in this bill for the initial implementation of the Pennsylvania Avenue Development Corporation. The Congress has adopted the plan for the redevelopment of Pennsylvania Avenue, and all that stands in the way of getting on with the job is the enactment of appropriations.

Mr. Chairman, I have had fairly lengthy involvement with the substance of this matter over a period of years as it was scrutinized by the Interior authorizing committee, and I feel that this is a most worthy project which must go forward. For any Member who may be at all apprehensive or undecided, I would point out that existing law permits only a portion of the total anticipated cost of the project to be spent. The idea is for the Congress to be able to evaluate the first stages of the project as it proceeds. Further commitment to follow through farther cannot occur until further authorization to do so, also supported by appropriations, is approved by the Congress. Hence, I feel very comfortable that we in the Congress yet retain tight control and oversight over the progress and wisdom of this entire project, and I urge the support of this part of the appropriations bill as it now stands.

Mr. DRINAN. Mr. Chairman, included in this supplemental appropriations request is $22 million for the Bureau of Prisons which will be used to begin construction of a youth offender facility at Lake Placid, N.Y.—site of the 1980 Olympic games. The Bureau of Prisons will construct the athletes' housing facility which will later be converted to a Federal facility for 500 youth offenders.

I fully appreciate the need for an afteruse plan since this construction represents a substantial investment of taxpayers' money. Yet, it is of great concern to me that this decision for afteruse was made without the benefit of full discussion. Although we have reached the sorry state wherein we must provide for our athletes' safety, a seemingly logical conversion of this facility to a correctional institution warrants further study and reflection.

In 1975 the Subcommittee on Courts, Civil Liberties, and the Administration of Justice, of which I am a member, held public oversight hearings on the Bureau of Prisons' construction policy and plans. Many highly respected organizations, including the National Council on Crime and Delinquency and the Task Force on Corrections of the National Advisory Commission on Criminal Justice Standards and Goals, have urged the Congress to halt prison construction until we can make intelligent decisions about what works, what is most cost-effective, and what actions are in our own long-term interest.

One major issue which emerges from future prison construction discussion is the location of facilities. When the Director of the Bureau of Prisons testified before the subcommittee in 1975 he stated:

> Our philosophy is that new institutions should be as close as we can humanly get them to where the offenders are from and where we can find staff and other resources.

The subcommittee was aware of the Bureau's search for a youth offender site to service the northeast region and it was expected that efforts would focus on large metropolitan areas. It was thus most disturbing to me to learn of the plan for Lake Placid. The inmates for this facility will come from New York City which is 300 miles away as well as the metropolitan areas of Boston, Baltimore, Philadelphia, and Washington, D.C., which represent an even greater distance.

It is well recognized and substantiated that in working with youth offenders we should maximize familial and community ties which may constitute the single most effective link to a law-abiding life. The Task Force on Corrections observed that "the goal of youth institutions is reduction of criminal behavior and reintegration into society must be made explicit." The Director of the Bureau of Prisons reflected this attitude when he told the subcommittee that—

> We feel the younger offender is the one whom we ought to invest the maximum opportunities for change. If we can somehow intervene at the earlier age, and help bring about a change in behavior, we can save the taxpayer and criminal justice system a great deal of expense in the years ahead.

I have no doubt that the Lake Placid facility will be adequate in design but there is more to incarceration than the physical structure of the institution. The failure of major youth institutions to reduce crime has been noted. The younger the person when entering the institution, the longer he is institutionalized and the farther he progresses into the criminal justice system, the greater his chance of failure. Isolation is a vital ingredient of this failure. Youths, often alienated already, find themselves in institutions which have no identify with the communities they left or to which they will return.

The ideal in corrections philosophy today is to operate the institution as a resource to meet specific needs without removing responsibility for the offender from the community. This is also a cost-effective approach. Besides the initial expense, the cost of maintaining prisons is constantly rising. The only way we will successfully curtail this growing expenditure is to develop workable alternatives. We still do not know what works and it seems rather irresponsible to continue constructing new institutions which we will be committed to support without the benefit of careful planning.

The location of this facility in the Lake Placid area may prove to interfere with goals of incarceration. We already know that it is difficult to recruit professional staff for these remote areas. Work or study release programs can only exist if there are contractual resources available in the community where the institution is located. As far as I know we have no idea what educational, vocational and community services or resources exist in the Lake Placid area which might be available to the institution. I must question the judgment for this facility in the absence of a clear statement of whatever planning went into the designation.

The Task Force on Corrections has outlined the disadvantages of continuing to construct correctional institutions in sparsely populated areas as follows:

1. The impossibility of using urban academic and social services or medical and psychiatric resources of the city.
2. The difficulty of recruiting staff members—teachers, psychologists, sociologists, social workers, researchers, nurses, dentists and physicians to work in rural areas.
3. The prolonged interruption of offender's contacts with friends and relatives which are important to the reintegration process.
4. The absence of meaningful work or study release programs.
5. Most importantly the consignment of corrections to the status of a divided house dominated by rural white guards and administrators unable to understand or communicate with Black, Chicano, Puerto Rican and other urban minorities.

In the early days of America's prison history, penitentiaries were built where the people were. The selection of rural areas in the last century reflected the fact that this Nation was predominantly farm country. That has changed and the majority of our prison population is from urban areas.

In most all of our human services programs we have moved or are moving away from the dependence on congregate rural institutions. Mental institutions have yielded to the community mental health movement, orphanages to foster homes and other child assistance programs, and so forth. This happens because isolated institutions proved un-

successful, expensive, and even counterproductive as responses to specific human problems. Changes came about because better treatment methods were developed making the isolated institution largely obsolete and treatment in the natural community setting preferable.

In the spring we will again be voting on appropriations for further prison construction. I urge my colleagues to give careful attention to further prison construction plans. Congressman ROBERT KASTENMEIER, chairman of the Subcommittee on Courts, Civil Liberties, and the Administration of Justice, noted at the start of the public oversight hearings that—

> If the Bureau of Prisons is to be mandated to build new prisons, this construction must be considered as part of a well-documented, publicly developed long-range plan.

It is irresponsible to do otherwise.

Mr. BROWN of California. Mr. Chairman, I will support the amendment by Mr. OBEY, when it is offered. The question before the House is a simple one: Will the Congress support economic relief for the poor and very low-income people of this Nation who have been hit by a weather disaster? It is quite simply a matter of recognizing that the record cold spell of this past winter was as much a disaster as a flood or a drought. The impact of the cold weather was felt by all to be sure, but the impact fell disproportionately upon the poor and very low income residents of this Nation. As a matter of equity, and as a test of how this Congress will deal with the equity issue in other energy debates. I urge my colleagues to support the Obey amendment. Energy prices are going to be rising, with or without weather disasters. These price increases may be the best way to promote energy conservation with all its long-run benefits. We are going to have to be very careful, however, that the needs of those in lower and middle income brackets, or those hit by temporary economic dislocations, are not ignored as the gradual increases take place. The Obey amendment is the kind of special attention which may be needed as we work on an effective and comprehensive national energy policy.

Mr. HANLEY. Mr. Chairman, the recent cold weather crisis throughout the Nation is easily lost mind of on a day such as this in sun-basking Washington. Even as breezes carry scents of blossoming cherry trees on the Capitol Grounds, the chill winds of March sweep our northern neighbors with a crisp reminder that winter fuel bills are yet to be received. The understanding of this very real—and to some of our citizens very stark—reality should be foremost in our minds as we decide the fate of this appropriations measure today.

Contained in this supplemental appropriation is a request for funding for the Community Services Administration in the amount of $82.5 million for the continuation of its home weatherization program for the balance of this fiscal year. This is a most significant program in my home area of central New York and I would commend its emulation to other areas where it has not yet been demonstrated. I am advised that to date there have been 219 homes in Onondaga County, Madison and Oswego Counties which have been winterized. In addition, 395 applications are pending for work this year and another 1,500 are eligible for the program, but are not likely to be winterized because funding will have disappeared.

Now, we have heard some criticism of the program as overgenerous or as a ripoff with very little help going to the poor or the elderly who desperately need this type of program. Perhaps there have been abuses in the program; maybe there are shortcomings in its administration and failure to supervise work on a fair and aboveboard basis. But I submit that such instances as may have occurred are the result of personal culpability, not program irrelevance. There is concern, too, that the cost of the program is higher than might be the case if there were no Government-sponsored employment involved in the program. And there is the charge that private contractors could do the work more cheaply.

The experience of the program as run by the PEACE, Inc., community action agency in my home district does not bear out any of the horror stories which have been surfacing about this program. Contrarily, the PEACE performance demonstrates what can be done with this two-pronged program of weatherization and employment opportunity. Men and women who are skilled but jobless are given work as installation crews for weatherization projects targeted at lower income, fixed income persons owning their own homes or renting in eligible apartment buildings.

The average project cost totaled $513.09—$147.35 for materials and $365.74 for labor. This is competitive with, and most times, lower than, the price which would be charged by private parties. Thus, if we can agree that it is desirable to insulate the homes of low-income residents at reasonable costs in an effort to make their homes more habitable and healthy and energy saving; and if we can agree that it is desirable to put jobless people who are willing to work into a meaningful jobs program, then we can endorse this portion of the supplemental appropriation bill with confidence that it can accomplish its mission.

It should be noted also that the CSA is a good instrumentality for this program, since it has the widest experience in the field of winterization and has a special focus on the two sectors of the population needing aid—the low-income householder and the chronically unemployed who seek to develop meaningful skills.

In the effort which has culminated in this appropriation request, there has been yeoman work done by the president of the New York State CAP Directors Association, Mr. Glenn Brown, who is also executive director of the PEACE, Inc. CAP in Onondaga County, N.Y. The generation of a statewide and regional consciousness was his most valuable contribution to the salvaging of what could have been a doomed program for the balance of this year.

For this reason, Mr. Chairman, I would like to insert at the conclusion of my remarks background information and project outlines which may prove helpful in bringing understanding of the mission which this effort has accomplished in my home area. Its success may breed emulation.

In addition, our consideration of the suggestion of Mr. OBEY for the inclusion of $200 million for a fuel cost assistance program aimed at citizens who are faced with abnormally high home heating and utility costs bears some attention. The focus on low-income persons who can receive up to $250 this year to help pay fuel bills again reminds us of the personal disasters which our many fixed-income senior citizens face as costs rise despite the conscientious efforts at conservation practiced by many people. While there are serious questions about the administration of such a program and its application to only those who have presently outstanding fuel bills, there seems to be merit in aiding persons who would be pauperized further by large fuel charges. At any rate, I commend your attention to the anticipated remarks of the gentleman from Wisconsin.

[From the office of the Executive Director Glenn W. Brown, People's Equal Action and Community Effort, Inc., Syracuse, N.Y.]

FEBRUARY 18, 1977.

ENERGY CONSERVATION PROGRAMS

P.E.A.C.E., Inc. has been awarded a Community Services Administration Grant for $86,455. in support of Project H.E.A.T. (Heat, Education and Advocacy Team). This program is a comprehensive effort by P.E.A.C.E., Inc. to aid no and low-income persons in dealing with the rising cost of home heating. This CSA Grant will permit P.E.A.C.E., Inc. to continue its weatherization efforts in Onondaga, Madison, and Oswego Counties in 1977.

The CSA Grant will support an energy conservation project which includes the following objectives:

1. Provide 150 low-income families, individuals and elderly with necessary home maintenance services which will weatherize and winterize homes in Onondaga, Oswego and Madison Counties.
2. Provide approximately 100 emergency grants of up to $50 to families and elderly persons who face utility shut-offs or who lack heating fuel.
3. Negotiate with fuel companies and low-income consumers, when necessary, in order to restore heat, or to keep the heat on, and to develop an appropriate payment schedule for paying back utility bills.
4. Provide budget counseling for clients.
5. Make cords of wood available to low-income families who heat their homes through wood burning stoves, fireplaces, etc.
6. Provide information and training on energy conservation methods and techniques through workshops, brochures, news articles, public service announcements, etc.
7. Advocate for consumer needs and for increased consumer protection in meetings, public hearings and through newsletters.

P.E.A.C.E., Inc., the Community Action Agency for Syracuse and Onondaga County, has been operating a number of energy-related programs for the past three years. Among these programs there is a vast amount of human, equipment, and program resources; however, in the past, not all of our energy programs were coordinated by one staff person.

With the recommendation of Samuel R. Martinez, the former Director of the Community Services Administration, P.E.A.C.E., Inc. created an Energy Coordinator position. The Energy Coordinator will assume responsibility for all energy programs at the local level. This new component will better coordinate all of the existing energy-related programs and will enable P.E.A.C.E., Inc. to better utilize future funding possibilities and expand our energy programs.

PROJECT H.E.A.T. ACTIVITIES

P.E.A.C.E., Inc. has established five work crews to carry out the home weatherization activities in Onondaga, Oswego, and Madison Counties. These crews reduce or stop cold air infiltration, repair broken windows and doors, caulk joints and cracks, provide insulation, install weatherstripping, storm windows and doors. These home repairs are carried out to insure that the dwelling is warm as well as energy conserving during summer and winter months.

Project H.E.A.T also distributes firewood to families who use wood as a primary source of heat. This wood is donated by the New York State Department of Transportation and by local tree service firms. The firewood is free of charge to those individuals who meet the guideline.

Fuel vouchers are distributed during the fall, winter and spring months through the Project H.E.A.T. Grant from CSA. During 1976, 130 Project H.E.A.T. Grants were given out totaling over $6,300 to families and elderly persons who either faced imminent utility shut-offs; or were able to purchase needed oil from fuel companies.

The P.E.A.C.E., Inc. Consumer Information Service Center works closely with the Project H.E.A.T. staff and the Energy Coordinator in handling energy problems and investigating complaints concerning utility companies. In many instances P.E.A.C.E., Inc. staff negotiated with Niagara Mohawk to turn utilities back on, or develop a realistic payment schedule for the clients.

As the Community Action Agency of Syracuse and Onondaga County, P.E.A.C.E., Inc. has daily contact with the low and no-income residents of the City and County who are seeking much needed assistance from the various energy programs sponsored by P.E.A.C.E., Inc. The staff have found the current energy crisis to be devastating to the low/no income population.

Whenever any type of an energy crisis exists, contrived or not, the poor and elderly suffer a disproportionate share of the pains of energy shortage. Individuals on fixed incomes have an especially difficult time absorbing any increased costs of energy.

P.E.A.C.E., Inc. currently operates programs involving energy grants, and home weatherization, which soften the blow of this energy crisis; however, the Agency is continually searching for other resources in order to alleviate the suffering of the people we serve.

Additionally, P.E.A.C.E., Inc., along with other N.Y.S. Community Action Agencies, has been developing Congressional support for the continuation of Title X of the Public Works and Economic Development Act of 1965, as amended. The last Congress passed authorization to continue Title X; however, as yet no appropriations have been made.

For additional information on Project H.E.A.T., call 478–4146 or 487–4147 or visit our office which is located at 202–204 South Beech Street, Syracuse, New York 13210.

P.E.A.C.E., Inc. Year-End Report—Project H.E.A.T.—1976–77

I. Number of Structures Weatherized:
A. Onondaga—
1. City—89.
2. County—61.
B. Madison—32.
C. Oswego—37.
D. Total—220.
II. Total of Intakes:
A. Onondaga—324.
B. Madison—35.
C. Oswego—37.
D. Total—395.
III. Total Cost in Tri-County Area:
A. Total for Onondaga County—$22,676.17.
1. City of Syracuse—$13,819.22.
2. Onondaga—$8,856.95.
B. Madison County—$4,152.72.
C. Oswego County—$5,960.87.
IV. Average Cost per Home (material only):
A. Onondaga County—$151.17.
B. Madison County—$129.77.
C. Oswego County—$161.10.
V. Number of Cords of Wood Distributed—86.
A. Value of Wood—$4,300.
*VI. Estimated Reduction in Energy Saving:
A. Homes Under 25 Years of Age—17.4% reduction.
B. Homes Over 25 Years of Age—22.6% reduction.
*Data not complete—pending more information.

VIII. Project HEAT disbursements:

	Number of cases	Number of grants	HEAT cost
January	42	25	$1,277.28
December	35	23	1,956.63
November	26	17	872.00
October	26	14	756.56
September	20	1	50.00
August	15	--	------
July	23	--	------
June	25	2	106.82
May	24	4	200.00
April	68	37	1,878.97
March	50	25	1,248.89
February	53	47	2,291.98
Total	407	195	10,639.13

Note: Recorded payment on cases between May and September were authorized during the Project HEAT season. In most cases, the client was required to come up with a portion of a back bill before we paid.

P.E.A.C.E., Inc. Program Description & Background

In January of 1976 P.E.A.C.E., Inc., implemented Project H.E.A.T. (Heating, Education and Advocacy Teams). This program is a comprehensive effort by P.E.A.C.E., Inc., to aid low-income persons in dealing with the rising costs of home heating. This is done through a variety of means, including a home repair and insulation service, a wood-fuel distribution porgram, direct grants for families faced with fuel shut-offs, and an information and technical assistance program. These services together comprise the major efforts of Project H.E.A.T.

PROGRAM ACTIVITIES

A. Weatherization effort:

(1) Purpose: To provide direct fuel savings to the consumer through insulation and repair of their homes. This is a free service with a maximum investment of up to $350 in materials. Three crews of three persons each install insulation, weatherstripping, storm windows, and make minor repairs to roofing and siding where such repairs will directly aid in stopping heat loss.

Money for materials has been supplied by the Community Services Administration, and unemployed persons were hired on a full-time basis with funds from the New York State Division of Economic Opportunity.

(2) Eligibility: Families whose gross incomes are within program guidelines (see attached) may be considered for this weatherization service. Special arrangements can be made with landlords whose tenants are eligible for Project H.E.A.T.'s services.

B. Wood for fuel program:

(1) Purpose: To distribute firewood to families who use wood as a primary source of heat. This wood is donated by the New York State Department of Transportation and by local tree service firms. It is cut, split and delivered in quantities of one face cord as a free service.

(2) Eligibility: Families must use wood as a primary source of heat, and have incomes within guidelines (attached).

C. H.E.A.T. grants:

(1) Purpose: To assist families faced with fuel shut-offs by providing a $50 grant, or 150 gallons of fuel oil.

(2) Eligibility: Grants are provided once only to families showing financial need, and are available October through April.

D. Other services:

(1) Project H.E.A.T. is the coordinating center for similar programs in the counties of Madison and Oswego.

(2) Project H.E.A.T. coordinates its own weatherization efforts with local home-improvement organizations in order to provide the most comprehensive service possible.

(3) Project H.E.A.T. provides information to local and national statistical energy studies.

(4) Project H.E.A.T. acts as a referral unit, making sure that clients are aware of other options and programs which are open to them.

(5) Project H.E.A.T. makes presentations to community groups on energy and conservation in the home.

(6) Project H.E.A.T. advocates on behalf of its clients in rate hearings, new legislation, etc.

Interested persons may contact Project H.E.A.T. by calling 478–4146 or 478–4147.

The Project H.E.A.T. offices are located at 202–204 South Beech Street, Syracuse, New York 13210.

Project H.E.A.T. income guidelines

Family size	*Income*
1	$3,500
2	4,625
3	5,750
4	6,875
5	8,000
6	9,125
7	10,250
8	11,385
9	12,500
10	13,625

For family units with more than 10 members, add $900 for each additional member in a non-farm family plus 25% of that amount.

P.E.A.C.E., Inc. Regulations Regarding Multiple Dwelling Units and Tenant/Landlord Situations

1. At no time will Project H.E.A.T. commence weatherization or repair of a structure where the owner of that structure owns more than five rentable units, including the one(s) in which the owner resides.

2. Only dwelling units resided in by "clients" may be weatherized or repaired.

3. Only dwelling units held by owners whose property expenses are greater than 30% of their total income may be weatherized and/or repaired.

4. In all cases, the owner will sign a legally binding contract stating that:

(a) he will not raise the rent on the weatherized unit; and

(b) will not sell the property of which the weatherized unit is a part; and

(c) that the above conditions will be in effect for a period of one year, regardless of sale or transfer of the property or individual dwelling unit.

5. Situations in which the owner is responsible for heating fuel costs, he/she will sign a legally binding contract stating that he/she will reduce the rental cost of the weatherized dwelling unit. This rental reduction shall be equal to 1/12th of the cost of materials used in weatherization of that dwelling unit, and such reduction shall be in effect for a period of 12 months from the contract date.

6. The Energy Coordinator and/or Advisory Council may decline service to any owner's property if such service is deemed contrary to the purposes of the program.

7. The Advisory Council may waive any or all of the above regulations on a case-by-case basis by a majority vote of the members present at a duly called Council meeting.

OWNER. The person, persons, corporations, etc., which holds by deed, or otherwise, more than one rental unit; and whose income is greater than that allowed by the Community Services Administration's Income Guidelines for Eligibility.

CLIENTS. A person, or family, whose income is within the Community Services Administration's Income Guidelines for Eligibility.

PROJECT H.E.A.T.

INTRODUCTION

Project H.E.A.T., the weatherization program for Onondaga, Oswego and Madison Counties has been in operation since December of 1975 doing home weatherization repairs and installations for the low-income populations in these three counties.

Within that time the weatherization effort has increased its productivity from 21 homes in the first quarter to 68 homes in the third quarter which represents an increase of 308% in just six months.

The weatherization effort is only one of three distinct parts of Project H.E.A.T., another area is the Emergency Fuel Voucher Program. This effort is maintained in Onondaga County utilizing the resources of the P.E.A.C.E., Inc., Consumer Information Service Center as an intake and distribution center for emergency assistance. During the period December, 1975 through April, 1976, 91 Emergency Vouchers were distributed. Between October, 1976 to the present, 34 Emergency Vouchers have been supplied to needy persons and families.

The third distinct part of Project H.E.A.T. is the Wood-Fuel Program. In the recent months this has been one of the fastest growing aspects of Project H.E.A.T. Throughout the Spring and Summer of 1976 the New York State Department of Transportation has been supplying Project H.E.A.T. much of the wood which it cuts from its right-of-ways in Onondaga County. The wood is then cut and split by Project H.E.A.T. crews and distributed to low-income families who use wood for heating and cooking.

Starting in September and October, with the early advent of winter in Central New York, the requests for wood have more than tripled what they had been in the past. With over 4,000 housing units in Onondaga County, excluding the city of Syracuse, which are not heated or heated by means other than steam, hot water, warm air, electricity or pipeless furnace, it is anticipated that this demand for wood will continue to increase.

A private tree service has joined the N.Y.S.D.O.T. in contributing wood to the program which was essential in meeting our demand for service.

P.E.A.C.E., INC. ENERGY STATEMENT
FEBRUARY 1977

As the Community Action Agency of Syracuse and Onondaga County, P.E.A.C.E., Inc., has daily contact with the low and no income residents of Syracuse and Onondaga County who are seeking much needed assistance from the various energy programs sponsored by P.E.A.C.E., Inc. We have found the current energy crisis to be devastating in the low/no income residents who are suffering a disproportionate share of the pains of the energy shortage.

Whenever any type of an energy crisis exists, contrived or not, the poor and elderly are the ones who suffer most. People on fixed incomes have an especially difficult time absorbing any increased costs of energy.

The Department of Social Services, for instance, has not increased their heat allowance since October 1975 and energy costs have skyrocketed since then. Half of the people helped through the Project HEAT Program are on various Social Service Systems. For a family of four on welfare, the monthly heat allotment for energy is $50.00; for a family of three, it is only $39.00. Through our Project HEAT program, the average monthly bill we see is $90.16. Low-income people now fear death by freezing rather than death by starvation. We see people assigning priorities to how they will spend their meager incomes and find they must choose between food and energy. People should not have to choose between the basic necessities of life.

Although we view this crisis as acute, we are aware of the need to plan on the possibility of another crisis which would have an equally devastating impact on the citizens in this county.

P.E.A.C.E., Inc. currently operates programs involving energy grants and home weatherization, which soften the blow of this energy crisis, however, they are temporary answers to the energy situation. We offer meaningful input which could affect future energy costs and availability of energy to the people we serve. We offer our expertise and ideas to affect policies of interested agencies, governmental commissions and utility companies to assure that low income and elderly people will not suffer a disproportionate share of any future energy shortage.

We will continue to focus on the following concerns in order to alleviate some of the energy problems suffered by the people we serve.

1. Availability and responsible use of alternate fuel sources such as coal, wind, solar, synthetic fuels, wood.

2. Conservation Ethic—make the means available to home insulation, repairs of infiltration, proper working and energy-saving heating equipment, and storm windows and doors.

3. No utility disconnects through May 31, 1977.

4. Deferment of a portion of winter utility bills until summer plus rebates of additional expenses due to wholesale gas price increases.

5. No rate increases for a period of 24 months until proper conservation methods can be initiated and employment stabilizes.

6. Higher subsidies to the poor and elderly through the various social service systems and direct grants for the working poor.

7. Continue to support weatherization; Support and increase continued dollars in Title VII—Materials and Title XX for manpower.

THE USE OF TITLE X FUNDS IN OTSEGO COUNTY, N.Y.

To all Title X Grantees: Please complete the following questionnaire immediately. All figures should be as of February 1, 1977. This information should be forwarded to the New York State Senators and Congressional Representatives by the quickest means available.

What type of work has your Title X project done? Winterization of homes, public education.

How many people did you serve 158 (Homes Winterized).

How many people did you employ? 9.

Welfare recipients: 1.

Unemployment insurance recipients: 1.

Other: 4 from termination CETA I. 1 not qualified from UIB.

How much money was spent? Labor? $32,800 Est. Other? $33,900.

When does the project end if Title X funding is not continued? February 15, 1977.

When the project ends, how many employees will return to:

Welfare: 1.

Unemployment insurance: 3.

Other: 1 hired with C.S.A. funds for 6 months. 3 terminated during 1976 are either on Public assistance or have found another job.

Total 8.

If your Title X program is a weatherization program, please supply this information as February 1, 1977.

Homes weatherized 158.

Family members affected: 610 Est.

Cris is interventions: 0.

Family members affected: 0.

Cubic feet natural gas conserved as of February 1, 1977: N.A.

Gals. home heating oil conserved as of February 1, 1977: 1,7760. Wood: 6,789 Cords—2.5 tons coal.

Units of other fuel conserved as of February 1, 1977: 3,864 gals LP.

Based on your efforts as of February 1, 1977, how much fuel per annum will be conserved?

Cubic feet of natural gas: N.A.

Gals. of home heating oil: 22,200 Est.

Units of other fuels (i.e. cords of wood, tons of coal, etc.) 700 cords wood 4,000 gallons of bottled gas. 2.5 tons coal.

THE USE OF TITLE X FUNDS IN CHAUTAUQUA COUNTY

Type of project efforts: Weatherization and Public Education.

Number of people served: 1,400.

Number of people employed:

Title X monies: 10.

Other funds: 7.

Welfare and public assistance: 1.

Unemployment recipients: 6.

Unemployment exhaustees: 1.

Number of dollars spent: From Nov., 1975 to Dec., 1976—

Title X: $60,000.

CSA funds: $49,500.

CETA: $34,000.

Amount spent in January, 1977:

Emergency (Title X): $4,000.

Title X: $6,500.

CSA: $6,000.

CETA: $2,500.

Project will end: May 5, 1977.
Homes winterized: 180.
Crisis intervention: 270 families (1,000 people) were provided with fuel and/or food vouchers and wood for fuel.
Estimate of energy conserved: Target is 15–25%; at this time, the information is pending and is not available.

THE USE OF TITLE X FUNDS IN NIAGARA FALLS, N.Y.

To all Title X Grantees: Please complete the following questionnaire immediately. All figures should be as of February 1, 1977. This information should be forwarded to the New York State Senators and Congressional Representatives by the quickest means available.
What type of work has your title X project done? Home Weatherization.
How many people did you serve? 139.
How many people did you employ? 11.
Welfare recipients: 7.
Unemployment insurance recipients: 2.
Unemployment exhaustees: 1.
Other: 1.
Total number employed and served: 158.
How much money was spent? Labor? $79,000. Other? $45,000.
When does the project end if title X funding is not continued? February 31, 1977.
Welfare: 2.
Unemployment insurance: 11.
Other: 0.
Total: 11.
If your Title X program is a weatherization program, please supply this information as February 1, 1977.
Homes weatherized: 141.
Family members affected: 232.
Crisis interventions: 8.
Family members affected: 22.
Cubic feet natural gas conserved as of February 1, 1977; gallons home heating oil conserved as of February 1, 1977; units of other fuel conserved as of February 1, 1977: Due to the severeness of this winter and the mildness of last winter it is impossible to tell the effectiveness of the program.
Based on your efforts as of February 1, 1977, how much fuel per annum will be conserved?
Cubic feet of natural gas; gallons of home heating oil; units of other fuels (that is cords of wood, tons of coal, etc.): It has been evaluated that some fuel has been saved. The participants this winter have not used more fuel, but the same amount as they used last winter.

[Mailgram]

FEBRUARY 23, 1977.

GLEN BROWN,
Peace,
Gifford Street,
Syracuse, N.Y.:

Lewis County Opportunities Incorporated in the Community Action Planning Council, Jefferson County (community action agencies) have jointly operated a weatherization program with a manpower funded under title 10 of the Public Works and Economic Development Act of 1965. In addition to weatherizing a total of 154 homes, title 10 workers have provided crises intervention services on fuel problems, and assistance in processing FMHA home improvement loans.
Of a total of 17 people employed one was formerly a welfare recipient, 14 were receiving unemployment compensation and two had exhausted unemployment benefits.
Of $97,000 spent $90,625 or 93 percent has been spent on labor.
If there is no new appropriation for title 10 by March 31, 1977, two of these workers will return to the welfare rolls, 9 to unemployment insurance rolls. A total of 6 title 10 workers were trained and found employment in the private sector in the past year.
Title 10 workers have winterized 154 homes, affecting 587 people and provided crises intervention services to 437 households.
Despite the severity of this winter compared to last year, families in the 154 homes winterized have conserved: 262 cubic feet of natural gas, 1,239 gallons of home heating oil, 123 gallons kerosene. Use of wood for fuel has increased by 23 cords.
Based on our efforts as of February 1st we estimate per annum fuel conservation by these households at: 578 cubic feet natural gas, 2,726 gallons home heating oil.
Title 10 workers vital to continue these efforts. Urge your support of supplemental appropriation for title 10.

MRS. ALICE B. PAYBERG,
Chairman, Lewis County Opportunities, Inc., Board of Directors.

NEW YORK STATE TITLE X WINTERIZATION PROGRAM

Employee/350 goal through turnover, promotion, transition to unsubsidized employment.
Approximately 420 were given jobs.
There were an additional 20 due to special grants.
The figures for all CAPS as of October 31, 1976, for homes winterized: 4,140.
All CAPS state-wide by December 31, 1976: 5,175.
Projection to end of program year March 1, 1977 would be 5,906.
Crisis interventions:
State-wide as of October 31, 1976: 2,026. To December 31, 1976: 2,539.
Number of unemployed persons hired: 342.
Number of persons who exceeded unemployment benefits: 198.
Number receiving unemployment benefits when hired: 129.
Number of individuals receiving public assistance when hired: 228.
The average salary: $6,834.
Fringe: $1,367.
Labor intensified: 93 percent.
Number of unskilled jobs: 81 percent.

Mr. RUPPE. Mr. Chairman, I am pleased to support H.R. 4877 providing supplemental appropriations for fiscal year 1977. This measure contains $100 million to fund the payment-in-lieu-of-taxes program authorized by the 94th Congress.

The authorizing legislation mandates that local governments be compensated at a rate of 75 cents per acre for federally owned land within their jurisdiction. The funding included in the bill before us today will allow full implementation of the new system during the current fiscal year.

This increased payment is particularly important to northern Michigan. The 11th District contains over 2½ million acres of Federal land including several national forests, a wilderness area, a national lakeshore, and a national recreation area.

In the past, local governments have been compensated for Federal ownership of land at an average rate of about 11 cents per acre. This low rate of compensation, when coupled with the large amount of Federal land has represented a real hardship on local governments throughout northern Michigan.

Under the proposal before us today northern Michigan will receive over $1.8 million annually out of a total of $2.1 million earmarked for the State of Michigan.

Mr. Chairman, the $100 million in payment-in-lieu-of-taxes funding in this bill is vital to the continued strength and flexibility of local governments in northern Michigan. I urge my colleagues to support the appropriation and adopt the supplemental apppropriation bill for fiscal year 1977.

Mr. PEPPER. Mr. Chairman, I am very pleased to express my support for H.R. 4877, which provides supplemental appropriations for fiscal year 1977.

As chairman of the Select Committee on Aging, I have reviewed the contents of this bill very carefully to identify what assistance it might provide for the older citizens of this country.

Having completed that review, I offer my congratulations to the Appropriations Committee members who approved it. A particular word of praise is due to the members of the Labor-HEW Subcommittee, chaired by the distinguished gentleman from Pennsylvania (Mr. FLOOD). He was, of course, aided by the presence on the subcommittee of the gentleman from California (Mr. ROYBAL), who also serves with distinction as the ranking majority member of the Aging Committee. It is evident that these Representatives have carefully considered the needs of the elderly in fashioning H.R. 4877.

There are several specific provisions of H.R. 4877 worthy of mention, Mr. Chairman.

HOME HEALTH

The bill contains $3 million for home health demonstration programs. This modest amount of money will fund some 300,000 home visits to about 15,000 people in need of those visits.

Mr. Chairman, if I have a single priority as chairman of the Select Committee on Aging, it is to see put into place a workable system of home care, to keep older people independent longer, and to keep them out of institutions.

Not only are long-term care institutions damaging to the self-image and self-respect of older persons, they are substantially more expensive than maintaining the same persons in home settings. Home health care, with proper safeguards against abuse, can be a cost-effective way to help hundreds of thousands of America's elderly stay where they want to stay—in their own homes.

MENTAL HEALTH OF ELDERLY

Mr. Chairman, I am particularly pleased at the inclusion in H.R. 4877 of $2 million for the Center on Mental Health of the Aging at the National Institute of Mental Health. Hearings and studies conducted by the Aging Committee's Subcommittee on Health and Long-Term Care, which I also chair, have documented the serious need for stepped-up efforts to address the unique mental health needs of older citizens. This particular item, I am happy to note, was one proposed in the Appropriations Committee by the gentleman from California (Mr. ROYBAL), with my strong endorsement.

TV AND AGING—A STEP FORWARD

Also worthy of note, Mr. Chairman is the $2.7 million in the bill to fund an initial season of programs on public tele-

vision, aimed directly at serving older Americans.

This is of interest to all of us concerned about the welfare of the elderly. We all know the power of the broadcast media. It is time for television to provide a forum for a program that depicts our older citizens without bias, without stereotyping, without mockery. I am reviewing the possibility of an inquiry by my committee into the attitudes of broadcast media toward the elderly. If all programing were as thoughtful as the proposed series funded partially by this bill, perhaps no such inquiry would be necessary.

COLD WEATHER AND OLD PEOPLE

Finally, Mr. Chairman, I compliment the Appropriations Committee on its inclusion in H.R. 4877 of $82.5 million for the emergency energy conservation program run by the Community Services Administration.

My colleagues will remember that, during the recent severe cold weather, even the normally balmy temperatures in my home State of Florida dipped to freezing levels. Particularly among older people, whose homes had no capacity for major heating effort, the cold weather meant discomfort, sometimes severe hardship.

I was disappointed, of course, in the decision of the full Appropriations Committee—by a very close vote, I understand—to delete from the subcommittee-approved bill some $200 million for emergency fuel assistance through State grants. This is a badly needed provision, particularly for low-income elderly persons, and I intend to support the amendment to be proposed by the gentleman from Wisconsin (Mr. OBEY).

But certainly, Mr. Chairman, H.R. 4877 is a bill that is sensitive to the needs of older Americans. It is a tribute to the thoughtful and compassionate members of the Appropriations Committee, and I urge the House to approve it overwhelmingly today.

Mr. BADILLO. Mr. Chairman, I rise to support the appropriations asked for in this bill with pleasure. Of course, I have my own prejudices and favorites in such an omnibus package, but in the areas of my concern, the areas that will affect my constituents and mean most to me, the new administration is making an excellent beginning to assuring a shift in the priorities of our spending.

First, I would like to commend the members of the committee for the excellent language they have chosen to introduce increased appropriations for the international financial institutions. As a new member of the Subcommittee on International Development Institutions and Finance, I shall strive to see that the intent expressed in the committee report that "The United States will undertake a vigorous effort to redirect these institutions' development policy * * * away from autocrats and repressive regimes, away from countries that are diverting aid funds * * * to military or nuclear programs; and toward nations that show an active interest * * * in providing direct aid to their poor * * *" is incorporated into all future legislation regarding the international development and finance institutions.

I would like, as well, to applaud the increased appropriation for bilingual education. Two weeks ago, when the Hispanic Congressional Caucus met with President Carter, we received his commitment for increased funding over last year. And he has begun with a $17 million increase—up from $98 million to $115 million, with a projected fiscal year 1978 commitment of $20 million. This is real progress, and it means real hope for the millions of Hispanic-Americans who will benefit from the increase. The opportunity it will afford Latinos to get an education that is on a par with their non-Spanish-speaking schoolmates cannot be underestimated, and it cheers me to have this concrete sign that we are dealing with a responsive new administration.

Finally, I would like to mention the increase in funding for section 8 housing. Section 8, which provides Federal rent subsidies for low- and middle-income housing, has been dreadfully underutilized in New York. In fact, using the simplest indicators about housing in New York, the story becomes painfully obvious. In 1975, there were 3,810 housing units authorized. Of that number 395 were given section 8 funding. In 1976, there were 5,434 units authorized. There were no section 8 units among them. It is my earnest hope that with an increased appropriation, more money will be available for section 8 projects within the city. We have seen over and over again during the past years in New York how construction costs have made new low-income development unavailable to those for whom they were originally meant. And I am hopeful that now there will be more money there to create decent living space for the poor and elderly citizens of New York.

Mr. MAHON. Mr. Chairman, I have no further requests for time, and I ask the Clerk to read.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

INVESTMENT IN INTER-AMERICAN DEVELOPMENT BANK

For payment to the Inter-American Development Bank by the Secretary of the United States share of the increase in subscription to (1) paid-in capital stock, (2) callable capital stock, and (3) the United States share of the increase in the resources of the Fund for Special Operations, as authorized by the Inter-American Development Bank of May 31, 1976 (Public Law 94-302), $276,000,000, to remain available until expended.

AMENDMENT OFFERED BY MR. LONG OF MARYLAND

Mr. LONG of Maryland. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. LONG of Maryland: On page 10 of the bill, strike out lines 20 through 25, on page 11, strike out lines 1 and 2, and insert the following:

"For payment to the Inter-American Development Bank by the Secretary of the Treasury of the United States share of the increase in subscription to capital stock and in the resources of the Fund for Special Operations, as authorized by the Inter-American Development Bank Act of May 31, 1976 (Public Law 94-302), $316,000,000, to remain available until expended; of which not more than $36,000,000 shall be available for paid-in capital stock, not more than $120,000,000 shall be available for callable capital stock, and not more than $160,000,000 shall be available for the Fund for Special Operations."

Mr. LONG of Maryland. Mr. Chairman, I offer this amendment in the spirit of compromise.

The amendment would provide an additional $40,000,000 for the Fund for Special Operations of the Inter-American Development Bank which would still be a reduction of $40,000,000 below the budget request.

Since the subcommittee markup, a number of Members have expressed concern to me that they felt the amount provided in this supplemental bill for the Fund for Special Operations is too low and should be increased by a larger amount than I am now proposing. In fact, in the full committee consideration of this bill an amendment to increase the Fund for Special Operations by $70,000,000 was offered but it was defeated by a narrow margin. Therefore, because of the strong reaction to the level of funding for the Fund for Special Operations provided in this bill, I have agreed to offer this amendment and I ask that it be adopted.

The Fund for Special Operations is the concessional loan window of the Inter-American Development Bank and provides loans to developing nations of Latin America.

Mr. CONTE. Mr. Chairman, I rise in support of this amendment to increase funding for the Inter-American Development Bank's Fund for Special Operations.

The concessional loan program supported by the fund assists the very poorest countries and the poorest people in Latin America. The projects supported by the Fund include such things as the development of rural farmer cooperatives, rural electrification, local health clinics, and the improvement of sanitation facilities.

It has been alleged that as much as 40 percent of the Fund's loans have gone to such countries as Chile, Argentina, and Brazil. I do not know where that information came from, but it bears little resemblence to the truth. In fact, some 3 percent of the Fund's hard currency loans went to those countries. And if you include local currency, the amount is in the range of 15 percent. Not really excessive amounts, when one looks at the economic conditions which those loans are dealing with.

In order for the replenishment of the Fund to continue as scheduled, it is necessary for the United States to put up its share in this supplemental; otherwise the bank will run out of available funds before the end of this year and would have to suspend operations. This contribution from the United States is necessary to permit the use of the contributions from all of the other donor countries.

Mr. Chairman, the new administration is currently involved in negotiations with

all of these international lending institutions to attempt to revise the policies and procedures which the Congress has found problems with. The provision of these funds is necessary to enable our negotiations to proceed in good faith.

I urge the adoption of this amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Maryland (Mr. LONG).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

INVESTMENT IN INTERNATIONAL DEVELOPMENT ASSOCIATION

For payment by the Secretary of the Treasury of the remaining portion of the first installment of the United States contribution to the fourth replenishment of the resources of the International Development Association, as authorized by the International Development Association Act of August 14, 1974 (Public Law 93-373), $55,000,000, to remain available until expended.

AMENDMENT OFFERED BY MR. YOUNG OF FLORIDA

Mr. YOUNG of Florida. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. YOUNG of Florida: On page 11 strike lines 3 through 11.

Mr. YOUNG of Florida. Mr. Chairman, this is the amendment that strikes the paragraph that I mentioned in my earlier comments during general debate. To begin with, this $55 million is appropriated by this bill to remain "available until expended." In all the research and review I have been doing, I can find no authorization for the funds to "remain available until expended."

I believe it would be subject to a point of order. I am not going to raise the point of order because I hope to delete this paragraph.

This is $55 million to IDA, the soft loan window of the World Bank which was rejected by this House for fiscal year 1977. We have already rejected it. In fiscal 1977 we did appropriate $377 million for IDA. There has been nothing which has happened or which has been presented to the Congress since then to demonstrate a need for this extra $55 million. I hope the House will strike the money.

Let me tell the Members something about IDA that maybe they are not aware of. First of all, 33 percent of the money going to IDA comes from the United States. Forty percent of the money that IDA has used has gone to India. Let me give the Members just a very brief history about India. While India was having the pressure removed economically from building roads or powerplants, or whatever they used this IDA money for, they were using their own money to buy war materials from the Soviet Union and to develop their atomic bomb.

These extra funds for IDA are not needed. In the first place, we already have $375 million for IDA in fiscal year 1977. And—IDA still has $900 million on hand and uncommitted at this time. IDA, as I said, is part of the World Bank, and as the gentlewoman from Nebraska (Mrs. SMITH) mentioned earlier, we know that this is not only the soft loan window that we discussed earlier, but if the money ever is paid back to IDA it is not required to be paid back for 50 years.

We know some of the employees who work for the World Bank in IDA and some of these other international institutions are paid as much as 57 percent higher than the comparable employee working for the U.S. Government, and their income is not taxable, as is the income to the employee of the U.S. Government.

But I am concerned about this item because it is IDA that has already sent a delegation to Vietnam to consider the possible future loan of IDA funds to Vietnam. I am against that. The House of Representatives has spoken out time and time again that we do not want these moneys, American dollars, going to Vietnam.

So I suggest a way to solve this problem is to strike out this paragraph, eliminate the $55 million, so that we know that none of it is going to Vietnam and we know that no more of it is going to India so that they can use their own money to develop more and more military equipment. Let us just strike the $55 million because there has not been shown a real need for this $55 million to be in this supplemental bill, anyway.

Mr. LONG of Maryland. Mr. Chairman, I rise with a very heavy heart in opposition to the amendment. My heart is heavy because the gentleman has tried to accomplish exactly what I tried to accomplish in marking up the original bill. I have the same reservations the gentleman has about the International Development Association and the other multinational institutions. I am certainly not pleased with its operation, especially with its huge concentration on loans to countries such as India.

However, the Subcommittee on Foreign Operations included the funds in this bill as an expression of its support of the present administration. As chairman of the subcommittee and an agent of the subcommittee I must regrettably oppose the amendment of my distinguished colleague from Florida (Mr. YOUNG) who has proved himself as one of the most valuable members of the subcommittee.

Mr. CONTE. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I strongly urge that the subcommittee's recommendation of $55 million for the International Development Association be maintained.

The International Development Association extends interest free credits for economic development to the poorest nations in the world. In 1976 and 1977, 90 percent of IDA's credits will flow to countries with per capita incomes of less than $200. The remainder will go to countries with per capita incomes between $200 and $300. In the past 2 years, IDA lending has benefited over 18 million of the rural poor, has at least doubled the income of project participants, and has substantially increased food production.

The work of the International Development Association is succeeding in reaching a significant portion of the 700 million rural poor in developing countries; increasing their standard of living, making them active participants in the world economy, and cutting into the local food deficit, which can no longer be covered solely by grain shipments from North America.

The $55 million requested by the administration represents the remainder of our first installment in the fourth replenishment of IDA.

We all recognize that a disproportionate amount of IDA's lending has gone to India. But just 2 weeks ago, Assistant Secretary-Designate of the Treasury for International Affairs, Fred Bergsten, met with the other IDA donor countries to discuss reallocating IDA lending policies. Because our subcommittee had approved this $55 million, the completion of our first installment, Mr. Bergsten said that the other donors were receptive and open to shifting IDA lending away from India and giving more attention to the Sub-Saharan African nations. Without this $55 million, our negotiators will lack the leverage—the appearance of good faith—that will enable us to improve the lending policies of IDA. I urge approval of the full $55 million.

Mr. BAUMAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. YOUNG of Florida. Mr. Chairman, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Florida.

Mr. YOUNG of Florida. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I have heard this argument about replenishment of our IDA commitments and about the pledges our negotiators have made ever since I first sat on the Subcommittee on Foreign Operations of the Committee on Appropriations, and I think the Members of this House ought to know that when they talk about keeping a pledge, they are talking about a pledge of an appropriation of American tax dollars that somebody from the executive branch of Government has made.

It does not make any difference which administration does it; all the administrations have done it. They send their negotiators to Paris or to Geneva or wherever the meeting might be held at that particular time, and the negotiators sit down around a table and they discuss the making of a pledge of American tax dollars.

Mr. Chairman, I submit that they do not have the right to commit U.S. tax dollars until Congress has acted. The Constitution provides that only the Congress can appropriate tax dollars. So when these spokesmen and these negotiators make a pledge, they are, in my opinion, acting outside their constitutional authority. Nevertheless, they come back to Congress and they beat us over the head, and they say, "You have got to keep this commitment, because if you do not, we are going to be embarrassed on the world scene."

Mr. Chairman, many of the politicians who run the governments of countries that will receive much of this money

are using international platforms at every possible opportunity to the embarrassment of the United States any way. So I do not think this is really a valid argument, and in view of the fact they still have $900 million committed, U.N. committed, I do not think IDA is going to miss this $55 million.

Perhaps as the gentleman from Massachusetts has said they are going to divert some of the funds away from India, but let me point out to the Members—and I will be happy to let them read the newspaper articles that have appeared in the last 2 weeks—that they are considering sending some of this IDA money over to Vietnam. I do not think any Member wants that any more than I do.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. YOUNG).

Mr. YOUNG of Florida. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present.

The Chair announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears.

The call was taken by electronic device.

QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to rule XXIII, clause 2, further proceedings under the call shall be considered as vacated.

The Committee will resume its business.

The question is on the amendment offered by the gentleman from Florida (Mr. YOUNG).

The question was taken; and the Chairman announced that the ayes appeared to have it.

Mr. CONTE. Mr. Chairman, I demand a recorded vote.

A recorded vote was refused.

So the amendment was agreed to.

Mr. MOORE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to enter into colloquy with the Chairman of the Foreign Operations Subcommittee, the gentleman from Maryland (Mr. LONG).

Mr. LONG of Maryland. Yes.

Mr. MOORE. I would like to point out that on page 43 of the committee report dealing with funds to be appropriated for international financial institutions, the second paragraph reads in part:

> The Committee is providing these funds to the international financial institutions with the understanding that the United States will undertake a vigorous effort to redirect these institutions' development policy—

And I skip down to where it says

> toward nations that show an active interest through national policies and specific activities in providing direct aid to their poor through light capital technology and other means.

My question to the Chairman is, does that language intend that additional loans be made by these international lending institutions for the production of palm oil?

Mr. LONG of Maryland. If the gen- have the palm oil matter in mind when tleman will yield, we definitely did not this language was introduced. I developed the language to insure that U.S. assistance provided to these multilateral banks be directed to the poor people within the developing countries and palm oil was not a consideration.

Mr. MOORE. Would it be fair to say that this language does not intend that additional loans are in fact approved or disapproved by his subcommittee for palm oil?

Mr. LONG of Maryland. If the gentleman will yield further, the gentleman is correct. Palm oil was not an issue at the time this language was proposed.

Mr. MOORE. I thank the gentleman. I would point out that I am very concerned about this situation as palm oil exports from countries that have received these loans in the past are posing very significant economic and health problems, for this country.

I point out to the gentleman and his subcommittee and hope they will consider this problem in the full appropriations bill which will come along later this year. In 1975 palm oil imports into this country increased 118 percent, and it was no coincidence that American soybean farmers in that same period lost about $1.5 billion. 26 percent of world palm oil production is now directly attributable to these loans being made by these internattional banks. It is expected that by additional loans already approved and in the pipeline by these three international banks, for palm oil production, that palm oil production will be so increased by those additional loans that well over one-half the world's palm oil production will be attributable to these loans.

The problem is that the United States has absolutely no import quotas or tariffs on palm oil coming in. The palm oil coming in is in direct competition with all of our vegetable oils—such as cottonseed, safflower, peanut, corn, and soybean oils.

It has been proven that palm oil is the vegetable oil with the highest content of satutrated fat, significantly higher than any other vegetable oil that we have on the market. American housewives are buying something labeled as vegetable oil which they think is healthier than animal fat when it is in fact something far worse. So our tax money was being used to create competition with our own crops and to make possible an unhealthy oil getting to our consumers.

On July 29, 1976, in the last Congress, I offered an amendment to the foreign assistance appropriation bill to halt the use of U.S. funds that we are giving to these institutions from being used to finance palm oil production. That amendment failed by only 12 votes, in a vote of 198 to 210.

I simply point this out to the chairman and urge him to consider this when we come to the 1978 appropriation bill. I am glad to know there is nothing in this report that can be interpreted as encouraging the three development banks to make additional palm oil loans.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. MOORE. I yield to the chairman of the full committee.

Mr. MAHON. I want to say I join the gentleman from Louisiana in opposing these massive imports of palm oil from abroad.

Our Government has in the past taken steps to encourage the production of these oils, and that has been very detrimental to U.S. farmers.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

On request of Mr. MAHON, and by unanimous consent, Mr. MOORE was allowed to proceed for 2 additional minutes.)

Mr. MAHON. Mr. Chairman, if the gentleman will yield further, this Government has taken steps in the past to encourage production of palm oil abroad and to help build processing plants. Along with many other Members of the House I have opposed the movement in this direction. I hope we have slowed that down. I share the gentleman's concern about it. I hope proper action can be taken to prevent any acceleration of this program. I am not unaware of the health implications involved in the use of palm oil.

Mr. LONG of Maryland. Will the gentleman yield?

Mr. MOORE. I yield to the gentleman from Maryland, the chairman of the subcommittee.

Mr. LONG of Maryland. Mr. Chairman, the gentleman has raised a very important problem which has concerned me for a long time, and that is, when we give this money to the multilateral institutions we are giving up all control over how the money is going to be used. We have reached the alarming point where about 69 percent of all money given out by the United States in foreign aid is beyond the control of the Congress. This is something to be concerned about and this year we are heading even further in this direction of giving up control, because the requests for the multilateral banks have more than doubled in fiscal year 1978. I hope Congress keeps this in mind when we consider the authorizing legislation for these institutions in the near future.

I thank the gentleman for raising this point.

Mr. MOORE. I thank the gentleman from Maryland. I agree with the gentleman completely. I agree we should not continue to give up control when it in fact injures the economic well-being of our farmers and health of our people. I thank the gentleman.

Mr. CHARLES H. WILSON of California. I do not know what palm oil is, but I hope the dialog we have is not going to establish a congressional policy that may affect other States of the country. The gentleman is rightly representing his own State, but I do not know what the gentleman is talking about there. What is the significance of palm oil?

The CHAIRMAN. The time of the gentleman fom Louisiana has expired.

(By unanimous consent, Mr. MOORE was allowed to proceed for 2 additional minutes.)

Mr. MOORE. Mr. Chairman, I assure the gentleman that I am not only interested in my State. We are worried about soybean production and other oil crops which are produced in most of the farming States of the Union and also about a health problem which affects all our citizens. The point is that there is an unhealthy product coming in with no controls competing with our products. It is becoming a real problem to us and I simply want to be sure that this report is doing nothing to encourage additional loans to worsen the situation.

I think the chairman of the subcommittee has answered my question to the effect that nothing in this report is intended to encourage any such loans.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

CONSTRUCTION GRANTS

For necessary expenses to carry out Title II of the Federal Water Pollution Control Act, as amended, other than sections 206, 208, and 209, $1,000,000,000, to remain available until expended: *Provided*, That the funds shall be allotted in accordance with table I of Committee Print Number 94–39 of the Committee on Public Works and Transportation of the House of Representatives: *Provided further*, That the funds shall not be subject to the reallotment provisions of section 205(b) of the Federal Water Pollution Control Act, as amended, until three years from the date of enactment of this provision.

AMENDMENT OFFERED BY MR. TRAXLER

Mr. TRAXLER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. TRAXLER: On page 13, line 1, strike "$1,000,000,000" and insert "$500,000,000".

Mr. TRAXLER. Mr. Chairman, this amendment reduces the amount for construction grants from $1,000,000,000 to $500,000,000. This reflects the agreement reached on Monday by the chairman of the subcommittee, Mr. BOLAND, and the chairman of the Committee on Public Works and Transportation, Mr. JOHNSON, of California.

In recommending $1,000,000,000, the committee gave serious consideration to the difficulties this could cause the Committee on Public Works and Transportation—particularly without an authorization in place. Nonetheless, the committee felt it should provide some funding to insure the continuity of the program.

However, after the committee completed action on the supplemental bill, the Senate passed S. 427, the Public Works Employment Act of 1977. That bill contains an authorization of $9,000,000,000 for the construction grants program—$4,500,000,000 for fiscal year 1977 and $4,500,000,000 for fiscal year 1978. That bill does not address certain sensitive issues that the House Committee on Public Works and Transportation feels very strongly about. The distinguished chairman of that committee, Mr. JOHNSON of California, feels that an appropriation of $1,000,000,000 could sacrifice the leverage needed in conference with the Senate.

We do not want to jeopardize the bargaining position of the House or the Committee on Public Works. That is why we have agreed to offer this amendment to reduce the dollar amount from $1,000,000,000 to $500,000,000. When an authorization has been adopted and signed by the President, the committee will again consider the need for additional funds for this program.

I might add, Mr. Chairman, that the committee has historically and traditionally been very sensitive to the needs for construction grants for sewer and water programs. We would expect to review very favorably the recommendations that come from the authorizing committee. Finally, Mr. Chairman, I want to make it very clear that I strongly endorse both the objectives of and additional funding for this program. I recognize the ultimate need for substantially more than $500,000,000, and I will actively support increased funding at the proper time.

I urge approval of the amendment.

We do not want to put the cart before the horse. We do not want to jeopardize the position of our good colleagues on the Public Works Committee in their dealings with the Senate on this issue. It is not because of a lack of commitment that this amendment is offered, but merely a hope that the issue at stake can be resolved and that the 1978 appropriation bill will then be able to deal effectively and meaningfully with this problem, which all of us are very, very aware of.

Mr. COUGHLIN. Mr. Chairman, will the gentleman yield?

Mr. TRAXLER. I yield to the gentleman from Pennsylvania.

Mr. COUGHLIN. Mr. Chairman, I want to take the time to say that the minority concurs with the amendment, and thinks that it should be agreed to.

Mr. TRAXLER. I think the gentleman for his contribution.

Mrs. MEYNER. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Michigan (Mr. TRAXLER) and I feel very strongly that it addresses the critical issue of Federal funding for wastewater treatment in a backward manner.

My home State of New Jersey ran out of its Federal funding for water pollution control construction in December of 1976. Estimates are that between 32 and 45 other States will exhaust their funding before the end of fiscal year 1977. For this reason, it is essential that this supplemental appropriations bill contain adequate funding to maintain State programs.

The President has recommended $4.5 billion for this effort and the Senate has indicated its approval of this level of funding by including it in their version of the public works employment bill. The National Governor's Conference survey estimates that over $3.14 billion in Federal funding could be utilized immediately for priority projects in all the States.

How then, can the House of Representatives reasonably hold the level of funding down to $1 billion—more importantly, how can the House approve an amendment to cut this tiny sum by an additional 50 percent.

I think the answer lies in the crossfire of jurisdictional and political interests among the Members of this body. Make no mistake, Mr. Chairman, I am fully aware of the desire of the House Public Works and Transportation Committee to work its will on much needed reform of water pollution control laws, and of the position that major appropriations such as this should be preceded by authorizations approved by the relevant committees. But this program is too important to allow its funding to be held hostage until these issues are resolved.

Mr. Chairman, the facts in this case indicate that we have what amounts to a national emergency on our hands—an emergency that demands immediate action according to figures from the National Governor's Conference. Alabama needs $50 million for adequate sewage systems and water cleanup programs now. California needs $335 million. Illinois needs $417 million. New Jersey needs $360 million. Texas needs $202 million—and the list goes on and on

In light of the fact that the administration and the Senate have already indicated their strong support for full funding of these EPA programs, I find it unconscionable that the House of Representatives, would be the final stumbling block. This is particularly ironic since, after 5 years of administration impoundments and bureaucratic obstructions, the House today seems to be willing to engage similar delay tactics—tactics that would thwart the objectives of its own goals.

I had planned to offer an amendment at this time to restore the level of funding for the EPA water pollution control construction program to the $4.5 billion level requested by the administration.

However, I get a strong reading that this would be rejected in favor of stalling these funds until the Public Works Committee has a chance to work its will. I regret this, but am hopeful that the conference committee that meets to resolve the funding level of this vital program will accept a level of funding more in line with that recently adopted by the Senate.

I do not wish to jeopardize that conference in any way, and certainly would not like to see a "no" vote on my amendment construed as a rejection of the House of Representatives of this very valuable EPA program.

For these reasons, Mr. Chairman, I will not offer my amendment today. I do hope, however, that I have shed some light on the critical importance of full funding of the EPA water pollution control construction program, and that I have made a strong case for prompt favorable action on this $4.5 billion supplemental budget request.

At this time I will insert for the RECORD several items that will be of inter-

est in this debate that illustrate the consequences of a lack of decisive action:

U.S. ENVIRONMENTAL PROTECTION AGENCY,
Washington, D.C., March 11, 1977.

Hon. WILLIAM PROXMIRE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PROXMIRE: During my testimony before the Senate Appropriations Committee on March 7, questions arose concerning EPA's need for an appropriation of $4.5 billion in FY 1977 for the construction grants program which assists municipalities in constructing wastewater treatment facilities. The purpose of this letter is to clarify some of the major points made at that hearing.

Since the enactment of the Federal Water Pollution Control Act Amendments of 1972, the construction grants program has been growing steadily. That legislation authorized $18 billion for the planning and construction of municipal wastewater treatment works. Annual obligations have increased from $1.6 billion in FY 1973 to $4.2 billion in FY 1976 and are expected to exceed $6.0 billion in FY 1977. During this four-year period EPA and the State Agencies have been building organizational capability to efficiently administer this complex program.

To meet the national need for additional wastewater treatment facilities, the Administration has proposed an additional $45 billion for the construction grant program, to be allocated in equal $4.5 billion for the construction grant program, to be allocated in equal $4.5 billion increments over a ten-year period. This funding level would permit EPA to address the treatment needs identified in the 1976 Needs Survey at an annual level of funding that can be effectively administered at both the Federal and State level.

The $4.5 billion appropriation is needed in FY 1977 for three basic reasons:

To provide additional funds to those States which will run out of currently available funds prior to the end of FY 1977.

To assure that States do not continue to run out of funds in future years.

To allow the States to continue, without interruption, the long range planning necessary for the continuity of this program.

With regard to the first reason, at the current time we estimate that there are eleven States that will run out of currently available funds prior to the end of FY 1977, and that an additional $400 million to $1 billion could be obligated in FY 1977 if additional funds were appropriated. At the same time, however, we also estimate that eight other States will have critical problems in obligating their currently available funds by the September 30, 1977 reallotment date. To explain this apparent dichotomy it is necessary to look at the construction grants program not as a uniform, nation-wide program but rather as 56 separate programs, one in each State and territory. Each State handles its own program differently, and each State has its own particular problems as far as wastewater treatment is concerned. As the program has matured some States have moved ahead rapidly while others have fallen behind, in several instances because of litigation. Thus we find ourselves in the unusual position of having some States running out of funds while others are having problems using their current allotment.

In order to keep the program operating smoothly throughout FY 1977 and FY 1978, an appropriation of $4.5 billion for FY 1977 will be required. This level of funding is necessary because each State is allotted only that percentage of the appropriation allowed by an allotment formula established by law. Such a FY 1977 appropriation is necessary to provided the needed funds to those States running out. The Administration recognizes that the appropriation of $4.5 billion will result in significant unobligated balances in certain states at the end of FY 1977. But it will allow those States which have experienced problems to smooth out their programs since the allotment will remain available for three years, and it will provide for more effective management of the program than other alternatives which have been identified.

For example, the previous Administration proposed that $400 million be made available only to those States running out of funds. This proposal raised several problems. First, the availability of a limited amount of funds would have created a "run on the bank" situation, with the eleven States and perhaps others applying for a significantly greater amount of funding than would have been available. A second problem would have come in administering the distribution of these funds. It would have been virtually impossible to arrive at an equitable allocation formula. Therefore it would have been necessary to distribute the funds on a first-come first-served basis, raising the possibility that a few States might use the available amount, leaving the other States without funding. Increasing the total amount available for the States running out of funds to a level of $1 billion would certainly diminish this problem, but would not solve the long range planning problems discussed below.

Incidentally, EPA has frequently been asked why the $480 million added to the Public Works Employment Appropriation Act last year has not taken care of those States needing additional funds now. The reason is that under the Talmadge-Nunn formula in that Act the funds are allocated to only 37 States, primarily the Southern and Plains States, while the States running out of money are primarily in the North and the Midwest. There is very little overlap and where there is (as in the case of Nevada and Texas) the Public Works Employment Appropriation Act does not provide sufficient funds to do the job.

The second reason for requesting an appropriation of $4.5 billion for FY 1977—to assure that States do not continue to run out of funds—is less obvious, but its impact could disrupt the planning in this program for many years. The lack of a sizeable appropriation in FY 1977 could set up a situation in which certain States would run out of funds each year prior to the availability of the next year's appropriation. In effect, the States that are moving rapidly would be penalized by an intermittent availability of funds. Let me give an example. It is estimated that New Jersey could use the full allotment available from a $4.5 billion appropriation prior to the end of FY 1977. If this appropriation is not made available, New Jersey has sufficient projects to use its FY 1978 allotment in the first half of the fiscal year, putting the State again next year in the same position it is in now. New Jersey would then have to wait at least six months for the FY 1979 appropriation. This situation could go on indefinitely, unless the State chose to slow down its program. Each of the eleven States currently running out of funds is now in a comparable position. Many additional States could find themselves in this position in FY 1978.

The third reason—the need for long range planning—is extremely important to the momentum of the program. Long range planning is essential to program continuity; it takes two to three years to move a project through the planning and design phases before it is ready to go under construction. To successfully obligate the amounts of money proposed for this program at a steady, well managed rate, it is essential that the States continue planning for a balanced mix of Step 1 (planning), Step 2 (design), and Step 3 (construction) projects. The lack of a FY 1977 appropriation would disrupt this planning process; many States and localities have shown a reluctance to proceed with Step 1 and Step 2 planning and design until sufficient funds have been allocated to move projects through to construction. In short, an effect of not obtaining the $4.5 billion appropriation in FY 1977 would be to gear down certain State programs that have taken four years to build up. These States would then have to rebuild these programs again in FY 1978. This slowdown would also have a direct effect on the construction industry, with secondary effects on equipment manufacturers and other construction related industries.

In summary, the Administration is proposing a long-range program of level appropriations over a ten-year period starting in FY 1977. Such a program will, in the long run, iron out the problems which I have described. It will assure that States do not continually find themselves in the position of running out of funds, or in the uncertainty of not knowing whether future funds will be forthcoming. It will, in short, help to assure an efficient and effective program.

I hope that this letter has clarified the various issues related to the $4.5 billion appropriation requested in FY 1977 and demonstrated its importance to EPA's construction grants program. If you have any questions or wish any further information, please let me know.

Sincerely,

DOUGLAS M. COSTLE.

COMMITTEE ON ENVIRONMENT
AND PUBLIC WORKS,
Washington, D.C., March 15, 1977.

Hon. WILLIAM PROXMIRE,
U.S. Senate,
Washington, D.C.

DEAR BILL: As you know, the Senate voted to fund the water pollution control program in Title II of the Public Works Jobs bill. In order to stay within the target set by the First Concurrent Budget Resolution for this function and to conform with the new President's supplemental request for budget authority, the authorization for construction grants was reduced from $5 billion to $4.54 billion. It is now essential that the Appropriations Committee provide authority for full obligation of the 1977 construction grants funds.

There are several important reasons for inclusion of $4.54 billion in the supplemental appropriations which you will consider this week:

1. Funding for the construction of sewage treatment facilities is an integral part of the Public Works Jobs Program. This Program is ongoing; its projects are ready for construction; municipalities are ready to hire people; employment will be immediate;

2. As many as 34 States will exhaust their construction grant funds during FY 1977 and all States will require funds in FY 1978. The program must be replenished to keep workers on the job and make new jobs;

3. Any reduction in appropriations below the authorized levels reduces the allotment to each State proportionately. The Appropriations Committee does not have the flexibility to target these funds to specific States. A reduction will be crippling to those States most in need of these funds, some of which even now have demand for funds which would exceed their full share;

4. Full appropriation is needed to assure enough money for the initiation and continuation of construction of large projects. If the funding level is reduced, pressure will be on States to approve small projects in order to maximize use of limited funds, rather than maximize water cleanup or creation of new jobs;

5. Full funding for FY 1977 is needed to carry States through to the next appropriation cycle to enable long-range planning, to

ensure stable work flows, and to avoid added costs due to inflation; and

6. At last, we are gaining momentum in cleaning up our water. That momentum must be maintained.

When the EPA appropriations bill was considered by the Senate last June, we discussed the fact that funds were not included for waste treatment construction grants because the Public Works Committee had not completed work on the authorization. Now action can be expected on an authorization in the near future. Both the House and Senate have passed the jobs bills, and conference is expected soon.

The clean water program is vital. It serves, simultaneously, critical environmental and economic purposes; it cannot be allowed to expire; its momentum cannot be stalled; full funding is required at the earliest possible date.

We know of your commitment to our objectives, and look forward to your cooperation in providing full funding for this important program.

Sincerely,

Robert T. Stafford, Pete V. Domenici, Howard H. Baker, Jr., Jennings Randolph, Daniel Patrick Moynihan, Malcolm Wallop, Gary Hart, Edmund S. Muskie, Quentin Burdick, Mike Gravel, John C. Culver, Wendell R. Anderson, James A. McClure, U.S. Senators.

The CHAIRMAN. The time of the gentlewoman from New Jersey (Mrs. MEYNER) has expired.

(By unanimous consent, Mrs. MEYNER was allowed to proceed for 1 additional minute.)

[1] Most realistic estimate of the month State will submit to EPA for obligation its last dollar in current allocations.

[2] Estimate of Step III projects which could be submitted to EPA by 9–30–77.

Mrs. FENWICK. Mr. Chairman, will the gentlewoman yield?

Mrs. MEYNER. I yield to the gentlewoman from New Jersey (Mrs. FENWICK).

Mrs. FENWICK. I thank the gentlewoman for yielding.

Mr. Chairman, I would like to associate myself with the remarks of the gentlewoman and I would like to congratulate her on this very clear and sound exposition on a bill which is of grave importance, not only to our State, but to many other States, and further than that, to the quality of water and the whole environment.

Mr. VOLKMER. Mr. Chairman, will the gentlewoman yield?

Mrs. MEYNER. I yield to the gentleman from Missouri (Mr. VOLKMER).

Mr. VOLKMER. I thank the gentlewoman for yielding.

Do we have authorization in present law for the spending of the full amount that is in the present bill?

Mrs. MEYNER. No.

Mr. VOLKMER. In other words, we can spend it?

Mrs. MEYNER. The gentleman from Michigan (Mr. TRAXLER), I think, is better informed on that than I am.

Mr. VOLKMER. I would like to get that cleared up.

Mrs. MEYNER. I will yield to the gentleman from Michigan (Mr. TRAXLER) to answer that question.

Mr. TRAXLER. There is no existing authorization to spend a penny in this area.

Mr. MAHON. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I think a word of clarification at the moment would be in order. Insofar as I know, Members generally are in favor of the $1 billion provided in the bill. Not one penny of it has been authorized, however. And when we appeared before the Committee on Rules, the Committee on Rules granted us a rule waiving points of order because of lack of authorization. However, the representatives from the Committee on Public Works, the chairman, the gentleman from California (Mr. JOHNSON), and the gentleman from Massachusetts (Mr. BOLAND), the chairman of the subcommittee handling this appropriation, agreed in open session before the Committee on Rules that he would offer an amendment reducing the $1 billion to half of that amount, one-half billion dollars, in order to give time for this matter to be worked out. It is not because anyone is opposed to eventually providing these funds and additional funds, but it was a matter of enabling the legislative committee to come to an agreement within a reasonable time with the other body, in order that we would not in effect pull the rug out from under the legislative committee. The Committee on Appropriations does not feel that it is appropriate to undertake to pull the rug out from under the legislative committees. So we worked this out in an open hearing before the Committee on Rules.

Mr. Chairman, I am not out of sympathy at all with the statement of the gentlewoman from New Jersey in wanting the additional funds. The additional funds will be forthcoming, and I think the best way to do it is to accept this amendment and move along, because I am sure that this House and this Congress will see to it that the funds are provided in a timely way. In the meantime the one-half billion dollars provided here will be quite helpful, I think.

Mr. WRIGHT. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Texas (Mr. WRIGHT).

Mr. WRIGHT. I thank the gentleman for yielding.

The chairman of the committee precisely states the situation. A vote for this amendment is not a vote against water pollution abatement. A vote for this amendment is a vote for strong and effective water pollution abatement.

In 1972 this Congress launched a massive campaign to clean up the streams of this Nation in a hurry. It was an ambitious undertaking. We mandated that $18 billion should be made available to communities throughout this country in matching grants for wastewater treatment facilities in the first 3 years. Those 3 years have passed. And do the Members know how much of that money actually got out into the hands of the communities to clean up the streams during those 3 years? A miserable 9 percent. Nine percent of the money that Congress had made available was actually expended on the fundamental purpose of the program.

Therefore, it is absolutely necessary, if this vital program is to work effectively and not be just a farce, for the Committee on Public Works and Transportation to have the opportunity again this year to bring to us, as it did last year and as the House approved, some midcourse corrections that will get this program on target and free it from this strangulating, convoluted undergrowth of redtape and paperwork.

For that reason I commend the chairman of the committee, Mr. MAHON, for what he said, and I commend the committee for what it is doing by offering this amendment. If we are friends of water pollution abatement, if we want to clean up the streams, we will vote for this amendment and give the Committee on Public Works and Transportation and this House another opportunity to show that we are serious about making that program work.

Mr. JOHNSON of California. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, as chairman of the Committee on Public Works and Transportation, I was concerned, along with all the members, with this matter that appears in the bill on page 12 concerning the construction grants for water pollution control.

The Committee on Public Works and Transportation would be the last committee that would want to do anything that would jeopardize this very much needed program. However, at the same time we have our authorization bill pending in the Subcommittee on Water Resources. They have held hearings and are going to begin markup on this bill on Wednesday of next week. They expect to complete markup on Thursday.

We went before the Committee on Rules and raised the question there with the chairman of the Committee on Appropriations, the gentleman from Texas (Mr. MAHON), and with the chairman of the subcommittee, the gentleman from Massachusetts (Mr. BOLAND), and with the concurrence of the minority side on the same committee we were able to agree upon an amount of $500 million, which will give at least 2-months' grace to the funding of this program. At the end of that time we will have a chance to perfect our bill, and we will be able to take the bill to conference and work out an agreement.

Mr. Chairman, certainly neither I nor any of the members of the Committee on Public Works and Transportation are in disagreement with the program. We do not want to jeopardize it in any way. The Senate has already passed a 2-year program calling for $9 billion. Our bill will call for $17 billion under a 3-year program.

So I think if the Committee today will adopt the amendment offered by the gentleman from Michigan (Mr. TRAXLER), we will move along and have a very effective water pollution control program.

Mr. LAGOMARSINO. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of California. I yield to the gentleman from California.

Mr. LAGOMARSINO. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I wonder if the gentleman can inform me whether the bill he is now discussing, the one which the public works committee is going to start markup next Wednesday, will include a provision allowing for a case-by-case deferral of some of these local water pollution projects such as the Goleta Sanitary District in my district, programs that are not able to be completely funded?

Mr. JOHNSON of California. Yes. Especially in light of the fact that the year of 1977 is upon us at the present time, we must give consideration to that factor.

Mr. LAGOMARSINO. Does the bill contain such a provision?

Mr. JOHNSON of California. Yes, it does.

Mr. LAGOMARSINO. Mr. Chairman, I thank the gentleman.

Mr. VOLKMER. Mr. Chairman, will the gentleman yield for a question?

Mr. JOHNSON of California. I yield to the gentleman from Missouri.

Mr. VOLKMER. Mr. Chairman, assuming that Congress does pass a new funding bill, the bill that the gentleman spoke about, what amount does the gentleman contemplate would be needed to provide the additional funds for that authorization bill?

Mr. JOHNSON of California. Mr. Chairman, our bill will call for a 3-year program and an overall appropriation authorization of $17 billion. As stated here by the gentlewoman from New Jersey (Mrs. MEYNER), the Senate has already passed a bill calling for $9 billion in a 2-year program, providing $4.5 billion annually. So in our bill there will be at least that much for each year. Our bill calls for $5 billion, $6 billion, and $6 billion.

Mr. VOLKMER. That is additional?

Mr. JOHNSON of California. Yes.

Mr. VOLKMER. Mr. Chairman, I thank the gentleman.

Mr. HARSHA. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of California. I yield to the gentleman from Ohio.

Mr. HARSHA. Mr. Chairman, I thank the gentleman for yielding.

I would like to associate myself with the remarks of the gentleman from California (Mr. JOHNSON). He has accurately stated the case. The committee does have this legislation under review. We will report out a bill as expeditiously as we can. There is no member on the committee who is opposed to water pollution control abatement.

As one of the architects of the 1972 act, I can say without reservation that the minority wholeheartedly supports the continuation of this program.

However, Mr. Chairman, we would like to do it through an orderly process and through the usual legislative procedures. We have agreed with the majority member on the Subcommittee on Appropriations to proceed in this way. This will give us the leeway to enact proper legislation and bring it back to the floor for the consideration of the Members.

Mr. Chairman, I urge the adoption of the amendment of the gentleman from Michigan (Mr. TRAXLER).

Mr. JOHNSON of California. Mr. Chairman, I thank the gentleman.

Mr. MAHON. Mr. Chairman, since all Members already have the privilege of revising and extending their remarks, I ask unanimous consent that all debate close on this amendment at this time.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. TRAXLER).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

PRESERVATION OF HISTORIC PROPERTIES

For an additional amount for "Preservation of historic properties," $1,000,000, to remain available until expended.

AMENDMENT OFFERED BY MR. HAGEDORN

Mr. HAGEDORN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HAGEDORN: On page 16, after line 6, insert the following:

GEOLOGICAL SURVEY

SURVEY, INVESTIGATION AND RESEARCH

For an additional amount for "Survey, Investigation and Research", 5,000,000: *Provided*, That this amount shall be available only with cooperation of the states or municipalities for water resources investigations.

Mr. HAGEDORN. Mr. Chairman, the purpose of this amendment, is to increase the appropriation which is needed, I think, to facilitate the ground water and stream flow surveys which are underway right now by State agenices and are, I believe, being conducted in 26 States at the present time.

Mr. Chairman, the drought experienced by many regions of our country over the past year has been, in many respects, the worst experienced in more than four decades. In Oklahoma, less rainfall has been received than during even the peak of the Dust Bowl era in the 1930's. Throughout the Nation, major reductions have occurred in the amounts of crops and feed grains harvested, with the seven-State north-central region of the country suffering estimated losses of 135 million bushels of corn, 63 million bushels of soybeans, 33 million bushels of oats, and 31 million bushels of wheat.

In my own State of Minnesota, farmers experienced declines in production during 1976 of 23 percent for their corn crop, 10 percent for their oat crop, 28 percent for their soybeans, and 27 percent for their hay production. Twenty-four States are currently suffering from substantially below normal ground water levels, with nine of them experiencing levels rivaling the lowest in their recorded history.

The amendment I am offering would provide an additional $5 million to the U.S. Geological Survey for their ground water management activities, increasing the total annual appropriation in this bill to $34 million. The Water Resources Division of the Survey is responsible for investigating the occurrence, quantity, quality, distribution, and movement of surface and underground waters that comprise our country's natural water resources. Included among their major activities are the systematic collection, analysis, and interpretation of data relating to these resources.

It would be my intention that the additional funds provided for by this amendment would specifically be directed toward helping to alleviate regional water shortages attributable to the drought. None are to be made available to the States, except through matching programs administered by the survey, with State and local officials to be fully involved in the determination of objectives and priorities for individual projects.

I would also hope that efforts can be made by the survey to better consolidate their various drought management projects and enable persons impacted by drought conditions to learn the availability of survey studies which may be of benefit. Many farmers do not seem to be aware of the efforts by the Survey to

monitor the effect of natural conditions upon water supply, and to evaluate potential alternative sources of water when necessary.

Mr. Chairman, while the $5 million sum in my amendment is not going to suddenly eliminate the harsh impact of our current drought upon farmers, I am optimistic that at an extremely small cost it might contribute somewhat toward insuring that efforts to ameliorate the impact of future droughts can more quickly be set in motion.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. HAGEDORN. I yield to the gentleman from Illinois.

Mr. YATES. Mr. Chairman, I think this is a worthy amendment.

I think one of the greatest problems this country faces is the protection and preservation of our water resources, and a principal agency for protecting these vital resources is the Geological Survey.

Mr. Chairman, approximately $29 million was made available in the 1977 appropriation for this program. The appropriation requested for fiscal year 1978 is slightly above $31 million.

Mr. Chairman, the need for additional research by the Geological Survey has been made graphically clear in the hearings pending presently before our subcommittee. For example, it was brought out in the hearing only this morning that in the State of Oklahoma, the salting of old oil wells and gas wells under secondary and tertiary recovery procedures has resulted in the fouling with salt of one of the more important aquifers in the State.

Mr. Chairman, the Geological Survey feels that this may have such a devastating effect that the aquifer will not be usable in the future.

Therefore, Mr. Chairman, I commend the gentleman from Minnesota (Mr. HAGEDORN) for offering his amendment; and we are pleased to accept it on this side of the aisle.

Mr. HAGEDORN. Mr. Chairman, I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota (Mr. HAGEDORN).

The amendment was agreed to.

The CHAIRMAN. The clerk will read.

The Clerk read as follows:

BUREAU OF MINES

MINES AND MINERALS

For an additional amount for "Mines and minerals", $50,000.

AMENDMENT OFFERED BY MR. M'DADE

Mr. McDADE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. McDade: On page 16, line 14, strike out "$50,000" and insert in lieu thereof, "$10,050,000".

Mr. McDADE. Mr. Chairman, this is an amendment to beef up the research and development programs that are currently ongoing in the U.S. Bureau of Mines.

I offer this amendment for the purpose of extending a very important program which is underway within the U.S. Bureau of Mines. The $10 million which I propose to add today will be put to use in implementing some very critical mine subsidence control programs in sections of our Nation.

Mr. Chairman, for several years now our committee has funded and the Congress has supported research aimed at alleviating the threat of mine subsidence in areas victimized by improper mining practices. To do this the Bureau of Mines has developed new technology that provides dramatically improved protection from deep mine subsidence. This technique, known as hydrolic or pressure flushing, has proven to be immensely successful in protecting property, improving the environment and making additional land available for diversified use.

Today I am asking for $10 million more to expand that research on projects which are underway in the East St. Louis, Ill., area and in northeast Pennsylvania. The technology we benefit from by investing these dollars has made a substantial contribution to our knowledge of proper land reclamation. If our Nation is to develop its coal reserves to meet our energy crisis then we are going to need technology geared toward proper land restoration. This is one of the most successful research and demonstration programs found anywhere in our bill and I urge my colleagues to support this amendment.

Mr. Chairman, let me cite some specific examples of how this research benefits us.

The Bureau of Mines intends to conduct research on subsidence control in so-called perched water areas. This is where mine water has backed up in underground voids located in layers above deeper voids. We need to know how we can prevent further subsidence from mine waters that travel through layers of underground voids which correspondingly weaken the surface lands. This money will give us those answers.

Another program funded here will be research into flushing areas already badly caved by subsidence. Previous technology provides no answer. This demonstration project can show us how to achieve such surface stabilization and protect the homes and surface investments. The Bureau of Mines has utilized the latest scientific data available to determine if the people of this area can continue to live in their homes or conduct their businesses. These seismic profiles as they are called have demonstrated that there may be a remedy for these people. But we will not know until we demonstrate that pressure flushing works in a caved area. This money should provide that answer.

Another $2 million will attempt to resolve the future of 33 acres of heavily populated sections of Belleville and Maryville, Ill. Last year we began such research and the results are promising. We need to finish the task and refine this technology.

Later in this bill my colleague from Illinois (Mr. YATES) will offer a package of amendments designed to improve the roads, the maintenance needs, and the timber harvest in our national forests. We have a special obligation to preserve the multiple-use principle inherent in our national forest lands. One such use of the future will be how much mining we are going to undertake and how well we will be able to reclaim that green space from the effects of mining.

Some years ago, the Bureau of Mines undertook a unique demonstration project in cooperation with the Forest Service, the National Park Service, and the Bureau of Outdoor Recreation. This project is aimed at demonstrating how mine destroyed lands can be reclaimed and turned into new recreation opportunities. $1 million of this money will assist in the cleanup and rehabilitation of an existing mine located on public property aimed at demonstrating these new rehabilitation techniques. It will be another significant step forward in this program and it will greatly assist us in planning for our Nation's mine reclamation needs.

Finally, $2 million will be used as part of the Bureau's existing research in a related area—that of determining how much and how effectively usable coal can be recovered from mine refuse.

Mr. Chairman, one of the most difficult problems facing us in the area of mine reclamation is what to do with the millions of tons of solid waste obtained as a byproduct of coal extraction. These refuse banks which scar the Appalachian coal fields have been demonstrated at the laboratory level to contain reusable energy. Perhaps, up to 22 percent of this refuse could be recycled as a new energy source. But we need to test this potential new energy source at the demonstration plant stage of development.

Last year the committee began a program directing the Bureau of Mines, FEA, and ERDA to undertake a joint effort to examine the feasibility of a project to bring this useable coal on stream thereby helping meet our energy needs. This initiative is underway and this new money will allow for the construction of this demonstration program.

If we are successful with this initiative we will attack two difficult problems that plague the coal regions—the disposal of solid waste refuse from coal and the feasibility of recycling that refuse to meet our energy needs. I believe these very important initiatives deserve our support and I urge my colleagues' concurrence.

I have discussed this with the chairman of the committee. I believe that I have his support for the amendment and the support of the committee for the amendment.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. McDADE. I am delighted to yield to my friend, the gentleman from Illinois (Mr. YATES).

Mr. YATES. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, as I understand this amendment, it is proposed to be offered to the section dealing with the U.S. Bureau of Mines for the purpose of engaging in research and development respecting mine subsidences.

Mr. Chairman, there are so many areas throughout the coal-mining regions of

the country which are sinking because of abandonment of the mines and these areas are not usable for other purposes. The mine-subsidence program will develop methods of providing further use for those lands. I think it is a good amendment. I think the amendment should be adopted.

Mr. McDADE. Mr. Chairman, I thank the gentleman from Illinois for his statement. I urge the adoption of my amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania (Mr. McDADE).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

TERRITORIAL AFFAIRS

ADMINISTRATION OF TERRITORIES

For an additional amount for "Administration of territories", $19,700,000, to remain available until expended, including $8,500,000 for grants to the Virgin Islands and $11,200,000 for grants to Guam.

AMENDMENTS OFFERED BY MR. PHILLIP BURTON

Mr. PHILLIP BURTON. Mr. Chairman, I offer two amendments and ask unanimous consent that they may be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read as follows:

Amendments offered by Mr. Phillip Burton: On page 17, line 4, delete "$19,700,000" and insert in lieu thereof "$35,200,000".

On page 17, line 6, delete "$11,200,000" and insert in lieu thereof "$26,700,000".

Mr. PHILLIP BURTON. Mr. Chairman and my colleagues, this amendment is designed to provide equivalent recognition to the government of Guam as that which the bill provides to the government of the Virgin Islands in terms of dealing with the mandated reduction in their revenues as a result of the operation of the income tax reduction and rebate legislation of 1974 and 1976.

The background of this particular problem is as follows:

Last year we were able to reach accord with the administration with reference to the Virgin Islands and its problems. We had reached what I deemed to be an essential accommodation with reference to the tax reduction impact with reference to Guam but not with the second portion of the Guam package. Time ran out and the matter was not authorized for Guam.

Our distinguished colleague, Mr. WON PAT, has brought this matter to our attention again this year, and hence, this amendment.

It is my intention, if this amendment is approved—and I have cleared this with our ranking member of the subcommittee for this purpose, our colleague, the gentleman from California, (Mr. DON H. CLAUSEN)—that our authorization will require a dollar-for-dollar reduction in whatever objectively determined amount there is that the government of Guam would be entitled to as a result of this effort to repay them for losses in their revenues not traceable in any way to any of their own governmental actions.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. PHILLIP BURTON. I yield to the gentleman from Illinois.

Mr. YATES. I thank the gentleman for yielding.

The supplemental bill under consideration, contains $8,500,000 for the Government of the Virgin Islands. The reasons for that is because of the revenues lost to the Government of the Virgin Islands because of the rebates that were granted under the tax reduction act of 1975. There will be additional funds that will have to be paid in the future to the Government of the Virgin Islands and to the other territorial governments because of the rebates that are authorized under the tax law that has just been approved by the House—and I assume it will be approved subsequently by the Senate. The Government of Guam has lost the same kind of funds that were the subject of the appropriation for the Government of the Virgin Islands.

The gentleman from California is the chairman of the authorizing committee which has that program under consideration at the present time. He has assured me that the past testimony before his subcommittee indicates that the money that will be payable to the Government of Guam is approximately twice the amount of the amendment he has offered.

Mr. PHILLIP BURTON. That is what I understand.

Mr. YATES. With that understanding, and with the knowledge that the funds will have to be paid to the Government of Guam either in the 1978 appropriation or later, and that this will amount to speeding up the payment of funds and will help the recovery of the typhoon-devastated island, I have no objection to the amendment.

Mr. PHILLIP BURTON. I thank the gentleman.

Mr. McDADE. Mr. Chairman, will the gentleman yield?

Mr. PHILLIP BURTON. I yield to the gentleman from Pennsylvania.

Mr. McDADE. I thank the gentleman for yielding.

Mr. Chairman, I just want to indicate that both my colleagues, the gentlemen from California, Messrs. PHILLIP BURTON and DON H. CLAUSEN, who handled this legislation have very persuasively discussed this matter with us. I agree that my friend, the gentleman from Illinois, has stated the case with accuracy. We support the amendment.

Mr. DON H. CLAUSEN. Mr. Chairman, will the gentleman yield?

Mr. PHILLIP BURTON. I yield to the gentleman from California.

Mr. DON H. CLAUSEN. I thank the gentleman for yielding.

I just want to state for the record that I concur with the amendment as offered by the gentleman from California. It does take on a sense of urgency because of the typhoon problems of Guam, so I concur with his amendment.

Mr. WON PAT. Mr. Chairman, on behalf of the people of the territory of Guam, I rise in support of the amendment offered by the distinguished chairman of the Subcommittee on National Parks and Insular Affairs, Representative PHILLIP BURTON. As many of my colleagues in the House of Representatives are aware, the majority of the revenues of the government of Guam are collected by the territorial income tax Federal law provides that the territorial income tax be a "mirror image" of the U.S. Internal Revenue Code, which means that the Internal Revenue Code is applied on Guam, but the receipts are covered into the treasury of Guam rather than the U.S. Treasury. This procedure gives the government of Guam a sophisticated body of Treasury decisions and Internal Revenue Service regulations interpreting its income tax code. However, the mirror image code unfortunately places the government of Guam in a financial bind every time the Congress approves tax rebates or tax reductions, as such reductions reduce the revenues to the coffers of Guam.

The amendment offered by Mr. BURTON would compensate, in part, the government of Guam for revenues that were lost to it through the Federal income tax revisions in 1974, 1975, and 1976. The amount called for comes from the "Audit Report on the Government of Guam Income Tax Revenue Loss Due to Federal Income Tax Revision—1974, 1975, and 1976" by the Office of the U.S. Government Comptroller for Guam, Department of Interior, July 1976, Report No. RG76–17.

The recent recession has had a severe impact on the island's economy, and on the revenues of the government of Guam. The destructive effects of Typhoon Pamela in April 1976, greatly increased the strain on the budget of the island government. The favorable passage of the amendment offered by Mr. BURTON would partially eliminate the adverse effects of well-intentioned congressional action in reducing tax burdens for U.S. citizens by replacing the revenues to the treasury of Guam which were eliminated by tax reforms in the past 3 years.

I strongly urge my colleagues to vote favorably on this amendment.

The CHAIRMAN. The question is on the amendments offered by the gentleman from California (Mr. PHILLIP BURTON).

The amendments were agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

RELATED AGENCIES

DEPARTMENT OF AGRICULTURE

FOREST SERVICE

FOREST PROTECTION AND UTILIZATION

For an additional amount for "Forest protection and utilization", $211,805,000.

AMENDMENTS OFFERED BY MR. YATES

Mr. YATES. Mr. Chairman, I offer a series of amendments, and I ask unanimous consent that the amendments may be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The Clerk read as follows:

Amendments offered by Mr. YATES:

Amendment No. 1: On page 17, line 23, strike out "$211,805,000" and insert in lieu thereof "$233,005,000".

Amendment No. 2: On page 18, line 3,

strike out "$534,000" and insert in lieu thereof "$21,873,000".

Amendment No. 3: Page 18, line 6, strike out "$15,000,000" and insert in lieu thereof "$29,650,000".

Amendment No. 4: Page 18, line 8, strike out "$7,500,000" and insert in lieu thereof "$14,825,000".

Amendment No. 5: Page 18, line 9, strike out "$7,500,000" and insert in lieu thereof $14,825,000".

Amendment No. 6: On page 18, line 13, strike out "$17,000,000" and insert in lieu thereof "$33,800,000".

Amendment No. 7: On page 18, after line 21, add:

FOREST ROADS AND TRAILS

For expenses necessary for carrying out the provisions of 16 U.S.C. 528–538 and 551, relating to the construction and maintenance of forest development roads and trails $6,000,000, to remain available until expended.

Mr. YATES. Mr. Chairman, these amendments are offered on behalf of the members of the Interior Appropriations Subcommittee. They add $79,989,000 to the bill. The work to be performed under the appropriations will create about 12,000 additional jobs including positions for teenagers, who have the highest unemployment rates by age group in the country.

It is expected that the various agencies which administer these programs will observe several criteria in carrying out these programs, and I want the House to pay attention to this. These funds are not going to be used for the ordinary so-called leaf-raking jobs because of the following criteria.

First, the funds will be used in areas of high unemployment.

Second, to the greatest extent possible, the employment impact should be limited to the actual creation of new jobs.

Third, projects and programs initiated with these funds are not make-work jobs. They will result in acres of trees planted, in hiking trails constructed, in facilities built, in timber roads constructed, in other words, for permanent installations of the kind that were constructed during the Depression years in the national forests, national parks, in the public lands of the West. They are permanent installations which will benefit the Nation.

The $14,650,000 in this amendment for the Youth Conservation Corps brings the funding for this program to the authorized level of $60 million. The additional funds would provide for employment of approximately 9,500 young people between the ages of 15 and 18, bringing the total participants in the program for this coming summer to approximately 43,000 young people.

This program provides a twofold benefit: gainful employment for our youth in the outdoors and improvement of our own forests, parks, and public lands, and the improvement of our national heritage which we want to preserve and protect with pride for the generations to come.

The amendments also include $33,339,000 to rehabilitate the recreation facilities of the U.S. Forest Service. In the course of my remarks earlier this afternoon I commended President Ford for having announced his Bicentennial Land Heritage Program for the national parks. These amendments will provide a comparable program for the national forests. The national forests provides recreation facilities for as many people in our country as do the national parks. The recreation areas of the Forest Service have enormous visitation. This will permit the Forest Service to reopen 181 recreation areas that it has closed for lack of funds. In addition to that it will remove the threat of closing of 100 other recreation areas in the Forest Service, in total 281 areas which receive over 10 million visitor days during the year. The funds will provide for the rehabilitation and replacement of water systems, for new toilets, for the replacement of toilets, rehabilitation of camping and picnic grounds, boat facilities and other facilities of that type.

There is $10 million included for rehabilitation work to take care of construction and reconstruction of new water and sanitary facilities, to establish trails, to establish camp grounds, boat ramps, amphitheaters, and so forth.

The green heritage of this Nation has been neglected for much too long. These amendments correct that situation.

Mr. Chairman, the amendment also includes $32 million for acceleration of timber production in the national forests at a time when timber production should be increased. The housing industry of this Nation needs stimulation and is moving toward an increase in the construction of new homes. As a result of providing the funds in this bill over 700 million board feet of timber will be provided for the housing market a full year sooner than would have been possible otherwise. It is the announced goal of this administration to expand housing starts.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(By unanimous consent, Mr. YATES was allowed to proceed for 1 additional minute.)

Mr. YATES. Mr. Chairman, in order to meet the housing needs of this Nation, if adequate lumber is not available, increased prices will result and it will be even more difficult for people to acquire new homes.

Mr. Chairman, for all the reasons I have stated, I urge approval of my amendments.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Illinois (Mr. YATES.).

The amendments were agreed to.

Mr. DICKS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, today, we are considering H.R. 4876, an appropriations act designed to stimulate the present sluggish economy, through various programs that should result in the creation of one million new jobs in both the public and private sectors.

One important aspect of the unemployment problem which this measure will address is that of providing constructive work for the Nation's young people.

We have a particularly successful program currently, that provides employment and training for young persons aged 15 to 18. It is the Youth Conservation Corps. The popularity of this program can be attested by the fact that 200,000 applications were received last summer for 24,000 available positions. Of those individuals who have participated in the program, 95 percent have found their YCC experience to be worthwhile and enjoyable.

The YCC program has a value in the conservation work accomplished as well. In the summer of 1975 over $14,000,000 worth of projects were completed from a funding level of $13,000,000.

It is for these reasons that I rise in support of the amendment offered by the distinguished chairman of the House Interior Appropriations subcommittee to this bill that will increase the appropriation for the Youth Conservation Corps program by an additional $15,000,000.

This amount, when combined with the Appropriations Committee recommendation for another $15,000,000 increase in the program that is included in the Supplemental Appropriations Act, H.R. 4877, which I proposed will bring the funding level for the YCC to its full $60,000,000 authorization, and provide between 40,000 and 50,000 jobs for young Americans.

I strongly support adding $33,339,000 to improve the recreation facilities of the U.S. Forest Service. The amendment will enable the Forest Service to reopen 181 recreation areas and that 100 additional areas will not be closed. These 281 areas have annual participation in excess of 14 million visitor-days.

I also support adding $32 million for acceleration of timber production in natural forests. It will provide $9.2 million for timber sales preparation and $22.8 million for construction of forest roads. If these amendments are adopted 700 million more feet of additional timber can be made available to the housing market.

I would urge my colleagues to lend their support for these important amendments and to praise the subcommittee chairman, Mr. YATES, for his outstanding leadership.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

BOARD OF TRUSTEES OF THE JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS

REPAIR, RENOVATION, AND RECONSTRUCTION

For repair, renovation, and reconstruction of the John F. Kennedy Center for the Performing Arts necessary to correct water leaks in the roof, the terraces, the kitchen, and the East Plaza Drive and to correct any damage which has resulted from those leaks, $4,700,000, to remain available until expended: *Provided*, That this appropriation shall be available only upon enactment into law of H.R. 2846, Ninety-fifth Congress, or similar legislation.

POINT OF ORDER

Mr. ASHBROOK. Mr. Chairman, I make a point of order against this section.

The CHAIRMAN. The gentleman will state the point of order.

Mr. ASHBROOK. Mr. Chairman, I make a point of order that the $4,700,000 called for in this section is not authorized and violates rule XXI.

The CHAIRMAN. Does the gentleman from Illinois wish to be heard on the point of order?

Mr. YATES. Mr. Chairman, the section is not authorized and, regretfully, because of the fact that there are 125 leaks in the roof of the Kennedy Center and have been for the last year or so. May I say that I have to concede the point of order, if the gentleman insists upon the point of order; but I would hope the gentleman would not insist upon it, in view of the fact that the Center is deteriorating rapidly as a result of the leaks in the roof, and I would hope that the gentleman would desist.

Mr. ASHBROOK. Mr. Chairman, I would say to the gentleman that I do not feel too well about it myself, either.

Mr. YATES. Mr. Chairman, I agree with the gentleman.

Mr. ASHBROOK. That $4,700,000 is not authorized and I insist on my point of order.

Mr. YATES. Regretfully, Mr. Chairman, I must concede the point of order.

The CHAIRMAN. The gentleman from Illinois concedes the point of order. Therefore, the point of order is sustained.

The Clerk will read.

The Clerk read as follows:

CENTER FOR DISEASE CONTROL

PREVENTIVE HEALTH SERVICES

(TRANSFER OF FUNDS)

For an additional amount for "Preventive health services" for carrying out, to the extent not otherwise provided, sections 317(g)(1)(A), and 318(d)(2) of the Public Health Service Act and the Occupational Safety and Health Act of 1970, $11,000,000 to be derived by transfer from amounts appropriated in Public Law 94-266 for a comprehensive nationwide influenza immunization program.

Mr. CONTE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I wrote the minority views on this particular section.

Mr. Chairman, in the regular appropriations bill for 1977, we provided $26.5 million for community mental health centers. However, because of an underestimation of the costs of supporting continued operations of existing mental health centers, some $8 million had to be shifted out of new starts and into continuation costs.

There are two major reasons for this underestimation. First of all, the community mental health centers legislation enacted in the last Congress (Public Law 94-63) provided for a new method of funding these centers, based upon a percentage of the projected deficit for each center. Because this is the first full year under that funding formula, errors were made in predicting these deficits. As more experience is gained over the years, certainly the estimates will become more accurate.

And second, we are now in the midst of a 2-year process of converting old community mental health centers to new programs offering up to 12 mental health services. Because the legislation provided many different ways to convert in this process, it was not possible to accurately estimate the costs which would be involved. Again, the estimates were low.

The shift of $8 million out of the $26.5 million originally appropriated for new mental health centers would result in the funding of only 20 of the 38 already approved but unfunded community mental health center applications this year. The $8 million increase which I propose would provide for the funding of an additional 11 centers, and would make community mental health services available to an additional 2 million Americans.

There are presently 650 federally funded community mental health centers in the United States, serving approximately 43 percent of the Nation's population. The development of this program has been instrumental in shifting the focus of mental health care in the United States away from the State mental hopitals and toward community-based treatment.

Thanks to the community mental health centers program, the population of State mental hospitals has dropped over 44 percent since the program began. With daily per patient costs running over $37 per day in State hospitals, my colleagues will see the obvious cost benefits involved here, in addition to the therapeutic advantages of community-based treatment.

In 1974, an estimated 1.7 million people were treated in community mental health centers, up from 1.3 million in 1973. And it should be pointed out that these centers are especially important for the low-income families who would otherwise have mental health services available to them. In 1973, over half of the people seen in community mental health centers had incomes below $5,000.

Mr. Chairman, at the current funding rate it will take another 26 years to complete the community mental health centers program. I do not think we can afford to wait that long.

To bring us closer to the goal of adequate mental health services for every American we should add $8 million to this item in the budget.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Pennsylvania.

Mr. FLOOD. Mr. Chairman, I would like to say that we are aware of the problem described by the gentleman from Massachusetts, and because of that fact we have included in the report language requesting a full report from HEW, by the first of May, on the actual cost of continuing the existing mental health centers.

I can assume, and I assure the gentleman that as soon as we get this report, and as soon as we know exactly how much is going to be needed, we can include this amount in future appropriation bills.

Mr. CONTE. We expect to have another supplemental in June, I believe, and we can take care of it at that time?

Mr. FLOOD. I think so.

Mr. CONTE. Mr. Chairman, I always respect the gentleman's word, and I respect it now. For that reason, I will not offer the amendment at this time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

COMMUNITY SERVICES ADMINISTRATION

COMMUNITY SERVICES PROGRAM

For an additional amount for "Community services program", $82,500,000.

AMENDMENT OFFERED BY MR. OBEY

Mr. OBEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. OBEY: On page 28, line 12, strike out "$82,500,000" and insert in lieu thereof, "$282,500,000: *Provided*, That no part of the $200,000,000 appropriated in this paragraph for the Emergency Energy/Fuel Assistance Program may be expended for administrative costs."

Mr. OBEY. Mr. Chairman, this amendment is a very simple one. It simply restores $200 million which was originally included by the subcommittee and which was stricken by a 26-to-24 vote in full committee. I am offering it on behalf of 9 of the 11 members of the subcommittee and 13 additional members of the Committee on Appropriations.

The $200 million that we add would be an appropriation for Community Services Administration, which would be distributed by existing CSA formula to Governors of various States, who will in turn distribute it to assist elderly low-income families who cannot pay their heating bills because of the extraordinary cold winter and who face the prospect of utility cutoffs. The Community Services Administration has already been conducting this program for the past several years on a very small scale, and this would merely expand it.

This program has been worked out by HEW. It is strongly supported by the Governors. In fact, I have telegrams from a good many of them in support of it, and the Governors are working now to prepare to administer the program. In fact, some of them have already prepared training programs for those who will administer the program.

The program would work this way: We would simply make available sufficient money to provide for direct payments to fuel or utility suppliers, so that the money would not go in the form of a cash grant to the recipient but would in fact be used to pay bills which are presently due.

Persons eligible for assistance would be persons who are below 125 percent of the poverty level and who can demonstrate that they have a need for assistance by showing, for instance, a notice of cutoff or showing that they have outstanding bills higher than their income could possibly allow them to pay.

There is a limit per family of assistance of $250, and there is a deadline of June 1 to expend the funds, after which any unexpended funds would revert to the U.S. Treasury.

The payments made under this program will not be considered as income for the purpose of determining eligibility for benefits under the other programs, such as ASFE, ASFI, or veterans' benefits.

Mr. Chairman, presently the Community Services Administration reports that the poor will pay 25 percent of their incomes this year for energy, as compared to only 15 percent in 1973. There is an approximate 49 percent increase in the cost of home heating this winter over last. I do not think it takes a mathematician to figure out that if you are an elderly couple getting along on social security and if you are very lucky, with a small pension to go along with it, that you simply cannot afford to pay heating bills which average upwards of $1,000 this winter in New England, for instance, or which average upwards to $700 or $800 in places like Michigan or my home State of Wisconsin.

It is estimated that approximately 2 million households will be unable to pay this winter's fuel bills, and about 180,000 of those are estimated to be heated by electricity. They will not only lose their heating, but they will lose the use of their refrigerators, stoves, water pumps, and lights as well.

Well over half or about 1,200,000 of the households which are unable to meet this winter's heating costs are heated by gas, which in most cases is also the fuel source used for cooking.

I recognize that there will be some objections made to this program. It will be pointed out that it is not a perfect program, and that there might be other delivery systems which would be better able to provide assistance. That is probably true, but unfortunately the hard, cold fact is that we have literally millions of people in this country who are facing shut-offs of utilities within the next month or 5 weeks. We also have the very hard, cold fact that this is the only vehicle which will be presented to the Congress upon which we can take action to ameliorate this very serious problem.

The CHAIRMAN. The time of the gentleman from Wisconsin (Mr. OBEY) has expired.

(By unanimous consent, Mr. OBEY was allowed to proceed for 3 additional minutes.)

Mr. OBEY. Mr. Chairman, I do not know how cold it gets in Florida or in Georgia, I do not know how cold it gets in the Sun Belt, but I know that in my own district, when it gets to 40 or 50 degrees below, it is awfully cold, and in a district like mine, which is composed of a good many poor people with poorly insulated homes. It also gets mighty drafty.

There will be some Members who will suggest, for instance, that this approach discriminates because we are paying bills for people who have been billed, but we are not paying the bills for people who have managed somehow to pay their bills by being very efficient in the use of their funds. They will suggest, for instance, that we are rewarding people who presently have outstanding bills, but we are not doing anything to help the people who are already serious enough about the energy crisis to turn down their thermostats. But, as the gentleman from Pennsylvania (Mr. FLOOD) pointed out, the people we are talking about, the people we are trying to help by this amendmnte, are generally people who have shutoff all the rooms in their houses except one or two, and they are people who are mighty lucky if they have a thermostat to turn down in the first place.

These are the poorest of the poor. We are trying to take care of their real needs, the needs which will be here when these moratoriums on shutoffs occur and their utilities are shut off in the next 2 or 3 months.

Mr. Chairman, this amendment is supported by the Governors. I can read telegram after telegram received from Governors who explain what the delivery mechanisms will be. Governor Wallace also points out that he already has a training program in place to train people in administering this program in order to insure that these things are done in the most efficient way possible.

The amendment is supported by the National Council of Senior Citizens, the Rural Teachers Association, the AFL–CIO, the UAW, the Rural Housing Coalition, the Energy Policy Task Force, and a good many other groups as well.

Mr. Chairman, I urge support of the amendment.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. OBEY. I yield to the gentleman from Pennsylvania.

Mr. FLOOD. I want to compliment the gentleman on his presentation, and on the presentation he made before the subcommittee. This amendment was supported overwhelmingly by the subcommittee.

What the gentleman is talking about now is the result of a natural disaster. We have considered items such as this in the House before, and his request is not unusual. He is making his presentation for the poorest of the poor, and I certainly support his amendment.

The Labor-HEW Subcommittee, which I have the honor to chair, included this $200 million in the original subcommittee markup. We included it because we thought it was the right thing to do.

This was knocked out in the full committee by a vote of 26 to 24. A switch of just one vote would have kept it in the bill.

The intention here is that this will be a one-shot program to help poor people, especially the elderly, survive financially after the worst winter in a hundred years.

This money is for the true hardship cases who simply could not make it otherwise. This is for the people who will have their utilities shut off as soon as the weather stays warm.

There is no intention here to start a new program that will go on year after year. Not at all. This is a one-shot, one-time appropriation to deal with the effects of the very bad winter that we have just been through.

In effect, what we are talking about here is a natural disaster. The bitterly cold weather this winter, in effect, constitutes a natural disaster.

When people are financially ruined by a natural disaster, we try to give them temporary relief. That is all we are doing here.

By the way, the amendment makes it clear that none of these funds are to be used for administrative costs of any kind. This will not be siphoned off for administrative costs.

It will all be paid directly to fuel suppliers on behalf of poor people.

I urge you to have compassion for the poorest of the poor and support this amendment.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. OBEY. Absolutely, I yield to the gentleman from Kentucky.

Mr. PERKINS. Mr. Chairman, I wish to compliment the distinguished gentleman from Wisconsin (Mr. OBEY) for offering this amendment.

Any Member who represents a district that has a tremendous number of poor people knows the need for this legislation, this is the only opportunity for us to offer an amendment of this type.

It is true enough that we can go 125 percent above the poverty level in those cases that need the most help, that is, a nonfarm family with an income of $5,500 and a farm family with an income of $4,680. We have a well-cut pattern for this type of legislation.

It would be my hope that if anyone has any doubt about the need, he should just call the utility people to find out what are the facts.

The CHAIRMAN. The time of the gentleman from Wisconsin (Mr. OBEY) has expired.

(On request of Mr. PERKINS and by unanimous consent, Mr. OBEY was allowed to proceed for 1 additional minute.)

Mr. PERKINS. Mr. Chairman, will the gentleman yield further?

Mr. OBEY. I yield to the gentleman from Kentucky.

Mr. PERKINS. As I was saying, Mr. Chairman, if anyone has any doubt about the need for this legislation, I would suggest that he call the utility people throughout the country. They will tell him that we have thousands and thousands of people who are being cut off, unable to pay these bills; and this is just an orderly way to handle the situation in cases where it is mostly needed throughout America.

Mr. Chairman, I wish to compliment the gentleman from Wisconsin (Mr. OBEY) for offering this amendment.

Mr. OBEY. Mr. Chairman, I thank the gentleman, and I agree with what he has said.

Mr. PERKINS. Mr. Chairman, I rise in support of the OBEY amendment to add $200 million to this bill for emergency fuel assistance payments to low-income people.

This amount had been included in the bill reported out by the Labor-HEW Subcommittee, chaired by my distinguished colleague and friend, Mr. FLOOD, but was deleted at the full committee level by a vote of 26 to 24.

None of us need to be reminded how severe the winter has been. Cities and towns have been paralyzed by storms, school systems and factories have been

shut down, and our citizens have been hit with staggering fuel bills running as high as $1,000 for the winter in some areas.

For our low-income citizens, already hard-pressed by a high rate of inflation fuel bills have been a body blow. Some have had their fuel cut off. Others have had to cut down on food and other essentials for their families so that they could keep heat in their homes. Many will have needed utilities cut off in the Spring because they have been unable to keep up with their heating bills.

This is an intolerable situation. We need to give these people some relief. The supplemental appropriations bill we are voting on today can provide that relief, by providing in it $200 million for emergency fuel assistance, to be distributed to hard-hit States by the Community Services Administration.

Those eligible to receive this assistance, which is authorized by section 222 (a) (12) of the Community Services Act, would be those whose incomes are below 125 percent of the poverty level. This means a yearly income below $6,845 for a nonfarm family of four, and an income below $5,850 for a family of four living on a farm.

The money would be distributed to the States through a formula taking into account three factors:

First, average temperature;

Second, number of elderly with incomes less than 125 percent of the poverty level; and

Third, number of poverty households.

This is the same formula used last year in distributing $27.5 million in funds appropriated under section 222(a) (12) for fuel payments and weatherization projects.

The Governor of each State would then decide on the best way to distribute the funds to those most in need—through existing community action agencies or through State welfare agencies. Individual grants can be up to a maximum of $250.

All of these funds will go directly to the people. Any overhead costs incurred by State agencies will be absorbed out of their own funds.

Mr. Chairman, I mentionend a moment ago that there is presently available $27.5 million under section 222(a) (12), most of which is being spent for weatherization projects.

The Appropriations Committee did add an additional $82.5 million for these weatherization projects in this bill, and I commend them for doing so. This expands a highly successful program operated by the Community Services Administration, and is a great investment in the future.

The typical weatherization project for a home costs $219, of which $145 is paid for by CSA. Of the $145 paid for by CSA, $138 goes for materials, and another $7 goes for labor costs, meeting the CSA guidelines that 90 percent of the cost of any weatherization project should go for materials.

Another $74 in labor costs is contributed by other sources, such as the CETA program. These projects provide fine opportunities for training programs, and, in fact, are specifically mentioned in the CETA legislation. Trainees caulk windows, fix up holes in the wall, insulate attics, and so on.

In the years to come, these projects will not only save on the fuel bills for the people who live in these houses, but will help to conserve our Nation's scarce supplies of energy.

Mr. Chairman, with these additional funds provided for weatherization projects, and with the restoration of the $200 million for emergency fuel assistance, we will have really done something for the people of this country who were hurt the most by the severe winter weather.

This program has been well thought out, and the emergency situation we are trying to relieve is well-documented. I congratulate my colleague from Wisconsin, Mr. OBEY, for offering this amendment, and I urge my colleagues to support it.

Mr. COHEN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the original author of the proposal to appropriate funds for fuel payment assistance is my distinguished colleague from Maine, Senator MUSKIE. He is justifiably concerned about the devastating effect that the harsh winter that struck the Nation has had on home heating costs.

No Congressman appreciates better than I the fact that his constituents face enormous fuel bills this winter. In Maine and other Northern States where winter lasts nearly 6 months, home heating costs frequently soar over $1,000 for the average household. Maine homeowners, particularly those living on fixed incomes, are hard pressed to pay their fuel bills.

I have just returned from northern Maine. The snow is still piled to the top of the telephone poles in some areas, and the temperature this winter has dropped to 40° below zero. So I am fully sensitive to the problems the people I represent have in paying their fuel bills.

But if this measure is designed to alleviate the burden for only those who have not paid their fuel bills, then I suggest that it is fundamentally unfair to those who fall within the same economic status but who have paid their bills. You will be penalizing those who have had to borrow money or to take from their food allowance, or go into debt to pay heating costs. At the very least, all individuals in a designated income category should be eligible for assistance.

In evaluating the effectiveness of this proposal, we must also consider the long-term return of the Government's investment of $200 million. If, for example, this money were used to further increase funding for CSA's home winterization program—patterned after Project Fuel, which was very successful in Maine—the homeowner would conserve more energy in the years to come. Or, if the $200 million were to be applied toward providing homeowners with tax incentives to install insulation, the result of the Government's investment again would be reduced energy consumption. Helping people pay their fuel bills for one winter will not provide any incentive to conserve energy.

Finally, this proposal also underscores the need for a permanent tax reduction for middle- and low-income individuals.

Mr. OBEY. Mr. Chairman, will the gentleman yield?

Mr. COHEN. I yield to the gentleman from Wisconsin.

Mr. OBEY. Mr. Chairman, let me suggest to the gentleman from Maine (Mr. COHEN) that if he really wants to deliver help to anybody, he should support this program as laid out by HEW.

The kind of changes the gentleman is suggesting could require the governors to go back to the drawing boards to reassess who is eligible and who is not. It could greatly slow down the disbursement of funds, and we could have greater amounts of money which would revert to the Treasury by June 1.

Mr. Chairman, we are trying to take care of people who have immediate problems, many of whom are not having their homes heated now. We are trying to take care of an emergency and trying to take care of immediate problems until we will have a better opportunity to put together a better program.

Mr. COHEN. Mr. Chairman, will the gentleman tell me what regulation would be changed if we apply the same standards to those in the same economic circumstances as those whom the gentleman is talking about. What is changed if a person has a $100 bill and has to borrow the money to pay that bill?

Mr. OBEY. The governors have been setting up the program on the basis of their understanding of the program as put together by HEW. If they are told that they have additional requirements or additional categories, I submit that the amount of money that would be delivered to anybody could be minuscule because we could be talking about much larger numbers of people and the $200 million in this bill would not be as effective.

Mr. BURGENER. Mr. Chairman, will the gentleman yield?

Mr. COHEN. I yield to the gentleman from California.

Mr. BURGENER. Mr. Chairman, I thank the gentleman for yielding.

I want to associate my remarks with those of the gentleman in the well, the gentleman from Maine (Mr. COHEN).

There is no question about the need, but this bill is patently unfair, terribly unfair, to the people who, by prudent management, or by borrowing from other sources are giving up other things of importance and still are managing to pay their fuel bills.

I think it is worse to do something that is grossly unfair, really, than to do nothing at all. I commend the gentleman in the well.

Mr. COHEN. Mr. Chairman, I thank the gentleman from California (Mr. BURGENER) for his comments. I think that indeed we are setting quite a precedent for next year, if the forecasts are correct, because we are in for some very hard times in the years to come and we will have a difficult problem next year and after because we will be giving in-

centives for individuals to hold back and not pay their utility bills and then have them coming back to the Congress and seeking a program such as this.

But, Mr. Chairman, if we are going to provide reimbursement and help for those who have not paid their utility bills then I believe we also ought to afford help to those who have paid them.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. ANDERSON of Illinois, and by unanimous consent, Mr. COHEN was allowed to proceed for 2 additional minutes.)

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. COHEN. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. Mr. Chairman, I have listened with great interest to what I believe is a very cogent argument which has just been made by the gentleman from Maine (Mr. COHEN).

Mr. Chairman, I checked this morning with the Community Services Administration and I find that they have a so-called crises intervention program and that under their CSA instructions 6143–1A, which was issued on June 12 of last year, that the eligible activities under that program are as follows:

Immediate short-term assistance consisting of intervention to prevent hardship or danger to health due to utility shut-off or lack of fuel. Components include grants, loans, fuel voucher or stamp programs or payment guarantees; mediation with utility companies or fuel suppliers and financial counseling; maintenance of emergency fuel supplies, warm clothing and blankets.

Mr. Chairman, if we are going to go ahead and appropriate this additional money as suggested by the gentleman from Wisconsin (Mr. OBEY) would it not make better sense to substitute for the language of the Obey amendment, words to this effect:

That funds appropriated by this program shall be available to carry out the crises intervention program administered by the Community Services Administration as part of its emergency energy conservation services program.

Would we not then meet the objections the gentleman from Maine (Mr. COHEN) has pointed out that we would be favoring some people who have not paid their bills and ignoring the plight of those people who have made a great sacrifice in order to meet their obligations to the utility companies?

Mr. COHEN. Mr. Chairman, I think the gentleman from Illinois (Mr. ANDERSON) is absolutely correct. I hope the gentleman will offer that as an amendment to the Obey amendment. But, coming back to the major point, my State of Maine has cold winters and the people there certainly suffer from the hardships of winter. There is also no great abundance of wealth in my State.

I would simply say, in closing, that the notion that was offered by the gentleman from Wisconsin (Mr. OBEY) that this would impose a tremendous bureaucratic burden upon the administration simply does not hold up.

The CHAIRMAN. The time of the gentleman has again expired.

(By unanimous consent, Mr. COHEN was allowed to proceed for 1 additional minute.)

Mr. COHEN. Mr. Chairman, I repeat that that notion will not hold up. It seems to me that it does not impose any greater burden upon the Governors of any of the States to simply have the same individuals who were in the same economic strata come forward with a receipt for the amount they paid for their fuel bill and to have that credited against either future fuel bills by the utilities who will be getting reimbursed, or by some other kind of credit. But to simply adopt a program which will pay the bills of those people who have not paid them is, to me, fundamentally unfair.

The CHAIRMAN. The time of the gentleman has again expired.

(On request of Mr. OBEY, and by unanimous consent, Mr. COHEN was allowed to proceed for 2 additional minutes.)

Mr. OBEY. Mr. Chairman, will the gentleman yield?

Mr. COHEN. I yield to the gentleman from Wisconsin.

Mr. OBEY. Mr. Chairman, I would like to understand the position of both the gentleman in the well and the gentleman at the desk. Are the gentlemen suggesting we should object to this assistance because we do not go far enough, or are they suggesting that they want to offer an amendment to expand the assistance payment under this amendment?

Mr. COHEN. I think the gentleman from Illinois intends to offer an amendment to expand the coverage so that the appropriation would not be directed only to those who have not paid their bills but also would include those poor individuals who come within the same regulations that the gentleman is contemplating, who have paid their bills by making other sacrifices. So we will not discriminate on the basis of paid versus unpaid.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. COHEN. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. I thank the gentleman for yielding.

Yes, precisely, I share the concern of the gentleman in the well. I am not objecting to the figure, but I should like to substitute language that would provide that the exising crisis intervention program that is administered, as I understand it by the Community Services Administration, and which is currently opoperating under guidelines that would permit the kind of relief that we are interested in, but relief that would be limited not only to those who have not been able to pay their bills or who are delinquent in their bills, but would pay some attention to the people who have sacrificed in order to pay those bills, and as a result have had to skimp in other areas, or perhaps even existed at substandard living levels.

Mr. OBEY. Mr. Chairman, will the gentleman yield?

Mr. COHEN. I yield to the gentleman from Wisconsin.

Mr. OBEY. I thank the gentleman for yielding.

Let me say that while I think there is a problem in delay on this, if the House thinks that that is a better way to go, I would have no objection to it. If the gentleman has an amendment to the amendment, I would be happy to accept it.

Mr. COHEN. Mr. Chairman, I yield back the remainder of my time.

Mr. MICHEL. Mr. Chairman, I rise in opposition to the amendment. It was originally added in our subcommittee markup after no hearings, no advance word, very little effective discussion, and no vote. It was a mistake to have added this as a new program, and we rectified that mistake in the full committee as the gentleman from Wisconsin (Mr. OBEY) indicated, by voting to strike the funds from the bill on my motion which prevailed 26 to 24. We did so because there are too many questions about this program which have gone unanswered, because there are too many inequities inherent in the program, and because once we start down this road there will be no pulling back, since high fuel bills will certainly not be vanishing from the scene unless or until cheaper forms of energy are developed.

Regarding this last point, it is rather interesting to note what the head of our community action agency in my home community of Peoria is quoted in the press as saying just the other day:

Next winter promises to be as severe or worse than this winter has been, and these poor people will have the same problems then, and we will not have enough resources to help everyone.

So do not be fooled by the claim here that we are only authorizing this until June 30 and then all of a sudden the program is going to go away and we are never going to hear of it again. Do not get caught in this kind of a bind.

Earlier today we were discussing $700 million in here for food stamps that were mandated by court decision that prevented us from administratively tightening up that program. The food stamp program started out at $200 million, just like this one here, and in a few years it has reached nearly $6 billion. If we start here with just $200 million, mark my word, within a couple of years we are going to be in a multibillion dollar program, because fuel costs are not going to subside or continue to decline.

There is no question but that something has got to be done about our energy problem, including that high cost of fuel, but I do not think we want to get ourselves trapped in this course of action until we have given the overall problem much more thorough consideration. As I said, the proposed program has had no hearings in the House, and only 1 day of hearings in the Senate. I wish the Members could read those testimonies of Governors, Senators, and a few Congressmen on how bad the winter was, that it was just tragic, and we ought to do something about it, That is the extent of the

hearings in the Senate. There was nothing in the House. Are we going to embark on a brandnew program? We have got to be mindless to do a thing like that with so little consideration.

Very few standards have been set for governing the program's operation. One of the few is a formula proposed to determine allocation among the States. Every one of the 50 States qualifies, including Hawaii, and also Puerto Rico. How are they going to subsidize heating bills in those States? The money has to be used to subsidize air conditioning; does it not? But under the formula, every 1 of the 50 States is going to get a little dab of this thing, whether they need it or not.

Another thing the sponsors tell us is that the eligibility would be limited to those with incomes below 125 percent of poverty. In dollar terms this means people under $6,875 for a family of four, or those under $4,625 for a family of two, and that is a social security couple, and below $3,500 for a single individual. Anyone above that would not get cut in on this action at all. It is truly the poorest of the poor.

But now, to my friend, the gentleman from Illinois (Mr. ANDERSON), who proposes to do something in this crisis area, we have got money already in this bill. We put $82 million to add to what we had, which brings it up to $109 million. In my home community they are already taking money from that fund to help the destitute and the poorest of the poor. But do not come in with a brandnew program and expand it to the extent we are going to do here. We are going to be excluding a great many people who are existing solely on social security. The maximum amount one can make now in social security is $4,800 a year or $7,200 as a couple.

Think of the number of people who are excluded. If we want to cover everybody we cannot be content with $200 million. We will have to have something about $2 billion to begin with. How many of us are prepared to do that?

Our President did not offer one proposal in this regard. I am going to support our new President in this regard, to help him hold things in line.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. Mr. Chairman, I am impressed with the statements the gentleman makes about the severity of the problem we face this winter and also the fact that he recognizes it is not just a 1-year program.

He criticizes the subcommittee chairman and the members of the subcommittee for offering this program to try to answer this problem, and yet I do not hear any suggestion from the gentleman as to what should be done. He is right. It is not a problem that is going to be with us just this year. It will be with us also next year and as long as the utility companies increase the fuel costs in the years ahead.

What does the gentleman propose to do?

Mr. MICHEL. How are those utility company rates determined? By the States. How much money are we giving to the States in revenue sharing funds of all kinds? The States and localities as a matter of fact, I think the latest figures will show, have a $5.8 million surplus. I do not know of any surplus we are running in Federal funds. We are running a deficit again this year. There is plenty of money in the States to deal with this problem on a selective basis as the local communities feel and deem appropriate. I do not think we ought to get ourselves tied up in a Federal subsidy program to the extent that would be required if we are going to take care of everybody—and there are many people in that middle-income group who are saying: "How many times do I have to pay through the nose for somebody who does not pay?"

Mr. EVANS of Colorado. If the gentleman will yield further, in the last 30 or 40 years the Federal Government has had to act because the States have failed. We are faced with a crisis. I opposed this in full committee, but if the gentleman from Illinois offers his amendment I intend to support it because we do not have any other route to go and these people need assistance.

Mr. MICHEL. They have money in here. They have $82 million, and coupled with the other moneys we have tripled that program for crisis intervention in that regard.

Much has been said about the support of many Governors for the program. Of course, they support it. They would be given carte blanche authority to allocate the funds—have we ever known of a Governor to turn down free Federal moneys which end up making him look good?

The fact is most Governors will not be able to tell us how they will be able to admininister this program.

The sponsors of the amendment state that the funds would be used to pay "outstanding" fuel bills. This would clearly discriminate against those poor people who have paid their bills and may have sacrificed to do so. We would be rewarding the least conscientious at the expense of those who are most conscientious. This would particularly hurt our elderly citizens, who are usually quite conscientious about paying their bills. The program would also discriminate against those people who have sought to conserve energy and have lower bills as a result, while rewarding those who have made no effort to conserve and have let their fuel bills run up.

On the other hand, if we make everybody within the income limits eligible for a subsidy, as the gentleman from Illinois suggests, we will not only be needlessly making payments to people who have already paid their bills, we will be making 38 million people in this country eligible for a subsidy. What a boondoggle that will create; 38 million people descending upon the local community agency offices demanding payment of their fuel bills. The Anderson substitute will simply compound the many shortcomings of the amendment before us many times over.

The proponents of the Obey amendment have set forth a number of emotional arguments on its behalf, but they have not, or have been unable to, provide answers to serious questions about the implementation of the program. For instance, how many people will have their fuel cut off because they have not paid their bills? Within the income limit proposed, how specifically would eligibility be determined? How much would each eligible family receive, and how would that be determined? How was the $200 million figure determined? With questions as basic as these going unanswered, it is simply irresponsible to launch a program the size of this one at this time.

There is no question but that this has been a hard winter as far as fuel bills are concerned. We certainly do not want to see people have their fuel or power supplies cut off who have in fact sacrificed much to pay their bills. I submit, however, that the States have considerable resources available, as I mentioned earlier, to assist these individuals without the need for Federal assistance. The States regulate the power companies and thus certainly can take steps to protect people against cutoffs or to establish new rate of payment procedures. The states also have revenue sharings and countercyclical funds available, and, as of the last quarter, they along with the localities were running, as I indicated, budget surpluses of $5.8 billion.

In addition, we have added $82.5 million in this supplemental for the winterization program, which brings the total for the year up to $109.5 million. Part of these funds are currently being used to help the poor with their fuel bills, and substantially more could be used for this purpose if needed to help out those in dire straits.

Defeating this amendment will not mean, in other words, that we will be turning people out into the cold. There are other resources available to help out in those cases of real need.

Finally, it should be emphasized that President Carter has not recommended appropriation of these funds. In fact, Senator MUSKIE made a special appeal in person to the administration for support, and was turned down. The President may not veto a bill with such funds included as one item among many, but that is a far cry from saying that he wants the money added. He clearly does not.

In view of the many unanswered questions and inequities that exist, and the lack of effective administrative controls, and the widesweeping nature of this program, and the fact that if it is once started, there will be no turning back, there is no justification for appropriating this very sizable sum at this time, and I urge rejection of the amendment.

Mr. GLICKMAN. Mr. Chairman, I move to strike the requisite number of words, and I rise to speak in favor of the amendment.

Mr. Chairman, I just will talk for a couple of minutes. I support the Obey amendment. I would think the amendment the gentleman from Illinois intends to offer is probably even a little better than the Obey amendment, but I think this entire issue is a very important thing for us. I myself favor deregulation of natural gas. I think deregulation is critical to the formulation of a new energy policy, but we have got to recognize if that occurs or whatever else occurs in the future, our energy crisis is going to continue and energy costs for the homeowner and apartment dweller are going to go up monumentally over the next 5 years. But if we do deregulate gas, which I favor, we will have increased fuel costs of some degree.

Somehow the people at the lower ends of the economic spectrum have to be protected to some degree about these increased energy costs. So I say to the people on both sides of the aisle that if they are in favor of increasing incentives for the exploration of oil and gas, let us be honest about our approach and say, "Yes, that is going to cause gas prices to rise." It will increase prices to the consumer.

Therefore, the amendment speaks to something we are going to have to face over the next 5 or 10 years. How is the consumer going to cope with a gigantic increase in prices especially when price increases for energy may be necessary for increased exploration. These price increases are going to come, whether we deregulate gas or not, which I am in favor of. Therefore, the concepts of the gentleman from Wisconsin and the gentleman from Illinois are good ones.

Mr. KAZEN. Mr. Chairman, will the gentleman yield?

Mr. GLICKMAN. I yield to the gentleman from Texas.

Mr. KAZEN. Mr. Chairman, the only thing that worries me about the Obey amendment is the fact that those people who were in danger or about to have the utility companies cut their gas off because they could not pay their bills went out and hocked everything they had and paid those bills. They get no help under the Obey amendment.

The person that could not pay his bill and went out and got a legal aid lawyer to file an injunction against the company from cutting off his gas will get his bill paid. I just feel that is not fair. Let us treat all alike.

Mr. GLICKMAN. Mr. Chairman, perhaps then the gentleman will support the amendment of the gentleman from Illinois.

AMENDMENT OFFERED BY MR. ANDERSON OF ILLINOIS AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. OBEY

Mr. ANDERSON of Illinois. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mr. ANDERSON of Illinois as a substitute for the amendment offered by Mr. OBEY: On page 28, line 12, strike out "$82,500,000" and insert in lieu thereof "$282,500,000: *Provided*, That funds appropriated by this paragraph shall be available to carry out the crisis intervention program administered by the Community Services Administration as part of its Emergency Energy Conservation Services program: *Provided further*, That no part of the $200 million appropriated in this paragraph may be expended for administrative costs for the Crisis Intervention Program.".

Mr. BAUMAN. Mr. Chairman, I reserve a point of order on this amendment.

The CHAIRMAN. The gentleman from Maryland (Mr. BAUMAN) reserves a point of order.

The Chair recognizes the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Chairman, I can assure this House, and I think those of us who have served in this body for a number of years realize that I do not ordinarily arise to redo or unmake the work of the distinguished Committee on Appropriations; but when I received the letter from my dear friend and colleague, the ranking member on my side of the aisle, the gentleman from Illinois (Mr. MICHEL) in criticism of the amendment offered by the gentleman from Wisconsin, I, too, was troubled by the fourth paragraph on the first page of his letter of March 14, 1977, where the gentleman points out, and I think the gentleman said it earlier in debate under the 5-minute rule, that the amendment as offered would clearly discriminate against those poor people who had paid their bills and may have sacrificed to do so and we would be rewarding the least conscientious at the expense of those who are the most conscientious. This would particularly hurt the elderly citizens who are usually quite conscientious about paying their bills and so on.

Mr. Chairman, that troubled me a great deal. I thought the gentleman's point was entirely valid. I called down to the Community Services Agency which has this crisis intervention program and heard stories about elderly people who have sacrificed to pay their utility bills to the point they were literally eating dog food because they wanted to pay those gas bills and utility bills to keep from being shut off; so it seems to me we have the recognition of that fact by the language in this amendment.

Mr. Chairman, I am as concerned as is my friend, the gentleman from Illinois, that we not start a new program like food stamps that is going to balloon up to the $6 billion level and all that; but at the same time, I think we have to realize we have had the worst winter, I believe, according to the climatologists, in 177 years. This is clearly a crisis situation that calls for the intervention of a crisis program. I do not think that we establish thereby the precedent that year after year we are going to continue down this road.

As I read earlier in my colloquy with the gentleman from Maine (Mr. COHEN), who originally raised this point, under the instructions as written presently, the guidelines of the Community Services Administration, there is the authority to administer this kind of program, it seems to me, and to do it through the Governors. I do not want to disturb any of the administrative arrangements that may have been worked out in that regard to letting the Governors of the several States administer the program, but I share the feelings of my friend from Maine. I do not want to discriminate between those who have worked hard and sacrificed and struggled to pay those bills and those, as my friend from Texas said, who maybe through a careless use of energy or through dissipation of those funds in other areas, were not willing to pay the bills when they came due. So, I would suggest that the substitute amendment represents a more adequate solution to the problem.

Mr. COHEN. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Maine.

Mr. COHEN. Mr. Chairman, I would like to point out that under the gentleman's proposed substitute amendment, it seems to be a temporary measure to cope with this past year's crisis problem; is that not correct?

Mr. ANDERSON of Illinois. Yes; it is intended, certainly, as a temporary measure because of the cruel and critical winter.

Mr. COHEN. I want to commend the gentleman for confining it to that 1 year, for that short duration, because the other remark I wanted to make on that is that I think the effects of the program are misdirected. We ought to be concentrating on winterization programs, more importantly; on conservation.

Three years ago, I stood in the well and offered a tax credit program for those people who insulated their homes and installed storm windows, storm doors, and insulated the walls, and low-interest loans to those people who put in new and efficient heating equipment to reduce the consumption of energy. That was dismissed at that time. I think that is the direction in which we have to go in the future as far as tax incentives for insulation and winterization programs, whch are particularly helpful and useful in my State.

Project Fuel in the State of Maine is a significant success. The gentleman from Illinois (Mr. MICHEL) is correct in saying that we ought not take this as a permanent solution, but rather limit it to deal with the program for this last year, and deal with tax credits and other programs.

Mr. ANDERSON of Illinois. I share the gentleman's thoughts completely, and when we get an energy message from the President of the United States, as we are now scheduled to on the 20th of April, I hope very much that he will make the kind of suggestions the gentleman from Maine has spoken of; that we will try to find a permanent solution to this problem through conservation, extending tax credits to encourage people to insulate their homes. This is not intended to be—I repeat for the record—a permanent program, but rather a temporary measure to meet the situation we find ourselves in.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(On request of Mr. OBEY and by unani-

mous consent, Mr. ANDERSON of Illinois was allowed to proceed for 2 additional minutes.)

Mr. OBEY. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Wisconsin.

Mr. OBEY. Let me say that I agree with much the gentleman from Maine has said. I offered the amendment in subcommittee 2 years ago to add money to the winterization program. That is, fundamentally, the best way to go in the long run.

What this amendment was originally designed to do in its original form was to address a problem which real people are going to face in the real world 21 days from now, and while I still prefer we go that way, in the interests of speed I would be happy to accept the substitute proposed by the gentleman from Illinois. But, I do want to make clear that the only change you make in this is that the funding would be available for persons who have paid bills in the past, who can prove that they meet the other eligibility requirements; that these funds will still have to go through the Governors so that they will have the ability to control the expenditure of those funds to be sure they are spent in a rational manner.

Mr. ANDERSON of Illinois. But if this program is administered under the type of guidelines which I referred to earlier, and which I will certainly place in the RECORD at the appropriate time in conjunction with my remarks, it is clear to me that there would be the kind of flexibility to aid those people who have sacrificed to pay their bills, as well as those who are delinquent in their bills. That is what many of us are afraid might be in the language as offered in the original amendment.

Mr. OBEY. The gentleman is saying that the other requirements represented in the original committee report language would be followed; is he not?

I wish the gentleman would be a little more specific as to the requirements to which he refers.

The point is that this money will still be funneled through the Governors, and it will go to the Community Services Administration for distribution to the Governors and then distributed in whatever manner the Governors deem is best for their States.

Mr. ANDERSON of Illinois. That would be my intention under the guidelines that I referred to.

The CHAIRMAN. Does the gentleman from Maryland insist upon his point of order?

Mr. BAUMAN. Mr. Chairman, I still reserve my point of order.

The CHAIRMAN. The gentleman from Maryland (Mr. BAUMAN) still reserves his point of order.

Mr. MAHON. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in opposition to the Obey amendment and to the amendment offered by the gentleman from Illinois. People all over this Nation have seen their bills increase. There has been a skyrocketing of the cost of utilities, electricity, and fuel otherwise. That is not typical of any particular area; it is typical of the country. That has been the situation which has confronted us. We are all sympathetic to what inflation is doing to us and what the winter has done to us with respect to utility bills, and so forth. But this is not the time to offer and to accept an amendment adopting an undefined program with very wide-ranging implications. There is no budget estimate whatever for this program. It is not recommended by the President. It has no authorization as such. It is a very unfortunate thing that we are about—it would appear from what I judge to be the sentiment in the House—to launch a program of $200 million to pay people's fuel bills.

Mr. Chairman, let me say that this sum is a drop in the bucket. This will be just the beginning. This is the nose under the tent. This is an extension of the welfare state that is coming closer and closer to us with every passing year. Ultimately, the fuel amendment would require a multibillion-dollar program, to provide fuel assistance to the people of the Nation, and it will grow bigger and bigger and bigger. It will be in terms of many billions of dollars. Let us not start this program today. It is not in the best interest of the country. If we start it, we will never stop it. Not only that, no one really knows how the $200 million will be distributed. It is said that it will be distributed under the direction of the Governors. Can the Members imagine the people on every block in every community, if one man should be selected, maybe for a handout, and the other man not? Think of all of the abuses and the difficulties which will arise. It is going to create more animosity in communities than one can think of. I very much hope that we will not start down this road. If some people want to support such an undertaking, there ought to be extensive hearings and a well-conceived program worked out. Everybody in this Chamber knows if we pass this amendment and it becomes law, it will be the beginning of a long and expensive program.

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. I thank the gentleman for yielding.

Mr. Chairman, I see the distinguished chairman of the Committee on the Budget on the floor, and let me read to the Members what he said on March 3, when the third budget resolution was on the floor.

> I want to say that many of our conferees are tremendously concerned over the precedent that an emergency fuel bill program might have. We urge the House to examine this proposal very carefully when it considers the fiscal year 1977 supplemental bill. Such a program should be very carefully designed to provide assistance efficiently and equitably, without getting the Congress on the road to providing aid for a wide variety of goods and services that may be demanded in the future.

Now, in responding to the gentleman's statement, the House has not carefully examined this proposal; the program will not provide assistance efficiently and equitably; and Congress will very definitely be setting a precedent.

If I might make one further observation, even in the substitute offered by my friend, the gentleman from Illinois (Mr. ANDERSON), he does not address himself to the formula. None of the proponents of this program want to talk about the formula. I thought the justification was to pay those high heating bills resulting from a disastrous winter. How do we justify pouring money into Arizona, Puerto Rico, and Hawaii on that argument?

Mr. Chairman, the whole program should be well thought out under a new formula before we start appropriating sums of the size we are talking about here today.

The CHAIRMAN. The time of the gentleman from Texas (Mr. MAHON) has expired.

(By uanimous consent, Mr. MAHON was allowed to proceed for 5 additional minutes.)

Mr. SEIBERLING. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Ohio.

Mr. SEIBERLING. Mr. Chairman, I must say that I think the chairman of the committee has posed some very serious questions here.

Speaking as a Representative from the State of Ohio, I know that the State of Ohio has already taken action for moratoriums on the payment of utility bills to protect people who are unable to pay. They have received hundreds of millions of dollars of various types of Federal funds, revenue sharing and otherwise, which are available for many purposes that will be covered by this bill.

I would like to ask the chairman of the committee and the proponents of this amendment this question: Is this really something that is going to help the people who are unable to pay their bills, or is it really just a prescription to pay more money to utilities and to bail out the utility companies? I ask that because I know the States through their public utility commissions have the authority to handle this problem now, as I understand it.

Mr. Chairman, I wonder if the chairmen of the committee could elaborate on that?

Mr. MAHON. Mr. Chairman, I am not sure of the answer. We do not have any law and we do not have any guidelines, and I am not sure whether the money would be paid to the utility companies or whether it would be paid to the citizens or otherwise. This is a pig in a poke that we buy here.

Of course, if we keep moving in this direction, we will soon have a program to pay air conditioning bills in the summer for people when they are confronted with long hot spells. It is a most regrettable situation.

Mr. KRUEGER. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Texas.

Mr. KRUEGER. Mr. Chairman, I wonder if my understanding is correct

that in this proposed Obey amendment the funds would go to States on the basis of the degree days of cold which those States experienced rather than on the basis of the cost of utilities.

That is my understanding, and if that is correct, then what we have is legislation that is not necessarily directed to those States in which people might face the highest utility bills, but, rather, the money may very well go to those States that simply suffered the coldest days, although they might be States in which the utility bills nonetheless were much lower than in others.

If that is the case, we are not even sending the money to those States that are the hardest struck in terms of cost impact but we are sending the money to States that were the hardest hit by reason of temperature. That, it seems to me, is a most illogical way to solve this problem.

Mr. MAHON. Mr. Chairman, either one of these amendments calls for more or less of a handout of $200 million of Government money, and where it would go nobody could be sure. Undoubtedly it would be inadequate to take care of the fuel bills of the citizens.

It seems to me it would be most ill-advised for us to accept either the Anderson substitute or the Obey proposal. I think one is just as inequitable and indefensible as the other.

Mr. Chairman, I would hope that we might have a rollcall vote and avoid moving in this direction at this time.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. Mr. Chairman, there is an existing mechanism. There is a Community Services Administration. They are administering an intervention program that is in place.

I read earlier the instructions contained in the guidelines that I obtained this morning from that agency, and I will read it again:

> Immediate short-term assistance consisting of intervention to prevent hardship or danger to health due to utility shut-off or lack or fuel. Components include grants, loans, fuel voucher or stamp programs or payment guarantees;

And so forth.

Mr. Chairman, I think there is a program, and there are guidelines. Certainly the program is properly administered, and there is no reason why this is going to be a $200 million giveaway.

Mr. MAHON. Mr. Chairman, everyone knows that we have a multi-billion-dollar public assistance program. It is administered in all the States and in all the counties. Opportunities are taken to try to provide for the poor and prevent disaster to families.

We already have that program, and it is well financed. But to start this fuel program is most ill-advised, and I hope the House will reject the substitute and the amendment.

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Illinois.

Mr. MICHEL. Mr. Chairman, there is a very clean distinction that should be drawn. That winterization program that the gentleman just referred to is not administered through the Governors but by community action agencies. As, I think, the chairman of the committee pointed out earlier, the question is, Who is going to get favored, and who is not going to be favored?

Boy, we are going to have just a real can of worms on our hands if that is the kind of administration of this program we are going to get in our local communities.

As I said, it does not address itself to the inequity of that formula which just spreads this money around 50 States. In keeping with what the gentleman from Texas (Mr. KRUEGER) has said so well, there is just no logic to pursuing this program in that kind of fashion.

As I indicated earlier, the Anderson substitute is going to result in a program several times worse than the amendment itself. It is going to make all 38 million Americans with incomes below 125 percent of poverty eligible for a Federal fuel subsidy. How are you going to select who is going to receive the subsidy? Or is everyone going to get $5. Such an amount is really going to go a long way.

What we are going to have is millions of people descending upon the Community Action Agency offices expecting to be paid, and most of them will go away disappointed and angry, because there will be nowhere near enough funds to go around, and probably many of the people in the worst straits will end up with nothing.

So what we have here is an honest effort to correct an inequity in a bad program to begin with, but an effort which succeeds in only in making a bad program even worse. That is what happens when we try to legislate without thinking things out.

It is simply incredible to me that we are even seriously considering the adoption of a program that has been given as little consideration as this one. Mark my words, this thing is really going to come back and haunt us if we end up adopting it.

Mr. KRUEGER. Mr. Chairman, the Obey amendment is an example of good intentions mandating bad policy. People in all parts of the Nation have faced high utility bills because of unseasonably cold weather and historically faulty energy policy. The cold weather has prompted heavy use of energy for heating. The faulty energy policy has prompted widely variant charges for natural gas in different parts of the Nation.

The intent of Mr. OBEY'S amendment is good. He wishes to assist those who have difficulty in meeting their utility bills. I have no disagreement with his intent to assist those most in need and hardest hit by higher utility costs. But his amendment fails to do this.

It fails for several reasons. First, it directs Federal money to those States which have experienced the coldest weather. It does not, however, consider the cost of energy in those States. Therefore, for example, people in Wisconsin who may pay an average cost for gas of 50 cents to heat their homes would receive financial assistance while those people in Texas who pay $1.50 for the same amount of gas will not. In short, Mr. OBEY'S amendment is directed to assist people living in those areas that have cold weather, but not necessarily to assist those who face higher utility bills. Since all people across the United States will be paying for the appropriation that he wishes to make, his appropriation is inherently regressive in its policy implications. It is regressive because people living in warmer areas who may very well be paying higher utility costs than people in colder areas, and who on average earn less than people living in the North, must pay the utility bills of people living in the North, an area with a higher per capita income. The intent of a proper amendment should be to assist those people hardest hit by increased utility costs. I would be happy to support an amendment of that kind. But this amendment does not succeed in doing this.

Second, the amendment of the gentleman from Wisconsin will assist those who are homeowners, but not those who rent their homes or apartments. Renters are not eligible for these supplementary funds if utilities costs are included in their rent, since these supplementary funds are paid directly to utility companies, and not to the poor who may be needy but who pay their utilities as part of their rent.

There are, therefore, several reasons to vote against the amendment. First, it is directed to people who live in the coldest areas of the country, but not to those who pay the highest utility bills; second, it is regressive, taxing one geographical area of the country with lower per capita income to support another with higher income; third, it helps homeowners, but not renters, and is therefore discriminatory. Although the intent is good, the policy is therefore misguided.

Mr. GIAIMO. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

go nobody could be sure. Undoubtedly it

Mr. Chairman, it is true, as the gentleman from Illinois states, that during the discussion of the third budget resolution I expressed serious concern about this type of proposal. I felt that it should be carefully looked at, carefully studied, before we determined if we go down this road.

Mr. Chairman, this issue did come up before the Committee on the Budget during the consideration of the third budget resolution which provided for a stimulus package, and it was of serious concern to me.

As you know, coincidental with the development of the stimulus package occasioned by the economic slowdown in the Nation, we were hit by a very severe winter. At the time of the markup or during the time of the markup of the budget resolution, the extreme severity of the winter and our awareness of it perhaps had not made the impact on us to the extent that it since has. Therefore,

what happened was that during the markup of the budget resolution, during the debate in the House, and subsequent to that time, during the conference with the other body, tremendous pressure built up for this fuel assistance program.

Mr. Chairman, I have a three-page letter here from my governor in Connecticut in which she tells us that they are already implementing this program in the nature of an emergency situation and that they are paying it with State funds.

Several Members have made arguments that we should study it in the House, as I myself said, and I wish we could and did. However, what we have learned since that time, since February, is that this is a very real emergency matter.

Mr. Chairman, we spend millions of dollars in this body on disasters when they strike, whether they are earthquakes or floods or other.

Many of our governors are telling us that this is an emergency and a crisis because of the tremendously unusual severity of this particular winter. They are saying, "We need help from the Federal Government."

In fact, that is what this bill is designed to do. It is temporary in nature. It is not permanent legislation. It is not designed, as I am told, to start us down this road before we have full congressional study, but it is temporary; it is an emergency effort to help some of those States which need some money to alleviate the suffering of poor people.

Mr. Chairman, that is why I have changed my mind on this matter and urge its adoption.

Mr. BRADEMAS. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from Indiana.

Mr. BRADEMAS. Mr. Chairman, I would like to ask the distinguished chairman of the Committee on the Budget if it is not the case that the funds that would be provided under the amendment of the gentleman from Wisconsin (Mr. OBEY) were included in the third budget resolution.

Mr. GIAIMO. The gentleman is absolutely correct.

When we went to conference with the other body, the other body insisted that these funds be included along with weatherization funds which the House conferees proposed and which are provided for in the third budget resolution. We compromised on both of these problems in conference; and these fuel assistance funds are within the budget provided by the third budget resolution.

Mr. BRADEMAS. Mr. Chairman, I thank the gentleman.

I firmly support the amendment of the gentleman from Wisconsin (Mr. OBEY).

Mr. OBEY. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from Wisconsin.

Mr. OBEY. Mr. Chairman, let me just point out two things: First of all, it has been suggested that because of the moratoriums that have been passed on paying fuel bills, this problem has somehow been eliminated. The fact is that that is not true. All that those moratoriums do is extend the period of time during which the utilities cannot cut off service, and those moratoriums in most States will expire at the end of this month.

In addition to that, Mr. Chairman, even if they would be renewed in some of the more generous States, when those moratoriums eventually expire this summer, the bills will still come due and we will have old people and poor people eating cat food and eating dog food—as the gentleman from Illinois indicated—all summer and all fall so that they can put together money to pay heating bills hanging over their heads so they can again get fuel in September, October, and November. I do not think we want people to have to do that in this country.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. Mr. Chairman, I have in front of me a compilation of all of the telegrams that have been received from the Governors of the various States. One is my own Governor, Jim Thompson, and he says:

> Action is needed now to provide relief for these citizens. Therefore, I urge you to support legislation which may come before the House Appropriations Committee which would provide emergency aid to these individuals who are in desperate need of our help.

Mr. GIAIMO. I thank the gentleman from Illinois.

Mr. BURLISON of Missouri. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the gentleman from Illinois (Mr. ANDERSON) has just emphasized the demand of the Governors for his money, the Governor of his State and a number of other Governors. The truth of the matter is that some of these States are better able fiscally to handle this subject than the Federal Government is. None of our States have anything approaching a $700 billion public debt. My State of Missouri has no deficit. Many other States do not. Many States do not have it because their constitutions will not permit them to deficit finance their government operations.

So, Mr. Chairman, I say, let the Governors provide this money if it is essential.

Mr. PEPPER. Mr. Chairman, I rise in warm support of the amendment offered by the gentleman from Wisconsin (Mr. OBEY), to restore to the bill some $200 million in an emergency energy/fuel assistance program.

Members of the House should not be misled by the pleasant temperatures we enjoy in Washington today. Millions of low-income families, a disproportionate number of them with elderly members, bear very real scars from the severe winter most of the Nation has endured.

As chairman of the House Select Committee on Aging, I bear a special responsibility to do everything possible in my power to help alleviate the hardships imposed by the harsh winter on older Americans. I believe that the program to be financed under the pending amendment is a prudent, desirable step in that direction.

The money under the proposal we are considering would be allotted to Governors of States, according to a formula that takes into account the severity of weather in each State, the number of poverty households, and the number of poor and near-poor elderly. This establishes the strong legislative intent that these funds should focus on the fuel and energy needs of older Americans.

I believe it is important, Mr. Chairman, that all of the funds proposed in the pending amendment would go directly for paying the fuel bills of the beneficiaries. There is no allowance for administering the program; those costs will be absorbed by the governments and agencies responsible for the program.

My only regret is that this money could not have been approved some weeks ago, when the crisis was immediately evident. But the payments to be financed under this amendment would still alleviate hardship for hundreds of thousands, perhaps millions, of Americans with lower incomes. We should adopt this amendment, and do it swiftly.

Mr. PATTEN. Mr. Chairman, in the supplemental appropriations bill for HEW there is an item of significant importance to the District of Columbia universities. It is the construction of an Intercultural Center at Georgetown University, which will involve all the universities in the District of Columbia—American, Catholic, Georgetown, George Washington, Howard, and Johns Hopkins International Center.

This facility, which is to be located at Georgetown University, has four integral parts:

First. The Living Component, already completed (Henle Village);

Second. The Library Component, already completed (Lauinger Library);

Third. The Specific Academic Component, to be constructed; and

Fourth. The Athletic-Recreational Component, to be constructed.

The Intercultural Center for the D.C. universities at Georgetown will serve as a demonstration model for the other regional intercultural centers to be built throughout the United States.

New developments are being pursued in intercultural education precisely because older methods have proved unsatisfactory. The integration of the four components in the D.C. model is different; perhaps it may appear strange to some. Basing our judgment on past educational experience, we believe this integration is reasonable and promising; hence it should be seriously considered and tried.

The Intercultural Center is to serve not just American students, nor just foreign students, but both together. From this fact flows the invaluable specific intercultural contribution of the center: the living together, studying together, researching together and recreating to-

gether which only such an integrated campus can offer.

The academic component provides an appropriate setting for intercultural learning by both American and foreign students. The learning involves not merely language proficiency, nor merely substantive knowledge—a variety of courses—but both together. The setting is a building which: First, will create an uplifting physical environment in which intermingling of language and international relations will be stimulated; and second, will form, with the other three components, an integrated whole.

The athletic-recreational component powerfully supports the other components. Each of the four focal points of student life—residence, library, classroom, and recreation—is important, as everyone realizes who reflects on each of them. What educations rarely consider is the total intercultural impact which all of them can have in a united way when American and foreign students live, study, research, and recreate together.

Because there are 4,000 students from other countries here at the D.C. universities with the larger sections of them enrolled at Howard University and Georgetown University, I believe the funds in this bill for this intercultural facility will be far outweighed by the benefits to be derived from the new programs that these facilities will provide, which will enable the students of our Nation to understand those of other countries and vice versa, which is the best basis for our foreign relations programs of the future.

I am delighted that 696 students from New Jersey, who are at Georgetown University, will participate in and benefit from the programs in this center.

Mr. CONTE. Mr. Chairman, I rise in support of this amendment to provide $200 million to the Community Services Administration for fuel bill assistance to low-income families.

In the wake of one of the most severe winters in our Nation's history, millions of poor families simply do not have the resources to pay the resulting high fuel bills. For many of them, the spring thaw will mean collection time and a possible shutoff of services.

Certainly the average social security payment of $225 for an elderly couple is not going to go very far toward heating bills which average upward of $1,000 for the winter in many of our New England States.

People on fixed incomes will have a most difficult time meeting these increased costs.

This program will provide for the distribution of funds through the Governors of the States. Payments would be made directly to fuel suppliers for outstanding bills which individuals can demonstrate they are unable to pay.

This proposal has the strong support of the Nation's Governors, and numerous organizations deeply involved in providing for the well-being of the poor and the elderly. I urge the adoption of this amendment.

The CHAIRMAN. There is a point of order pending raised by the gentleman from Maryland (Mr. BAUMAN). Does the gentleman from Maryland (Mr. BAUMAN) insists upon his point o of order?

Mr. BAUMAN. No, I do not, Mr. Chairman. I withdraw my point of order.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. ANDERSON) as a substitute for the amendment offered by the gentleman from Wisconsin (Mr. OBEY).

The amendment offered as a substitute for the amendment was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin (Mr. OBEY) as amended.

The question was taken; and the chairman being in doubt, the committee divided, and there were—ayes 58, noes 41.

RECORDED VOTE

Mr. MAHON. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 233, noes 170, answered "present" 1, not voting 28, as follows:

[Roll No. 78]

ANSWERED "PRESENT"—1

Coughlin

NOT VOTING—28

Ashbrook	Guyer	Roe
AuCoin	Jones, N.C.	Staggers
Boland	Ketchum	Stump
Clay	Koch	Teague
Collins, Ill.	McCloskey	Tonry
Dickinson	McKinney	Tsongas
Dingell	Montgomery	Vander Jagt
Early	Neal	Vanik
Florio	Nolan	
Gonzalez	Richmond	

The Clerk announced the following pairs:

On this vote:

Mr. Boland for, with Mr. Coughlin against.

Mr. Florio for, with Mr. Teague against.

Mr. Richmond for, with Mr. Stump against.

Mr. Staggers for, with Mr. Montgomery against.

Mr. TUCKER changed his vote from "aye" to "no."

Mr. COUGHLIN. Mr. Chairman, I have a live pair with the gentleman from Massachusetts (Mr. BOLAND). If he had been present, he would have voted "aye." I voted "no." I withdraw my vote and vote "present."

So the amendment, as amended, was agreed to.

The result of the vote was announced as above recorded.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Such amounts as deemed necessary for the payment of allowances and expenses within this appropriation may be transferred among accounts upon approval of the Committee on Appropriations of the House of Representatives.

POINT OF ORDER

Mr. BAUMAN. Mr. Chairman, I make a point of order against the language on page 29, line 17 through 20, inclusive, on the grounds that the language as it is written constitutes legislation on an appropriation bill.

In previous instances where an appropriation bill has contained similar language—and I emphasize the word "similar"—the Chair has held that it is permissible to allow language that would transfer appropriations from one subhead to another in the same enactment.

The language before us, if it is read carefully, makes it rather clear that what is being permitted is the transfer of amounts, and they may be transferred, as the language says, among accounts upon approval.

It is not in fact an authorization to transfer amongst the various moneys in this bill, but in fact could be used to authorize the transfer of previously appropriated amounts not in this bill.

Therefore, it exceeds the authority of the committee to in fact consider it.

I would make that point of order.

The CHAIRMAN. Does the gentleman from Illinois wish to be heard on the point of order?

Mr. SHIPLEY. Mr. Chairman, I will say to the gentleman from Maryland (Mr. BAUMAN) that this language has been carried for several years in the bill and is subject to a point of order. The committee will concede the point of order.

The CHAIRMAN. The gentleman from Illinois (Mr. SHIPLEY) concedes the point of order. Therefore, the Chair sustains the point of order raised by the gentleman from Maryland (Mr. BAUMAN) and the language is stricken from the bill.

The Clerk will read.

The Clerk read as follows:

OFFICE OF TECHNOLOGY ASSESSMENT

SALARIES AND EXPENSES

For an additional amount for "Salaries and expenses", $569,050, to remain available until September 30, 1978.

AMENDMENTS OFFERED BY MR. M'KAY

Mr. McKAY. Mr. Chairman, I offer amendments, and I ask unanimous consent that they may be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Utah?

There was no objection.

The CHAIRMAN. The Clerk will report the amendments.

The Clerk read as follows:

Amendments offered by Mr. McKAY: Page 30, line 9, insert:

CHAPTER IX

MILITARY CONSTRUCTION

MILITARY CONSTRUCTION, ARMY

For an additional amount for Military construction, Army, $16,796,000, to remain available until expended: *Provided,* That none of these funds may be obligated other than for energy conservation, fuel conversion, or pollution abatement projects authorized in a subsequently enacted military construction authorization act.

MILITARY CONSTRUCTION, NAVY

For an additional amount for Military construction, Navy, $20,330,000, to remain available until expended: *Provided,* That none of these funds may be obligated other than for energy conservation or pollution abatement projects authorized in a subsequently enacted military construction authorization act.

MILITARY CONSTRUCTION, AIR FORCE

For an additional amount for Military construction, Air Force, $20,000,000, to remain available until expended: *Provided,* That none of these funds may be obligated other than for energy conservation or pollution abatement projects authorized in a subsequently enacted military construction authorization act.

FAMILY HOUSING, DEFENSE

For an additional amount for Family housing, Defense, $65,000,000 (and an increase of $35,000,000 in the limitation on Department of Defense, operation, maintenance; an increase of $15,000,000 in the limitation on Construction, Army; an increase of $5,000,000 in the limitation on Construction, Navy and Marine Corps; and an increase of $10,000,000 in the limitation on Construction, Air Force): *Provided,* That none of the funds appropriated herein shall be obligated until authorization for this appropriation is enacted.

Mr. McKAY. Mr. Chairman, the amendment before us today would add $57 million to energy conservation and pollution control programs of our armed services and $65 million to the operation and maintenance and improvements funds for military family housing. Both of these programs involve light construction that is labor intensive, and both would put people to work this spring and summer. Much of the work could be initiated within 90 days.

This $122 million package is a conservative military public works proposal. Three weeks ago I asked the military services to report on their capability to create employment opportunities through needed military construction projects. The services indicated that they could obligate between $500 and $600 million by the end of the calendar year. This program was then reduced to include only labor intensive, ongoing programs that have been carefully reviewed by the Military Construction Appropriations Subcommittee. There are no major new projects included in the amendment, and there are no projects that cannot be underway this summer. Over half of the funds would be obligated within 90 days and a predominate number of jobs under the proposal would be available in that same time period.

The need for energy conservation construction is critical. The Ford administration deferred about $95 million worth of work in its fiscal year 1978 budget. The estimated impact of this decision would be lost energy savings of $28.2 million and a loss of 1.1 million barrels of oil each year. The $25 million proposed for energy conservation will more than pay for itself within 3 years through energy and cost savings.

Many military installations are in violation of local, State, and Federal air and water pollution standards. For example, there are 90 bases with sources of air pollution that are not in compliance with existing standards. The military services have been pursuing a program to be in full compliance by September 1979, but limited construction funds will force the services to seek an extension of this target. The $32 million proposed for air and water pollution control will permit 14 additional sites to meet existing standards this year.

The Department of Defense maintains an inventory of 388,000 family housing units. As of the end of fiscal year 1977, DOD estimates that the family housing deficiency in maintenance will be almost $517 million. The proposed amendment will provide $35 million to reduce that backlog and $30 million for needed improvements and minor construction. This is the most labor-intensive activity in the military construction program. A relatively small amount of capital will create jobs on the ground almost immediately under this proposal.

We have heard a good deal about economic stimulus and jobs creation during the last 2 days. Let me reiterate that the amendment that I offer today is a modest, but effective package of employment-producing public works. This is not a pork barrel proposal; few of the projects exceed $1 million and they are distributed throughout the country. If the Congress is serious about bringing on the maximum number of jobs in the shortest period of time, it will approve this amendment.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Utah (Mr. McKAY).

The amendments were agreed to.

Mr. MAHON (during the reading). Mr. Chairman, I ask unanimous consent that the remainder of the bill be considered as read and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. BAUMAN. Mr. Chairman, reserving the right to object, is it the intention of the gentleman from Texas, if such permission is granted, to limit debate at any time, or to move to limit debate at any time?

Mr. MAHON. Mr. Chairman, if the gentleman will yield, let me say that I had not planned to move to limit debate. Of course we want to proceed in an orderly manner. We want all Members to have an opportunity to express their views.

Mr. BAUMAN. Would the gentleman from Texas agree not to seek limitation of debate under the circumstances? There are a number of other amendments which people wish to offer; and, quite obviously, if there is going to be an attempt to limit debate, perhaps such Members would be denied a fair opportunity.

Mr. MAHON. As I say, I have no intention of moving to limit debate.

Mr. BAUMAN. Perhaps we could solve the situation if we can limit the gentleman's request to dispensing with the reading of the balance of title II.

Mr. MAHON. Then let me change my request to the balance of title II.

Mr. BAUMAN. If that is the case, then I withdraw my reservation of objection.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that we dispense with the further reading of the balance of title II.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. Are there any points of order against any portion of title II?

Are there any amendments to title II? If not, the Clerk will read.

The Clerk concluded the reading of the bill.

AMENDMENT OFFERED BY MR. M'CORMACK

Mr. McCORMACK. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. McCORMACK: Section 204 of the Water Resources Development Act of 1976 is hereby amended to read as follows:

"SEC. 204. Appropriations for any project which is authorized for initial construction by this Act are authorized for those fiscal years which begin on or after October 1, 1977."

Mr. McCORMACK. Mr. Chairman, section 204 of the Water Resources Development Act of 1975 provides that no funds specifically authorized for any project in that act will be available for expenditure prior to fiscal year 1978. his provision has the effect of preventing implementation of modifications to projects where the modifications were authorized in that act. As an example, the project for the construction of additional hydroelectric generating units at the Chief Joseph Dam was modified by section 151 of this act to authorize the Chief of Engineers to provide for the education of dependents of persons engaged in the construction of the additional hydroelectric power units. However, because of the language of section 204, this educational assistance will not be available until fiscal year 1978 although the Corps of Engineers presently has money available.

The amendment which I offer to section 204 is the same language which was contained in the Water Resources Development Act of 1976 as it passed the House last year. The present language in section 204 was adopted at the insistence of the Senate conferees under the belief that it was necessary to comply with the requirements of the Congressional Budget Act. Actually the Senate language went much further by prohibiting the expenditure of appropriated funds instead of merely prohibiting the appropriation of funds for newly authorized projects. The language which passed the House made it clear that it was not intended to halt ongoing projects. In this regard the language contained in the House report on that bill is very informative:

This section provides that appropriations for any project which is authorized for initial construction by this Act, are authorized for those fiscal years which begin on or after October 1, 1977. The purpose of this section is to comply with the requirements of the Congressional Budget Act of 1974. The Committee wishes to emphasize that this provision is limited to those projects authorized for initial construction so as to make it clear that projects under way and already receiving funding are not to be halted simply because some modification in the project may have been authorized.

Mr. Chairman, the language which I offer is necessary to prevent the halting or slowdown of projects which are underway merely because they happen to be modified in the 1976 act. I urge its adoption.

Mr. CEDERBERG. Mr. Chairman, will the gentleman yield?

Mr. McCORMACK. I yield to the gentleman from Michigan.

Mr. CEDERBERG. I thank the gentleman for yielding.

Mr. Chairman, I rise in support of the gentleman's amendment which would allow fiscal year 1977 funding of certain projects authorized in the 1976 Water Resources Development Act, Public Law 94–587.

In that act a winter navigation demonstration program for the Great Lakes-St. Lawrence Seaway System was extended from December 31, 1976, to September 30, 1979, and the funding authority was increased to $15,968,000.

However, as a result of section 204, added by the Senate, to deny funds prior to fiscal year 1978, no funds could be made available for this and many other important projects. The House did not intend to halt ongoing works and the committee language in the House report made that point very clear.

Section 204 has caused many unnecessary slowdowns and I am enthusiastically in support of the gentleman's amendment so that the Corps of Engineers can follow through with water resources development projects without delay.

Mr. OBERSTAR. Mr. Chairman, will the gentleman yield?

Mr. McCORMACK. I yield to the gentleman from Minnesota.

Mr. OBERSTAR. I thank the gentleman for yielding.

Mr. Chairman, I support the gentleman's efforts. As one of the conferees last year on this piece of legislation, I can attest to the mischief that the other body wrought upon this House. The gentleman's amendment corrects that mischief, and I do hope it will be adopted.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. McCORMACK. I yield to the gentleman from Texas.

Mr. MAHON. I thank the gentleman for yielding.

Mr. Chairman, I have no opposition to the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington (Mr. McCORMACK).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. JOHN T. MYERS

Mr. JOHN T. MYERS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. JOHN T. MYERS: On page 72, after line 27, add the following new section:

"SEC. 305. None of the funds appropriated or otherwise made available in this Act shall be obligated or expended for salaries or expenses in connection with the dismissal of any pending indictments for violations of the Military Selective Service Act alleged to have occurred between August 4, 1964 and March 28, 1973, or the termination of any investigation now pending alleging violations of the Military Selective Service Act between August 4, 1964 and March 28, 1973, or permitting any person to enter the United States who is or may be precluded from entering the United States under 8 U.S.C. 1182(a) (22) or under any other law, by reason of having committed or apparently committed any violation of the Military Selective Service Act.".

POINT OF ORDER

Mr. YATES. Mr. Chairman, I make a point of order against the amendment.

Mr. MAHON. Mr. Chairman, I reserve a point of order.

Mr. YATES. Mr. Chairman, I make a point of order that it is legislation in an appropriations bill, obviously legislation in an appropriations bill.

Mr. Chairman, I insist on my point of order.

The CHAIRMAN. The gentleman from Illinois insists on his point of order.

Does the gentleman from Indiana wish to be heard on the point of order?

Mr. MAHON. Mr. Chairman, is the Chair entertaining a point of order?

The CHAIRMAN. The Chairman has heard a point of order.

Mr. MAHON. Mr. Chairman, if the Chair would permit, I would like to have a word with respect to the point of order.

The President of course under the Constitution does have the right to pardon. There are many of us who oppose the pardoning of the draft dodgers, as we all know. It seems to me that this amendment is subject to a point of order. It says:

None of the funds appropriated or otherwise made available in this Act shall be obligated or expended for salaries or expenses in connection with the dismissal of any pending indictments for violations of the Military Selective Service Act alleged.

It would seem to me that the executive branch would be required to make a determination here as to the violations

"alleged to have occurred between August 4, 1964 and March 28, 1973" or to determine if any investigation now pending relates to alleged violations of the Military Selective Service Act between August 4, 1964, and March 28, 1973, so again he would have to make another determination as to whether or not there was an alleged violation of the Military Services Act. It goes on to say:

. . . or permitting any person to enter the United States who is or may be precluded from entering the United States—

Under certain provisions—

by reason of having committed or apparently committed any violation of the Military Selective Service Act.

It seems to me the Executive would have to make a determination as to whether or not there was an apparent violation here. So I make the point of order, or I support the point of order.

The CHAIRMAN. Does the gentleman from Indiana wish to be heard?

Mr. JOHN T. MYERS. Yes, Mr. Chairman.

This is a limiting amendment. This Congress has adopted similar language a great many times limiting how the funds so appropriated may be used. I do not by any means wish to challenge or question the authority the Executive has in issuing a pardon. That is a constitutional responsibility or right that the Executive has. But this Congress has the constitutional responsibility and right to appropriate money. All this amendment does is limit how that money shall be spent again by an exercise that this Congress has used a great many times.

It is a negative restriction of funds. It is consistent exactly with the language that was used in the Executive order relating to the program of pardon. This amendment does not change existing law nor does it impose additional duties. The language of the amendment conforms exactly to the language of that Executive order. Those activities enumerated in the amendment are exactly the same activities which the Executive order directed to be carried out by the Attorney General and by the Immigration and Naturalization Service.

The constitutional argument is a moot one, I feel. Whatever the constitutional powers of the President may be, there is no obligation upon the Congress, there never has been, that we have to appropriate the money. That is consistent with every law we would pass. The two arguments that have been made here could be carried out to the point where it would be a physical impossibility for us ever to limit the funds.

It does not impose an additional burden on the Executive. Under "Deschler's Procedure," chapter 25, sections 10.4 and 10.5, it says:

The fact that the administration of the limitation will impose certain incidental but additional burdens on executive officers does not destroy the character of the limitation.

As far as the salaries are concerned, again I quote from "Deschler's Procedure," chapter 25, section 12.9, which says:

An amendment to an appropriation bill providing that "no part of any appropriation contained in this act shall be available" for the payment of salary of any officer or employee of the U.S. Postal Service who takes certain actions was held in order as a limitation on the use of funds in the bill.

All this amendment does again is limit that no money in this bill shall be used in carrying out this particular Executive order. Any funds from any other source could be used, so it certainly does not attack the President's authority or his right, but it does give us the right to regulate or control the purse strings, and that is all this does.

The CHAIRMAN. Does the gentleman from Illinois (Mr. YATES) desire to be heard on the point of order as well?

Mr. YATES. Mr. Chairman, I just wish to add the point that it requires additional duties on the part of the Executive and, therefore, is subject to a point of order.

The CHAIRMAN. The Chair has considered the points made by those in favor of the point of order and the points made by those in opposition to the point of order.

The Chair is constrained to rule that the amendment does not directly impose additional duties upon the Executive, the amendment may have the effect of restricting Executive discretion by a simple negative use of the appropriation but the determinations to be made are already required by law and the Executive order and are not new determinations. The point of order is overruled.

Mr. JOHN T. MYERS. Mr. Chairman, we are all quite familiar with the action taken on January 21 by the President in, first, the Presidential Proclamation of Pardon, in which the President granted a complete and unconditional pardon for all military violations of the Selective Service Act between August 4, 1964, and March 28, 1973.

The same date, the President issued an Executive order relating to Proclamation of Pardon, requesting the Attorney General to dismiss pending indictments and terminate pending investigations relating to those violations and ordered that persons in actual or apparent violation be permitted to reenter the United States.

The amendment again, as has already been explained, would limit that no funds in this bill could be used for those purposes.

I think all of us are well aware if we have read our mail and talked to the people back home that they are quite concerned with this pardon. My amendment is only a limitation, does not reverse the pardon, but the administration, the Attorney General, the White House, the immigration and the naturalization authorities, could not use funds to encourage or help people get back. It would not deny a pardon, but would not provide the funds. The question is a simple one and possibly the only opportunity you will have to express your views on this issue of the pardon.

If the Members feel the pardon was wrong, that it it will create damage in the future, the vote is yes to restrict and limit the funds. If the Members feel otherwise by favoring the pardon, they can vote against my amendment.

Mr. SLACK. Mr. Chairman, I rise in opposition to the amendment. In the first place, the full impact of this amendment is not readily apparent. It appears to be an attempt to nullify the pardons granted by President Carter. We all know that the President has the constitutional right to grant pardons, and it is unlikely that he would reverse his decision.

In my judgment, Mr. Chairman, this amendment would make it impossible to administer the program and would create a chaotic situation.

Finally, Mr. Chairman, let me say this matter, in my judgment, is a legislative matter and should not be included in an appropriation measure.

For these reasons, Mr. Chairman, I oppose the amendment of the gentleman from Indiana.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Indiana (Mr. MYERS).

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. ASHBROOK. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 220, noes 187, not voting 25, as follows:

[Roll No. 79]

Gonzalez	Richmond	
Heckler	Roe	

Messrs. GOLDWATER, FLOOD, and BIAGGI changed their vote from "no" to "aye".

So the amendment was agreed to.

The result of the vote was announced as above recorded.

Mr. OTTINGER. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I take this time in order to ask the gentleman from Pennsylvania (Mr. FLOOD) one very short question and that is in this supplemental appropriation bill there is some $12½ million in the Emergency Medical Services Act and that is programed to initiate a national burn center program. I would like to have assurances from the chairman, the gentleman from Pennsylvania (Mr. FLOOD) that it is his intention to fund that program and that that program should be initiated out of these funds.

Mr. FLOOD. Mr. Chairman, if the gentleman from New York will yield, let me say that the bill contains funds to initiate a demonstration program for burn injury care on a regional basis. Therefore, the committee expects HEW to start this program as soon as possible.

Mr. OTTINGER. I thank the gentleman.

AMENDMENT OFFERED BY MR. GRASSLEY

Mr. GRASSLEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GRASSLEY: On page 72, after line 27, add the following new section, and redesignate the succeeding sections accordingly:

"SEC. 305. None of the funds contained in this Act shall be used for any adjustments or increases in the rates of pay for legislative offices and positions within the purview of subparagraphs (A) and (B) of subsection (f) of section 225 of Public Law 90–206 made effective pursuant to section 225 of the Postal Revenue and Federal Salary Act of 1967 (Public Law 90–206)."

Mr. GRASSLEY. Mr. Chairman, my amendment basically dictates that none of the funds in this bill can be used to cover salary increases of Members of the legislative branch pursuant to the most recent Quadrennial Commission recommendations.

We have been told that there are no funds in this bill for congressional salaries. But, with the uncertainty of the response I want to guarantee that there are none.

To take care of any possibility in this bill that might allow the transfer of funds for that purpose, this amendment is being offered.

I want to nail shut a door I hope is already nailed shut, but I'm not sure.

On as important of an issue as the pay raise is to the people in this country—every Member ought to be sure what this bill says and does.

I want to provide that assurance that no money in this bill will be used for that purpose.

When the time comes to approve money for congressional pay raises, every Member ought to know the amount and exactly where the money is tucked away in the bill. And there should be a vote on the issue.

I want you and me and everyone to know that there is not some cleverly conceived and cleverly worded section of the bill that might permit money appropriated for other purposes to be used for our pay raise.

This amendment will assure that point.

Mr. SHIPLEY. Mr. Chairman, will the gentleman yield?

Mr. GRASSLEY. I yield to the gentleman from Illinois.

Mr. SHIPLEY. Mr. Chairman, let me say to the gentleman from Iowa that the committee has looked over this amendment and finds no objection to it and we accept the amendment.

Mr. GRASSLEY. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa (Mr. GRASSLEY).

The amendment was agreed to.

Mr. SIMON. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I made the motion to strike the last word to indicate to the Members that my colleague, the gentleman from Massachusetts (Mr. CONTE) will ask for a separate vote on the amendment of the gentleman from Florida (Mr. YOUNG), and I will join in that request. That amendment knocked out $55 million to Ireland. That is an obligation, 2 years old, of this Nation, supported by President Ford. It is an obligation that President Carter feels very strongly about. It is an obligation that the President not only feels strongly about, but I think it would be embarrassing to this Nation since very shortly he will be speaking to the United Nations. I think it is shortsighted to move in this direction. If we believe we can create prosperity in this Nation and ignore the needs of the poor nations of the world, we are living in a dream world.

Mr. WHALEN. Mr. Chairman, will the gentleman yield?

Mr. SIMON. I yield to the gentleman from Ohio.

Mr. WHALEN. I thank the gentleman for yielding.

I, too, urge that when the vote is taken on the Young amendment, we vote "no." As the gentleman from Illinois has pointed out, this represents a partial funding of the commitment made 2 years ago by Secretary Simon in Nairobi, Kenya, at the meeting of the International Development Association. The Congress then passed this commitment. We are now 2 years in arrears, whereas the other nations are all paid. I think certainly we must honor this commitment and, therefore, I would urge a "no" vote on the Young amendment when it is taken after the Committee rises.

Mr. LAFALCE. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I have just returned approximately one-half hour ago from a conference in Vienna regarding the International Development Association. At that time the representation was made to the delegates of 26 nations by the Assistant Secretary of the Treasury, Fred Bergsten, that the new President

of the United States, Jimmy Carter, strongly backed the International Development Association and called upon all the nations there present to participate in what was known as the fifth replenishment of IDA. France was thinking of withdrawing from the fifth replenishment, but Vice President MONDALE in his visit to France prevailed upon the French people to continue their participation and to continue it fully.

The issue came up in Vienna, however, of what the United States was going to do, not about the fifth replenishment, not about the future, but what the United States was going to do about the fourth replenishment, and not the four installments for the fourth replenishment but the first of the four installments, an obligation that the United States committed itself to in 1973.

I think I can say that every nation of the world participating in IDA feels strongly committed to the concept of multilateral assistance to the underdeveloped countries, that the new administration considers this to be one of the most basic tenets of its foreign policy approach, and that it is absolutely imperative for the United States to honor the commitment it made in 1973 and which has been restated so forcefully by our new President. This is the first step we must make toward that end.

On the day of our completion of pledges for the fifth IDA replenishment, we cannot, here in the House, turn around and vote to delete our past promise in the fourth commitment to IDA.

Mr. WRIGHT. Mr. Chairman, will the gentleman yield?

Mr. LAFALCE. I yield to the gentleman from Texas.

Mr. WRIGHT. Mr. Chairman, I thank the gentleman for yielding.

The gentleman is making a very significant statement. This is the redemption of a pledge that was made on behalf of the United States by the President of the United States, not by this President but by his predecessor. Yet the keeping of this pledge is important tc President Carter, as it should be important to all of us.

We have but one President at any given time, and there are occasions when he must speak for the Nation in the councils of the world. It is incumbent upon us to give substance to what he has pledged when he speaks for the United States. Otherwise, the Presidency and the Nation itself lose credibility. He must be able to speak with an expectation that the Congress will stand behind his word.

These are loans that go to the poorest of the poor. It is my understanding that they are going only to countries where the average income is $300 annually or less. Manifestly, the need is grave. What little we can do to help should not be done begrudingly.

I commend the gentleman for the statement he is making and I hope our colleagues will reject that amendment which was adopted by voice vote in the committee of the whole.

Mr. FRENZEL. Mr. Chairman, will the gentleman yield?

Mr. LAFALCE. Mr. Chairman, I yield to the gentleman from Minnesota.

Mr. FRENZEL. Mr. Chairman, I thank the gentleman for yielding.

I would like to support his statement and indicate that I hope the Members of this body will also vote "no" when the vote is taken on this amendment. Our country has the obligation, confirmed both by the current President and his predecessor, to complete the fourth replenishment of IDA.

I hope, and expect, that we will be tougher on making these commitments, and on demanding a review of loan policies, but our course today is clear.

Mr. CEDERBERG. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I find myself in a very unusual position today, and that is that I am going to not support the amendment of my dear friend, the gentleman from Florida (Mr. YOUNG).

Some days ago a number of us went to the White House, and with the President and the Secretary of State and others discussed this matter. These negotiations are going on in Vienna at the present time. The President is aware that all is not well with IDA, and he indicated that there are some changes that he wants to make, but he is not going to be able to make those changes if we unilaterally take the position that we are not going to go along with what we have committed ourselves to do.

Mr. LAFALCE. Mr. Chairman, will the gentleman yield?

Mr. CEDERBERG. I yield to the gentleman from New York.

Mr. LAFALCE. Mr. Chairman, an agreement was made that no further commitments would be made until such time as a new review was made of all lending criteria.

Mr. CEDERBERG. That is right. We realize there are many things that need to be corrected here.

Let me just say this. I agree that the new administration ought to have an opportunity to sit down and negotiate these things out, correct some of the things that have been brought out in the various hearings, but I think we ought to be very, very cautious and very, very careful on the action that we take here today.

Mr. RYAN. Mr. Chairman, will the gentleman yield for a very brief time?

Mr. CEDERBERG. I yield to the gentleman from California.

Mr. RYAN. Mr. Chairman, I think it is important for Members to know here that the countries we are talking about are countries that, in order to qualify for this kind of loan, have an average annual per capita income of less than $300 per year. Please remember those countries have to pay the same for oil that we do. That will give the Members an idea of the scale of development in those countries.

Mr. CEDERBERG. Mr. Chairman, it is important that we not tie the hands of the President in this instance and that we allow him the opportunity to negotiate and get the kind of agreement that we think will be healthy for the banks in the long haul.

Mr. YOUNG of Florida. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rejected the invitation to go to the Vienna meeting so I did not get all the big high-pressure sales pitch that someone might have gotten, but I am interested in the comments that "the poorest of the poor" will be receiving this money. Let me tell the Members what that amounts to. In the case of IDA, 40 percent of the money goes to India, and while they have been using this money for domestic development, they have been using their own money to buy Russian arms, guns, and bullets, and things like that, and for developing an atomic bomb.

Now the United States contributes 33 percent of the money that goes to IDA. While Congress rejected this same $55 million in the fiscal year 1977 bill, we did appropriate $375 million for IDA in that bill.

Mr. Chairman, here is something I did not have time to point out in our earlier debate. Do the Members know that today IDA, the soft loan window of the World Bank, has $900 million on account, uncommitted, unobligated, they can use for whatever loan they want to make and they are going to make whatever loan they want whether we like it or not, because we do not have a veto over how they use that money.

Let me say one more thing before I sit down. If the Members here have read their newspapers lately, they have seen where IDA has already sent a mission to Vietnam for the purpose of initiating whatever has to be done to initiate a loan from IDA to Vietnam. If those here want to be in favor of that, that is up to them; but I say this is an opportunity to eliminate from this bill money that IDA does not need and an opportunity to state once and for all that we are not going to take American taxpayers' dollars, give them to IDA for international loans and let them use it however they will, even if it includes a loan to Vietnam.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. YOUNG of Florida. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, as a member of the Committee on Banking and Currency, we have had many hearings on this international development fund. Many of these loans, and we will be voting for them today if we vote to add this $55 million—the people on the Committee on Banking and Currency know this—will provide interest-free loans, no interest paid. Many of the loans go for 40 years and are never paid back.

What I want to ask every one of my colleagues is to make a judgment for their constituents, to name one constituent, if they can get an interest-free loan for 40 years and in addition not have to pay it back.

There is plenty of money in this fund. It is not bankrupt, like our U.S. Treasury.

I ask each one, if we vote for $55 million now we are voting to give interest-free loans to a fund that is well-funded—approximately $900 million. Furthermore OPEC nations say they may

contribute to it out of oil profits. I say, let them contribute. They are bleeding us dry with the prices they charge for oil so OPEC nations can afford it. We cannot.

If we vote for this today we are saying to our constituents, "I am perfectly willing to ship money overseas interest free, while you have to borrow it at 6, 7, 8, 9, and 10 percent where you borrow here in the United States.

I ask this House, can we do that to our 99 million hard-working taxpayers?

Mr. YOUNG of Florida. Mr. Chairman, just in case anyone misunderstood the gentleman from California, a vote to eliminate the $55 million is "aye"; so vote for it.

Mr. CONTE. Mr. Chairman, I move to strike the requisite number of words.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the distinguished gentleman from Texas.

Mr. MAHON. Mr. Chairman, I would like to say to the gentleman that after the gentleman concludes his remarks, I will move that the Committee now rise.

The CHAIRMAN. The Chair will recognize the distinguished gentleman from Texas for that purpose.

Mr. CONTE. Mr. Chairman, first I would like to give a little background about this amendment. This amendment to eliminate funding for IDA was deleted from the bill when the chairman brought it up before the subcommittee. After a great deal of debate the subcommittee voted for the $55 million. Then we went to the full Committee on Appropriations and the gentleman from Florida offered the same amendment and the gentleman was defeated in the full committee.

Today during debate there were only a half dozen Members on the floor. The gentleman offered the amendment again. The gentleman won it on a voice vote. Unfortunately, there were not enough Members to get a recorded vote. We only got 15 to stand up; but had we gotten a record vote, we would have defeated that amendment.

Mr. Chairman, we have made a commitment for this $55 million. What the gentleman from New York has said is absolutely right. This money is due. We made that commitment several years ago. There is no doubt about it. What the gentleman from Florida says about 40 percent going to India is also true; but in that meeting in Vienna 2 weeks ago, they agreed to consider changing the formula. They agreed to consider cutting down on the amount of money India will get under IDA.

The administration in good faith went out and negotiated this agreement based on the fact we were going to give IDA this $55 million.

I might add, Mr. Chairman, that this $55 million was cut from the 1976 foreign aid appropriations bill. It is not a new item.

Let me tell this House the story that I told in the full committee. When President Kennedy was assassinated in Texas, Vice President Johnson assumed office. Two things occurred.

We had a new chairman of Appropriations, Chairman MAHON. Our former chairman, Chairman Cannon from Missouri, had died. Chairman MAHON called me one Saturday morning and he said:

Silvio, I would like to come over to Room 118 and talk to you.

He did. He said:

You know, we have a new President. We only have one bill left on the floor of the House and in committee. That is the foreign aid bill. The whole world is looking at this new President to see whether he has control of the situation.

At that time, the ranking Republican on the Foreign Operations Subcommittee was JOHNNY RHODES. The second ranking Republican on the Foreign Operations Subcommittee was Jerry Ford. And I was the third. Mel Laird was on the Appropriations Committee then, and dead set against giving President Johnson the foreign aid bill.

My vote, Mr. MAHON told me at that time, would break a tie in subcommittee for the foreign aid bill. And it did. It broke a tie, and I was about as welcome on this side of the aisle as a skunk at a lawn party. It went to the full committee, and we reported that bill by one vote. Then, we came to the floor of the House, and I believe we carried that bill by one vote. I remember that they sent out Air Force One to Puerto Rico, to bring our former colleague, Congressman Celler back to the floor; and one Member, who is still here today, actually refused to come back. It was a close vote.

That was a very difficult position for me as a Republican, as it is a difficult position for me today to stand here and defend a Democratic President. But, President Carter is a new President, just as President Johnson was then, and he deserves our backing on this particular measure. This measure was sent up by President Ford before he left office. So, it is not just a Carter supplemental; it was sent up here by President Ford as well as prior to Mr. Carter's taking office on January 20.

As was mentioned already on this side of the aisle, this money goes to some of the poorest people in the world—700 million rural people, hungry people who go to bed at night knowing that in the morning they will still be without food; without medication; without electricity.

Last year, 90 percent of IDA credits went to countries with per capita incomes of less than $200.

In the last three replenishments of IDA, other governments have repeatedly come forward to make it easier for the United States to participate. First, by allowing U.S. payments to be made after all other countries' payments were in. Second, by making advance contributions to keep the fund going pending American ratification of the necessary agreements. And third, by allowing a reduction of the American share to one-third of the total.

The United States is now in default on its obligations to IDA. Failure to honor our commitments will dissuade other donors from continuing to participate.

Mr. Chairman, at a time when we are preaching to the rest of the world about human rights, about responsible conduct in the international arena, it is incumbent upon us to live up to our commitments.

The administration is negotiating to bring these international lending institutions into compliance with congressional concerns. The administration is negotiating in good faith, and needs these funds to further those negotiations. I think the administration deserves this chance.

I urge my colleagues to defeat the amendment of the gentleman from Florida.

Mr. MAHON. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill, as amended, do pass.

The motion was agreed to.

Accordingly the Committee rose, and the Speaker having resumed the chair, Mr. FLOWERS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 4877), making supplemental appropriations for the fiscal year ending September 30, 1977, and for other purposes, had directed him to report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill, as amended, do pass.

The SPEAKER. Without objection, the previous question is ordered.

There was no objection.

The SPEAKER. Is a separate vote demanded on any amendment?

Mr. CONTE. Mr. Speaker, I demand a separate vote on the so-called Young of Florida amendment.

The SPEAKER. Is a separate vote demanded on any other amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The Clerk will report the amendment on which a separate vote has been demanded.

The Clerk read as follows:

Amendment: On page 11, strike lines 3 through 11.

The SPEAKER. The question is on the amendment.

Mr. YOUNG of Florida. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 171, nays 234, not voting 27, as follows:

NOT VOTING—27

Boland	Heckler	Roe
Clay	Jones, N.C.	Staggers
Collins, Ill.	Ketchum	Stump
Dickinson	Koch	Teague
Dingell	McCloskey	Tonry
Early	McKinney	Tsongas
Florio	Montgomery	Vander Jagt
Gonzalez	Neal	Vanik
Hawkins	Richmond	Wilson, Bob

The Clerk announced the following pairs:

On this vote:

Mr. Teague for, with Mr. Boland against.
Mr. Stump for, with Mr. Florio against.

Until further notice:

Mr. Staggers with Mr. Gonzalez.
Mr. Roe with Mr. Richmond.
Mr. Early with Mrs. Heckler.
Mr. Hawkins with Mr. Tsongas.
Mr. Vanik with Mr. Vander Jagt.
Mr. Koch with Mr. McCloskey.
Mr. Dingell with Mr. Jones of North Carolina.
Mrs. Collins of Illinois with Mr. Bob Wilson.
Mr. Clay with Mr. Tonry.
Mr. Montgomery with Mr. McKinney.
Mr. Neal with Mr. Dickinson.

Mr. ALEXANDER changed his vote from "nay" to "yea."

So the amendment was rejected.

The result of the vote was announced as above recorded.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. MILLER OF OHIO

Mr. MILLER of Ohio. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. MILLER of Ohio. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. MILLER of Ohio moves to recommit H.R. 4877 to the Committee on Appropriations, with instructions to that Committee to report the bill back to the House forthwith, with the following amendment:

On page 72 after line 27 insert the following:

SEC. 305. Of the total budget authority provided in Title I for payments not required by law, five per centum shall be withheld from obligation and expenditure: *Provided*, That of the amount provided for each appropriation account, activity, and project, for payments not required by law, the amount withheld shall not exceed ten per centum.

Mr. MILLER of Ohio. Mr. Speaker and my colleagues, I offer instructions with the recommittal motion that will do one thing, it will reduce the total amount of the bill by 5 percent. It will not wipe out any one item in the bill. It will only reduce those items that are nonmandatory. It means by best estimation that it would reduce the bill some $1 billion.

We have heard this afternoon about the problems we have in the commitments we have made in the case of IDA.

Let me tell the Members what is in the bill and a commitment that is about ready to be made and that is the commitment for approximately one-half a billion dollars for section 8 of HUD. This would pay rent subsidies, and HUD will tell you that last year they paid rent subsidies and the highest amount that they paid was $873 a month for one family—$873 a month was the maximum they would pay. In the bill we have about a half a billion dollars so that HUD can enter into contracts for section 8, which means that we will be obligated for up to 40 years for over $13 billion. That is almost half of the amount of money that is in the bill that we are about to vote on.

Why do I say we should reduce? I suppose most of the Members are familiar with the fact that the Secretary of the Treasury says that we will pay interest on the national debt this year of $46-plus billion. Let the Members stop to think what does it amount to if we bring it down to daily payments? We pay approximately $130 million a day interest on the national debt, and in this bill under HUD alone we are going to obligate ourselves for the next 40 years for another $13 billion. I believe it is high time that we stand up and be counted.

I also heard this afternoon that we were living in a dream world. We certainly are living in a dream world if we think that we can continue to spend and not go the direction that Great Britain has gone—the map is right before us—and not go the direction that New York City has gone—yes, the map is right before us—but we continue to go in that same direction anyway.

Mr. Speaker, I ask for a yea vote on the motion to recommit.

Mr. MAHON. Mr. Speaker, I rise in opposition to the motion.

The SPEAKER. The question is on the motion to recommit.

The question was taken; and the Speaker announced that the noes appeared to have it.

Mr. MILLER of Ohio. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

The question was taken; and on a division (demanded by Mr. MILLER of Ohio) there were—ayes 114, noes 194.

So the motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

Mr. CEDERBERG. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 306, nays 98, not voting 28, as follows:

[Roll No. 81]

Mr. Koch with Mr. Vander Jagt.
Mr. Dent with Mr. McKinney.
Mr. McClory with Mr. Dickinson.

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERMISSION FOR COMMITTEE ON EDUCATION AND LABOR TO FILE REPORT ON H.R. 4250

Mr. THOMPSON. Mr. Speaker, I ask unanimous consent that the Committee on Education and Labor may have until midnight Friday, March 18, 1977, to file a report on the bill H.R. 4250.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

PERMISSION FOR COMMITTEE ON INTERNATIONAL RELATIONS TO FILE REPORT ON H.R. 5040, TO AUTHORIZE ADDITIONAL APPROPRIATIONS FOR DEPARTMENT OF STATE FOR FISCAL YEAR 1977

Mr. WOLFF. Mr. Speaker, I ask unanimous consent that the Committee on International Relations may have until midnight tonight to file a report on the bill (H.R. 5040) to authorize additional appropriations for the Department of State for the fiscal year 1977.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

PERMISSION FOR SUBCOMMITTEE ON ENVIRONMENT, ENERGY, AND NATURAL RESOURCES OF COMMITTEE ON GOVERNMENT OPERATIONS TO SIT TOMORROW DURING 5-MINUTE RULE

Mr. RYAN. Mr. Speaker, I ask unanimous consent that the Subcommittee on Environment, Energy, and Natural Resources of the Committee on Government Operations be permitted to sit under the 5-minute rule tomorrow, if necessary, for the purpose of conducting a further investigation on the Federal Dam Safety Act.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

GENERAL LEAVE

Mr. BARNARD. Mr. Speaker, I ask unanimous consent that all Members may be permitted to include extraneous matter with their remarks on the bill H.R. 4877 which passed the House today.

The SPEAKER pro tempore (Mr. SEIBERLING). Is there objection to the request of the gentleman from Georgia?

There was no objection.

AMENDING SOCIAL SECURITY ACT TO PERMIT UNLIMITED EARNINGS WITHOUT PENALTY

(Mr. ALLEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ALLEN. Mr. Speaker, I am today—together with my colleagues Congressman ALBERT GORE, JR., Congressman ED JONES, Congressman FRANK ANNUNZIO, and Congresswoman MILLICENT FENWICK—reintroducing a bill I proposed at the last session of Congress to change the social security law so that no one would be forced to retire or be limited in the income he or she may earn, in order to receive full social security benefits. I have noted with satisfaction that a great number of my colleagues, both Democrats and Republicans, have introduced similar bills during this session of Congress, which I dare to hope is a harbinger of broad bipartisan support of this measure that will lead to its ultimate passage before this session ends.

Those who have reached the age where they are entitled to receive social security benefits, for which they have already paid their taxes, should not be forced to retire in order to receive full benefits, or be penalized for having other sources of income. This is not required of those who have paid their premiums on annuity policies with private insurance

companies, and it should not be required of those who have paid their premiums in the form of social security taxes. Furthermore, the more wealthy, who own stocks, bonds, real estate, and other assets from which they draw an income, are not limited in the amount of income they may receive in order to qualify for full social security benefits. I can see no justification or defense for this kind of discrimination against the less fortunate of our citizens whose only income outside of social security is in the form of wages and salaries for work performed. Everyone should be treated alike.

The Government's failure to control spiraling inflation has hurt those on modest and fixed incomes. The elderly and people with disabilities, either temporary or permanent, and those who are often without other sources of income, find that the meager increases in their social security payments have been offset by spiraling inflation.

There is no reason for those on a limited income to bear the often devastating consequences of Government policies that do nothing to control inflation. And certainly there is no reason for placing a limit on how much extra income a senior citizen receiving benefits may earn. Our society cannot afford to waste the special skills for our elderly by depriving them of their social security benefits if they choose to continue working.

It is Congress, and only Congress, which can correct this injustice. The right of those on social security to live in dignity, and not despair, is in the hands of the U.S. Congress, and I hope we will correct the present situation by passing this bill.

SHOE INDUSTRY: A MATTER OF ECONOMIC SURVIVAL

(Mr. BURKE of Massachusetts asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BURKE of Massachusetts. Mr. Speaker, the chairman of the board of the prestigious First National Bank of Boston, and a man I admire greatly, Mr. Richard Hill, has recently written to Secretary W. Michael Blumenthal urging import relief for the domestic shoe industry.

Mr. Hill and I have approached many issues of trade from differing perspectives in years past; however, this is an issue on which we fully agree. His letter, written from the perspective of a bank that does extensive international business and has taken a strong position on matters of free trade, illuminates the extent of injury this industry has sustained—an industry of extreme importance to the health of the economy of the Northeast.

Trade philosphies aside, I do not think there can be any disagreement on the fact that our trade laws are constructed so that an industry, seriously jeopardized by imports, is to be afforded a breathing space to recover. The shoe industry has demonstrated this need, as pointed out by Mr. Hill, and under our laws should be afforded the relief recommended by the ITC. And while this is an issue that spans many regions of the country, it is particularly crucial to our ailing economy of the Northeast; we simply can not sustain the further job losses that would result if this relief is not forthcoming.

I would also like to enclose a copy of a letter I received from the Boston Chamber of Commerce on this matter.

FIRST NATIONAL BANK OF BOSTON,
Boston, Mass., March 9, 1977.

Congressman JAMES A. BURKE
Cannon Building
Washington, D.C.

DEAR CONGRESSMAN BURKE: Because of your long-standing interest and concern in the problem of import competition, I wanted you to have a copy of the letter Dick Hill recently sent to Secretary Blumenthal supporting the International Trade Commission recommendation for a tariff-quota system.

I believe this is an important step along the way to keeping the New England economy healthy. I look forward to working with you on these matters in the future.

Sincerely

JAMES M. HOWELL.

FIRST NATIONAL BANK OF BOSTON,
Boston, Mass., March 2, 1977.

Hon. W. M. BLUMENTHAL,
Secretary of the Treasury, Treasury Department, Pennsylvania Avenue, N.W., Washington, D.C.

DEAR SECRETARY BLUMENTHAL: You and I last met in Tokyo as members of the Advisory Council on Japan-U.S. Economic Relations and, needless to say, I was proud to learn of your appointment to such a key position in new government.

I am writing with regard to the decision pending in the Administration on a proposal for relief for the United States shoe industry from import competition.

Our Bank has taken a forthright position in support of free trade, as befits an organization with extensive international business. In November, I gave a speech at the National Trade Convention in New York, which dealt with the problems that could arise from the growing external debt held by some developing countries. In particular, I stressed that the United States and other industrialized countries should reduce import barriers to provide growing markets that will assist the orderly servicing of external debt. Some United States industries, I indicated, would suffer in the adjustment. No mention was made in my speech of the shoe industry which has experienced substantial import competition and is still a large employer in the Northeast. At the same time, however, I said that this adjustment will be greatly facilitated if we can achieve steady and stable growth for the American economy and that tax and accounting changes which encourage investment in plants and equipment offer the best promise for long-term growth, more jobs and lower inflation. The economies of the Northeast region have not achieved this improvement in economic activity and investment and accordingly we feel justified in supporting some protective action with respect to an industry which is important to it.

As you know, the degree of import penetration in total United States shoe sales (47 percent) is larger than for almost any other broadly defined industry. There is no question that imports are a major factor in the decline of the domestic industry. Shoe production is concentrated largely in the New England and Middle Atlantic states. The top four shoe producing states are Pennsylvania, Missouri, New York, and Massachusetts. Although leather manufacturing employment will continue to decline, it is still sizable, amounting to 47,000 in New England and the Mid-Atlantic states. In my opinion, it is unwise to allow a further rapid deterioration in this important regional industry.

Some degree of protection for this industry is not inconsistent with a general concern that developing countries be allowed to expand exports to service debt. With respect to shoe imports, competition has been extraordinary and comes primarily from Taiwan, and secondarily from Italy, Korea, Spain, and Brazil, all of which have a wide range of alternative export opportunities.

I respectfully urge that you support the tariff-quota system proposal by the International Trade Commission for shoe imports since it provides effective protection without being excessively rigid.

Sincerely,

RICHARD D. HILL,
Chairman of the Board.

GREATER BOSTON,
CHAMBER OF COMMERCE,
Boston, Mass., March 8, 1977.

Hon. JAMES A. BURKE,
Cannon House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE BURKE: The Greater Boston Chamber of Commerce joins the American Footwear Industry Association and the United Shoe Workers of America, AFL-CIO, in their efforts to effect a modification in the current foreign shoe import trade imbalance and the attendant damaging consequences to numerous American shoe companies and thousands of workers.

The members of the International Trade Commission (ITC) have unanimously concluded on two occasions that the recent level of foreign shoe imports has seriously injured our domestic industry. A majority of the ITC members have recommended that a tariff rate quota be established and this recommendation is supported by the industry and organized labor.

The underlying cause of this critical problem is the level of hourly compensation paid to workers in the principal competing foreign nations. In the past ten years, imports of foreign shoes have more than doubled and market penetration is at an unparalled 50%. This has caused domestic production to fall so sharply that some 240 companies are no longer in business. Employment has declined by 70,000 workers and, in 1976, the industry's unemployment rate was 50% higher than the national average.

The history of the shoe industry in Massachusetts is no brighter, and if the situation is not ameliorated, the outcome could be disastrous for the 21,000 shoe workers in the Commonwealth.

For these compelling reasons, we ask you, as a Representative from Massachusetts, to support the ITC recommendation now before the President and to communicate your position to the Chief Executive.

Respectfully,

THOMAS A. SAMPSON,
President.

REPORT OF AD HOC SUBCOMMITTEE ON PRESIDENTIAL PAY RECOMMENDATIONS

(Mr. FORD of Michigan asked and was given permission to address the House for 1 minute and to revise and extend his remarks).

Mr. FORD of Michigan. Mr. Speaker, I believe it is an appropriate moment to advise my colleagues that the Ad Hoc Subcommittee on Presidential Pay Recommendations has now completed its report.

The report of the subcommittee includes some very important findings and

recommendations for legislative action. Specifically, the subcommittee report recommends deferring all pay adjustments for Members of Congress, insuring a record vote on quadrennial pay recommendations should a majority of Members so desire, and prohibiting any comparability adjustment for officials in a year in which the quadrennial recommendations become effective.

The members of the subcommittee are in agreement with the recommendations and with the need for passing legislation to accomplish these changes.

I wish to stress that this is the first time since the passage of the 1967 Act that a subcommittee of this House has formally considered and recommended changes in that act.

Accordingly, I believe it would be extremely unwise for the House to act precipitously by changing or altering any aspect of the existing pay-fixing mechanism until there has been an opportunity for Members to review the subcommittee's report, and the full Committee to act on legislation. Chairman NIX has assured the subcommittee that he will schedule such legislation for prompt consideration by the committee and arrange for early consideration by the House.

Mr. Speaker, I include the text of the subcommittee report in the RECORD at this point:

REPORT OF THE SUBCOMMITTEE ON PRESIDENTIAL PAY RECOMMENDATIONS

INTRODUCTION

The Subcommittee on Presidential Pay Recommendations was chaired by the Honorable William D. Ford with Mr. Morris K. Udall, Mr. Charles H. Wilson, Mr. William Clay, Mr. Stephen J. Solarz, Mr. Edward J. Derwinski, and Mr. John H. Rousselot, as members. It met on February 16, 1977, and by unanimous consent of the Members, the meeting was open to the press and the public. Media coverage included numerous representatives of all the news media and representatives from three national television networks.

At this meeting, the Subcommittee voted not to approve for full Committee consideration certain resolutions disapproving all or part of the President's pay recommendations for top level positions in the Executive, Legislative, and Judicial branches, and to table all similar resolutions then pending before the Subcommittee.

The actions of the Subcommittee on February 16 followed a period of intense Subcommittee consideration of the pay recommendations themselves as well as issues not related strictly to the merits of the pay recommendations, such as the procedures under which they become effective and the manner in which they are determined. The Subcommittee's experience indicates that there is much misunderstanding with respect to the existing pay setting mechanism, particularly concerning the underlying concept of a citizens commission formulated to provide a nonpartisan and objective basis for the pay recommendations.

In view of the significance of the Subcommittee's actions and of the importance of insuring an understanding of the existing pay setting mechanism, it has deemed it advisable to issue this report which—

(1) summarizes section 225 of the Federal Salary Act of 1967 (Public Law 90–206) and the pay recommendations previously submitted pursuant to that Act;

(2) summarizes the FY 1977 pay recommendations of the Quadrennial Commission and of the President;

(3) reviews the actions of the Committee and the Subcommittee taken with respect to the FY 1977 pay recommendations of the President;

(4) sets forth the Subcommittee's findings with respect to problems under the existing law; and

(5) sets forth the Subcommittee's recommendations for improving the pay-fixing procedures.

SUMMARY OF SUBCOMMITTEE ACTION

On February 7, 8, and 9, the Subcommittee held public hearings on the various disapproval resolutions. Testimony was taken from 34 witnesses.

Prior to and during these hearings, the Subcommittee made every effort to insure that individuals who desired to testify or to submit statements for the record were advised of the opportunity to do so. Testimony was received from 27 Members of Congress, and an additional 96 Members submitted statements for the record.

At its meeting of February 16, after agreeing unanimously to open the hearings to the public and the media, the Subcommittee took the following actions:

1. By a record vote of 1 to 4, defeated a motion offered by Mr. Rousselot to favorably report House Resolution 201 (disapproving all of the President's pay recommendations) to the full Committee.

2. By voice vote, defeated a motion offered by Mr. Rousselot to report House Resolution 152 (disapproving Members' pay increase only) to the full Committee.

3. By a record vote of 1 to 4, defeated a motion offered by Mr. Rousselot to report House Resolution 201, without recommendation, to the full Committee.

4. By voice vote, adopted a motion to table all House Resolutions similar to H. Res. 201 and H. Res. 152, with Mr. Rousselot asking to be recorded in opposition to the motion.

Finally, the Subcommittee agreed to issue a report containing its views and recommendations concerning the pay setting mechanism.

SUMMARY OF RECOMMENDATIONS

The Subcommittee's detailed findings and its specific legislative recommendations are set forth in later sections of this report. If the Subcommittee's recommendations are enacted, major revisions would result in the pay-fixing mechanism for top officials in the Executive, Legislative, and Judicial branches.

Mainly, the recommendations provide that in the future—

(1) any pay raise for Members of Congress, including any comparability adjustment, would not take effect until the beginning of the next Congress;

(2) a record vote in the House on pay raises, based on Quadrennial Commission recommendations, would be guaranteed if a majority of the Members of the House so desire; and

(3) although the October comparability adjustment mechanism would be retained, Public Law 94–82 would be amended to prevent officials from receiving a comparability adjustment in any year in which the Quadrennial Commission recommendations become effective.

The recommendations would work as follows:

The present system of a Quadrennial Commission, would continue on a four-year cycle, with the next one being appointed in January, 1980, and a new Commission appointed in January of every fourth year thereafter. The Commission would study and review the rates of pay for top government officials and recommend adjustments to the President, just as it does presently. The President would be required to submit his first recommendations in January, 1981, the pay raises for Members of Congress only to become effective two years thereafter. Subsequent recommendations would be submitted at four year intervals in January (1985, 1989, etc.), and the pay raises for Members would become effective two years thereafter. This would insure that the President could not alter the statutory timeframe, as has been done in the past, for submitting his recommendations to the Congress.

The pay recommendations would be effective 30 days after they were submitted to Congress unless either House disapproved all or part of the recommendations. The House Rules would be amended to guarantee a floor vote on the recommendations within 30 days, if a discharge motion was filed under a new simplified procedure, and signed by a majority of the Members of the House. The new procedure would provide that such a motion could be filed immediately upon a disapproval resolution having been before a committee for fifteen days, rather than the 30 days required under current House Rules.

In the four-year period between quadrennial reviews, officials covered by the quadrennial system, other than Members of Congress, would receive annual salary adjustments equal to the average comparability adjustments given to General Schedule employees except in those years when Quadrennial recommendations become effective. Members of Congress would not receive annual adjustments, since these would be deferred until the next Congress.

It should be emphasized that with respect to all adjustments in Members' pay, Members would be prohibited from receiving any adjustment approved during the then current Congress. All pay adjustments for Members would be deferred until the Congress next following the effective date of that adjustment for officials in the other two branches. The net result would be that Members' pay, at the most, would be adjusted only once in each Congress, and the nature of that adjustment would be determined during the preceding Congress. Officials in the Executive and Judicial branches would receive no more than one adjustment in any given year.

FEDERAL SALARY ACT OF 1967

Section 225 of Public Law 90–206, approved December 16, 1967, 2 U.S.C. 351, authorized the appointment of a Commission on Executive, Legislative, and Judicial Salaries to serve for the period of the 1969 fiscal year, and the appointment of a new Commission to serve during the period of every fourth fiscal year following the 1969 fiscal year.

The Commission is composed of nine members, three to be appointed by the President, two by the President of the Senate, two by the Speaker of the House, and two by the Chief Justice of the United States.

The Commission is required to conduct quadrennial reviews of, and recommend rates of pay for, Members of Congress, the principal officials of the legislative branch, the judiciary, and the principal officials of the executive branch. The quadrennial review and recommendations are to be submitted to the President, who, in turn, is required to submit to the Congress with his next budget, his recommendations as to the exact rates of pay he deems advisable.

The President's recommendations become effective automatically, unless within approximately 30 days after the recommendations are submitted to the Congress, the Congress enacts a statute establishing different rates of pay, or one of the Houses of Congress disapproves all or any part of the recommendations.

PRIOR RECOMMENDATIONS UNDER 1967 ACT

Fiscal Year 1969

The pay recommendations of the first Commission on Executive, Legislative and Judicial Salaries, appointed for fiscal year 1969, were submitted to the President on December 2, 1968. President Johnson, in turn, submitted his pay recommendations to the Congress with his budget message on January 17, 1969. The recommendations of the Commission and of the President for certain selected positions are set forth below:

	Recommendations	
	Commission	President
Executive level I	$60,000	$60,000
Executive level II	50,000	42,500
Executive level V	40,000	36,000
Members of Congress	50,000	42,500
Chief Justice of the United States	67,500	62,500
Associate Justices of Supreme Court	65,000	60,000
Circuit court judges	50,000	42,500
District court judges	47,500	40,000

In his message to the Congress transmitting his pay recommendations, President Johnson pointed out that while he believed the $50,000 Congressional salary, recommended by the Commission, could be justified, the leaders of Congress felt that an increase to $42,500 was more likely to receive the necessary support.

On February 4, 1969, the Senate, by a vote of 34–47, defeated Senate Resolution 82 which proposed to disapprove the President's pay recommendations. On February 5, 1969, the House Rules Committee voted to table a resolution providing for the adoption of House Resolution 133 which proposed to disapprove the President's recommendations and, at that time, was pending before the House Post Office and Civil Service Committee.

Since neither House adopted a resolution of disapproval before the end of the 30-day period, the President's pay recommendations became effective in February and March 1969, as applicable for each group of officials covered by the recommendations.

Fiscal Year 1973

In fiscal year 1973, which commenced on July 1, 1972, President Nixon delayed making his appointments to the Quadrennial Commission until December 11, 1972. As a result of this delay, it was impossible for the Commission to conduct a review and submit a report to the President in time for him to include pay recommendations in his January 1973 budget. This meant that the President's pay recommendations could not be submitted to the Congress until 1974, an election year.

The Commission's report was submitted to the President on June 30, 1973, and President Nixon submitted his recommendations to the Congress with his budget on February 4, 1974.

The Commission recommended an immediate 25 percent increase in salaries for levels II, III, IV, and V of the Executive Schedule and equivalent positions in the legislative and judicial branches. However, due to the state of the economy, the President recommended that the pay adjustments become effective in three steps of approximately 7½ percent each, beginning in March 1974, January 1975, and January 1976.

Set forth below are the pay recommendations of the Commission and of the President for certain selected positions:

	Commission's recommendation	President's recommendation		
		1974	1975	1976
Executive level I	$70,000	$60,000	$64,500	$64,500
Executive level II	53,000	45,700	49,100	52,800
Executive level V	45,000	38,700	41,600	44,700
Members of Congress	53,000	45,700	49,100	52,800
Supreme Court:				
Chief Justice	72,500	62,500	67,200	67,200
Associate Justices	70,000	60,000	64,500	64,500
Circuit Court Judges	53,000	45,700	49,100	52,800
District Court Judges	50,000	43,000	46,200	49,700

On March 6, 1974, the Senate, by a vote of 71 to 26, adopted Senate Resolution 293 which disapproved all of the President's pay recommendations. In the House, the Post Office and Civil Service Committee reported House Resolution 807, disapproving all of the President's recommendations on March 4, 1974, but the Senate's action made further consideration of H. Res. 807 unnecessary.

FISCAL YEAR 1977 PAY RECOMMENDATIONS

The appointment of the members of the Quadrennial Commission for fiscal year 1977 was completed in August 1976 and the Commission submitted its report and recommendations to the President on December 2, 1976.

In its report, the Commission pointed out that for the last eight years, the highest officials of all three branches of the government have received only one increase in salary, a nominal 5 percent increase in October, 1975. During this eight-year period, average private wages increased by 70 percent, the consumer price index went up by more than 60 percent, and civil pay increased by 65 percent. While these economic indicators clearly would have justified a 50 percent increase in the pay of the government's top officials, the Commission concluded that direct pay comparisons with the private sector are neither feasible nor appropriate for almost all of the positions covered by the Commission's report. Therefore, the Commission recommended salary increases which, in its opinion, would result in the minimum levels of pay necessary to attract and retain first-rate individuals for these positions and not exclude those individuals whose entire standard of living is dependent on current earned income.

In order to restore public confidence in government, the Commission recommended that the proposed pay increases be tied to the establishment of new and more stringent codes of conduct for all three branches of the government. The Commission recommended that such codes of conduct include, as a minimum, the following principles:

1. Full public disclosure of each official's financial affairs.

2. Rigorous restrictions on outside earned income.

3. Strict conflict of interest provisions on investments.

4. Appropriate and accountable expense allowances.

5. Clear and reasonable restrictions on post-service employment.

6. Vigorous and consistent auditing.

President Ford submitted his pay recommendation to the Congress on January 17, 1977. In his message to the Congress, the President strongly endorsed the Commission's recommendation for new and more stringent codes of conduct. The President stated that he would not recommend the salary increases in the absence of a firm commitment to new codes of conduct. In addition, the President advised the Congress that President-elect Carter had endorsed the salary proposals and the recommendation for stronger codes of conduct.

The salary recommendations of the Commission and of the President for certain selected positions are as follows:

	Recommendations	
	Commission	President
Executive level I	$67,500	$66,000
Executive level II	60,000	57,500
Executive level V	49,000	47,500
Members of Congress	57,500	57,500
Chief Justice of the United States	80,000	75,000
Associate Justices of Supreme Court	77,500	72,000
Circuit court judges	65,000	57,500
District court judges	62,000	54,500

COMMITTEE CONSIDERATION OF FISCAL YEAR 1977 RECOMMENDATIONS

On February 1, 1977, two days before the full Committee's organizational meeting, the Honorable Robert N. C. Nix, Chairman of the Post Office and Civil Service Committee, sent a letter to each Member of the Congress, indicating that he would appoint an ad hoc subcommittee to consider the various House Resolutions, pending before the Committee, to disapprove all or part of the President's FY 1977 pay recommendations. Chairman Nix extended the opportunity to all Members of the Congress to testify at the hearings or to submit comments for the record.

The ad hoc Subcommittee on Presidential Pay Recommendations, consisting of seven Members, was appointed at the first meeting of the full Committee on February 3. The Honorable William D. Ford of Michigan was appointed Chairman of the Subcommittee. It should be pointed out that each and every Member of the Committee who expressed his or her desire to serve on the Subcommittee, was appointed by the Chairman.

In a press release dated February 3, 1977, Chairman Ford announced the Subcommittee's schedule of hearings for February 7, 8 and 9, and invited all interested parties to appear before the Subcommittee. On the same date, Chairman Ford addressed a letter to each Member of the House who had introduced or co-sponsored a disapproval resolution specifically inviting such Member to testify at the hearings or to submit comments for the record. Again, on February 7, 1977, Chairman Ford, on the floor of the House, invited each Member who was interested in the pay recommendations to appear before the Subcommittee or submit a statement for the record.

At the time of the Subcommittee's hearings on February 7, 8 and 9, there were pending before the Subcommittee 17 House Resolutions (with 54 sponsors) proposing to disapprove all of the President's pay recommendations. In addition, there were 13 House Resolutions (with 16 sponsors) which proposed to disapprove the President's recommendation with respect to the pay increase for Members of Congress.

During the 3-day period, the Subcommittee took testimony from 34 witnesses (Hearing No. 95–1). Twenty-seven Members of Congress and the former Chairman of the House Post Office and Civil Service Committee appeared before the Subcommittee and 96 Members submitted statements for the record. The Subcommittee heard witnesses from the Carter Administration; the American Bar Association; the Commission on Executive, Legislative, and Judicial Salaries; and a consumer advocate. In addition, the Subcommittee received official letters endorsing the President's pay recommendations from Chief Justice of the Supreme Court Warren E. Burger, the Office of Management and Budget, the Civil Service Commission, and the Comptroller General of the United States.

Of the 123 Members of the House who either testified or submitted statements for the record, 49 Members opposed all of the pay recommendations, 44 opposed only the pay increases for Members of Congress, 30

recommended that the increase be deferred until the next Congress, and 9 Members favored the increase. However, of important significance is the fact that of those 123 Members, 110 recommended that the House be required to vote on any proposed pay increases.

On February 16, 1977, the Subcommittee on Presidential Pay Recommendations, in open session and with a quorum present, took the following actions:

1. By a record vote of 1 to 4, defeated a motion offered by Mr. Rousselot to favorably report House Resolution 201 (disapproving all of the President's pay recommendations) to the full Committee.

2. By voice vote, defeated a motion offered by Mr. Rousselot to report House Resolution 152 (disapproving Members' pay increase only) to the full Committee.

3. By a record vote of 1 to 4, defeated a motion offered by Mr. Rousselot to report House Resolution 201, without recommendation, to the full Committee.

4. By voice vote, adopted a motion to table all House Resolutions similar to H. Res. 201 and H. Res. 152, with Mr. Rousselot asking to be recorded in opposition to the motion.

SENATE CONSIDERATION OF FY 1977 PAY RECOMMENDATIONS

In the Senate, one resolution of disapproval (S. Res. 39) was placed on the printed calendar and another (S. Res. 50) was referred to the Committee on Post Office and Civil Service, but there was no opportunity to vote on either resolution. However, during Senate consideration of S. Res. 4, a resolution reorganizing the committee system of the Senate, an amendment was offered to S. Res. 4 proposing to disapprove all of the President's pay recommendations. A motion to lay the amendment on the table was adopted by a vote of 56 to 42 (Cong. Rec., p. 3240, February 2, 1977).

Since neither House disapproved the President's pay recommendations, they became effective, as to Members, on March 1, 1977.

NEW CODE OF ETHICS FOR HOUSE

As discussed above, the pay recommendations of both the Quadrennial Commission and the President were "tied" to the establishment of strict codes of conduct applicable to the three branches of the government.

After several months of study, the House Commission on Administrative Review, which the House of Representatives established on its own initiative during the 94th Congress (long before the Quadrennial Commission submitted its recommendations to the President), completed action on a comprehensive package of recommendations for a new and more stringent code of ethics and a new financial disclosure system applicable to Members and employees of the House.

On March 2, 1977, the House, by a record vote of 402 to 22, agreed to House Resolution 287 which, essentially, embodied the recommendations of the Commission on Administrative Review. As agreed to by the House, House Resolution 287 amended the Rules of the House of Representatives to—

1. Require full financial disclosure by Members and officers of the House, their principal assistants, and professional committee staff;

2. Limit to 15 percent of salary the amount of earned income a Member may receive from sources outside of Congress;

3. Limit to $750 the fee a Member may receive for making a speech or an appearance or for writing an article;

4. Prohibit the acceptance of gifts of $100 or more in value in any calendar year from any person having a direct interest in legislation before the Congress or who is a foreign national (or agent of a foreign national);

5. Abolish unofficial office accounts, including newsletter funds, and prohibit the conversion of political funds to personal use;

6. Impose new restrictions on the use of the frank, including a prohibition on mass mailings under a frank when the matter is mailed less than 60 days before a primary or general election; and

7. Prohibit official travel by Members who have announced their retirement or have been defeated in the general election.

FINDINGS

1. The concept of a citizens commission to periodically study and recommend salary adjustments for top executives in the Legislative, Judicial, and Executive branches is sound and should be retained.

The history of top level salary adjustments prior to the establishment of the Quadrennial Commission in 1967 presents an erratic picture. For example, during the period 1856 (prior to 1856 Members received per diem) through 1968, there were ten pay adjustments for Members of Congress—or, on an average, one adjustment every 11.2 years. With respect to cabinet officers, from 1789 through 1964 (the year the Executive Schedule was established) there were ten pay adjustments, an average of one every 17.5 years. Supreme Court Justices received eleven adjustments between 1789 and 1968, an average of one every 16.3 years. Clearly a mechanism, similar to the Quadrennial Commission mechanism, is necessary to insure periodic salary review for these positions. Past history affirms that if these salary adjustments are left solely to legislative initiative, political realities insure that review and adjustment of these salaries will return to the haphazard practices of the past.

Close review of reductions in Congressional salaries further emphasizes the political nature of salary adjustments left solely to legislative initiative. On three occasions, Congress has voted to reduce its salary (or per diem). In each instance, the reduction merely repealed the previous year's increase. More recently, the 94th Congress, in effect, repealed an increase by amendment to the Legislative Branch Appropriation Act (P.L. 94–440, approved October 1, 1976). This action blocked the salary increase which Congress had authorized the previous year (P.L. 94–82, approved August 9, 1975).

The Quadrennial Commission concept requires the Commission to review the rates of pay for the purpose of determining and recommending appropriate adjustments (P.L. 90–206, Section 225(f)). Although the Commission's final recommendations are not binding, and in fact, the President has consistently recommended smaller increases than those recommended by each of the three Commissions, the statutory review requirements do provide an empirical basis for the President's recommendations, as well as any action by the Congress. The Commission's review insures that Presidential or Congressional action regarding the pay adjustments will not occur in a vacuum. The Subcommittee strongly believes that comparative and statistical data compiled from the Commission reviews is an essential ingredient when pay adjustments are to be considered.

2. The change in the beginning of the government's fiscal year (from July 1, to October 1) required by the Congressional Budget and Impoundment Control Act of 1974 (P.L. 93–344, Sec. 501), has resulted in an unrealistic time frame during which the Commission must organize, hold hearings, conduct surveys, study available data, deliberate, and formulate and deliver its recommendations to the President.

If the President is to have sufficient time to review the Commission's recommendations in order to formulate his own recommendations for transmission with his budget, the Commission must present its recommendations to the President by early December. Since by law the Commission may not be established until the beginning of the fiscal year (now October 1) this permits a time period of only two months for the Commission to prepare its recommendations.

This clearly is not sufficient time for thorough and complete consideration of the complex issues involved in legislative, judicial, and executive pay. The law should be amended to change the period of time of each commission to serve from a fiscal to a calendar year basis. Thus, the next commission would be for the calendar year 1980 in lieu of fiscal year 1981. The President's recommendations would be required to be submitted in January 1981, the same as under existing law.

3. The 1967 Act permits the President to submit his recommendations in either an election or a non-election year.

Although the Subcommitee is convinced that the Congress intended the President to submit his recommendations in a non-election year, Public Law 90–206 does not require him to do so. By delaying the date in which the Commission must submit its report, or by delaying the appointment of Members to the Commission, the President may create a situation permitting the recommendations to be submitted in an election year. The report of the second Quadrennial Commission was delayed by President Nixon's failure to appoint its members, and as a result, the President's recommendations were not transmitted to Congress until January 1974, an election year. The Senate disapproved those recommendations in toto.

The Subcommittee firmly believes that the politics of any pay-adjustment are such that it must be considered by the Congress in a non-election year. The political pressure experienced by the Subcommittee Members in this non-election year was awesome. Political pressure in an election year appears to be unbearable. Congress has not approved an election year pay increase since 1866, notwithstanding the fact that such pay adjustments have been totally and fully warranted.

4. In the absence of periodic adjustments such as those authorized under Public Law 94–82, a four or eight year time lag between adjustments under Public Law 90–206 and the substantial recommended increases which result create practical and political problems.

When Public Law 90–206 was approved in 1967, it was anticipated that the four year review cycle would result in recommendations for legislative, judicial and executive pay adjustments which were timely and appropriate, but not unduly large. Two factors, however, resulted in this year's recommendations for a 28.9 percent average pay increase for Members.

First, the period between the implementation of the first commission's recommendations and the announcement of the third commission's recommendations (1969–1976) was one of extremely high inflation. During this period, average hourly private non-farm earnings increased by 70.1 percent. The Consumer Price Index increased by 60.5 percent. Pay of civil servants under the General Schedule increased, on an average, 65.7 percent.[1]

Second, the rejection by the Senate in 1974 of the President's recommendations resulted in an eight year period when there were no adjustments pursuant to Public Law 90–206. Thus, with the exception of an October 1975 increase of 5 percent authorized by Public Law 94–82, the pay for incumbents of positions covered by Public Law 90–206 was

[1] "The Report of the Commission on Executive, Legislative, and Judicial Salaries", Committee on Post Office and Civil Service, Committee Print 94–27, 94th Congress, 2nd Session, page 12.

frozen for eight years. If the President's 1974 recommendation of $52,800 for Members had become effective, the current increase to $57,500 would represent only an 8.8 percent increase.

Unless the pay adjustment mechanism is changed to provide for more frequent adjustments, the Subcommittee forsees the following problems.

First, the Congressional Budget Office estimates that General Schedule comparability increases for the next five years will average 5.6 percent annually.

If the Executive Level V salary ceiling ($47,500) is not adjusted prior to the submission of the next Commission recommendations (January 1981), "salary compression" will affect employees in grades GS–15, step 5, and above. A GS–15, step 5, who today receives $38,293 would receive, but for the ceiling, $47,618 as of October, 1980.

Second, if the next scheduled Quadrennial recommendation simply provides an increase equivalent to that received by General Schedule employees, that increase would be approximately 24.4 percent. This is almost as large an increase as that which took effect this year.

Third, recommended increases on the order of twenty to thirty percent, which the Subcommittee believes are inevitable under the existing Quadrennial system, appear outrageous to the average citizen whether or not they are in fact justified. The size of the increase, not its merits, is the focal point of consideration. The fact that an individual's salary was frozen but for one 5 percent increase for eight years was overlooked this year and figures such as 28.9 percent or 30 percent became the sole issue with respect to the recommended increases.

The size of the recommended increases is a special problem for those recipients who are required to consider the recommendations, and whose employment may depend on their stand on those recommendations—Members of Congress. The problem is particularly acute for first and second term Members who, unlike their colleagues, have not experienced a 30 percent decline in the purchasing power of their pay check, and who are especially vulnerable to the charge that "you knew what the pay was when you ran for the job."

The Subcommittee expects that many citizens would not object to a 5 percent per annum increase for individuals whose salaries are adjusted under the Quadrennial mechanism. Many of these same citizens, however, would believe an equivalent 21.5 percent increase following a four year freeze to be exhorbitant.

A fourth problem with the four year review system is that even with the recent salary adjustments, approximately 6,300 individuals will not receive any pay adjustment for four years. This number includes approximately 2,500 individuals whose salaries are adjusted pursuant to the Quadrennial system, plus an additional 3,800 individuals whose salaries are presently limited by the Level V statutory ceiling. This number will increase each year as more salaries reach the ceiling as the result of comparability increases.

The Subcommittee estimates that the total number of frozen salaries could reach 23,000 before the next scheduled Quadrennial recommendations. These individuals will experience a constant decline in the purchasing power of their pay checks.

5. The Executive Salary Cost-of-Living Adjustment Act (P.L. 94–2).

The problems discussed in point 4 would be precluded if Congress retains and does not interfere with the operation of the Executive Salary Cost-of-Living Adjustment Act (P.L. 94–82). The Act provides that salaries for positions subject to the Quadrennial review will be adjusted annually by a percentage equal to the average percentage adjustment for positions under the General Schedule.

General Schedule salaries are adjusted each October pursuant to the Federal Pay Comparability Act of 1970 (P.L. 91–656). Annual General Schedule adjustments are not "cost-of-living" adjustments although they are commonly referred to as such. Rather, pursuant to P.L. 91–656, these annual adjustments result from Bureau of Labor Statistics bility" between Federal salaries and private sector salaries. The primary data used for pursuant to P.L. 91–656, these annual adjustments result from Bureau of Labor Statistics surveys of private sector salaries. The increase in the cost-of-living or the Consumer Price Index is not a determinant in these adjustments except to the extent that any such increase may have affected increases in private sector salaries.

Accordingly, adjustments authorized for officials of the legislative, judicial, and executive branches pursuant to Public Law 94–82, are not based upon increases in the "cost-of-living". Instead they are determined by the average "comparability" increase accorded to General Schedule employees. Nevertheless, last year, and we expect in every subsequent year, it will be charged that Congress and top level goevrnment officials benefit from increases in the cost-of-living. The Subcommittee regrets that this misunderstanding is encouraged by the misnomer "Cost-of-Living Adjustment" in the title of the Act.

Last year, by an amendment to the Legislative Branch Appropriations Act (P.L. 94–440, Congress prohibited the use of funds for any pay increase authorized under Public Law 94–82 to individuals subject to the Quadrennial mechanism. Absent this amendment, those individuals would have received a 4.8 percent pay increase on October 1, 1976, pursuant to Public Law 94–82.

The Subcommittee is concerned by last year's action and foresees problems if the Congress attempts to deny future increases in the same manner.

In his opinion letter of September 21, 1976, to the former Chairman of the House Committee on Post Office and Civil Service (B-145492, dated September 21, 1976) the Comptroller General indicated that last year's amendment did not "suspend or postpone the operation of Public Law 94-82 and it is not therefore a limitation on the rates established thereunder. The language sets a limitation on the use of funds." Thus, the legal pay rates for individuals covered by the Quadrennial mechanism increased by 4.8 percent. This includes the rate for Level V, the statutory ceiling level. The Comptroller General further noted that since the amendment referred only to positions covered by the Quadrennial mechanism, funds could be used to pay individuals, such as those under the General Schedule, at the appropriate legal rate. The end result was that General Schedule employees at the statutory ceiling received pay at the new Level V rate ($39,600) while individuals who actually occupied Level V positions received pay at the old rate ($37,800).

The question of the effect of last year's amendment is now moot in light of the implementation of pay increases pursuant to the Quadrennial mechanism. However, the Congress could enact the same use of funds prohibition this year and in succeeding years. In that event, using the CBO assumption of 5.6 percent annual comparability adjustments, the salary paid individuals in positions in Grades GS-16, step 7 and above would exceed the salary paid for Executive Level V in 1977, for Level IV in 1978, for Level III in 1979, and would be approximately equal to Level II in 1980. The next Quadrennial recommendations are not scheduled until 1981. Before that time, approximately 20,000 individuals would be receiving a salary only slightly less than that paid for Level II which is the rate for Circuit Court Judges and Congressmen.

Another problem could arise if an individual who is subject to a use of funds prohibition should press a claim against the government. It is clear that the individual is not being paid at the rate of pay established by law for his position. The Subcommittee believes that a court could find that the individual is, notwithstanding the prohibition on use of funds, entitled to be paid at his legal rate.

Finally, Public Law 94-82 currently provides for comparability adjustments for Quadrennial officials every year, including a year when the Quadrennial pay recommendations become effective. Thus, every fourth year, there is the possibility that these officials could receive two pay adjustments. This is the case this year.

The Subcommittee does not believe two pay adjustments in any one year are necessary. If, as happened this year, the Quadrennial recommendations become effective, there is no need for a comparability adjustment only seven months later.

The recommendations which become effective in March are based upon study and consideration by an objective, impartial citizens commission. The comparability adjustments which may occur in October are intended to insure that during the period between reports by the commission the serious problems of pay compression and lost purchasing power would not again occur as they have in recent years. In a year in which the Quadrennial recommendations become effective, those problems should be averted by these recommendations. Accordingly, the Subcommittee believes that annual comparability adjustments should not be accorded to Quadrennial officials in any year in which the Quadrennial pay recommendations have become effective.

6. Recommendations for a Biennial Commission.

Both the second and the third Quadrennial Commissions recognized that the four year interval between pay adjustments was too long. As the second commission stated in its report:

"A system involving salary changes every 4 years is simply incompatible with one that is adjusted each year during an inflationary period, particularly when the 4-year system 'puts a lid on' the one year system." (Report of the Commission on Executive, Legislative, and Judicial Salaries, p. 15 (June 1973).)

The second commission recommended that recommendations be made every two years. The third commission suggested "a permanent commission making recommendations as appropriate to the President, but at the very least, of course, once every four years." (Report of the Commission on Executive, Legislative and Judicial Salaries, p. 49 (December 1976).) Such a biennial approach would, it is argued, obviate the need for annual adjustments, such as those authorized under Public Law 94–82.

While a 2-year cycle for recommendations could alleviate the problems resulting from the present 4-year time lag, e.g., salary compression and the necessity of considering sizable increases, there is no guarantee that such a cycle would alleviate these problems. And the Subcommittee doubts that such an approach would solve these problems.

First, if Congress disapproved one set of biennial recommendations, there again would be a 4-year lag. With no annual adjustment mechanism in place, the serious problem of salary compression, explained in point 4, would again occur. Similarly, when the next recommendations were submitted for consideration, the increases recommended would most likely be substantial to compensate for the 4-year period when there were no adjustments.

Second, because of the emotional appeal of the Congressional pay issue, and the ease with which it can be exploited, a 2-year cycle would virtually insure that such issue would be central in every future Congressional campaign. While the Subcommittee believes that constituents' views on the pay issue are important, it also believes that much time would be spent debating that issue (if a 2-year cycle were adopted), which could better be spent on the more significant issues facing the country and the Congress.

Nor would the time consumed by the issue be limited to that spent on the campaign trail. As the Subcommittee's experience aptly demonstrates, enormous amounts of Members' time, rightly or wrongly, must be devoted to the pay issue during the period when the recommendations are pending before the Congress.

7. Increases for Members should not take effect until the beginning of the next Congress.

A substantial number of the Members who testified before the Subcommittee expressed the view that a sitting legislative body should not, either directly or by inaction, increase the salaries of its own Members. It was stated during the hearings (page 205) that 37 states have constitutional provisions barring their legislators from raising their salaries during their current terms.

The Subcommittee agrees that pay adjustments for Members should be deferred until the Congress next following that in which they are considered. Such a practice would lessen the inherent and inescapable conflict of interest charges which Congress faces with respect to establishing its own rate of pay. Members of the House, and one-third of the Senate, would have to stand for reelection before any pay increase takes effect.

Deferring pay adjustments would also alleviate the problem faced by first term Members of Congress. Under the present system, these Members may be faced with a vote on the pay issue during their second month in Congress. Whether or not the recommended adjustments for officials covered by the Quadrennial mechanism are warranted, it is virtually impossible for these first term Members, who have just begun serving at a salary rate known to them in advance of their election, to support the adjustments.

Witnesses who supported deferring Members' pay raises referred only to increases which occurred pursuant to the Quadrennial mechanism. The Subcommittee believes, however, that the deferral principle should apply to any adjustments in salary rates, including annual adjustments pursuant to Public Law 94–82.

Annual adjustments pursuant to Public Law 94–82 are equal to the average comparability increase accorded General Schedule employees under the Pay Comparability Act of 1970. That Act has been in effect for seven years, and in five of those seven years, the President has submitted an Alternative Plan thereby placing the issue of the comparability adjustment before the Congress for its consideration. Thus, past history under the Comparability Act indicates that the issue of annual adjustments is likely to be before the Congress again in the future. Deferring the annual adjustments for Members of Congress will alleviate the potential conflict of interest Congress would face when considering an alternative plan and would eliminate jeopardizing the comparability increases for other officers and employees.

The Subcommittee sees no need to defer pay increases for officials in the executive and judicial branches. It is only Members of Congress who are faced with voting on their own pay. Deferring only Members' pay increases will disturb the traditional, and we think advisable, relationship between salaries of officials in the three branches. Requiring Congressional pay adjustments to temporarily lag behind those in the other branches is, however, justified in terms of minimizing the inherent charges of conflict of interest, and permitting the electorate to know exactly what a Member will be paid during the term for which he is running.

Finally, the Subcommittee recognizes that deferring Members' adjustments until the succeeding Congress may create special problems in the Senate in view of its six-year staggered terms. The Subcommittee defers to the wisdom of that body with respect to the practical application of the deferral concept for Senators.

8. A record vote on Quadrennial pay adjustments.

The witnesses who testified before the Subcommittee overwhelmingly supported changing the law to insure that a record vote could be obtained on the Quadrennial pay recommendations.

The Subcommittee believes that the committee system in the House is essential if the House is to function in a responsible manner. Only in the most extreme circumstances should the full House consider legislation without having first had the benefit of the views of the committee having jurisdiction over that legislation.

The existing committee system has endured these many years because it has proven to be the most practicable and efficient means of considering and developing legislative proposals for action by the full House. In almost all instances it is a committee of the House that initially determines the merits of a proposal and then refines that proposal into legislation that is acceptable generally to the Members of the House. If a committee determines, after thorough consideration, that a proposal is without merit, or for some other reason is unacceptable, the proposal is not reported to the House and for all practical purposes the matter is laid to rest at least for the remainder of that Congress.

Given the proven success of the committee system, this Subcommittee can find no valid basis for circumventing the usual operation of that system in the case of the Quadrennial pay recommendations. The Post Office and Civil Service Committee reported the legislation which established the Quadrennial pay system and now has exclusive jurisdiction over all matters relating thereto. Under the Rules of the House, it is the responsibility of this Committee to consider the merits of any proposal for changes in that pay system and, in particular, the merits of any pay recommendations submitted pursuant to the 1967 Act. The Subcommittee believes that the Committee's responsibility should not, and must not, be completely abrogated by mechanically approving a disapproval resolution simply for the sake of affording Members of the House an opportunity to vote on the specific pay recommendations. If the Members of this Committee or an appropriate subcommittee determine that pay recommendations, based on the Quadrennial Commission's review, are fully justified, it is their responsibility, acting within the established procedures of the House, to take appropriate action, as they did this year, to ensure that such recommendations are placed into effect.

The fact that certain Members find this procedure to be politically unacceptable, notwithstanding the merits of the issue, should have no bearing on the prerogatives and responsibilities of the Committee to act as it sees fit. This procedure is uniform for all committees, and, except for the "politics" involved, the procedural question would have never surfaced.

The procedure for considering the Quadrennial recommendations, however, places the Committee or subcommittee to which the disapproval resolutions are referred in a "no win" situation. If the Members of the Committee or subcommittee, after studying the recommendations and hearing the views of interested individuals, properly discharge their responsibility by voting on the merits of the recommendations, and if a majority of the Members vote not to report a disapproval resolution, the issue is killed. The question cannot, for all practical purposes, reach the House floor. Thus, by voting their conscience on the merits of the issue, subcommittee Members become open to the charge that they denied the full House the opportunity to express its will by a recorded vote.

The Subcommittee believes that Committee or subcommittee consideration of the pay recommendations is important. The subcommittee also believes that one subcommittee or committee should not be placed in a position where, by expressing its views on the merits of the recommendations, it becomes subject to charges of "bottling up" the issue.

Several procedures could be used to insure that the full House will have the opportunity to consider Quadrennial recommendations. The House Rules could be amended to provide that a motion to discharge the committee and consider the issue would be one of high privilege. Such a procedure, however, would permit just one Member of the House to force the issue on the floor. The Subcommittee believes that it would be unwise to subject the Members of the House to what inevitably would be a prolonged and emotional debate at the insistence of only one of the Members of the House.

Rather, the Subcommittee favors a procedure which would permit the issue to be brought up on the floor after a discharge motion is filed and signed by a majority of the Members. This is the normal procedure for bringing a matter out of committee when the committee has failed to report to the full House. The House Rules could be amended to provide that such a petition, with respect to a disapproval resolution, could be filed after a resolution has been before a committee for fifteen days (House Rules presently require 30 legislative days to pass). This would insure that a vote would occur if a majority of Members formally expressed their desire for such a vote by signing the discharge motion, and would preclude the possibility that absent such majority support, this highly political and emotional issue could be taken to the floor solely to serve the political interests of one or a few Members.

The Subcommittee favors retaining the 30 calendar day time limit within which either House must act. To prolong the time period for consideration of this issue, given the intense and time consuming consideration which it generates, could unreasonably divert the attention of the Congress from other more important legislative matters.

RECOMMENDATIONS FOR LEGISLATIVE CHANGES

1. Members of the Commission should be appointed for a period of one calendar year, such period to commence on January 1, 1980, and every fourth year thereafter.

2. The report of the Commission should be submitted to the President during the first week in December of the year for which the Members are appointed, and the recommendations of the President should be submitted to the Congress during the first 15 days of the next Congress.

3. The House Rules should be amended to provide that if a discharge motion is filed fifteen or more calendar days after a resolution disapproving all or part of the President's recommendations has been referred to a committee, and is signed by a majority of the Members of the House, it shall be in order for any Member who has signed the motion to call up that motion for consideration at any time during which the House is in session.

4. Public Law 94–82, relating to annual comparability adjustments for Quadrennial officials, should be amended to provide that such adjustments shall not be accorded in

any year in which the Quadrennial pay recommendations become effective.

5. Any pay adjustment for Members of Congress, pursuant to recommendations submitted by the President under Public Law 90-206 (Quadrennial Commission) or annual adjustments under Public Law 94-82 (Comparability Law), shall not take effect until the next Congress convenes.

Hon. WILLIAM D. FORD,
Chairman.

Hon. MORRIS K. UDALL,
Hon. CHARLES H. WILSON,
Hon. WILLIAM CLAY,
Hon. STEPHEN J. SOLARZ,
Hon. EDWARD J. DERWINSKI,
Hon. JOHN H. ROUSSELOT.

ADDITIONAL VIEWS OF THE HONORABLE EDWARD J. DERWINSKI

I concur in the presentation of this report and its recommendations, with one important exception. In its recommendation No. 4, the subcommittee proposes amending the annual comparability law so that those positions covered by the Quadrennial pay recommendations would not receive the comparability increase in any year in which the quadrennial adjustments are effective. I have introduced legislation (H.R. 2037) to repeal the provisions of the comparability adjustment law which apply to positions covered under quadrennial adjustments.

It is no longer necessary, I believe, to have duplicating pay adjustment procedures for the top legislative, executive, and judicial positions. While I appreciate the so-called "compression" that builds in the upper General Schedule grades during the 4-year interim of quadrennial pay commission action, I feel there must be a better and more practical way to solve that problem.

I cannot, in my own mind, justify both annual and quadrennial pay adjustments for top executives and Members of Congress simply for the reason of providing an escape valve for supergrade salaries.

While I agree with the subcommittee that positions receiving a pay increase under the quadrennial procedure should not receive two pay increases in one year, the recommendation falls short of the proper position, namely that only once every four years should judges, Members of Congress, and top executives receive pay adjustments.

HUMAN RIGHTS IN NORTHERN IRELAND

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. WOLFF) is recognized for 60 minutes.

Mr. WOLFF. Mr. Speaker, I am privileged today with our colleague from Massachusetts, Mr. MOAKLEY, to join with so many of my distinguished colleagues in a united expression of congressional concern for the continuing plight of the people of Northern Ireland, and to join in testifying publicly today in hopes of compelling American and world attention on the issue of human rights in Northern Ireland.

Mr. Speaker, since President Carter forthrightly spoke out on Irish human rights during the campaign, and as he has courageously backed up his remarks on human rights while President with concrete actions, I feel confident that our pleas today for official U.S. Government scrutiny of the issue of human rights in Northern Ireland will be successful.

Indeed. at the close of my remarks today, I will insert for the record a complete copy of President Carter's speech before the united leadership of the Irish National Caucus in Pittsburgh last October 27.

As the President said at that time:

The world knows . . . that it is a mistake for our country's government to stand quiet on the struggle of the Irish for peace, for the respect of human rights, and for unifying Ireland.

The President also called for the creation of a Commission on International Peace to study and help work for the human rights of all people throughout the world, and not just the people of Northern Ireland.

Since the President's remarks, the European Commission on Human Rights in Geneva has received an admission from the British Government that, as I have tried to call the attention of this House for a number of years, systematic torture has been carried out against people in Northern Ireland.

When I came back from my visit to the British-run concentration camp to Long Kesh, I said in 1974 as I say today, the cleansing light of world and American public opinion is the best source of hope, and the best potential for help that oppressed people all over the world presently have against their torturers.

The British have had the character to publicly confess their crimes, and while we may weep at such words from the nation which gave us Magna Carta, we must hope that such a confession, and even a promise never to carry out such crimes against humanity will never again be necessary. But I think we have learned by now that the only way we in the United States can satisfy ourselves that justice is being done in Northern Ireland is to examine the matter as closely as is possible, so that those who might be tempted will fear to continue to policies of repression which have prompted so much of the violence.

Let me say at this time as I have said many times in the past, that the forces of violence only feed the forces of repression. It is an everexpanding circle of death and destruction for the people of Northern Ireland, where well over a thousand people—innocent people of all ages—have lost their lives in the past few years.

One year ago, on St. Patrick's Day, I took the occasion of the visit of the President of the Republic of Ireland to point out that simply to issue calls for the supression of violence, and the arrest of the violent, is for a government leader to abdicate his responsibility to the police.

The duty of a government is to offer positive programs of hope, real solutions based on the economic, social and political realities which are nearly always the root causes of violence anywhere in the world.

As I said last year, the violence in Northern Ireland is not a simple matter of Catholic or Protestant animosity—it is rather the universal story of the haves trying to keep the have-nots from attaining a fair share of the fruits of society. It is a story of an economic and political majority denying the legitimate rights of the minority to decent homes real jobs, and many of the things which we in the United States take for granted.

In my two missions to Northern Ireland, I have witnessed firsthand how the minority population are forced to live in ghettos, how they are segregated into areas where there is little or no opportunity for a decent job—or even any job at all.

I noted on my first visit that the Wolf Shipyards—and I hasten to say that the owners of this shipyard are no relatives of mine—which is situated squarely in a minority population area, employed more than 10,000 people, and that no more than a dozen of them were members of the minority population: this was not only a gross inequity, but constituted a gross insult to the intelligence and the patience of the minority population.

Similar deprivations of political rights and incarceration without trial have been systematically carried out, and I have already mentioned the horrifying admission of torture, and the conditions at the Long Kesh concentration camp.

Now the issue has frequently been raised that it is none of our business when we issue calls for hearings on human rights in Northern Ireland.

Well, Mr. Speaker, I have found no more eloquent statement of why we should concern ourselves with the issue of human rights in Northern Ireland than the words of President Carter last October, when he stated:

I don't disavow my own Irish Heritage. It would be a mistake for all of us to forget that we have a dual commitment; first and foremost, of course, to our own country, here, the United States. But then, secondly, and very importantly, to the nations from which our families came.

My point here is simply that serious and systematic deprivations of human rights have been going on in Northern Ireland for years, so the official silence of our Government, which represents many millions of Americans with friends and relatives in Ireland and Northern Ireland, simply underscores the sad fact that our Government has preferred to speak out on human rights in Africa, Europe, Asia, and South America—rather than address itself to a situation clearly involving our Nation.

So to conclude, Mr. Speaker, I would again state that we must very clearly differentiate between the issue of human rights, on which we are united, and on the issue of violence, in which we are also united in our opposition to the misguided perpetrators who only serve the forces of repression.

The sorry fact is that despite the recent revelations of the European Court on Human Rights, the outrages such as the British torture of Northern Ireland could have been avoided if the spotlight of world attention could have been focused sooner.

Similarly, the cleansing light of official American Government attention to the issue of human rights in Northern Ireland can go a long way to removing the initiative from the forces of violence on both sides, forces which often feed on the sense of frustration of the people of

Northern Ireland that for them, there is no hope.

The knowledge that the American people are informed and concerned can be a key factor in helping the people of Northern Ireland triumph over those who presently try to grab world attention through the bullet and the bomb.

Again, I would like to thank my colleagues here today for joining in this attempt to illuminate the struggle of a gallant people for their human rights, and I am privileged to present for the record the remarks of President Carter on the issue of human rights for the Irish people:

"It is a great honor for me to come here this afternoon to be with you who come to meet with me from a major part of this nation.

"I don't disavow my own Irish heritage. As I said, in a speech earlier today, it does not matter when our ancestors came here, two years ago or twenty years ago or two hundred years ago or more. . . . it is why we came here and what we do after we arrive to make our nation great.

"It would be a mistake for all of us to forget that we have a dual commitment; first and foremost, of course, to our own country, here, the United States. But then secondly, and very importantly, to the nations from which our families came.

"When I was in Notre Dame two weeks ago last Sunday with Father Hesberg and just a few moments ago, as a matter of fact, with Cardinal Cooke in New York, we talked about the need for the establishment of a Commission on International Peace, to pursue in the multitude of places around the world, the concept of our country's standing firm in its commitment to human rights.

"We see, on the evening news and in national headlines every now and then, some instances where human rights are subjugated and where quite often our nation, as was pointed out by the Father, stands mute and doesn't speak.

"The Democratic National Convention Platform Plank was written jointly, by my own staff and by Mayor Daley from Chicago, to be sure that the world knows that the Democratic party understands the special problems in Ireland and that it is a mistake for our country's Government to stand quiet on the struggle of the Irish for peace, for the respect of human rights, and for unifying Ireland.

"I would like to say that I almost feel like I am a member of the Ancient Order of Hibernians as well.

"For six years in a row I was honored to go to Savannah on Saint Patrick's Day, and if any of you have ever been to Savannah on Saint Patrick's Day, you know that it is one of the fine and wonderful events in the life of a human being and those who come there from Boston and other major cities in the world, say that they have never seen anything like it. Although Savannah is a fairly small city, we have two hundred and fifty thousand people participating in the parade and the beer is green, the grits are green, the streets are green, everything is painted green; in fact, one year we dyed the entire Savannah River green. So Georgia has an awful lot of Irish settlers including my own family, to some degree, and I know the heartache that you feel to see the bloodshed and the disharmony and the deprivation in Ireland. And I am very honored that you come to let me feel a part of a hope that will never be extinguished, that we can have a redressing of grievances, and a realization for hopes of our brave, unfortunate mankind in Ireland."

Mr. GILMAN. Mr. Speaker, will the gentleman yield?

Mr. WOLFF. I yield to the gentleman from New York.

Mr. GILMAN. Mr. Speaker, I want to thank the distinguished gentleman from New York (Mr. WOLFF) for taking this special order in order to focus our attention upon the abridgement of human rights in Northern Ireland. I know that the gentleman from New York (Mr. WOLFF) has traveled to the concentration camps in Ireland, has personally witnessed some of the problems there, and for a long period of time has been a fighter for freedom and for unity in Ireland. I certainly want to commend the gentleman for his efforts.

Mr. Speaker, it is inconceivable that in 1977 the most civilized people in the world, the people from whom Americans inherited their passion for justice and the tenets of their Bill of Rights, would be accused of perpetrating inhuman acts or torture within their prisons. It is inconceivable that the British, the authors of the Magna Carta, a document which has, for nearly 800 years, illustrated Britain's respect for the law, would sanction inhumane treatment of British prisoners and would confess, before the European Court of Human Rights that these techniques of torture were used for years before the rest of the world became aware of such cruel and unusual punishment.

We have heard about the abridgement of human rights in the Soviet Union, and the subsequent mistreatment of prisoners, the "prisoners of conscience," who, because of their religious and cultural beliefs, are relegated to the status of inferiors, outcasts and aliens from their society. We know about the torturous treatment of Jewish and Catholic prisoners during the Second World War at the hands of the ruthless Nazis. We have learned about, and have grown outraged over, the torture techniques used in the Southeast Asian conflicts. Perhaps we have accustomed ourselves to these incidences of barbarism, and have reconciled ourselves to the fact that these events only occur in nations where violence and humiliation are the prevailing philosophies. But, as we have recently learned, Northern Ireland, a land of gentle grace and beauty, has been beseiged by this type of barbarism. It is hard to reconcile ourselves to the fact that these abuses have been perpetrated by one of the world's most civilized and advanced nations, Great Britain.

In his statement before the European Court of Human Rights, the British attorney, Sam Silkin, pledged to the rest of the world that the British would never again "use the five techniques of interrogation about which Ireland has complained." In a news item in the New York Times, appearing on February 9, 1977, it was reported that the five techniques used by the British to interrogate Irish prisoners included: hooding a prisoner, harassing him with noise, putting him on a strict regimen of bread and water, depriving him of sleep and making him lean against a wall for prolonged periods of time, often 16 hours, with his arms outstretched. The harassment of Irish prisoners has been documented, and the stories of resultant psychological and physical damage are chilling.

In a report prepared by Father Denis Faul of Dungannon and Father Raymond Murray of Armagh, entitled "Brutality in Albany Prison, Isle of Wight," case histories of prisoners are detailed for public information. Throughout the report, it is clear that article 3 of the Human Rights Commission, which forbids torture or inhuman degradation, has been violated. Permit me to share with my colleagues some of the experiences of the prisoners in Albany prison.

The statement of Mrs. Mary Campbell of Mountjoy, County Tyrone and Luton, illustrates the torturous treatment which her husband, Sean, underwent after being accused and jailed by the British Government. Mrs. Campbell states that—

Sean (and three other prisoners) were allowed to go to the Governor, not realizing that this was a carefully contrived attempt to set them up for a brutal beating and loss of remission . . . The Governor treated them alright. The second time they went it was the Assistant Governor and he would not entertain them at all. He would not listen to them . . . The riot squad who "happened" to be standing by, was called and appeared ready with helmets, shields and cudgels; the men were pushed into a small room off the corridor, beaten, stripped and knocked down; the men used what was in the room to defend themselves. They were moved from there to the segregation unit and beaten again.

They thought that Sean was unconscious. They jumped on his legs; they held him down until they broke his leg. Then they said: "I think he has a punctured lung, let's take him to hospital." He was taken to hospital . . .

He lost 690 days remission and got 90 days in solitary with loss of all privileges . . . he got no food or water for two days . . on the third day he was moved to the punishment block. They brought him his food there.

The bed is a piece of foam 3" thick: it is taken away at eight a.m. and brought back at eight p.m. All he has is a hard chair and a table and an old pot. He is locked in for 23 hours; he gets out to the yard on his own for an hour.

They did not give him a basin of water to shave or to wash. On the 11th day he got the plaster off his leg, and got a bath and a wash—the first after he came from the hospital. He has lost a lot of weight . . . is very pale and in pain.

His worst injuries are his chest injuries and his back . . . he keeps spitting up blood. He cannot move his left hand.

Sean wrote two letters to me from the prison and I did not get them . . .

In an article appearing in the New Scientist, August 5, 1976, entitled "Taking the Hood off British Torture," authors William Ristow and Dr. Tom Shallice detail the British torture techniques and contend that the damages sustained from this type of torture are long lasting and may never be forgotten:

These techniques do not leave the obvious scars of physical torture, but they are torture nonetheless. By inducing a temporary

psychosis, they left most men permanently psychiatrically affected.

These techniques, the authors go on to say, are similar to the techniques employed by the KGB in their brainwashing procedures. The torture described before, are sensory stresses which rob prisoners of their dignity and their ability to think clearly and rationally. Loud noise, called white noise reaches decibels of 85–87 and is played continuously into prisoners' ears. The loose fitting black hoods, placed over the prisoners' heads are worn until the actual interrogation, and prisoners are forced to stand against walls in a search position, fingertips lightly touching the walls, until they collapse, at which time the procedure is repeated until a period of 16 hours is reached.

A study conducted by Robert Daly, a professor of psychiatry at University College, Cork, indicated that the tortured men are suffering anxiety, hallucinations, paranoid delusions, and nightmares. Psychological violence, or "sensory deprivation" wreak lifelong results, which are inescapable and terrifying.

When we address ourselves to the question of human rights in Ireland, we should not concentrate solely upon the effects that torture has upon the prisoners. The subtle effects of violence and degradation are illustrated by the children of Northern Ireland: theirs is a pain and a sorrow which will extend into future generations.

In a letter to the then Secretary of State, Henry Kissinger, the chairman of the Rockland County, N.Y., Chapter of the Ancient Order of Hibernians, John Finucane, stated that the toll of violence in Northern Ireland had been taken on the most innocent of victims, Ireland's children. I would like to share with my colleagues an excerpt from his letter:

Recently a group of American citizens here in Rockland County, New York, opened their hearts and homes to a group of Nationalist children from Northern Ireland. During their stay I was made aware of the terrible suffering inflicted upon these children whom I call the "Lost Generation." I have no doubt the damage to their minds and hearts is permanent. . . .

A child who was staying with the family of a New York City busdriver became hysterical when she saw him in uniform. Why? Because the child thought he was a police officer. This is a clear indication of the treatment handed out to Irish Nationalists, both young and old, by the police of Northern Ireland.

Another child, eight years of age, said she was in a hurry to go home. When asked why, her reply was: "It is very quiet here. There is no excitement. No bombs going off, no shooting, no police or soldiers going through the house." Now isn't that something to hear from a child?

Then there was the scene at the airport when the children were going home. The majority of the children became hysterical. They did not want to go home. Some of them were even physical in their efforts not to go. You can imagine the impression this had on us. Grown men became so choked up—they could not talk. These children, who you would think were anxious to get home, were willing to leave their mothers and fathers, their brothers and sisters, behind, rather than once again face the turmoil of Northern Ireland. . . .

The Irish poet, W. B. Yeats, expressed so poignantly the affection that the Irish people have for the innocence of the children, and lamented the thought that the future was, of necessity, so full of uncertainty for Ireland's children. It was in 1914 that Yeats wrote the poem, "To a Child Dancing in the Wind."

Dance there upon the shore;
What need have you to care
For wind or water's roar?
And tumble out your hair
That the salt drops have wet;
Being young you have not known
The fool's triump, nor yet
Love lost as soon as won,
Nor the best labourer dead
And all the sheaves to bind.
What need have you to dread
The monstrous crying of the wind?

It is difficult to imagine the children of Ireland, once so innocent and unburdened, witnessing in 1977, the awful brutality and violence which characterizes the present state of Northern Ireland.

In 1914, Europe was ravished by the rumblings of the First World War; there was the overthrow of governments, the bloodshed and misery that haunted many for years after the signing of the Treaty of Versailles. And during Yeats' lifetime, there was the Easter rebellion, the years of struggle for a free Ireland, the oppression of a people whose song and poetry has inspired the entire world. And in 1977, the bloodshed and oppression are still with the Irish, scarring the psyches of the young and old alike, denying the validity of one's religious beliefs, political philosophies, culture. It is little wonder that the playwright Eugene O'Neill stated in his work "A Moon for the Misbegotten" that "there is no present or future, only the past happening over and over."

Indeed, the innocent child in Yeats' poem has not seen "the best laborer dead," but today the threats to Ireland's best laborers, the young and the loyal, are real and dangerous. The toll of injuries in Northern Ireland, according to a report in the Washington Post of December 12, 1976 has reached 17,200. "According to police figures," the Post reports, "17,200 men and women have been injured by bomb, bullet, fire and riot in the past 8 years. Official figures give little clue to the seriousness of the wounds. Some victims are blinded, limbless, or suffering internal injuries: others have had only superficial cuts. If 17,000 have had physical damage, thousands more have suffered psychologically."

The same article in the Post goes on to relate the story of a victim of the bombing of a Dungannon bar last New Year's Eve. The victim stated:

All I know is that something seemed to hit the back of my head and I was falling, falling, falling. I thought I'd never hit the ground. . . . I was blown right over the bar and was covered with bricks and beer and crates. I blacked out. Then I could hear some fellows dragging others out, and one of them said, "I think that's everyone out." When I heard that, I let out a roar and they found me.

The article's author, Derek Brown then comments:

There were moments in the months ahead when, Robert now confesses, he wished that they hadn't found him. His right leg was amputated; his large intestine was shortened; his kidneys were damaged; his spine was twisted; and his back, where a chair leg was embedded by the blast, was a mass of scars.

The violence in Northern Ireland has taken too large a toll. The spirit of the Irish, an indomitable spirit which is known throughout the world, and praised particularly on St. Patrick's Day is a spirit which cannot and must not be maimed—a spirit which has celebrated life, which has memorialized beauty, and which, in its peculiar brand of melancholy and joy, has given each of us in America a new sense of being alive. The Irish spirit should not be allowed to die at the hands of the merciless and cruel, and should be preserved in a place of peace and harmony. War and strife destroy the very fiber of human life: The discordancy, the declination of families, the suspicion and selfishness which result from conflict are opposites of the values and ideals cherished by the Irish.

I urge my colleagues to join with me today in expressing a sense of the Congress in seeking an end to the hostilities in Northern Ireland. Let us join together in prayer and action to bring about the cessation of violence and bloodshed, to urge the reconciliation of the Irish people, and to lend our support to the needs of these people. Let us conduct hearings into this unfortunate situation, so that we can work together to find an equitable solution to the problems which have scarred so many children and adults, and which have made the lives of the Irish so unhappy. Let us call for the relief of all people who are oppressed because of their religion, their cultural values, and their beliefs, and whether they be in Ireland, the Soviet Union, Africa, or the United States, let us dedicate ourselves, once again, to the guiding principles set forth in the Magna Carta, the Bill of Rights, the Emancipation Proclamation, which call for the granting of human rights to all people.

Mr. WOLFF. Mr. Speaker, I thank the gentleman from New York (Mr. GILMAN) for his comments.

I want to say to the gentleman that his efforts in behalf of freedom and rational procedures in the quest for human rights in Northern Ireland has been going on for a long time now, and I applaud his leadership in that connection.

Mr. GILMAN. Mr. Speaker, I thank the gentleman.

Mr. BIAGGI. Mr. Speaker, will the gentleman yield?

Mr. WOLFF. I yield to the gentleman from New York.

Mr. BIAGGI. Mr. Speaker, it is a pleasure to join with my colleagues Mr. WOLFF, Mr. GILMAN, and Mr. MOAKLEY, in sponsoring today's special order to discuss the continuing tragedy in Ireland. Tomorrow we will celebrate St. Patrick's Day, but, as has been the case for too many years, the celebration will be tempered by the realities Ireland faces daily.

We conduct this special order in an atmosphere of deep concern over the continuing bloodshed and violence which cloak the citizens of Ireland in con-

stant fear. We also feel a sense of frustration. The Carter administration has established as one of its major foreign policy priorities, the recognition by world nations of fundamental human rights. During this campaign we have made note of several nations which are responsible for denials and outright deprivations of the human rights of their citizenry.

Yet the voices of the Carter administration and many in the Congress have been conspicuously silent about the blatant and long standing violations of human rights practiced by the British and Irish Free State Governments against the citizens of Ireland. The President, having had the opportunity to discuss this issue during the recent visit by British Prime Minister James Callaghan, chose not to, to the disappointment of millions of Irish Americans. We are using this forum today to expose some of these human rights violations and to advocate early congressional action on legislation which will declare the right of self-determination for all citizens of Ireland.

The world community was shocked and outraged this past summer when the European Commission on Human Rights found, and the British Government admitted to charges of torture of Irish political prisoners in English and Irish jails under the jurisdiction of the British Government. In addition to acknowledging their guilt for these practices, the British Government admitted to similar policies of torture in 15 other nations. The Commission found that many of the prisoners tortured by the British Government had suffered permanent, physical, and mental damage.

In response to this indictment, the British Government told the Commission that they would cease these objectionable and reprehensible practices. But, the proof is clear that the British have not honored their word, for as recently as 2 weeks ago, documented cases of torture were still being reported. We must question why we are remaining so silent in the face of these deplorable practices? Why are we allowing the British Government to overtly sabotage our efforts to demand that principles of human rights be established and respected by foreign governments? These are questions which must be answered.

In addition to the torture of prisoners, the presence of British troops throughout Ireland has resulted in other violations of human rights involving innocent citizens. It is widely acknowledged that the British troops stationed in Ireland are obstructing the road to peace.

It is apparent that this Nation should demand more than the word of the British Government with respect to human rights issues. We must have visible signs of their intent to improve conditions in the prisons. One clear way would be to allow for the inspection of prison facilities by impartial observers. Another would be to work for the early repeal of laws, such as the Emergency Special Powers Act, which are being used as the vehicles to repress the human rights of the people of Ireland.

Yet the real culprit which merits the brunt of our indignation is the Irish Free State Government; a government whose leaders, among them Foreign Minister Garret Fitzgerald, have been sanctioning some of the most brutal and repressive policies of any civilized nation. The aforementioned Emergency Special Powers Act provides the most glaring example. While the practice of repression by the Irish Government has been ongoing since 1969, these policies have been greatly intensified in the 5 months following the assassination of Ewert Biggs.

The realities of the enforcement of this law have been horrifying. Civil and human rights of hundreds of innocent Irish citizens have been trampled on repeatedly by the Irish Government which is using the Emergency Special Powers Act as its justification. Among their heinous practices are widespread roundups of individuals, oftentimes in the middle of the night. Suspects are held as long as 7 days, without charges. Trials are often held without any semblance of due process rights afforded the accused.

I wish to bring one specific example to the attention of my colleagues, which was discussed in an article in the New York Daily News. They recounted the story of an individual who was apprehended by Irish authorities, never formally charged, but still subjected to 28 straight hours of interrogation by the Irish authorities. In desperation, the individual attempted suicide.

This is not a story from the Soviet Union or one of its satellite nations where such practices are commonplace. This happened in Ireland, a British Province where the fundamentals of law were established centuries ago. Why now are they being so ruthlessly abandoned?

Several authorities closely affiliated with the Irish question have raised questions about the validity of the emergency which brought about these repressive measures. One noted Irish scholar went so far as to categorize the emergency claim as ludicrous. President O'Dalaigh of Ireland felt compelled to resign, rather than be associated with the policies of the Irish Government.

Another very disturbing element of the Irish laws is the fact that they have in some instances been applied to Irish Americans visiting Ireland. In one case, Dr. Fred Burns O'Brien, information director for the Irish-American caucus, a leading Irish-American political organization, was placed under constant surveillance and was harassed and his life was even threatened on several occasions by Irish police, particularly a detective Hagarty, while conducting a fact-finding mission in Ireland.

Another very disturbing element of the Irish laws is the fact that they have in some instances, been applied to Irish Americans visiting Ireland. Correspondence I had last year with the Department of State reported in effect, that Irish Americans visiting Ireland were not exempt from the indiscriminate law enforcement arm of the Irish Government. This is an issue which merits very close congressional scrutiny.

The silence of the American Government on the Irish question has been deafening. In reality, we have seen instances of the American Government working against the interests of Irish Americans. One primary example is the collusion between the U.S. State Department and the British and Irish Governments in the denial and revocations of the visas of leading Irish figures seeking to visit the United States. I personally visited Dublin in 1975 to discuss this issue and was not offered any explanation which could change my original position—that our State Department was contributing to censorship against the Irish-American community.

It is also worth noting that during my aforementioned Dublin visit in 1975, I sought permission from the Irish Government to visit political prisoners incarcerated in the Portlaoise prison. My request was summarily and arbitrarily denied by the Irish Government. This served to heighten my suspicion that this was an attempt by the Irish Government to cover up the allegations of the abhorrent conditions in the prisons. My fears were somewhat confirmed this past summer by the findings of the European Commission on Human Rights.

The problems of Ireland are complex and emotional. Since 1969, more than 1,600 persons, including innocent children, have been killed in Ireland. We do not have all the solutions. What we can do is make recommendations, such as is contained in the legislation I have introduced in each of the past three Congresses, calling for the people of Ireland to be given the right of self-determination on the disputed question of reunification. We can urge the British Government to make a commitment to set a date for the removal of their troops from Ireland.

Above all, and in light of our renewed interest and commitment to working for human rights throughout the world, we as a nation and as a people, must put pressure on the British and Irish Governments to conform to basic principles respecting human rights. We must call on the leaders of the Irish and British Governments to adopt new policies to restore human and civil rights to those who have been, and are being deprived of them. We must urge the repeal of repressive laws which provide the vehicles for repression and torture of innocent citizens. We must work on behalf of Irish political dissidents who wish to come to this Nation to inform their friends and relatives in America of the issues in Ireland. We must be consistent in our applications of our new human rights oriented foreign policy. Our Government's failure to speak out in condemnation of the policies of the Irish and British Governments has embittered millions of Irish Americans. Tragically, it appears that in the area of human rights the old adage holds true: "No Irish need apply."

I now wish to insert into the RECORD, several articles which elaborate on the violations of human rights touched upon in my remarks:

[From the Irish Times, Feb. 14, 1977]

GARDAI USING NORTH-STYLE BRUTALITY IN INTERROGATION TECHNIQUES

(By Don Buckley, Renagh Holohan, and Joe Joyce)

Brutal interrogation methods are being used by a special group of gardai as a routine practice in the questioning of suspects about serious crimes. This group uses physi-

cal beatings and psychological techniques similar to some used in Northern Ireland, to obtain information and secure incriminating statements.

These methods have evolved over several years and appear to have become more entrenched since the introduction last October of the Emergency Powers Act, which gave the gardai power to detain suspects for seven days.

These conclusions are based on the experiences of victims, lawyers, doctors and social workers involved—and also on information from Garda sources obtained over a period of weeks. The Garda Commissioner has refused to discuss them.

The "Heavy Gang," as the group has been nicknamed within the force, physically assaults and applies severe psychological pressure on suspects. The pressure includes threats, lies, and psychological tricks, and is intensified by depriving suspects of sleep, food and water over long periods.

Deprivation of sleep and food are two of the five techniques used in the North after the ending of internment, which Ireland wants the European Court to outlaw. There are also suggestions that the "Heavy Gang" are using another of the five techniques—forcing people to stand spreadeagled against a wall for lengthy periods.

FLYING SQUAD

The nucleus of the "Heavy Gang" comprises plainclothes detectives drawn from the investigative section of the Garda Technical Bureau. They are assisted at times by members of the Special Branch and other units of the force, directed by some officers of C4, the official title of the Technical Bureau.

They operate from a base at the Technical Bureau headquarters in St. John's Road, Kingsbridge, Dublin, and act as a flying squad traveling to all parts of the country. Local uniformed gardai rarely participate in their interrogations.

The investigative branch of the Technical Bureau is usually known as the Murder Squad, or, more accurately, the Serious Crimes Squad. Unlike the Special Branch, it is not exclusively concerned with politically-motivated crimes. But it has become more involved in investigating these since the start of the Northern troubles and has been known to dispute areas of responsibility with the Special Branch.

The change from the more traditional methods of painstaking detective work to the use of brutal interrogation methods to secure convictions appears to have developed in response to political pressure to get results.

This pressure on the force has been increasing, particularly since the spectacular recent crimes like the murders of Mr. Christopher Ewart-Biggs and Garda Michael Clerkin. The brutality appears to have intensified in the period following these crimes.

CRUDE RESPONSE

The "Heavy Gang" appears to be a crude response to these pressures. This is evident from the unsophisticated way they mix physical beatings with attempts to use more scientific techniques. The psychological methods used differ from those employed in the North in that they are not scientifically applied and consequently are not as effective.

The psychological tactics include alternating groups of "brutal" and "nice" detectives, disorienting people by keeping them in rooms with blinds drawn and lights on day and night so that they lose track of time, and confusing them by constantly giving conflicting orders. Suspects are forced to sit by fires or heaters and refused water and an atmosphere of fear is induced by loud banging, shouting, threats and sometimes screams from outside the room. All these are intended to break the suspect's resistance to reveal information or, more commonly, to signing incriminating statements.

The procedures have been intensified by the introduction of the Emergency Powers Act, which means that they can be applied for seven days instead of two. Another consequence of the Act is that suspects are unsure of their rights under it and the gardai use this to further intimidate them and deny them access to doctors and lawyers.

Since the activities of the "Heavy Gang" must be known to their superiors, it is assumed that they are given at least tacit approval, if not direct orders.

REQUEST REFUSED

The Irish Times last Wednesday requested an interview with the Garda Commissioner, Mr. Edmund Garvey, to discuss allegations of Garda brutality. On Friday the Garda press office said that the application for an interview was "regrettably refused."

An interview was also requested on the same day with the Minister for Justice, Mr. Cooney, but the Government Information Services has not yet responded. The Garda authorities and the Government have continually dismissed all brutality allegations as propaganda and referred complainants to the force's investigative machinery or the courts.

However, an increasing number of gardai are themselves becoming worried about the extent of this practice. They are concerned that the use of these brutal interrogation methods will damage the force's reputation and their own standing in their local communities. Tension has arisen between uniformed gardai and members of the "Heavy Gang" during interrogations and, in some instances, the local gardai have tried to actually stop them.

Mr. Cooney will be asked in the Dail this week to make a statement on allegations of Garda ill-treatment of suspects in custody. A question has been tabled by the Opposition Spokesman on Justice, Mr. Gerry Collins.

[From An Phoblacht, Marta 1, 1977]

PORT LAOISE: CAN WE REMAIN SILENT? AN APPEAL BY REV. PIARAS O'DUILL

By any standards the scale of punishment inflicted on the prisoners in Port Laoise Prison is outrageous, amounting to an appalling degree of cruelty. Such ill-treatment of sentenced prisoners is most serious and disturbing. Conditions in the prison at the moment are worse than at any time previously and certainly as severe as in British and Northern prisons.

Apart from the general and petty harassment of political prisoners by the authorities there are three specific areas of punishment practised in Port Laoise which cause concern: solitary confinement, strip searches, and visiting conditions.

SOLITARY CONFINEMENT

Long spells in solitary confinement for the least infringement of rules is particularly vindictive and can only be described as savage. I am particularly concerned about punishment by solitary confinement—the shortest duration of which is never less than seven days and can be as long as six weeks. Solitary confinement is an ancient and barbarous punishment that should be ended immediately as it is frought with dangers to the physical and mental health of the subject.

This kind of punishment is imposed at the whim of the prison governor and as I stated for the slightest breach of discipline. Examples of such infringements are:

refusing to address a prison warder as 'Sir',

switching on a light without permission.

The prisoner in solitary confinement is kept in a special cell away from other prisoners and held incommunicado for the full duration. For the initial three days he is kept in the cell for the full 24 hours. After that he is then allowed a half-hour exercise alone each day. He is strip-searched going to exercise and again on his return. His cell has no furniture whatsoever during the day. Everything removed, the prisoner is compelled to stand, walk about the cell barefoot or sit on the floor. Shoes are taken from the prisoners during solitary confinement. He eats his food on the floor.

STRIP SEARCHES

Many prisoners in Port Laoise, because of the stringency of discipline and the whimsical moods of the Governor have to endure solitary confinement at some stage of their sentence. Medical evidence corroborates that this type of confinement causes severe mental and physical distress to the prisoner and his family. It certainly does nothing to help the prisoner from a rehabilitation point of view. In fact there is a lot of evidence to demonstrate that this type of punishment and unnecessary hardship is in fact counter productive.

It should also be remembered that the prisoner in solitary confinement is allowed no cigarettes, no writing materials, no handcrafts, visits or letters. In other words, his confinement is complete. No doubt the authorities are aware that reversal of previously held certainties is more easily gained where the individual is isolated. He is subjected to frequent strip searches, a humiliation to which all prisoners, even those not in solitary confinement, are subjected.

THE STRIP SEARCHES

These searches often involve 7 or 8 warders entering a cell and holding the prisoner down while his clothes are torn from him. When completely naked, he is then physically searched and his private parts explored by these warders. Having completed the search, the prisoner is locked in his empty cell where the warders may return several times during the day, sometimes within ten minutes and repeat these search tactics. Some prisoners have been searched five times within 24 hours and some as often as three times within 40 minutes. Prisoners have been turned upside down, while their cheeks are pulled apart and the prison warders probe the prisoner's anus. It is alleged that other warders stand and jeer.

Exploration of the anus is a medical procedure which should be carried out with great care. It is important to relax the patient and lubricate the item which is being used. This procedure can have some dangerous side effects for the person should some basic rules not be observed. These rules are taught in medical and nursing schools throughout the country. To my knowledge none of the warders carrying out this procedure in Port Laoise have ever attended medical or nursing schools. As it is a medical procedure and should it be necessary at all, then it should only be performed by medical/nursing personnel who are bound by ethical codes to conduct it in an ethical manner and not in the barbaric manner with which it is performed in this prison. This type of behaviour by the authorities can only do untold physical and psychological damage to the person—a very high price to pay in the name of security.

S.F. CLLR'S ACCOUNT

The following account was given to me by Councillor Joe O'Neill, a member of the Bundoran Urban District Council. He was recently a remand prisoner in Port Laoise before being cleared of charges.

"During the last week in July, 1976, I was strip searched six times in 24 hours in Port Laoise. Because I removed my own clothes on demand they were not taken off me violently; but even this compliance, under great strain, due to the frequency of the searches, did not prevent the wardens from making me bend over and pulling my buttocks apart

with their bare hands so that they could inspect my anus.

"Because of the utterly degrading nature of such searches and their frequency it was with great difficulty that I managed to restrain myself and refrained from resisting such humiliation. Had I not done so I would have been brutally beaten into submission as happened to some of my colleagues.

"I regard the prison regime in Port Laoise as totally repressive. Men are sentenced to seven and 14 days solitary confinement on the mere whim of the Governor with no avenue of appeal open to them. It is impossible to see how men can serve sentences ranging from 10 to 20 years without becoming physical and mental wrecks".

(Cllr. Joe O'Neill).

The Dept. of Justice acknowledged that wardens use force to inflict these searches. This force has resulted in prisoners being injured. But as visits are suspended at the mention of prison happenings the evidence of these searches are hidden from the public. Prisoners, because they are strip searched before and after each visit, have in many cases developed an aversion to visits from their families and loved ones—such is the terrible effect of strip-searching.

VISITING CONDITIONS

There are further reasons why visiting day in Port Laoise can be painful for the prisoner. Visiting a prisoner in Christian tradition is considered to be one of the corporal works of mercy. In Port Laoise Prison it is a traumatic experience inflicted by the prison authorities not only on the prisoner but also on the innocent party, his relatives.

In recent times in Port Laoise prison—in the name of security—the number of visitors admitted in one day has been drastically curtailed, thereby causing relatives who travel long distances to wait in cold and stormy weather for long periods and tolerate the uncertainty of not knowing if they will get in to see the prisoner or not.

Only recently a prisoner, Earnonn Sullivan of Dublin, who is serving 7 years in this prison, learned that his wife had been served with an order preventing her from ever visiting him again. One would expect that the duty of a prison authority would be to facilitate rather than inconvenience relatives—the contrary is the practice of the Port Laoise authorities. Here is the description of a visit by one father to his son:

"I visited my son in Port Laoise on November 20th, 1976. The 'visit' lasted 20 minutes. The warden in charge insisted that we stand within two feet of him. He was equipped with a notebook on which he took notes of our conversation. Another warden obviously embarrased, was compelled to stand immediately behind my son for the duration of the 'visit'. This is standard practise. And to that, that you view the prisoner through two grills of close mesh and two strips of dirty perspex and you have some measure of the intensity of malevolence which pervades the very atmosphere of this place".

Patrick Stagg, a nephew of Frank Stagg, who died on hunger strike last year because of his treatment in a British Jail, was arrested on Friday, September, 10th last. His father was refused a visit to his son on the following day. On Monday, 13th his mother was told by the Port Laoise authorities that no visit could be granted to her unless she wrote a letter requesting one. She did so and on the following day, Tuesday, 14th she travelled to Port Laoise in order to be there early on Wednesday morning to see her son. She failed to gain admission throughout Wednesday, even after producing her passport as identification and returned home discouraged and distraught.

For 12 days the mother and father failed to see their son, a remand prisoner, and had no idea what condition he was in medically or otherwise. A letter was received by the mother from her son during that time. Written on the 14th and postmarked the 17th, it had eight lines completely blackened out by the prison censor and stamped by him. This left the minimum of information regarding the prisoner's well-being.

Similar hardships are being endured by the families of other prisoners, some of whom are almost totally isolated from the outside world, in fact, there is no question of family visits in the true sense. Visitors must apply individually to the Governor. They must supply a photograph of themselves plus other identification. It may take many weeks before they receive a reply, if any, and in the meantime they are subjected to visits and enquiries by the Special Branch police. Having finally procured a visiting permit, they have to wait outside the prison gates, sometimes for hours in all weathers, before being called in, two at a time, to be searched before being permitted entry to the waiting room. Again they are humiliated by searches before entering the visiting rooms.

Once in the visiting room, the prisoner and his family are separated by two formidable wire grills rising from table level to ceiling level. One grill rises on the visitor's side of the table, about 9" from the edge; the second rises on the prisoner's side, again about 9" from the edge. There is a two foot gap between each grill. The grills are made of rectangular wire mesh with holes approximately 1" x ½". The rectangular mesh runs in opposite directions on either side, making the largest through-space ¼" sq. Attached to the inside of each grill is a perspex partition rising 18" from table level, thus further increasing the difficulty of carrying on a conversation. The grills run the whole length of the room (about 30 ft.) though, at the moment, only one visit is allowed in each room, despite the size. There is also a wire cage at the end of the table in which the supervising warder sits and takes notes of the conversation, writing down the most intimate and personal family details. A second warder stands guard behind the prisoner. Both prisoner and visitor have to stand during the visit in order to see and hear each other over the perspex partitions. Such a situation is degrading and inhuman.

PRIESTS BARRED FROM VISITING

Priests are being refused permission by the Minister for Justice to visit their parishioners in Port Laoise. Listen to this for official claptrap: "There can be no pressing reason for a visit from their parish priest and the visit from Canon McIvor cannot therefore be approved"—this is typical of the many replies from the Department of Justice to requests for clerical visits in a spiritual capacity.

And Canonach Diarmuid Maclomhair (Canon McIvor) of Fochairt, Co. Lough had this to say:

"So strict is the control in Port Laoise that the visit of one pastor cannot possibly menace the secure custody of the prisoners. The more decisive consideration therefore seems to be the want of a pressing reason for the visit. That depends I suppose on how they (the authority) assess the case. If assessment is really strict there will be no need even for visits from close relatives since these can easily convey their concern by letter. But common humanity calls for a personal encounter, even when hampered by prison conditions. The same motive, touched by a higher and more spiritual dimension, is true of the pastor. To debar him from this duty of a personal relationship can only be reckoned a piece of dire rigorism".

All clergymen, other than the official chaplain and priest—relatives, are barred from visiting the prisoners in Port Laoise.

NO EDUCATION ALLOWED

Educational facilities are forbidden in the prison, not indeed by the prison rules but by the prison authorities. Surely the imposition of such limits as the deprivation of education is in this age bordering on the irresponsible. Lectures, whether by outside lecturers or by chosen prisoners are forbidden. The prison Governor's reply to this request was: (unbelievably) "No prisoner is entitled to further the education of another". Educational books are also forbidden as are all classes, debates, correspondence, basic teaching aids such as drawing equipment, textbooks, cassettes and records. Prisoners are forbidden to practice a hobby or undertake handcraft of any description.

All the above issues have been raised on numerous occasions with both Church and Welfare Authorities who, though sympathetic to the demands of the prisoners, admitted that they made no progress with the prison authorities. A wall of indifference has met every reasonable demand for educational facilities and it seems that the considered policy of the authorities is one of forcing the prisoners to vegetate. Is it any wonder that Fr. Denis Faul, that great campaigner for human rights and a critic of all violence had this to say:

"The prison world of the Northern Catholic People exists also in the South, the journey there is longer, the conditions for the visit are harsher, the soldiery are unfriendly.

"A crude, mean, and rigid application of 19th century rules meets poor women and children at the prison. Authority in the south of Ireland is totally deaf to pleas for more human and modern treatment for prisoners, their families and spiritual directors. The heartless official letter written in bad English, is the only response of an Irish Government to a plea for decency".

CAN WE REMAIN SILENT?

When addressing a clerical ecumenical conference in March last, Fr. Faul said that the ex-prisoners he had met from Port Laoise Prison were more socially disorientated than exprisoners from either Six County or British jails. It is my own opinion that the worst prison in these islands is that of Port Laoise. The ill-treatment at present meted out in Six County jails and in prisons in Britain is well known. However, considerably less is known about the plight of the men in Port Laoise who are degraded, beaten and deprived by the authorities of that prison. The families of these prisoners are well used to the curt note received from the Governor stating: "As a result of an incident in the prison all letters and visits to a son/husband have been suspended. You will next be entitled to letters and visits on . . .".

RELATIVES CONCERNED

Relatives and families of the prisoners are very concerned about the psychiatric and physical welfare of their menfolk in Port Laoise. These prisoners may not have received the extreme physical ill-treatment that inmates are enduring in, for example, Albany Prison (Isle of Wight) but there is little doubt that psychological ill-treatment is practised on Port Laoise prisoners to a much finer point than in Six County or British prisons.

The destructive effects of solitary confinement and humiliation of forced stripping which can cripple the personality, distort behaviour and produce permanent psychological scarring of a more serious consequence than bodily injury is borne out by medical evidence. By and large, the existing situation

in Port Laoise prison with its conditions of tension and psychological pressures is injurious to the mental and physical health of prisoners.

When such an attempt is made to undermine the personality of the prisoners by isolation or to rob him of his self respect by the repetitive humiliation of strip searching—under such manipulation and stress the prisoners must break or resort to revolt.

It is an explosive situation that may break at any moment. If you are concerned you cannot remain silent. Speak out and demand an end to this.

Mr. WOLFF. Mr. Speaker, I thank the gentleman from New York (Mr. BIAGGI) for his comments and also for the work that he has done over the years in trying to bring some peace to this troubled land.

Mr. NEDZI. Mr. Speaker, we are all aware of the tragic violence in Northern Ireland, and I trust we will also give more attention to efforts to end the killing and maiming.

I believe it would be useful to review the military realities of the conflict. In this regard, Col. James B. Deerin, N.G. A.U.S., retired, has written an excellent analysis, "Northern Ireland's Twilight War," which appeared in the December, 1976, issue of Army magazine.

Colonel Deerin's article, which is free of the usual heat and emotion attending the issue, provides a helpful background as we discuss the Irish question today.

The article is set forth below:

NORTHERN IRELAND'S TWILIGHT WAR

(By Col. James B. Deerin, NGAUS, Retired)

Not since the days of Rudyard Kipling's *Gunga Din*, when the British Army posted a far-flung empire, has it had such difficult and frustrating duty as it has today in Northern Ireland.

While its involvement in Ulster may not be accurately portrayed as England's Vietnam, there are parallels. It is a war of counterinsurgency in which the army operates under heavy restraint. It is a war in which it is difficult, frequently impossible, to know who is the enemy.

After seven years, it is obvious that under the present rules clear-cut victory over the terrorists is not attainable. It is a twlight war that drains manpower and energy that otherwise would be directed to NATO, Britian's primary defense commitment.

While the British Army has, for many years, maintained three resident regiments in Northern Ireland, a province of the United Kingdom, it has been compelled to nearly quadruple the size of its force here since the outbreak of the current troubles in 1969. At one point, in 1972, the force level exceeded 21,000, a sizeable slice of England's relatively small land force.

There is no intent here to discuss the complex political issues that have fused the current troubles, but, at least, a brief outline of the situation is necessary to understand the difficulties faced by the army and the delicate political environment in which it operates.

The troubles are rooted in nearly two centuries of discontent and bitterness which stem from religious differences and economic disparity. In this small province there are a million and a half citizens, about two-thirds of them Protestant. The minority—the Catholics—are largely poor and their employment opportunities limited.

Before the disbanding of the provincial government, there was little Catholic representation. Few Catholics are members of the Royal Ulster Constabulary or employed by government agencies.

The goal of the Catholics is to unite the six northern counties with the predominantly Catholic Irish Republic, from which they had long been separated when that nation was formed in 1949. For some years before that, the 26 counties in the south had been a self-governing free state.

A united Ireland has been aggressively sought by the Irish Republican Army (IRA) which has, in the past, engaged in violence, but which is currently abiding by a cease-fire it put into effect in 1975.

The war is carried on now by the break-away Provisional IRA (PIRA), the extreme, violent arm of the movement. Opposing it are a number of Protestant paramilitary organizations which can be equally as violent in their efforts to keep the *status quo*, which is to say, continue Ulster as part of the United Kingdom.

The conflict between PIRA and such Protestant extremist organizations as the Ulster Volunteer Force and the Ulster Defense Association is what the British call the "tit-for-tat" war. If two Catholics are killed, two Protestants will be killed. If a Catholic pub is bombed, a Protestant pub will be bombed.

PIRA's prime target is the British government and Protestant-owned businesses. Its strategy is to cripple the economy and continue its campaign of terror to discourage the government to a point where it will withdraw its soldiers and negotiate with PIRA on its terms.

The army is somewhere in the middle, seeking primarily to keep the violence from escalating to open warfare which, its leaders are convinced, would lead to the killing of thousands and total destruction of Ulster s cities and towns.

The mission of the army is to rout out the terrorists, cut off their supplies and destroy their arsenals. In doing this, the responsibility for protecting the lives and property of Ulster's citizens is paramount. The objective is to restore peace, as tenuous as it always is in this land, in order that political negotiations, aimed at permanent solutions, may be resumed.

As the army has found in its seven years here, there are limits to how effectively a military force can carry out its mission when it must operate in an environment in which civil law continues in effect and the rules of engagement are written by politicians.

PIRA and the Protestant paramilitary organizations are hidden armies, scattered over wide areas with their operations well protected by sympathetic segments of the population. While they are not large, truly organized forces, they hold the initiative. There are no fixed engagements, no troop movements to be observed.

The British do not have a force sufficiently large to permit it to do more than it currently does, which is to keep a cap on the terrorists' activities by making it as difficult as possible for them to operate.

Army strength now is about 14,000, scattered through the six northern counties. It is organized in three infantry brigades under the command of Gen. Sir David House, the army's former director of infantry. Headquarters, British Army, N. Ireland, is at Thiepval Barracks, a long-established base at Lisburn, about 15 miles from Belfast.

The largest brigade is the 3rd which has responsibility for four of the six counties, making up the southern half of the province. Its troops patrol the troublesome, ill-defined border between Ulster and the Irish Republic.

The 39th Brigade has the mission of securing Belfast and the surrounding areas. The 8th is posted in Ulster's second largest city, Londonderry, and patrols the northwest corner of the province, including about 40 miles of border.

There are, in all, 16 regiments and battalions (both about the size of a U.S. Army battalion) supported by the usual special detachments—communications, bomb disposal, sappers (engineers), and medical.

The army is augmented by a unique volunteer, citizen-soldier organization—the Ulster Defense Regiment (UDR). It has 11 infantry battalions and a strength of roughly 8,000, of which about 1,600 work full time.

The regiment was activated in 1970 for the defense of Northern Ireland and unlike the British Territorials, the army's traditional reserve, it cannot be deployed outside of the province. The regiment is commanded by a regular brigadier and regulars command the battalion. Other than that, it is a citizen force.

The UDR, which has battalions in all counties, is under tactical but not administrative control of the army. Some battalions have responsibility for specific areas while others may be attached to regular units in operations.

Members of the regiment are expected to spend one or two nights a week on duty and some weekends. In addition, they attend 15 days of summer training, some of which was conducted this year in England. They perform all the duties of a regular unit, except they are not trained in riot control and are excluded from operations in some critical areas of Belfast and Londonderry.

The Royal Air Force provides support with a detachment of helicopters and light fixed-wing aircraft based at Aldergrove Airport. This commercial airport about 15 miles outside Belfast is probably the most strongly secured air terminal and field in the world. It is patrolled by a company of Royal Military Police.

The smaller number of regular army regiments are here on resident tours which extend for 18 months. Members are accompanied by their families and most of these units are stationed at or near permanent army bases such as Thiepval. The rest of the units—most of which come from Britain's Army of the Rhine—are on four-month rotation tours.

Nearly every unit of the United Kingdom Land Forces and the Army of the Rhine, which forms the British NATO commitment, has served in Northern Ireland, most for several tours. Very few officers of the regular army have not served at least one tour here and some have served as many as five.

PIRA is the main enemy force and it is not large. There are probably not more than 100 hard-line activists in a batallion tactical area of responsibility (TAOR), and likely to be fewer in rural areas. But it is organized, disciplined and unrelenting. There is a high command, sometimes believed to be in Dublin, and at least two brigades. The Belfast brigade is known to have three battalions.

The basic unit is the company and in sparsely settled sections these will be separate, probably reporting directly to a brigade headquarters.

While the structure is there, the organizations are skeletal, generally having a staff that includes a commander, deputy-adjutant, intelligence, training, recruiting and armament (bomb) officers and paymasters. There may be a handful of privates in active-service status.

Scattered through a battalion or company area are pools of inactive or reserve members who may be called out as needed. These include women who act as lookouts and messengers, who are essential since PIRA rarely uses the public telephone system. There is a large network of couriers, the backbone of their communications system.

There exists also an organization of teenage boys known as the *Fianna*. Members are used for scouting and hijacking assignments and to steal the cars which are used as bomb carriers.

PIRA has no fixed headquarters but meets in houses and industrial buildings that are considered safe. Except in hot pursuit, the

army may not institute a house search without brigade headquarters' permission.

Training of PIRA members starts with a week of basic for recruits and extends to intensive specialized training that many key PIRA people undergo, sometimes in a school operated in a European or Middle Eastern country by one of the known international terrorist organizations. There are indications that specialists from those organizations have been smuggled into Northern Ireland to train PIRA members.

Like most guerrilla armies, PIRA has a hodgepodge of weapons in its arsenal, many of them purchased from foreign arms dealers, including, reportedly, some in the United States. The preferred rifle is the AR15 (the British use the NATO 7.62-mm rifle), but there are plenty of M1 carbines and Garards around and a few Russian and even Chinese weapons have been captured by the British.

In automatic weapons, the Sten 9-mm and the Thompson submachine gun are favored. PIRA is known to have a modest inventory of rocket launchers and mortars, some of which are manufactured in their own arsenals.

It is, however, in the manufacture of bombs and incendiaries and the necessary detonating devices that PIRA has shown its greatest sophistication.

A great deal more is known and heard about PIRA for a number of reasons, primarily because it is the aggressor force. The Protestant paramilitary organizations tend to be more defensive and engage more in retaliatory actions. The British Army is not *per se*, its enemy, but the Protestants are expected to defend against the army when it moves to capture its personnel or arms.

There are extremists on the Protestant side who would like to see the army withdraw and thus permit open civil war between the two factions on the theory that the Protestants, with twice the manpower, greater economic resources and wider citizen support, would win.

Although the enemy is the same throughout the province—PIRA and the Protestant terrorists—the army seeks him out and fights him on two different types of battlefields. In Belfast, Londonderry and other larger cities and towns, the battlefields are city streets and cluttered housing areas where the army must operate with great caution to avoid harm to the large crowds of citizens who are ever present.

In the rural areas of south and west Ulster, the army fights an enemy rarely seen, in forests, farmland, mountains and lakes. There are long and frustrating periods of surveillance for soldiers seeking to track down the bomber and smuggler.

The game out there is to outguess him—catch him in a surprise road block, spot him setting a culvert bomb and laying a command line for detonation and swoop down on him in a helicopter as he moves over the road transporting explosives or weapons.

In both environments, it is a war against the gunman, bomber and smuggler in which the enemy has the advantage. His tactic is to hit when and where he is least expected. The sniper will squeeze off no more than one or two shots and fade away, his escape route always previously plotted. Frequently, there are accomplices standing by to create diversions to throw off pursuers, and safe houses in which he is hidden.

The bomber has an even greater advantage. He is normally long gone by the time of the blast or, as some here feel, standing in the crowd at a safe distance, watching the results of his work.

The smuggler can pick his border-crossing point and his time, be it by land or water. There is no way to effectively seal off the nearly 300 miles of border with the manpower available.

At all cost, PIRA avoids becoming involved in firefights.

The "patch" patrolled by the 3rd Brigade is some 3,500 square miles. Although it is largely rural, there are several medium-size cities within its borders; thus, it has battalions deployed in both urban and rural environments. To control this relatively vast area, it has six regular and six UDR battalions.

Its critical operational area is currently the southern portion of Armagh County, which is strongly held by PIRA. It is a "no-go" sector where the army operates aggressively but not without caution, and does much of its patrolling by helicopter. Administrative road traffic is kept to a minimum and, where necessary, is by armored car. Supply of many of its units is almost exclusively by chopper.

PIRA fights to hold control in south Armagh because geographically the area suits its operations. A look at the map shows why. Monaghan County, across the border in the Irish Republic, juts northward well into Ulster, thus giving PIRA a short communications line from arsenals and training bases in southern Ireland into Belfast, the focal point of PIRA operations.

It has had reasonable success in securing its supply lines in the area, but only at great expense in personnel and material captured by army patrols.

In addition to land routes from the south, Armagh has access from the Irish Sea for the movement of weapons and ammunition that continue to reach here from other countries.

The problem in guarding the border is to find it, for it is impossible in many areas to know just where the boundary is between north and south. There are few distinguishing features such as mountains and rivers; it is vague, rambling and poorly marked, making it difficult for patrols which are as sensitive about crossing over as the Irish Republican government is to having them in its territory.

In addition to its border patrols, units of the 3rd Brigade also have responsibility for securing the main rail line between Belfast and Dublin. Trains using the rails have been subjected to bombing and sabotage.

In recent months, the border patrols have been strengthened by the assignment of a squadron of Britain's Special Air Service, an organization similar to the U.S. Special Forces.

The 3rd Brigade is also responsible for securing the perimeter of "The Maze," the maximum-security prison that houses some 1,200 convicted Catholic and Protestant activists. It has one company charged with that duty.

It is not there to keep the prisoners in, but to guard against attack by either Catholic or Protestant groups seeking to free the inmates, among whom are leaders of both factions.

Some 40 miles north of south Armagh is an urban "no-go" area—Andersonstown. A sprawling neighborhood in Belfast, it is almost wholly Catholic and is the headquarters and operating base of PIRA's Belfast brigade. It is also headquarters of the 1st Battalion, King's Own Royal Border Regiment, an element of the 39th Brigade based at Thiepval Barracks.

This is a "patch" where they wage a different kind of war.

As one young company commander on patrol said, pointing to a group of small children playing on the front lawns of a shabby housing development, "This is our battlefield—front lawns, backyards, school yards, parking lots and main streets."

"This is the kind of war," he added, "in which more innocent civilians are killed than soldiers and terrorists."

Andersonstown is without law enforcement; the Royal Ulster Constabulary is not strong enough to patrol there and comes in only when escorted by the army. The army does not attempt nor is it authorized to perform normal police duties. Thus, Andersonstown is something of a jungle where vandalism is taking its toll in an already depressed area.

Scrawled on the walls of deserted buildings and the sides of houses are slogans such as, "The Provs rule here." And there is little denying it.

Company commanders are responsible for their TAOR. Based on intelligence passed down from regimental headquarters or gathered by their own patrols or intelligence sections, they normally mount their own patrols and are allowed considerable latitude in operations.

Most of Andersonstown is the TAOR of Somme Company, 1st Battalion, King's Own Royal Border Regiment. It has a strength of 120 men to patrol an area of about a square mile in which live, mainly in multiple dwellings, about 20,000 people. It is one of the most critical areas in the province because here the army comes closest to confrontation with PIRA, but rarely engages him on that ground.

It is here that PIRA plans his moves against the army and Protestant targets which then are carried out in other areas, mainly in the city center. There are, however, occasional attacks on army patrols in the neighborhood, primarily intended to show the people that PIRA is there and free to operate at will.

But Somme Company is there, too, patrolling almost constantly to show the Queen's colors, to deny PIRA freedom of action. This it does with considerable success.

It is important to know your "patch"—the people who live and work there, their habits, their routines. If a suspected or known PIRA member leaves his house an hour earlier than usual or takes a different route from that he normally travels, the information is radioed to company headquarters. If a member is seen driving a car other than his own, he is stopped and the car inspected.

An increased milk delivery, drawn window shades or a housewife carrying what appears to be a larger-than-usual grocery bundle are reasons for increased surveillance. There are "safe" house in the neighborhood known to the military, but there are restrictions on house searches except in hot pursuit.

Although it is assumed army intelligence agents have, from time to time, infiltrated PIRA and extremist Protestant organizations, one battalion commander described Northern Ireland as an intelligence desert. Commanders are quick to admit that intelligence is hard to come by and that most of it is low-grade.

Company commanders and most of their men know the active terrorists in their TAORSs. They see them going about their daily routines and occasionally engage them in conversation. Bulletin boards in company intelligence sections are covered with pictures and descriptions of known activists.

In urban areas such as Andersonstown, most patrols are on foot. The British have developed patrol movements in which every man on patrol covers another and he in turn is covered. As one soldier commented, "We do a lot of walking backwards in Ireland."

Two foot patrols are normally covered by a mobile patrol in a Land Rover or armored car in urban areas and the reserve at company headquarters is rarely more than five minutes away.

Asked how he felt about this type of duty, a soldier responded, "I think I would be safer on a battlefield where I would have a pretty good idea where the enemy would be. He is behind a hedgerow, across the river or off in a tree line. Here you never know."

As the soldier ran a broken line across a

small park surrounded by three-story-high apartment buildings, he made the point that every one of the hundreds of windows looking down on the patrol was a possible sniper firing point.

In addition to patrols, vehicle checkpoints (VCP) are used frequently where there is traffic in and out of activist areas. Normally, a VCP is operated for not more than ten minutes to avoid traffic backups, crowd assembly and, specifically, callout of a sniper who could zero in on the soldiers.

A company commander stated, "We may not know where or when a terrorist is going to make a move, but we manage to keep him off balance by frequent sweeps and mobile checkpoint operations. And he never knows where or when we will make a move to check him."

Fighting the guerrilla in urban areas presents obstacles for the army which serve as advantages for the terrorists. Confinement and limited maneuver area are serious problems. Quickly gathering crowds, which may in some areas deliberately hamper soldiers by screening the getaway of the gunman or bomber, are problems. The need to limit reaction to avoid harm to civilians who may be in the area is especially restrictive and sometimes limits quick response.

Every soldier on coming here is impressed with the restraints under which he must operate and the fact that he is subject to civil law. Troops are issued yellow cards on which are printed the rules of engagement, describing actions they are permitted to take in specific situations and those that are not permitted.

"This is a soldier's war," Brigadier Martin Farndale, director of British Army public relations, made clear at a briefing at the Ministry of Defence in London before leaving for Northern Ireland.

"It is a war," he added, "in which we depend on the junior officers, non-coms and the soldier out on the point to make judgments they would not be expected to make in normal combat operations. They must make decisions in tense situations.

"Our patrols are small, especially in urban areas; situations develop quickly. Reaction must be fast. There isn't time to ask, 'What do I do now?' "

A battalion commander makes the point strongly, "This is not a shoot-to-kill war. It is not the kind of combat for which a soldier is basically trained to 'kill your enemy before he kills you.' ".

A brigade commander reminds his officers that the army is not here to cause bloodshed but to prevent it and that, he admits, makes it tough duty.

Soldiers must adjust to the restraints, be mindful that they are not on a normal battlefield or colonial frontier. They are in a war in which they man machine guns behind barricades which look over streets crowded with citizens of their own country.

A rifleman, crouched in a doorway or behind a mailbox, carefully scans a jammed sidewalk with no way of knowing if anyone out there is carrying a gun or a bomb, knowing most of them are not the enemy but a screen behind which the enemy hides.

The rules of engagement, one is quickly informed, are made by politicians, and within the framework of those rules, the army must go about its mission of routing out terrorists on both sides, destroying their units, depleting their arsenals and stopping the inflow of arms.

It is not an ideal situation in the view of most commanders, but one the army has come to understand as essential where there is warfare in communities in which the majority of people continue to go about their business and attempt to lead normal lives.

The shuttle of organizations back and forth from Germany and England to Northern Ireland undoubtedly is cause for trauma, and there are officers here who feel that the fourth-month tour should be restudied. It is a matter of concern to commanders of units drawn from the three armored divisions which make up the 1st British Corps of Britain's Army of the Rhine.

There is no question but that the drawdown reduces the readiness of the 1st Corps. Among other things, a unit may be getting ready for movement here, be here or be enroute back to Germany when it normally would be engaging in NATO exercises.

Also, commanders view assignment to Northern Ireland not as a four-month commitment but something longer; as long, some insist, as six months, allowing time for training, lay-up of vehicles to be left in Germany and other movement preparation.

The cycle reverses when an organization returns to Germany. Armored vehicles and artillery must be withdrawn from storage; tankers and gunners, who have been operating as infantrymen in Ulster, must be retrained and the organization reconditioned to perform its normal mission as part of a division.

The disadvantages of the British involvement here are to some degree offset by the fact that, of all the armies in the world, Britain's undoubtedly is the most thoroughly trained in anti-terrorist tactics and urban guerrilla warfare.

With the exception of the problem of family separation, morale here—although there certainly is plenty to gripe about—appears to be high. And that is to the credit of army leadership, for living conditions are poor, at least for troops in the urban area. Soldiers live in burned-out hotels, abandoned factories and prefab huts.

In urban areas, again, the duty day may extend from 0500 to midnight. There is a minimum of recreation, especially for those troops in areas where they dare not go off post except into secured zones, which are not always close at hand.

Army statistics reveal some interesting characteristics of the operations here:

There have been, since the start of the troubles in 1969, 1,644 persons killed, the greater number—1,240—civilians. Civilian, in this instance, includes Catholic and Protestant terrorists, but in that category, the far greater number must be assumed to be innocent victims.

The army has lost 256 killed and 2,800 wounded. The figure does not include 61 members of the UDR and 88 members of the Royal Ulster Constabulary.

The figures for 1976 (through August) show that there have been 1,327 shootings, 550 bombings; 18 Catholics have been assassinated and 28 Protestants. The army has lost ten killed and 94 wounded. Thirteen persons described as terrorists have been killed.

It is interesting to note that the UDR lost eight killed and only 12 wounded. These figures are in addition to the army casualties and would appear to indicate that members of the UDR are special targets for PIRA.

In weapons and ammunition captured, army records show a total of 265 machine guns, 5,118 rifles and pistols, 16 rocket launchers, 49 mortars, 783 mortar rounds, nearly a million rounds of ammunition and nearly a quarter-million bombs and parcels of raw explosives.

Army officials estimate that currently there are about 929 Catholic terrorists and 504 Protestant terrorists out of action by virtue of arrest and incarceration in Maze Prison.

The British force here is considered adequate to hold the line against the terrorist organizations and sufficiently large and effective to make it impossible for the situation to escalate to open warfare, if that were the intent of the terrorists.

It is not sufficiently large to gain its objective, which is the same as that of any army in any war: to destroy the enemy.

It is thinly spread over a large area and compelled to operate under what almost any commander would consider to be necessary but restrictive rules of engagement.

The government in Whitehall understands this and, at present, settles for what the army can reasonably be expected to do under the existing conditions. And, to a degree, so do most of the citizens of Northern Ireland.

Mr. ZEFERETTI. Mr. Speaker, freedom is a word we all know and use with familiar frequency. We know what we mean when we say "freedom," but are we always so certain of what the other fellow perceives in the same word?

In 1870 Otto von Bismarck, in promulgating the formation of the Second Reich in Germany, commented that now at last they—the Germans—were free. This sounds strange indeed when one considers that Germany had been liberated from Napolean's rule some 55 years earlier. Yet to Bismarck the Germans were not truly free until their country was reunited.

In this country, a full century after emancipation and the 13th amendment we heard numbers of our citizens crying out for "Freedom now!" Webster's "Third New International Dictionary" gives no fewer than 18 different usages of the word freedom.

Clearly then, when dealing with the word or concept of "freedom" we must understand how this very common term is perceived by others if we are to accurately appreciate its meaning and usage when we are confronted by it. This is an essential guide in the formulation of our own policies.

There is a peculiarly Celtic, Irish approach to the concept of freedom. It is not enough to recognize that the Irish have been in the forefront of the battle whenever the United States have fought in the defense of freedom. We must also recognize the centuries-old struggle for Irish freedom as a unique and special case.

The cause of Irish freedom has been a recurrent political issue in this century. Wars have been, and continue to be, fought in its name. It is important that the Members of this House, and of our Government generally, understand the traditional Irish nationalist meaning and definition of the word "freedom" if we are to deal intelligently with the problems caused by the "troubles" in the tragic land of Ireland today.

I therefore commend to your consideration a speech delivered by Liam Murphy, currently editor of the National Hibernian Digest, at the annual Wolfe Tone Commemoration in San Francisco, Calif., on June 19, 1976. It is entitled, "Keeping Faith With Tone."

On many previous occasions I have recommended to the Congress the importance of respecting the right of the Irish to national self-determination. Most recently I have introduced House Concurrent Resolution 143 on March 8; I cannot emphasize enough the importance of holding congressional hearings on the Irish question in order that our Government might be able to formulate a new Irish policy which will not be counterproductive to the cause of peace, justice, and human rights. It is my conviction that the Irish ought to have the same opportunity which we enjoyed in

1787 of sitting down to write a new constitution in an all-Ireland convention, free of foreign lot or hinderance. Only after a declaration of intent by the British Government to be quit of Ireland by a fixed date can we expect all parties in Ireland to turn from past antagonisms and face the future for the building of a new Ireland, congenial to the needs and and character of the Irish nation. This address, "Keeping Faith With Tone," illuminates the depth and character of the irrepressible cause of Irish freedom:

KEEPING FAITH WITH TONE

"Is marig de ghni go holc agus bhios bocht ina dhaidh," says the Irish proverb. "Woe to him that doeth evil and is poor after it." The men who have led Ireland for fifty years under the treaty have done evil, and they are bankrupt. They are bankrupt in policy, bankrupt in credit, bankrupt now even in words. They have nothing to propose to Ireland, no way of wisdom, no counel of courage. When they speak they speak only untruth and blasphemy. Their utterances are no longer the utterances of men. They are the mumblings and gitterings of lost souls.

One finds oneself wondering what sin these men may have been guilty of that so great a shame come upon them. Is it that they are punished with loss of manhood because in their youth they committed a crime against manhood? . . . Do the ghosts of Parnell and the Men of 1916 hunt them to their damnation?

Even had the men themselves been less base, their failure would have been inevitable. When one thinks over the matter for a little one sees that they have built upon an untruth. They have conceived of nationality as a material thing, whereas it is a spiritual thing. They have made the same mistake a man would make if he were to forget that he has an immortal soul. They have not recognized in their people the image and likeness of God. Hence, the nation to them is not all holy, a thing inviolate and inviolable, a thing that a man dare not sell or dishonor on pain of eternal perdition. They have thought of nationality as a thing to be negotiated about as men negotiate about a tariff or about a trade route, rather than as an immediate jewel to be preserved at all peril, a thing so sacred that it may not be brought into the market place at all or spoken of where men traffic.

He who builds on lives rears on lies. The untruth that nationality is corporal, a thing defined by statutes and guaranteed by mutual interests, is at the base of the untruth that freedom, which is the condition of a hale nationality, is a status to be conceded rather than a glory to be achieved; and of the other untruth that it can ever be lawful in the interest of empire, in the interest of wealth, in the interest of quiet living, to forego the right to freedom. The contrary is the truth, Freedom, being a spiritual necessity, transcends all corporal necessities, and when freedom is being considered interests should not be spoken of. Or, if the terms of the countinghouse be the ones that are best understood, let us put it that it is in the highest interest of a nation to be free.

Like a divine religion, national freedom bears the marks of unity, of sanctity, of catholicity, of apostolic succession. Of unity, for it contemplates the nation as one; of sanctity, for it is holy in itself and in those who serve it; of catholicity, for it embraces all the men and women of the nation; of apostolic succession, for it, or the aspiration after is, passed down from generation to generation from the nation's fathers. A nation's fundamental idea of freedom is not affected by the accidents of time and circumstances. It does not vary with the centuries, or with the comings and goings of men or empires. The substance of truth does not change, nor does the substance of freedom. Yesterday's definition of both the one and the other is to-day's definition and will be tomorrow's. As the body of truth which a true church teaches can neither be increased nor diminished—though truths implicit in the first definition may be made explicit in later definitions—so a truth definition of freedom remains constant; it cannot be added to or subtracted from or varied in its essentials, though things implicit in it may be made explicit by a later definition. If the definition can be varied in its essentials, or added to, or subtracted from, it was not a true definition in the first instance.

To be concrete, if we today are fighting for something either greater than or less than the thing our fathers fought for, either our fathers did not fight for freedom at all, or we are not fighting for freedom. If I do not hold the faith of Tone, and if Tone was not a heretic, then I am. If Tone said 'BREAK the connection with England,' and if I say 'MAINTAIN the connection with England,' I may be preaching a saner (as I am certainly preaching a safer) gospel than his, but I am obviously not preaching the same gospel.

Now what Tone taught, and Pearse and the other fathers of our national faith before and after Tone, is ascertainable. It stands recorded. It has fullness, it has clarity, the sufficiency and the definiteness of dogma. It lives in great and memorable phrases, a grandiose national faith. They, too, have their Credo.

The Irish mind is the clearest mind that has ever applied itself to the consideration of nationality and of national freedom. A chance phrase of Keating's might almost stand as a definition. He spoke of Ireland as 'domhan beag innti fein', a little world in herself. It was characteristic of Irish-speaking men that when they thought of the Irish nation they thought less of its outer forms and pomps than of the inner thing which was its soul. They recognized that the Irish life was the thing that mattered, and that, the Irish life dead, the Irish nation was dead. But they recognized that freedom was the essential condition of a vigorous Irish life. And for freedom they raised their ranns; for freedom they stood in battle through bloody centuries.

Irish nationality is an ancient spiritual tradition, one of the oldest and most august traditions in the world. Politically, Ireland's claim has been for freedom in order to preserve the full and perpetual life of that tradition. The generations of Ireland have gone into battle for no other thing. To the Irish mind for more than a thousand years of freedom has had but one definition. It has meant not a limited freedom, a freedom conditioned by the interests of another nation, a freedom compatible with the suzerain authority of a foreign parliament, but absolute freedom, the sovereign control of Irish destinies. It has meant not the freedom of a class, but the freedom of a people. It has meant not the freedom of a geographical fragment of Ireland, but the freedom of all Ireland, of every sod of Ireland.

The Cause of Irish Freedom, Irish Separatism, and its modern expression, Irish Republicanism, is ultimately a legitimist political movement, but contemporary political theory has not criteria for dealing with legitimacy. Legitimacy reaches to something far deeper than doctrine: it reaches to being. A son is the son of his father, and his own father inherited before him. These truths of being are prior to every legality, prior to all doctrine: they are simply one with the agathonic structure of Existence. Legitimacy is normalcy. When the political order is truly normal, it reflects the principle of legitimacy.

Keeping faith with Tone is the Irish definition of legitimacy. This is the Fenian Faith.

The principle of legitimacy is implicit in the position of the "Provisional" Irish Republican Army (the IRA); as such it is an important factor in the residual of popular support which always exists for the Irish Republican Movement. Regarding Wolfe Tone and the United Irishmen of 1798 as the Phoenix-like regeneration of that Irish national spirit which has never accepted foreign domination, we then trace Republican "apostolic succession" through Robert Emmett, the '48 men and the Fenians to Tom Clarke, Patrick Pearse and the 1916 Eastern Rising.

The Irish Republic, which was proclaimed in arms in the blood sacrifice of Easter 1916 "In the name of God and of the dead generations from which she receives her old traditions of nationhood . . . ," was ratified by the Irish electorate in the 1918 General Election and established *dé jure* by the Declaration of Independence of the First Dáil Éireann in 1919. The First Dáil was succeeded by the Second Dáil Éireann; the Third Dáil Éireann never met, so the mantle of legitimacy remained with the Second Dáil until it dissolved itself in 1939 returning the mantle of Irish Republican legitimacy to the Army Council of the IRA, from whom the First Dáil Éireann had received it as a consequence of their oath of allegiance to the Irish Republic proclaimed in 1916. The essential thing about this Irish Republican legitimacy is that it is a legitimacy of principle rather than of person. How else could Pearse, the son of an Englishman, become the patron saint of twentieth century Irish Republicanism, except by keeping faith with Tone—becoming, in himself, the personification of the traditional Irish heroic ideals of Cú Chulainn, of Saint Patrick, and of Christ himself. Today's legitimate successors of Pearse and the Provisional Government of 1916 are those who most faithfully adhere to their ideals, namely the "Provisional" IRA. Not only through succession, but also through their idealism are the "Provos" a *legitimist* political movement. Daithi Ó Conaill is the personification of that Gaelic ideal today.

The Dublin government of the 26 counties at Leinster House is the lineal descendant of that Dublin government of the Irish Free State established in accordance with the British Government of Ireland Act of 1920. Its heritage therefore is that of a government constituted by foreigners to rule Ireland in the interests of England, a pedigree it shared with the Stormont government in Belfast. Whatever practicality and de facto acceptability the Dublin government may have, and however it may have mutated over the years, the fact remains that the Irish Republican movement can never regard as legitimate any government of Ireland which does not exemplify in deed as well as in word the principles of Wolfe Tone, Patrick Pearse and the 1916 Easter Rising.

We the diaspora of the Irish nation living in America have a dual responsibility: not only to the traditions of our race and blood, but also to the citizenship of our adopted home. We are most fortunate to be living under the Constitution and Flag of the United States. It should be easier than ever to understand, in this bi-centennial year of America's freedom, the true meaning of Robert Emmett's statement that we desire to procure for Ireland "the guarantee which Washington procured for America; . . . not to receive new taskmasters, but to expel old tyrants."

In the struggle to once and for all drive the red flag of England from all of Ireland we recall and heed the words of our late President, John Fitzgerald Kennedy: we

pledge that in Ireland "one form of colonial control shall not have passed away merely to be replaced by a far greater iron tyranny." It is not to be expected that an independent Ireland shall always support the policy of the United States. "But," as President Kennedy said in his inaugural, "we shall always hope to find them strongly supporting their own freedom—".

The support of this freedom, this keeping faith with Tone, is our duty. We need Ireland to be Irish, sovereign and free, as the untainted well-spring of our Celtic culture where we can from time to time refresh ourselves and enrich American life in the same act. (Nor should we forget the legitimate aspirations for national freedom of our brother Celts in Wales, Scotland, Cornwall, the Isle of Mann and Brittany.) In the interests of world peace and the security of the North Atlantic, the United States also needs a free Ireland, whether our political leaders realize it or not. It is our task and duty as American citizens to educate them to this realization; and, through our system of free elections, to replace those who will not be enlightened.

Responsible political action is another way of keeping faith with Tone. To the extent that we are successful in influencing the policy of the United States government, to that extent we will hasten the dawning of a new day of peace for Ireland, while simultaneously brightening the lustre of the honor of these United States, conceived in revolution two centuries ago.

"Ireland unfree, shall never be at peace." This is the fact of history which all must come to recognize. Our task—Keeping Faith With Tone.

Mr. CONTE. Mr. Speaker, nearly 1 year ago, I called for immediate congressional hearings into possible American involvement in the tragic conflict in Northern Ireland.

Apparently, the situation there has not changed—it may well have worsened. Charges that our Government is involved grow stronger every day. I would like to recite some allegations that have been made to me and which obviously concern me.

In recent months, U.S. Customs agents were sent to Belfast to work with Scotland Yard.

Selected Irish, men and women, have had their U.S. visas revoked or denied.

An Irish-American newspaper has been sued by our Department of Justice and, most recently, an Irish-American organization, Irish Northern Aid Committee, has received a similar suit.

I cannot say whether these alleged actions by our Government are helpful, or even necessary. They most certainly are unprecedented in the Irish-American community and that community is very upset. But, we are unable to make a judgment because we do not know the facts.

Perhaps if my call for hearings had been heeded a year ago, these situations could have been avoided. Perhaps we would now be in a position to help that beleaguered country in a positive way.

Our counterparts in the English and Irish Governments come here regularly to air their views and I appreciate having the opportunity to hear them. What bothers me—and bothers my constituents—is the fact that our own citizens have not been afforded the same opportunity to come before the appropriate committee of Congress and tell their side of the story. I think they are entitled to that opportunity.

It is still not too late. I urge my colleagues to join with me in supporting open hearings in the Congress to determine if our Government is involved in that conflict and, if so, the extent and direction of that involvement.

Mr. ROSENTHAL. Mr. Speaker, I appreciate the opportunity afforded me by my colleagues to address the question of human rights and peace in Northern Ireland.

Tomorrow will be a day of celebration and merrymaking for millions of Americans honoring the patron saint of Ireland, Saint Patrick. But on that troubled and bloodied island, March 17 will mark only another day in a nation bitterly divided and at war.

For the friends and relatives of thousands of political prisoners in Northern Ireland, the American celebration of the Irish spirit will be viewed with a certain cynicism. While President Carter has forcefully spoken out on human rights for the citizens of countries on every continent, the tragic plight of the people in Northern Ireland has been acknowledged only with official silence.

Several weeks ago, Great Britain admitted before the European Court of Human Rights it had tortured detainees in Northern Ireland. In making this unique admission the British said the torture techniques were stopped in 1972 and would never be used again.

Much as we are saddened by Britain's shame, we cannot leave the serious subject of human rights in Northern Ireland at rest. At the same time, our concern for human rights cannot be divorced from the equally important and related concern for a just end to the political occupation of Northern Ireland. It is this outside control of political, economic and social life in Ulster that sets the stage for such abuses.

A rallying cry in strife-torn Ireland long has been "Ireland unfree will never be at peace." There is much truth to these universally applicable words and much truth that is familiar to our own history. Yet the American Government traditionally has maintained a distance from the internal tragedy of Northern Ireland.

Five years ago, the Subcommittee on Europe of the Committee on Foreign Affairs held hearings, which I chaired, to highlight this country's concern for human freedom and justice for the people of Ireland.

The justification for our involvement has not changed in the intervening years. At the outset of the 1972 hearings I said, "The burdens of finding solutions to these problems rests primarily on the countries involved. Yet no man of conscience can rest easy with that assertion and no country can subsist any longer behind the fiction that the nation-state system demands or even allows that injustices can continue simply because they occur wholly within national borders."

The time is here to work to end the political stalemate over Northern Ireland by offering diplomatic help and mobilizing the peacekeeping and arbitration machinery of the United Nations.

I would like to direct my colleagues to an excellent and thought-provoking article by Dublin journalist Ulick O'Connor that appeared in the Washington Post of March 13. Mr. O'Connor proposes negotiated independence for Northern Ireland. The concept relies heavily on the responsibility of the warring factions to settle their differences without the presence of what they consider an oppressive force.

I submit Mr. O'Connor's piece for the RECORD for its interesting approach to the tragic situation in Northern Ireland:

POINT OF VIEW

(By Ulick O'Connor)

Northern Ireland has become Britain's Vietnam. Fourteen thousand British troops are at war with a highly skilled guerrilla army. In five years of war, more than 1,600 people have been killed. Almost every day there is a bombing or a shooting.

Is there any solution?

In January, 1974, there seemed hope. A cabinet was created with a majority of Protestants, but with Catholics in key positions. But this was not acceptable to a large section of the Protestant community; a well-organized strike coerced Britain into abolishing that cabinet and governing Northern Ireland directly from Westminster. There have been no initiatives for two years.

In recent months, however, there has been growing support for a new idea, the concept of negotiated independence for Northern Ireland, an independent Ulster. The advantage is this: in order to succeed, the formula would require concessions from all sides.

The Protestant community would have to give up the idea of the British connection. The Catholics would have to put the idea of Ulster nationalism before their aspirations to an all-Ireland republic. The Irish government in Dublin would be asked to remove from its constitution the articles claiming sovereignty over the whole of Ireland. Both Irish and British governments would be required to guarantee the borders of the new state.

If the British were to withdraw, a peacekeeping force would be necessary for a period. This could come from the United Nations or the European Economic Community. Either would seem to be acceptable to the two main paramilitary forces, the Ulster Volunteer Force (Protestant) and the Irish Republican Army (Catholic).

The independent Ulster formula has received strong support from significant sections of both communities. The Ulster Loyalist (Protestant) Central Coordinating Committee has published a policy document supporting it. Paddy Devlin, one of the leaders of a major Catholic party and one-time IRA internee, has come out strongly for the idea.

Devlin admits a current 13 per cent gap between revenue and expenditure in Northern Ireland. But with tax revenue going to an Ulster rather than to a British treasury, he says, "An independent Ulster would be able to expand her markets much more than she can at present, imprisoned as she is within the [British] economy."

Britain would no longer have to pay massive sums in compensation for bombed houses and business premises and for civilians killed in the conflict. And there is hope that, because of both communities' close ties with America, some U.S. help could be expected in building the new Ulster.

What would prevent the Protestants from going to war against the Catholics once the British are gone?

Those favoring an independent Ulster believe that the main cause of the killings has been the British presence. Ulster is the last colony of the British Empire. Protestant exploitation of the Catholic minority has, until now, been sustained by British rule.

If Britain were to declare an unalterable intention to withdraw, the Protestant community would have to reconsider its position. One prominent Protestant told me:

"At least some of the Protestant military leaders know that, if Britain gets out, their only chance of survival on the whole island of Ireland is to act responsibly. In an all-Ireland military confrontation the Protestants could not win. If they declared war on the Northern Catholics, the Irish army in the Republic would have to intervene and there would be support in the North for the Irish army from the IRA."

A document entitled "Ulster Unfettered Free," supported by a number of the Protestant paramilitary leaders, said this:

"Now is the time to negotiate our Independence. Would this stop the terrorist bombing campaigns which have been recurring regularly over the years by the IRA? The IRA have repeatedly said, 'Our fight is with the British, not with Ulstermen.' On the basis of this is it not possible that, if Ulster receives its Independence and is governed by Ulstermen, the Nationalist Republican argument is negated?"

How would the two paramilitary bodies, Protestant and Catholic, be accommodated in the new Ulster? Both sides have a number of effective leaders. If they declare their allegiance to the new state, they can be absorbed into a new security force. No one knows better how to deal with recalcitrant members of their own forces than the guerrilla leaders themselves. They have had to keep discipline in the field. In peacetime they will know who are the psychopaths and who can be employed usefully in working with the state.

Another guarantee for the minority would be economic assistance from Britain and the United States. For this presumably would be conditional on the introduction and implementation of a Bill of Rights.

What is the difference between a United Nations peacekeeping force and a British force? The answer is that to the minority the British army represents the forces of oppression. Even to the Protestant community the army no longer represents an acceptance peacekeeping force.

A British statement of intent to withdraw within a fixed period would have a powerful effect in inducing the IRA to cease operations. It would also help turn the two communities toward consideration of an independent Ulster.

A real difficulty is that the surrender of the Protestants' old position means giving up privilege. No matter how poor the Ulster Protestant was, he always knew that he was better off than the Catholic. The jobs, even when they were few, went to him and his. The Queen's picture in his shabby hallway was his passport to preference. But in an independent Ulster without British support, privilege could wither as quickly as segregation has in the American South.

What is important at present is that there is a growing grassroots acceptance of the idea of a shared community. The Protestant is becoming aware of how little he has in common with Englishmen and how much closer he is in temperament to his Catholic fellow Ulsterman. The Catholic community is coming more and more to see that it has in common with the Protestant qualities of shrewdness, reliability and industry which are not as marked in the easy-going South.

If Britain moves out and an Ulster state is formed, It would mean two republics in the island of Ireland. But the curse of colonialism would have been laid. With Britain out, emerging new structures could lead to the establishment of a federal system such as happened 200 years ago in the first colony to break with the British connection.

Mr. BOLAND. Mr. Speaker, we are all acutely aware of the continued suffering in Northern Ireland. One thing is painfully clear in the long conflict there; the real victims are the Irish culture and the Irish people. It is also clear that the solution to a problem that is hundreds of years old will not be an easy one.

I believe the Members of this House can best approach this dispute with open minds and a willingness to listen to all points of view. Hearings on the situation in Northern Ireland have been proposed by House Resolution 88. As a cosponsor of this resolution, I believe this is the best way for the Congress to listen and become informed of the current situation there.

Mr. Speaker, I decided to participate in this special order because I believe the first step on the road to healing the wounds of Northern Ireland is by listening. Perhaps our consideration of the conflict will lead to new suggestions for peace. I am uncertain as to what role there is for the United States to play in Northern Ireland, but if there is a clearly positive role we could play, I would support it. The best hope for the Irish people is for a lowering of voices, a laying aside of weapons and a time for careful consideration of their common needs as a united country. Only then will peace return to that beautiful land.

Mr. DRINAN. Mr. Speaker, at a time when concern for human rights has finally become an important part of our foreign policy, the infringements upon fundamental human rights occurring in Northern Ireland continue to go largely unnoticed.

The Irish people are largely peaceloving and desire nothing more than an end to the terrible scourge of violence and hatred which has beset their land for far too many years. We in the United States, and indeed all over the world, must realize that only a few radical terrorists are behind the bombings which kill and maim innocent men, women, and children.

History has taught us that the foreign policy of the United States is best served when we hold true to the principles that we cherish and when we attempt to live up to those principles. We therefore must vigorously protest the violation of human rights. It is a policy intended to relieve the present harsh conditions existing within Northern Ireland and elsewhere.

It is a policy that must be applied evenhandedly to our allies as well as to our adversaries.

Great Britain, a nation which cherishes its traditions of tolerance and liberalism, continues to infringe upon the basic human rights of Catholics in Northern Ireland in response to the crimes of a small band of terrorists. Great Britain must seek majority rule in Ireland with the same determination as in Rhodesia. Britain must cease at once the internment and torture of the Catholic minority in Northern Ireland.

It saddens me to state that it seems clear that Great Britain still seeks a military solution to a political problem. In 1973 Parliament passed the Northern Ireland Emergency Provisions Act and in 1975 additional amendments were added which enlarged the authority of British security forces to stop and question individuals, expanded search and seizure practices, made it an offense to recruit members for certain proscribed organizations, and outlawed the collection of information deemed likely to be useful to terrorists.

In August, 1976, the European Human Rights Commission found the British to be guilty of violating article 3 of the European Human Rights Convention, which forbids torture or inhuman or degrading treatment as punishment. The British have carried out such deplorable actions as setting up a "torture school" to train police and army personnel in torture techniques. They have established dreadful internment camps for the alleged purpose of ending violence, whereas, in fact, their very existence has aggravated an already deteriorating situation. Internment without trial today remains in the statute books and the notorious Long Kesh camp, scene of many horrifying and inhumane activities, still contains Irish prisoners.

It is clear that the use or threatened use of force has not ended the political divisions, discrimination, and violence which plagues Northern Ireland. Although the burden of finding solutions to the problems in Northern Ireland rests ultimately upon the parties directly involved, it is our duty to do all we can to end the violations of the human rights of the Catholic minority in Northern Ireland. It is also our obligation to publicize and discuss these human rights violations in appropriate international forums.

Prof. Norman Gibson, commenting recently on the needs of Irish society, said:

If peace in Ireland is to mean anything, it must include the total rejection of violence and the threat of violence.

These words need to be heeded by all who cherish basic human rights and the dignity of man.

Mr. VENTO. Mr. Speaker, it is tragic that while St. Patrick's Day is a day of celebration for millions of Irish-Americans, it is just another day of fear, suffering and death for the citizens of Northern Ireland.

The violence which has beset the citizens of this portion of the United Kingdom since 1969 should not surprise anyone. It is the logical culmination of a history filled with prejudice, discrimination and hatred. Today these feelings still affect the lives of everyone in Northern Ireland. No one is safe on the streets and a citizen's basic rights of work, education and housing are still restricted by his religion.

A cessation of violence is not the solution of the problem. The people of Ireland must move to eradicate the centuries-old hatreds and must deal with the serious human rights questions which have arisen. The promise of freedom held so high and bright by the British has been tarnished by the continuing events in Northern Ireland.

The United States has long suffered

through the evils of prejudice and discrimination and has begun to combat these curses of mankind. It is my hope that Northern Ireland and all the world can learn and benefit from our experiences and that prejudice, and discrimination will be eventually banished from the world.

My hope and that of this country is that the problems of Northern Ireland will be effectively solved in the near future. Our comments today are not idle words designed to satisfy the ethnic constituencies that we represent but are a recognition of a serious problem that we feel compelled to address and represent our effort to extend whatever help we can to resolve the conflict.

Mr. MURPHY of New York. Mr. Speaker, in the few minutes we have today we cannot solve the problems of Ulster. Men and women have been trying to accomplish this since the outbreak of violence 8 years ago. We, as Members of the U.S. House of Representatives, can go on record as abhorring the recent confirmations of torture of prisoners by British troops in Northern Ireland and express our concern and support for an end to the unrest that has been eating away at this small province.

In February of this year Great Britain confirmed before the European Court of Human Rights that its forces in Northern Ireland have used five methods of torture on prisoners. These consisted of hooding the prisoner, harassing him with noise, putting him on a bread and water diet, depriving him of sleep, and making him lean for long periods of time off balance, with arms outstretched, against a wall. The British Government must be condemned for this contemptible behavior which has been carried out to unknown dimensions since the initiation of internment without trial in August of 1971.

The violence in Northern Ireland is in itself far too destructive. There is no need for additional uncalled for actions by the peacekeeping force. Torture, harassment, and other violations of human rights only serve to spur the sides in the conflict to a greater resolve not to relax their activities, and if anything, provoke more gruesome and grisly retaliation.

Civil liberties have been restricted in Northern Ireland for much of the 8 years of conflict, but just as the violence has not been contained in the province, this cancer has now spilled over the boundaries of Ulster. In September of last year, a state of emergency was declared on the Emerald Isle. Police powers have been increased and certain restrictions have been put on freedom of the press and of speech.

Possibly the only bright spot seen in Ulster for many years is the formation of the Peace People, formerly known as the Irish Women's Peace Movement. But this again was spurred by a senseless tragedy which resulted in the death of three young children and the serious injury of their mother. The aunt of the children, Mairead Corrigan and a neighbor who witnessed the accident, Betty Williams, were so outraged that they formed the peace movement. At first only women, both Catholic and Protestant, were sought out, but as the movement progressed, supporters of both sexes joined, bonded by a belief that the violence must end and that the people of Northern Ireland should begin the rebuilding of their land.

Since the incident, which occurred on August 10, 1976, the Peace People have drawn over 200,000 indications of support, staged numerous peace marches and rallies, and have traveled extensively to build international support for their cause. The two leaders, Ms. Williams and Ms. Corrigan, understood from the beginning that they would be fighting an uphill battle, and possibly endangering the lives of themselves, their friends, and their loved ones. But they have persisted in spite of bodily attacks, threats, and slander. They have continued to spearhead a movement toward peace. These women deserve recognition, and I have, as have many of my colleagues, sponsored a resolution applauding these two brave women.

Another significant development for the future of Northern Ireland is a report entitled "Violence in Ireland" prepared by a working group of Roman Catholics and the Irish Council of Churches which is composed of Anglicans, Presbyterians, Methodists and the Society of Friends. In this report for the first time Catholics and Protestants have agreed upon a number of significant issues, notably the origins of the violence and an opposition to the activities of paramilitary groups. As the problems of Northern Ireland revolve around and are fed by religious differences, it is imperative that this type of cooperation continue if an end to the violence is ever to be contemplated.

The toll of the violence in Northern Ireland has been high. Over 1,400 people have been killed since 1968, approximately 20,000 injured and maimed, over 6,000 explosions reported and shooting incidents which are too numerous to estimate. But the toll of the last 8 years, while heavy in the loss of human life and the destruction of property, has also weighed heavy upon the living. Many residents live day after day in fear of their lives if they even step out of their homes onto the street. It is this type of fear which causes the Northern Irish to refuse to give out their addresses except to those whom they know well, to ignore questions as to their religious affiliation, and to abstain from any activity which would cause them to leave their homes after dusk.

There are children in Northern Ireland who have never known anything other than terror. There are young men and women who have had their carefree years stripped from them and who will enter adulthood as hardened, tired people. There are other young people who, when the first civil rights marches began 8 years ago, were encouraged to throw rocks at the British troops and those members of the opposition. Today these young people are throwing bombs and carrying rifles.

A solution to the Irish question will not be found as long as Irishman is killing Irishman and as long as Americans and other groups continue their financial support to organizations supplying arms and explosives to both factions. There will never be a solution as long as violence persists.

What has transpired since 1968 can never be forgotten or in many cases forgiven by those who have lived through it. However, we as world citizens concerned for the well-being of our brothers, and as members of the legislative body of this country, must make our feelings known. We must support with our words, our actions and our prayers a swift resolution of the strife in Northern Ireland. The citizens of Ulster, both Catholic and Protestant, must soon return to the business of living, rather than living with dying.

Mr. DOWNEY. Mr. Speaker, I rise today to bring to the attention of my colleagues in the House of Representatives the systematic violations of human rights in Northern Ireland. This is a matter which deserves our most serious consideration not only because it involves questions of human freedom but because it is being closely watched by millions of Americans of Irish descent. These citizens, and I am one, have been deeply torn as they have witnessed the dramatic erosion of fundamental freedoms in the home of their ancestors.

The issue of human rights is a salient one—already President Carter has expressed official concern over the issue of freedom in many countries. But despite the new administration's concern over events in Africa, Asia, and in the Soviet Union, little concern has been shown toward the innocent men, women, and children who have unduly suffered at the hands of western governments.

This American "cloak of silence" is all the more tragic in light of the recent disclosure before the European Court of Human Rights in which Great Britain confessed that she has carried out systematic torture of human beings in Northern Ireland.

Mr. Speaker, while Britain has indicated that these activities have been halted and will not resume, we, as American citizens whose fundamental freedoms are based heavily upon British tradition, cannot help but wonder whether our failure to recognize these atrocities and take the appropriate action against them has resulted in the needless suffering of hundreds of people.

I think that all of us have heard the rumors of British torture. Yet we failed miserably to focus world interest on the actions of Great Britain despite the fact that millions of Irish Americans warned us of the consequences. True, the atrocities have been exposed, but our silence can only remain a very dark mark upon our history.

We can remain silent no longer. Clearly turning a blind eye toward the atrocities committed by our allies is not the kind of action that can be condoned by the citizens of a country founded on the principles of individual freedom.

The United States can and should accept its world leadership role in the issue of human rights. We are not powerless to halt the acts of torture and repression of other governments. Moreover, we can, by positive and forthright action,

serve as a catalyst for focusing the attention of the world upon the criminal actions of governments in the hope that we can set the forces of freedom and peace in motion.

Mr. KOCH. Mr. Speaker, I am delighted to join my colleagues as we commemorate St. Patrick's Day with our expressions of concern and those of many Americans for the health and safety of friends and relatives in Northern Ireland.

For 7 years, Northern Ireland has suffered under a virtual seige of violence that has shocked the civilized world. The perpetrators of this violence—regardless of their political motivation—deserve universal condemnation, both because of the injury they cause to society and because of the repression they invite. Yet even though I condemn the wanton killing, bombing, and other violence that has been unleashed by zealots at both extremes of the Irish political spectrum, I believe that the public authorities in Northern Ireland who are trying to maintain order must be held to the same standards of fair police conduct as we expect from any civilized nation. The treatment of individuals arrested for engaging in violent acts, including the senseless killing of civilian bystanders is a stringent test of a civilized society's ability to maintain values of decency; in the face of continued violence in Northern Ireland, Great Britain appears to have failed the test.

As one who has championed basic human rights for the citizens of all countries of the world, I was particularly distressed to learn that the Government of Great Britain, one of our oldest and closest allies, was found guilty last year of using torture in interrogating internees in Northern Ireland.

The evidence against Great Britain was compiled by the European Commission of Human Rights in an action brought by the Government of Ireland. British authorities in Northern Ireland were found guilty of official tolerance of torture and inhumane treatment of 14 internees in the months after the introduction of internment without trial in August of 1971. The five techniques of "interrogation in depth" which constituted torture included: hooding prisoners, harassing them with noise, putting them on a bread and water diet, depriving them of sleep, and making them lean against a wall for long periods, off balance with arms outstretched.

Such practices may have been commonplace in centuries past or in cultures less sensitive than our own to the need for fair treatment of prisoners, but to learn that such techniques were used by guards and condoned by officials of a government allied with ours both politically and culturally and from which we have inherited our legal system is a painful disappointment.

Newspaper reports of the commission hearings which were held in France, Norway, and London also indicated that the British Government was uncooperative during the investigation of the charges, instructing its witnesses not to reply to questions about interrogation techniques.

Many times in the past I have condemned the use of torture and the wanton violation of basic human rights by oppressive regimes in Latin America and Asia. It would be hypocritical to ignore a proven case of similar behavior by a European democracy.

Perhaps we can find some hope in the latest chapter of this shameful history. The government of Great Britain last month officially conceded at hearings before the European Court of Human Rights that it had used torture on internees. The attorney general in the current British Government, Sam Silkin, said the torture practices were halted in 1972 and compensation had been paid to those who had suffered. The British Government has also promised never to engage in such practices again.

If there is a bright spot to this tragic story, it may well be the fact that an impartial, international organization was able to investigate charges of torture and that a government found guilty of such charges officially acknowledged its responsibility and solemnly pledged its commitment to avoiding a repeat of its mistakes. It will be a grand day for the cause of international human rights when other nations charged with similar violations follow suit.

A news article from the New York Times summarizing the hearings of the European Court of Human Rights follows:

[From the New York Times, Feb. 9, 1977]

BRITISH ADMIT IRISH WERE TORTURED

STRASBOURG, FRANCE, Feb. 8.—The British Government conceded today that it had used five torture techniques on detainees in Northern Ireland, but gave a solemn pledge to the European Court of Human Rights that it would never do so again.

The British Attorney General, Sam Silkin, gave the pledge in an effort to persuade the Irish Government to drop its proceedings against Britain. It is the first case of its kind to come before the court.

Mr. Silkin told the panel of 18 judges that British forces would never again use the so-called "five techniques" of interrogation about which Ireland had complained.

These are hooding a prisoner, harassing him with noise, putting him on a bread and water diet, depriving him of sleep, and making him lean against a wall for long periods, off balance with arms outstretched.

The preliminary hearing in Strasbourg, which ends tomorrow, is designed to establish the scope of the court's jurisdiction regarding the Irish complaint.

Unless Ireland decides to drop its case against Britain after Mr. Silkin's speech, the court will meet again—probably in April—to discuss specific accusations of ill-treatment.

The Irish Government, in a voluminous dossier submitted to the European Human Rights Commission here in 1971, charged numerous cases of torture and other ill-treatment by British security forces in Northern Ireland in the months after the introduction of internment without trial in August, 1971.

Some of these allegations were upheld by the commission after a four-year investigation in which 119 witnesses were heard, among them senior security officers.

The commission found that in certain cases Britain had violated Article 3 of the Human Rights Convention, which forbids torture or inhuman or degrading treatment as punishment.

Mr. Silkin said today that his Government was not contesting the commission's findings He said that, after an official inquiry into the conduct of the security forces in Northern Ireland, the use of these five techniques had been halted in 1972 and compensation paid to those who had suffered.

Mr. Silkin referred to a submission to the court by the Irish Attorney General, Declan Costello, that Ireland sought a court order obliging Britain to undertake never again to have recourse to those techniques.

Following his Government's solemn pledge, Mr. Silkin said: "We hope that the court will be enabled to face a situation in which the objective of the applicant government has in fact been accomplished."

"We dare to hope also," he went on, "that in doing so we shall enable the applicant government to agree that there is no longer any adequate reason for them to pursue a course which can only divide us in a situation which cries out for the fullest cooperation between us."

Mrs. MEYNER. Mr. Speaker, it is sad and ironic that our thoughts are drawn to the tragic situation in Northern Ireland on a day that should be as joyous as St. Patrick's Day. And yet it is fitting and proper that we should do so.

The statistics on political violence in Northern Ireland are awesome and grisly: Since 1969, more than 1,700 Northern Irish have been killed, more than 18,000 injured, more than 5,500 explosions have occurred. The numbers become even more incredible when you realize that the United States has a population that is 128 times larger than that of Northern Ireland.

And yet, there is finally a glimmer of hope for peace in Northern Ireland. It is the Women's Peace Movement. It sprang up spontaneously after the tragic deaths of three innocent children last August.

Since that time, the movement has captured the imaginations of tens of thousands of Northern Irish, Catholics and Protestants, men and women, who were sick of the endless violence around them. A recent New York Times article stated that:

The Peace Movement has swept across the country, blowing away centuries-old taboos and prejudices, offering an exciting new initiative.

Under the brave leadership of Betty Williams and Mairead Corrigan, the movement has organized impressive demonstrations in Northern Ireland and London despite acts and threats of violence by extremists on both sides. Their efforts have stirred the hearts and won the support of thousands of peace-loving people throughout Europe and the United States.

The powerful appeal of the Peace Movement is the simplicity of its goal—an end to the use of violence as a means of resolving political differences. In January, the movement issued a manifesto calling for a new phase of local democratic organization and "individual dedication to community reconcilation and development." They offer an exciting and promising alternative to the oppression of the religious terrorists and the British occupation forces.

On February 28, I introduced House Resolution 342, "applauding the courageous efforts of the Women's Peace Move-

ment to end the tragic sectarian violence in Northern Ireland." I will reintroduce this resolution tomorrow with over 30 cosponsors. I believe that its passage would be a fitting statement of American support for the forces of peace in that war-torn country. A copy of the resolution follows:

Whereas more than one thousand seven hundred residents of Northern Ireland have been killed and more than eighteen thousands residents have been injured due to political violence since 1969; and

Whereas many of the victims of this violence have been innocent men, women, and children; and

Whereas the Women's Peace Movement of Northern Ireland was a spontaneous response on the part of both Catholic and Protestant women to the deaths of three children in sectarian violence in August 1976; and

Whereas the Movement, under the leadership of Betty Williams and Mairead Corrigan, has moved hundreds of thousands of Northern Irish, men and women, Protestants and Catholics, to demonstrate in peaceful marches their opposition to violence; and

Whereas the Movement has expressed the simple goal of an end to sectarian violence as a means of resolving political differences; and

Whereas the Movement represents a grass-roots effort by residents of Northern Ireland to solve their problems by peaceful dialog; and

Whereas the Movement has not been deterred by acts and threats of violence; and

Whereas the Movement has gained supporters through Europe and the United States; and

Whereas the Movement's manifesto of January 1977 calls for a new phase of local democratic organization and "individual dedication to community reconciliation and development": Now, therefore, be it

Resolved, That the House of Representatives applauds the courageous efforts of the Women's Peace Movement to end the tragic sectarian violence in Northern Ireland.

Mr. EDWARDS of California. Mr. Speaker, it is with a heavy heart I note that another St. Patrick's Day has come, that violence still rages as the order of the day in Northern Ireland.

The songs that will be sung in pubs, the shamrocks pinned to lapels, and the jigs danced in festive parades will mean little to those people in Northern Ireland who have suffered, and who continue to suffer, a vicious divisiveness that kills family and friends; that makes daily, routine outings a dangerous mission to be avoided whenever possible.

Traditional songs of camaraderie exist in most nations to bolster communal good will, but in Northern Ireland communal good will is almost a thing of the past.

There has been one effort to end the sectarian violence. It was born out of the deaths of three small children last August.

The Women's Peace Movement has, literally, Catholic and Protestant women embracing each other in the common courageous cause to end the 7-year siege of terror they have all somehow survived.

I am against violence from wherever it comes. There is no justification for it in terms of religion, politics, or territory. Political rhetoric, religious differences, and man-made boundaries are one thing. But the wanton violence found in Northern Ireland should have no place in a civilized world.

Have not people learned from the horrors of history—from the concentration camps of World War II Germany, from the life and death of our own Martin Luther King—that violence begets violence and that the only victor is suffering?

The Women's Peace Movement is to be praised as the only constructive coalition to come out of Northern Ireland to end the vicious fighting. Any community, whether local or international, that has ever participated in, been a victim of, or fortuitously only experienced vicariously the horrors of violence, cannot help but recognize the unforgivable violence which draws no distinction between the innocent, the children, the old, and the infirm.

It is bad enough when civilized countries fight each other under formal declaration of war, but it is utterly reprehensible whenever violence flourishes as a way of life.

I support any and all individual or collective efforts to appeal to end the violence in Northern Ireland, to oppose violence from any source, and to hail the efforts of the small band of dedicated members of the Women's Peace Movement who pick up banners for peace and march through the death streets in Northern Ireland.

Congresswoman MEYNER has just introduced a resolution (H. Res. 342) applauding the Woman's Peace Movement and I urge unanimous adoption by the House.

"In Belfast, Fear Haunts the Eyes," by Roy Reed, appeared in the New York Times of March 7. It is an all too accurate report of the horrors with which people must live, and shows us what the Women's Peace Movement is trying to stop:

IN BELFAST, FEAR HAUNTS THE EYES

(By Roy Reed)

BELFAST, NORTHERN IRELAND, Feb. 28.—They say that after eight years they are used to the bombing and shooting, but their eyes betray them.

Ask a new acquaintance here where he lives and see him lower his eyes and study his plate. A man entrusts his address only to friends.

Away from the main streets, watch the oncoming pedestrian lift his eyes from the sidewalk and seek yours. It is not a greeting. It is a cold, involuntary look to see who is coming.

Fix his eyes in a tight gaze and hold it until he walks past. The response is a withdrawing stare that seems to come from the other side of a darkness.

For the ordinary citizen living in this terrorized city, the odds are that nothing will happen. But who can say?

Uncertainty is part of the mental equipage here. People live with it as New Yorkers live with noise, and with the same incalculable effect.

They are aware that almost 1,400 people have been killed in Northern Ireland since 1969 in what they call, with more than a hint of euphemism, the troubles.

That figure includes only citizens of Ulster, members of the Protestant majority and the Roman Catholic minority who have been more or less continually at each other's throats for centuries. It does not include the 327 British soldiers who have died trying to keep the more murderous extremists in hand.

The figures will undoubtedly be out of date by the end of the week. The killing and maiming continue almost daily, and with little prospect of a political settlement that might satisfy the two factions in their struggle for power and thus end the violence.

Resigned to living with it indefinitely, the residents make small, daily accommodations—each one exacting some small fee in worry and calculation.

DECISIONS BECOME GAMBLES

Ordinary decisions become petty gambles. Does one take the long, safe way home or shall he risk the street where the soldiers are always on patrol and are shot at once or twice a day? The soldiers, if they are tense, point their guns at the heads of everyone passing by.

Ordinary frets and courtesies become matters of moment. Asking what church a person goes to can be as ill-mannered as asking his address: The answer could classify him as "other."—Protestant or Catholic, as the case may be. Religion largely determines politics and politics is at the heart of the extremist terror.

Even shopping is a grim pastime. All the big stores have guards at the door, not to spot shoplifters but to watch for bombers.

At 2 P.M. last Saturday, several hundred people were in a huge supermarket and department store in suburban Dunmurry. Every one of them had stood in line at the entrance to be searched and frisked by the guards.

CAMERA IS FORBIDDEN

A visitor with a camera joined the queue. A guard told him he had to leave the camera at the door.

"Why?"

"Security."

No further explanation was given. Every public activity is governed by security.

It is a more popular subject than football and it is continually on the tongues of politicians, policemen, soldiers and public figures of all sorts: How much better it is than formerly. How much worse it is. Tightening it, improving it, honing and fine-tuning it like a teen-ager's first car.

But it is never good enough. Over the last weekend, terrorists, apparently from the I.R.A. shot to death three persons here and in surrounding towns. A bomb killed two others. The bodies of those killed in the bombing were so nearly obliterated that the police could not determine their sex.

It is worst at night. In the daytime, people go about their business grimly but fairly casually. At night the streets are almost empty. The police have put up signs warning people not to stand on corners after dark, especially under street lights.

NO MOTIVE BUT RANDOM TERROR

A young man and his wife were walking on a Belfast street at 11 o'clock last night. Someone came by and shot him in the head. If the murderer had a motive other than random terror, it was not immediately known.

A few nights earlier, two gunmen entered the home of a 70-year-old justice of the peace, a well-known Protestant. He was not there, so they held his two aged sisters at gunpoint until he arrived. Then they went into the hall and killed him.

The killers were presumed to be members of the I.R.A., which is predominantly Catholic. A prominent Catholic political leader said the next day that he found it difficult to express the depth of his contempt for people whose idea of revolution was making war on old men.

The violence which comes from extremists on both sides, is condemned regularly and

without much effect by many Protestant and Catholic leaders.

Much has been written about the youthfulness of many of the terrorists, especially those with the I.R.A. Children 6 and 7 years old throw stones at the soldiers of the British peacekeeping force. They rattle garbage can lids to signal the soldier's arrival so that neighbors can give shelter to I.R.A. men who might need to seek safety.

Children who were rattling lids in 1969, when the present troubles started, are now hardened terrorists, expert with rifle and explosives.

ABNORMAL LIFE FOR THE YOUNG

But what of the other young people, the large majority who do not become terrorists?

A hotel housekeeper fell to talking the other day about her 18-year-old daughter, Betty.

"She was just ill when the troubles started," she said. "She's never had any life. No life at all. I had a life when I was young now. Yes, I had a life."

The sad eyes brightened a little in her thin Scotch-Irish face. It might have been a face from Tennessee or the Texas hill country, a homely anticipation of Lady Bird Johnson's neighbors.

The woman's daughter works downtown in the daytime but at night she stays at home. Either that or she goes to her boyfriend's house, even on Saturday nights.

"Before the troubles, there were three theaters between here and town." The woman named them. "Now they're all closed. Bombed. If they want to go to a picture, they have to go to downtown Belfast.

"CAUGHT IN A BOMB SCARE"

"She goes sometimes. She'll say, 'We'll be home half past ten.' Then it gets to be twenty of eleven, quarter of eleven, and I start thinking the worst. She finally comes in 11 or so. Got caught in a bomb scare."

"Sometimes her father has to hit her to snap her out of it when she's been in a bomb scare. She's been in too many of them. She starts screaming, and if it happens at work, sometimes they have to put her in a police car and take her to the hospital to get it stopped."

As the woman cleaned the room, she talked of bomb explosions she had just missed and close calls they all had had.

Did she know anyone who had been killed?

Her back was turned and she seemed not to hear. She moved the teacups with a little clatter, taking away a dirty one, replacing it with a clean one.

The question was repeated. She turned around and her first words were not intelligible. Her eyes shone, not with tears but with something interior. Memory perhaps, or some small failure of the mind.

She told rapidly of three men she had known who had been shot to death. Neighbors and friends.

DEATH OF A POLICEMAN

"One of them lived as close as here to the reception." She pointed toward the registration desk 40 feet down the hall.

"He was a policeman. I saw him leaving the house that day as I was coming in. We stopped and talked. He was wearing his civilian clothes. They don't wear their uniforms now on the way to work, you know. They keep their uniforms at the barracks and change there.

"My Betty come home a little later, and she walked in front of the fireplace and stood there like this." She clasped her hands behind her and began swaying back and forth, imitating her daughter.

"I thought she was hearing some of that new music. She was just getting into that kind of thing, you know. Then all of a sudden she just pitched over on her face. Her father started patting her face and he brought her around, and I said: 'What's wrong, Love? Did somebody say something to you at school or something?' "

"She said, 'Mr. Clark was shot dead.' I said: 'No, Love, it couldn't be. I saw him outside not an hour ago.' She said, 'I just heard it on the news coming home.' "

NOT EVEN 10 MINUTES

Her eyes shone again, now with tears. Her anger seemed directed less at her friend's death than at the swiftness of it.

"He hadn't been to work 10 minutes!" The last two words rang out, and with a show of will she made herself repeat them. "Not 10 minutes!"

She composed herself and talked of the fire drills and the bomb scares and the importance of leaving the building fast and getting well away from it. Her tone was friendly and instructive, only a little more earnest than when she had given directions to get to the supermarket down the street.

She was asked what was to be done to stop the troubles.

"I don't know," she said. "But the old people, now, the old ones like my father. I know what they would have done."

She shook her head firmly and said, "They would not have put up with it."

Mr. HANLEY. Mr. Speaker, on this eve of Saint Patrick's Day, the world seems poised in joyful anticipation of one Nation's celebration of its patron saint. For an Irishman and for most American-Irish it is almost impossible to contain the spirit which swells exultant as March 17 draws nearer and nearer.

Associated all at once in this blended consciousness of happy reminicences, tearful regrets, high-flown rhetoric, and poignant anecdote is the Shamrock and Harp and the all-encompassing green dressings of men and anything else nailed down or not. And indeed it is that color—the color green—which most symbolizes the essence of the Irish experience wherever it is lived. For that elemental and most natural coloration, that photosynthetic creation which is emblematic of life itself, is the adopted color of that island nation which cherishes and husbands every scrap of life's joy and sorrow. It is the duality of that symbolic reference of color manifested in the optimism of the regenerated growth of springtime after winter's cruelty and in the melancholy of the shrouding moss over the ruins of past glories which appeals to the nature of the Irish temperament.

Left to its own devices, unimpeded by the interference of outside elements, aided by enlightened disinterest by friendly parties, encouraged to remedy its ills from the wellsprings of its own imagination and perseverance—Ireland could be as free as she is green. She could be free of violence. She could be free of bigotry. She could be free of the malice which poisons the soul and the body of each generation touched by the pestilence of tyranny. She could be free of the strength-sapping and futile engagement which causes men to fight their brothers, women to betray their sisters, children to hate their neighbors.

Instead of growth, there is decay. Where there might be life, there is certain death. A sickly green masks over the rotting timbers of an ancient civilization—it reflects a corruption of nature which turns what it touches gangrenous.

Just as the green of shamrock and of fungus can represent aspects of this life to which we commit ourselves, so does the disparate nature of humankind find itself reflected in the conduct of the struggling forces in Northern Ireland. On the one hand is the force of darkness, of perfidy, of unreason; while on the other is the force of light, of truth, of sanity. Choose to which side in the raging dispute you will ascribe such a description and you engage in the very discrimination which curses any attempt to restore order and stop the killing and establish internal tranquility in Ireland.

For how can the nature of the struggle—polarized by brutality and repetitious controversy—be assessed in the heat of passion? How can the option be explored amid the smoke of bomb-started fires? How can the voices of tolerance be heard above the clamor of dispute? Some silence and some tongue-biting is very much in order.

The monster of human nature gone wild and distracted is a poor candidate for temperate counseling. What is needed is removal of the disturbing element in the life of Ireland. What is needed is to leave Ireland alone.

This necessitates the removal of the forces of Great Britain from Northern Ireland. This necessitates the observances by all peoples in both Northern Ireland and in the Irish Republic of the truce of arms which could bring on the long-sought amelioration of grievances and disputations. This necessitates the laying aside of grudges which must go unanswered. This means the exercise of domestic leadership all over Ireland which is based on mutual respect as much as on self interest. This means the prompt and certain retribution to any element within either region which seeks to continue unrest, bloodshed, and death.

It may well be the hardest adjustment of the human mind to admit that there is merit to the point of view of one whom it is convinced is a sworn and deadly enemy, but that is what must occur in Ireland, if there is ever to be accord. The economic discrimination, the social apartness, the political suppression which characterize life in the north can never be breached unless there is a reciprocation of openness, candor, and unity among that fratricidal population.

The horrors of the old days repeated daily even to this very moment should spur this country and this government in inquiry and to action on behalf of the rights and lives of the victims of Ireland's present chaos. I do not advocate interference in the internal affairs of north or south Ireland—merely approach of evenhandedness to all parties as mediator and negotiator.

Surely there is a residual of national identity and commonality which can transcend the differences in faith and disposition. The growing demonstrations by citizens seeking peace and the increasing disenchantment that the manipulated events of carnage and turmoil will ever bring redress of just complaints are encouragement that there is another option open to Ireland except its self destruction. We should encourage such efforts and applaud their progress so that they will not be engulfed in counter-efforts by selfish elements promoting discord.

Within the spirit of the lead proposed by President Jimmy Carter when he urged the establishment of a commission on international peace, this Congress must speak out in support of human rights for each citizen of Ireland as for each person of the world. We seek to export no ideology or gain any foothold or take any advantage of Ireland. We seek a common bond of humankind—a warmth of understanding, a tolerance of differences, a purposeful resolve to achieve harmony.

We seek a chance for all men to breathe the air of personal freedom and to enjoy free exercise of opportunities which talent and desires and needs bring to him. As others here have noted, we must call upon each party of interest in the present "troubles" to draw back from confrontation and to reestablish the bond of human kinship which should be the measure of our treatment of others.

The terror of sudden death and the premeditation of torture by either side must be repudiated as the repugnance it has become. The bestiality of either side, or both, should be of little consolation for its victims as they are used to excuse horrendous acts of violence and thereby breed a new generation of victims and revenge-seekers.

So let us urge an end to insanity. Let us urge rebirth of commonsense and common purpose and common decency. Let us seek an end to police and army terror tactics and an end to underground warfare which has lost its direction.

The human rights of no person in any nation are safe while the human rights of another are in jeopardy. We should support no policy nor any program which would undermine this basic appreciation of mankind's dependence on his neighbors for whatever measure of individual freedom is enjoyed.

Let us also join in prayerful plea that there will be an end to inhumanity everywhere and no need for fractious remedies to intolerance and injustices. Let us hope that the full bloom of life's springtime will emerge from the chill ground of discord and that the eternal greenery of humanity's benign nature will endure.

Mr. HARRINGTON. Mr. Speaker, with the advent of the Carter administration, America has made a fresh commitment to the cause of human rights in the world community. We have condemned human rights violations in the Soviet Union, in Uganda, and in Latin America. However, our credibility in the area of human rights is dependent upon our consistency, and to be consistent, it is imperative that we speak out on human rights violations involving ally and adversary alike.

Great Britain, our longtime friend and ally, conceded last month that British security forces had used five torture techniques on Irish prisoners. After a 4-year investigation by the European Court of Human Rights, in which 119 witnesses were heard, it was found that Britain had violated article 3 of the Human Rights Convention, which forbids torture or inhumane or degrading treatment as punishment. To Britain's credit, the British Attorney-General has stated that the use of these techniques had been terminated in 1972 and that compensation has been paid to those who had suffered.

The findings of the Commission with respect to Britain's role in Northern Ireland are a special tragedy, as they involve a nation that has given us the Magna Carta and is universally recognized as the defender of the rights of man.

In all fairness, it should be acknowledged that the root case of human rights violations in Northern Ireland is the social and political system. It is a system in which the Protestant majority remains adamant in its refusal to recognize the rights of the Catholic minority. And it is also only fair to say that Britain is as eager as the rest of the world to see the conflict settled.

Criticism of human rights violations, by itself, provides no solution to underlying causes: social, economic, and political injustice. An active search for a solution to the prevailing injustice in Northern Ireland is the only means by which the human rights violations of all sides can be brought to end. It is my hope that President Carter would offer the good offices of the United States to help bring the conflict to an end, and to insure for all citizens of Northern Ireland the political and social stability that is essential to the fulfillment of human potential.

Mrs. FENWICK. Mr. Speaker, the Prime Minister of Eire, Liam Cosgrave, addressed a joint session of Congress a year ago. And on this day it is still remembered to the honor of Ireland. For those of us who—like me—were ardent Sinn Fein sympathizers years ago, it was an important and proud occasion. Those who used to question whether or not the romantic, poetic, impetuous Irish would be disciplined democrats should have been there to listen.

He spoke, first, to the people of this country, warning them of the effect of their actions no matter how well meant:

> There are in this country some people who contribute in the most direct way possible to violence in Ireland—by sending either guns or explosives—for use in northern Ireland.
>
> Let me tell such people in the most categorical manner possible what they are doing. What they are doing, whatever their motives, with every penny, dime, or dollar they give thoughtlessly for such purposes, is helping to kill or maim Irish men and women of every religious persuasion in Ireland.

In a world where, too often, the bomber, the kidnaper, and the terrorist are defended and given asylum, it was reassuring to hear Prime Minister Cosgrave. But the high point of his address—a tribute not only to him as an individual but also as one who spoke for all who hope for a just and orderly world—was the section of his speech addressing the question of the six northern counties:

> We seek reunification, but we want it only on the basis of a free vote of the people who live there . . . The British government, a partner of Ireland in the European community, declared formally two years ago, and this, is of significance, that it would support Irish unity if and when a majority of the people of northern Ireland accepted it. And this is the only basis on which our people seek unity.

This is the voice of reason, and the world needs to hear more talk like this. One wishes that Lebanon, Korea, Angola, the Middle East, Africa and South America could listen to such calm, moderate reasoning. It is all the more impressive and admirable in that it comes from one who is not speaking from an island of peace and tranquility but from a country torn by bloodshed and troubles, one who—in the midst of such tragedy—is prepared to respect the rights of individuals and abide by the free choice of free people.

And now two women have come forward in Northern Ireland, speaking with the same voice, speaking of peace and an end to slaughter and hatred. This, too, on this day, stands to the honor and glory of Ireland.

Mr. ANNUNZIO. Mr. Speaker, Great Britain has long been a country that cherishes its historical and judicial tradition of tolerance for opposing viewpoints and that nation also officially condemns other countries which use torture as a means of repression. As a member of the United Nations, Great Britain has also signed the 1950 European Convention for the Protection of Human Rights which guarantees in article 3 of its charter, that "no one shall be subjected to torture or to inhuman or degrading treatment."

These aspirations contained in the Statute of the Council of Europe are of the utmost importance to the dignity of all human beings. Yet as important as this statement may be, such an achievement is little more than an empty promise—rhetoric—unless it is accompanied by an effective means of enforcement.

In presenting itself as a concerned member of the international community, Great Britain has a forthright commitment to the protection and advancement of human rights. How inconsistent it is then to find that Britain is guilty of violating those same precepts of human dignity by torturing Northern Irish prisoners.

A report, prepared after careful research and documentation by the European Commission of Human Rights in response to complaints by the Irish Republic, found that sensory deprivation techniques, used by Britain in 1971, amounted to "torture and degrading treatment;" a clear violation of article 3 of the United Nations Human Rights Charter.

In its findings the commission said:

> The systematic application of the techniques for the purpose of inducing a person to give information shows a clear resemblance to those methods of systematic torture which have been known over the ages.

These abuses, among others cited, included five sensory deprivation techniques deemed to be in violation of the charter: wall standing, hooding, subjection to noise, and an unspecified reduction in the amount of food, water, and sleep.

The commission took into consideration the fact that Great Britain had

taken important steps to abide by the convention but the Republic of Ireland felt that to decide to drop the case would be an abuse of the investigative system. In response to the suggestion that the report will damage relations between the two countries, Mr. Michael O'Kennedy, foreign affairs adviser for Ireland's main opposition party, replied:

I feel confident that, in fact, far from damaging cooperation, it could help towards an open and trusting relationship.

While this is a view that could be argued, it is in the best interests of both nations to heal these wounds in order to move to a much more worthy and pressing concern—the resolution of the political violence and suffering which has torn Northern Ireland for over 10 bloody years and resulted in over 1,700 deaths.

It is especially important today that Great Britain and the Republic of Ireland come to terms of mutual understanding and cooperation in order to stem the wave of terrorist-inspired violence that threatens all chances of peaceful political resolution of Northern Ireland's problems. Dublin and London should be encouraged to do all they can do to break the grip of terrorism and violence by sectionalist paramilitary groups who are the common enemy of peace and stability.

Dr. Garret FitzGerald, Ireland's foreign minister, made this clear in stating:

Our two peoples, whose pasts have been so closely linked for good and ill throughout eight centuries, have confounded our common enemy by responding to this tragedy with a deepened sense of interdependence and of our common interest in combatting violence and averting anarchy.

There is no immediate solution to Northern Ireland's internal struggle. It is clear that the only solution for now is to continue the vital efforts for compromise in Northern Ireland and work to discredit the destructive elements of violence. Yet in this difficult task, Great Britain must never lose sight of the safeguards which guarantee citizens the fundamental right to human dignity and personal justice guaranteed by the spirit of the United Nations Charter.

GENERAL LEAVE

Mr. WOLFF. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the subject of my special order today.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

NIAGARA FALLS: THE START OF A FISCAL COMEBACK

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. LAFALCE) is recognized for 5 minutes.

Mr. LAFALCE. Mr. Speaker, I would like to bring to the attention of my colleagues and the Nation the major accomplishment made by one of the principal cities in my congressional district, the city of Niagara Falls, N.Y.

For the first time in 9 years, the city's budget showed a surplus. Indeed, the city's financial prudence resulted in a surplus of nearly ¼ million dollars. I am personally very proud of the city manager, the mayor, the city council, and especially the citizens of Niagara Falls who worked so hard and who sacrificed so much to bring this about.

While the name of this city is perhaps as well known as any in the world, thanks to the natural wonder within its boundaries and after which it is named, the real nature of the city of Niagara Falls is not so widely known. It is appropriate, therefore, for me to outline the recent history of this city and, in so doing, emphasize the importance of the achievement of the budget surplus last year.

Thanks to the abundance of relatively inexpensive energy generated by the privately developed hydroelectric plant at the falls, the city of Niagara Falls grew during the early decades of the 20th century to a peak of well over 100,000 people. Many industries requiring large amounts of electrical power, including one of the largest petro-chemical complexes in the world, located in Niagara Falls.

In the 1950's, however, a disaster took place and the effects of it are still being felt. The powerplant was destroyed in one of the largest and most devastating rock slides along the lip of the falls.

New York State organized itself to assist in the rebuilding effort, and the result some years later was one of the most impressive and efficient hydroelectric plants in the world, the Robert Moses plant. But rebuilding the plant took a long time, even with the legendary Moses at the helm, and in the interim an exodus of industry, jobs, and population took place.

Many firms had to close their doors, while others relocated to other parts of the country. The city's population began to recede and, some 20 years later, it stands at 80,000. A 20-percent population loss in the space of 20 years is more than most communities should expect to survive.

The result was a city with municipal systems designed to serve over 100,000 people but which, due to the large loss of population, were serving far fewer than that. Excess school capacity; sewer, street, and other systems larger than required for the remaining people; these and other built-in costs had to be absorbed without having the revenue base provided by the people who had left.

Niagara Falls did not give up, however. The city resolved to do what it could to bring itself back to life. It started a total rebuilding of its downtown area, near the falls, in one of the most ambitious urban renewal programs for a city its size in the country. The goal was to extend the tourism season and to build a new convention-related industry and, at the same time, replace the commercial core of a community of 80,000 people. The city's own commitment to this was to finance one of the most magnificent convention centers in the country, hoping to encourage private investment in hotels, shops, and other convention and tourism-related developments.

These private developments would, of course, add to the local tax base and help meet municipal budgetary needs.

But circumstances far beyond the city's control conspired to delay the anticipated private investment. The national economy took a severe downturn, adversely affecting all of us and contributing even more to the economic distress of the Northeast, which has suffered from regional dislocation for so long.

All of these factors contributed to the fiscal situation faced by the city of Niagara Falls. And, to be fair, the city may have been imprudent in its spending policies from time to time during the late 1960's and early 1970's; 1976 was a year in which the overall economic condition improved, but only slightly. More important, it was the year in which Niagara Falls tightened its belt, faced its problems head on, and took those steps necessary to bring its financial house in order.

Restoring confidence in Government is something that we in Washington have been working hard to accomplish for some time now. Yet it is equally important at other levels of government as well. I believe that the citizens and leaders of the city of Niagara Falls have made a meaningful first step toward restoring confidence in the soundness of the city and its financial condition.

CONGRESSIONAL CAMPAIGN FINANCING ACT OF 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. MCHUGH) is recognized for 5 minutes.

Mr. MCHUGH. Mr. Speaker, on behalf of Mr. MAGUIRE and myself, I am today introducing legislation to provide for partial public financing of House and Senate primary and general election campaigns beginning in 1978. The Congressional Campaign Financing Act of 1977 would extend to congressional elections many of the public financing features applicable to Presidential primaries.

THE NEED FOR PUBLIC FINANCING OF CONGRESSIONAL ELECTIONS

The 1976 Presidential election proved that public financing works, and that it works for both primary and general elections. Consequently, I believe that the time has come to extend this basic reform of our political process to elections for the Senate and the House of Representatives.

The very success of public financing of Presidential elections makes public financing of congressional campaigns all the more urgent. Closing the Presidential arena to private contributions has substantially increased the flow of such special interest contributions into House and Senate election races.

What will we have gained by closing off the Presidency and the executive branch to the influence of big money if the result is to open up Congress to a heavier

influx of special interest funds and influence?

The American people have come to understand that the present system of financing congressional campaigns is neither democratic nor fair. Unless a candidate is personally wealthy, he must look to private contributors to finance the expense involved in running for public office. The evidence very clearly suggests that such contributors are often not representative of the Nation as a whole.

In the very recent past, for example, 90 percent of all campaign contributions came from less than 1 percent of the population. This 1 percent represented individuals and groups that often had a substantial interest in the decisions to be made by public officials. The potential for abuse should be clear.

The needed reform is both simple and obvious. We must extend public financing to congressional campaigns, and we must do so in the 95th Congress.

PROVISIONS OF THE BILL

To achieve this goal, the legislation Mr. MAGUIRE and I are introducing today would establish a matching system of partial public financing for House and Senate primary and general elections. I would like to briefly summarize some of the major provisions contained in our bill at this point, Mr. Speaker. A more detailed explanation of its provisions is contained in the factsheet that I am including in the RECORD at the conclusion of my remarks.

One of the most important features of this legislation is that it would reestablish campaign spending limitations for primary and general elections for those candidates who choose to accept public financing.

For the House of Representatives, a general spending limitation of $80,000 per campaign is established for primary and general elections in 1978. This general limitation is tied to the Consumer Price Index and would be adjusted upward on an annual basis thereafter.

For the Senate, a general spending limitation of 8 cents multiplied by the voting age population, VAP, of the State, but not less than $80,000, is established for 1978 primaries. A general spending limitation of 12 cents multiplied by the VAP of the State, but not less than $80,000, is established for 1978 general elections. These general limitations are also tied to the Consumer Price Index.

Candidates who accept public financing would be able to exceed these general limitations in three ways:

First. A candidate would be allowed to raise and spend up to an additional 20 percent of his or her general limitation to cover the actual expenses of fundraising in both primary and general elections.

Second. A candidate for election to the House would be allowed to accept and spend up to $10,000 in additional funds from a State or national party organization in the general election only. A candidate for election to the Senate would be allowed to accept and spend up to 2 cents multiplied by the VAP of the State, or $20,000, whichever is greater, in additional funds from a State or national party organization in the general election only.

Third. Expenditure limitations would be waived for a candidate who accepted public financing if his or her opponent did not accept public funding and exceeded the expenditure limitations contained in this bill. The candidate who had accepted public funds would still be entitled to them, but only up to the levels stipulated in the bill.

To be eligible for Treasury matching, a candidate would have to raise at least $7,500 in amounts of $100 or less from private contributors. After this threshold was reached, the qualifying amount and each additional contribution of $100 or less would be matched by the Treasury on a 1-for-1 basis up to 50 percent of the general limitation applicable. Cash contributions could be matched provided they were properly accounted for. Only contributions of $100 or less from residents of the State in which the election is being held would be eligible for Treasury matching. The qualifying amount would only have to be raised once.

For the House of Representatives, this would mean a maximum allowable Treasury match of $40,000 in 1978 primary and $40,000 in 1978 general election races. For 1978 Senate primary elections, this would result in a maximum Treasury match ranging from $40,000 in the smallest States to $308,720 in Illinois, the largest State with a 1978 Senate primary. For 1978 Senate general elections, the maximum Treasury match would range from $40,000 in the smallest States to $463,080 in Illinois. These estimates for the Senate are based upon 1976 VAP figures.

Candidates of minor parties, and independent candidates, would be eligible for matching payments in both primary and general elections. Our bill makes no distinctions between types of candidates or types of parties. No candidate would be automatically eligible for public funding. Rather, the ability of a candidate to qualify for matching payments is based solely upon demonstrated support in raising the threshold qualifying amount and additional contributions of $100 or less.

Funds for congressional public financing would come from the existing $1 voluntary checkoff on Federal income tax returns, and the program would be implemented by the Federal Election Commission. If sufficient funds were not available, the Secretary of the Treasury would be authorized to reduce the entitlements of candidates proportionately. Alternatively, the $1 checkoff could be increased by law.

The estimated cost of our bill is $93.1 million every 2 years, or $46.5 million annually. I do not believe that this is an unreasonable sum, Mr. Speaker. For example, the estimated cost of financing all Senate primary and general election campaigns is $25.4 million, a reasonable figure when compared to the $21.8 million that President Carter received to finance his general election campaign alone. The estimated cost of financing all House primary and general election campaigns is $67.7 million, or approximately one-third more than it cost to finance the general election campaigns of both President Carter and former President Ford. Moreover, I would stress that the assumptions I have used in estimating the cost to the Treasury probably overstate the real cost of this legislation.

ADVANTAGES OF A MATCHING SYSTEM

Mr. Speaker, a system that matches small private contributions with Federal payments has a number of advantages over plans that fully fund the campaigns of candidates who gain the nomination of a particular political party.

In a matching system, Treasury payments are related as closely as possible to the current strength of a candidate. Party affiliation or performance in some previous election is not a factor. This is very important, Mr. Speaker.

A system of public financing should not artificially prop up candidates who have little current or potential strength. Neither should it put obstacles in the way of a candidate who does have broad support among the general public. Public funding should be related to public support, and should not be used to finance candidates simply because they gain the nomination of a so-called major party. Matching does not lock in the present two-party system. It makes it possible for third party and independent candidates to compete without being put at an artificial disadvantage.

Moreover, a matching system preserves and encourages the role of the small contributor, the citizen who wants to do more than simply vote for a candidate. At a time when too many Americans feel alienated from our political system, when they feel there is little they can do that has an impact on their Government, we should be very cautious of proposals that would further reduce their ability to play an important role. At the same time, we should encourage candidates to show some initiative in seeking out such citizens and encouraging them to participate in the political process.

A matching system also has the advantage of limiting the cost to the Treasury, especially when it is tied to meaningful expenditure limitations. As the fact sheet I am attaching to my remarks indicates, our bill would be significantly less costly than the only other measure that has been introduced to date in the other body. At the same time, I am convinced that this legislation would screen out nonserious candidates by requiring a candidate to raise a threshold qualifying amount.

CONCLUSION

Mr. Speaker, public financing of congressional elections is supported by different individuals for different reasons. Some view it as a way of limiting the escalating costs of congressional campaigns without placing incumbents at an advantage. Others view it as a way of eliminating the influence of big money from our political system while at the same time encouraging the role of the

smaller contributor. Some support public financing but wish to avoid excessive costs to the Treasury. Still others believe it should be used to support major party candidates without unduly inhibiting minor party and independent candidates.

The proposal that Mr. MAGUIRE and I are introducing tries to develop a workable compromise among these diverse goals. It is a deliberate and incremental approach that builds upon the existing system.

If confidence in our system of government is to be restored and maintained, some action must clearly be taken. I believe that the legislation we are introducing today constitutes the best approach to solving this very difficult problem.

FACTSHEET ON THE CONGRESSIONAL FINANCING ACT OF 1977

I. INTRODUCTION

A. This measure is designed to build upon existing legislation which provides for public financing of Presidential elections. It establishes a matching system that would provide for partial public funding of House and Senate primary and general elections. Limitations would be placed on spending by congressional candidates who choose to accept public financing, and small private contributions would be matched by Treasury payments on a 1 for 1 basis up to stipulated levels after an initial qualifying amount was raised. The financing of both primary and general elections is modeled after the public financing provisions contained in present law for Presidential primary elections (Chapter 96 of Subtitle H of the Internal Revenue Code). Funding for congressional matching payments would come from the existing $1 checkoff fund, and the program would be administered by the Federal Election Commission.

II. CAMPAIGN EXPENDITURE LIMITATIONS AND TREASURY MATCHING

A. House of Representatives.—A general spending limitation of $80,000 per campaign is established for primary and general elections in 1978. This general limitation on campaign spending for candidates who accept public financing is tied to the Consumer Price Index and would be adjusted upward on an annual basis thereafter. Candidates who accept public funds would be able to exceed this $80,000 general limitation in three ways:

1) A candidate would be allowed to raise and spend up to 20% of this general limitation ($16,000 in a 1978 primary and $16,000 in a 1978 general election) to cover actual fundraising expenses. These funds would not be eligible for Treasury matching.

2) A candidate would be allowed to accept and spend up to $10,000 in additional funds from a national or state party organization in the general election only. These funds would be eligible for Treasury matching.

3) Expenditure limitations would be waived for a candidate who accepted public financing if (a) his opponent did not accept public financing and (b) his opponent exceeded the expenditure limitations contained in this law. The candidate who accepted public financing would still be entitled to public financing, but only up to the levels stipulated in the law.

To be eligible for Treasury matching, a candidate must raise $7,500 in private contributions of $100 or less. After this threshold is reached, the qualifying amount ($7,500) and each additional contribution of $100 or less would be matched by the Treasury on a 1 for 1 basis up to 50% of the general limitation.

Thus, using 1978 as an example, a candidate could spend up to $96,000 on a primary race and up to $106,000 on a general election race. However, the maximum allowable Treasury matching would be $40,000 (50% of the general limitation) in the primary and $40,000 (50% of the general limitation) in the general election.

As noted previously, the candidate could still receive up to $40,000 in public funds and exceed campaign spending limitations under circumstances outlined in point three above.

B. Senate.—A general spending limitation of 8¢ multiplied by the voting age population (VAP) of the State, but not less than $80,000, is established for 1978 Senate primary elections. A general limitation of 12¢ multiplied by the VAP of the State, but not less than $80,000, is established for 1978 Senate general elections. These general limitations on campaign spending for candidates who accept public financing are tied to the Consumer Price Index and would be adjusted upward on an annual basis thereafter. The limitations can be exceeded in three ways:

(1) A candidate would be allowed to raise and spend up to 20% of the general limitations to cover actual fundraising expenses. These funds would not be eligible for Treasury matching.

(2) A candidate would be allowed to accept and spend up to 2¢ multiplied by the VAP of the State, or $20,000, whichever is greater, in additional funds from a national or state party organization in the general election only. These funds would not be eligible for Treasury matching.

(3) Expenditure limitations would be waived for a candidate who accepted public financing if (a) his opponent did not accept public financing and (b) his opponent exceeded the expenditure limitations contained in this law. The candidate who accepted public financing would still be entitled to public financing, but only up to the levels stipulated in the law.

To be eligible for Treasury matching, a candidate must raise 2¢ multiplied by the VAP of the State, but not less than $7,500, in private contributions of $100 or less. After this threshold is reached, the qualifying amount and each additional contribution of $100 or less would be matched by the Treasury on a 1 for 1 basis up to 50% of the general limitations applicable for primary and general elections.

In 1978 primary elections, this would result in a maximum Treasury matching payment ranging from $40,000 in the smallest States to $308,720 in Illinois, the largest State with a 1978 primary. In 1978 general elections, it would result in a maximum Treasury matching payment ranging from $40,000 in the smallest States to $463,080 in Illinois, the largest State. These estimates are based upon 1976 VAP figures.

As noted previously, a candidate could still receive Treasury matching payments and exceed the campaign spending limitations under circumstances outlined in point three above.

C. Eligibility for matching payments.—The same requirements that apply for establishing eligibility for matching payments in primary elections apply to establishing eligibility for general elections. However, a candidate must raise the threshold qualifying amount only once. Consequently, if the qualifying amount is raised in the primary, contributions of $100 or less for the general election would continue to be matched on a 1 for 1 basis up to the stipulated levels with no further requirements.

D. Third Party and Independent Candidates.—Candidates of minor parties, and independent candidates, would be eligible for matching payments from the Treasury in both primary and general elections to the extent that they meet the qualifying requirements. No distinctions are made between types of candidates or parties. Rather the ability of a candidate to qualify for matching payments is based solely upon demonstrated support in raising threshold qualifying amounts and additional contributions of $100 or less.

E. Applicability of Campaign Spending Limitations.—In accordance with the decision of the Supreme Court in *Buckley* v. *Valeo*, spending limits would apply only to candidates who accept public financing. However, as noted previously, if a candidate not receiving public funds exceeds the overall spending limits contained in this legislation, those limits are waived for his or her opponents using public funds. A candidate using public funds would still be eligible to receive matching payments from the Treasury, but only up to the levels stipulated in the law. To enforce the waiver, candidates who exceed the spending limits contained in this legislation would be required to report to the Federal Election Commission within 48 hours after they make expenditures or commitments for expenditures in excess of the overall spending limit. Failure to report would be a punishable offense. Except as previously noted, a candidate who accepts any public funds would be required to adhere to all spending limitations for primary and general elections.

III. FUNDING AND ADMINISTRATION

A. Funds for congressional public financing would come from the existing $1 check-off. Congressional primaries and general elections would receive fourth priority for checkoff funds after party conventions, the Presidential general election, and Presidential primaries. If the amount in the $1 checkoff is not sufficient, the checkoff would have to be increased by law. However, if such an increase was not approved, the Secretary of the Treasury would be authorized, after determining that the moneys available either are not or may not be sufficient to pay the full amount of entitlements to all candidates eligible to receive payments, to reduce the amount to which each candidate is entitled proportionately. However, in no case would a candidate who had already received public funds be required to repay any amount to the Treasury as a result of such a reduction.

B. Public financing of congressional elections would be implemented by the Federal Election Commission. In order to become eligible for public funds, candidates would have to agree to abide by applicable spending and contribution limits, file required reports, and open their books for audits as required by the FEC.

IV. ESTIMATED COST TO THE TREASURY

A. The estimated cost to the Treasury of this legislation is $93.1 million every two years:

	Senate	House	Total
Primaries	$13,107,904	$37,600,000	$50,707,904
General elections	12,332,565	30,060,000	42,392,565
Both	25,440,469	67,660,000	93,100,469

B. Cost estimation of public financing is difficult. This estimate is based upon a number of assumptions that probably overstate the cost of this legislation to the Treasury. It was derived by applying the provisions of this bill to 1976 House and Senate primary and general elections using the following assumptions:

(1) House Primary Elections.—There were approximately 1,175 viable primary candidates in 1976. A viable primary candidate was defined as one who received at least 20% of the vote in a primary election. The figure of 1,175 viable primary candidates was derived from primary results reported by Congressional Quarterly and includes viable third party and independent candidates. It was further assumed that viable primary candidates would average 80% of the public financing limitation for House primaries ($32,000). Multiplying the number of viable candidates (1,175) by $32,000 yielded an estimated cost of $37,600,000.

(2) House General Elections.—There were approximately 835 viable general election candidates in 1976. A viable general election candidate was defined as one who received at least 10% of the vote in the general election. The figure of 835 viable general election candidates was derived from election results reported by Congressional Quarterly and includes viable third party and independent candidates. It was further assumed that viable general election candidates would average 90% of the public financing limitation for House general elections ($36,000). Multiplying the number of viable candidates (835) by $36,000 yielded an estimated cost to the Treasury of $30,060,000.

(3) Senate Primary Elections.—There were 98 viable primary candidates in 1976. A viable primary candidate was defined as one who received at least 20% of the vote in a primary election. The figure of 98 viable primary candidates was derived from primary results reported by Congressional Quarterly and includes viable third party and independent candidates. It was further assumed that viable primary candidates would average 80% of the public financing limitation applicable to their States. The cost to the Treasury for each viable primary candidate was calculated, and yielded an estimated cost of $13,107,904.

(4) Senate General Elections.—There were 64 viable general election candidates in 1976. A viable general election candidate was defined as one who received at least 10% of the vote in a general election contest. The figure of 64 viable general election candidates was derived from election results reported by Congressional Quarterly and includes viable third party and independent candidates. It was further assumed that viable general election candidates would average 90% of the public financing limitation applicable to their States. The cost of the Treasury for each viable general election candidate was calculated, and yielded an estimated cost of $12,332,565.

C. As mentioned previously, these figures probably *overstate* the likely cost to the Treasury in 1978.

D. S. 926 (introduced by Senator Clark and others in the Senate) is a public financing measure that covers only members of the U.S. Senate. Senator Clark estimated the cost of his legislation for Senate primaries and general elections at $38 million, a figure significantly higher than our estimated cost of $25.4 million. However, application of our assumptions to S. 926 yielded an estimated cost to the Treasury for S. 926 of $50,690,397, almost twice the cost of our legislation. While we do not argue that our assumptions are more valid than those used in defending S. 926, it should be pointed out that the cost of our legislation for Senate primary and general elections would be approximately half the cost of S. 926 whatever assumptions one chooses to make.

V. OTHER PROVISIONS

A. Cash contributions.—Cash contributions are eligible for matching if they are properly certified and if adequate records are kept showing the date and amount of each cash contribution, and the full name and mailing address of the contributor.

B. Eligible contributions.—Only contributions from residents of the State in which the House or Senate election is held are eligible for matching.

C. Timing.—Contributions received after January 1 of the year preceding the year of the election are eligible for matching, but matching payments may not begin before January 1 of the election year. Contributions received after the date of the election may not be matched. Once a candidate raises the required threshold in small contributions, the Federal Election Commission has 10 days to certify the candidate's eligibility for matching payments. The Secretary of the Treasury then has another 10 days to make the payments for which the candidate is eligible.

D. Primary and General Elections treated separately.—The $100 limit on contributions that may be matched applies separately to primary and general elections. Thus, a single contributor may make a matchable $100 contribution for the primary and another matchable $100 contribution for the general election. However, separate accounts must be kept for the primary and general elections for this purpose.

E. Repayments to Treasury.—If a candidate does not use all of the funds raised privately and the Treasury matching payments in the primary, unused funds may be carried over and used in the general election (although the overall spending limitation for the general election may not be breached). A proportionate share of any funds that remain after the general election must be returned to the Treasury. The FEC is required to conduct a detailed post-audit and obtain repayments when necessary.

F. Criminal Penalties.—There are criminal penalties for exceeding the spending limits, and for unlawful use of payments, false statements made to the FEC, kickbacks and illegal payments.

G. Effective date.—The provisions of the bill apply to elections held after January 1, 1978.

VI. CONCLUSION

A. This bill was designed to achieve a workable compromise between a number of different goals:

(1) the desire to limit the escalating costs of congressional races without placing certain types of candidates at an advantage or disadvantage;

(2) the desire to eliminate the influence of big money while at the same time encouraging participation in the political process by the smaller contributor;

(3) the desire to provide for some public financing while avoiding excessive costs to the Treasury; and

(4) the desire to provide funds to major party candidates without inhibiting minor party and independent candidates, thus locking them out from effective participation in our political system.

If you have any further questions regarding the provisions of this bill, please contact Gary Bombardier at 56335.

SUPPORT FOR WORTHWHILE PUBLIC WORKS PROJECTS THAT MAKE REAL CAPITAL IMPROVEMENTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York, (Mr. KEMP) is recognized for 10 minutes.

Mr. KEMP. Mr. Speaker, as one Member who has worked hard to secure funding for legitimate and constructive capital improvement projects such as sewage treatment plants, flood control, mass transit, highway construction plus other worthwhile public objectives, I want to discuss recent congressional emergency moneys for public works in the context of the redtape that is holding up thousands of good developments that could put people to work. In H.R. 4876, the House was asked to appropriate $22.6 billion based on the questionable premise that additional Federal spending will alleviate the chronic unemployment plaguing the Nation.

If that were true—if we could really spend ourselves into prosperity—I would be the first to support the appropriation. I would even suggest amendments to increase the amount. After all, why should we settle for only $22.6 billion more prosperity? Why not twice or treble that amount?

But if Federal spending could get people off unemployment rolls and back to work, the problem would have long since been solved. From 1972 to 1976, Federal outlays rose from $232 billion to $373.7 billion, an increase of 61 percent in just 4 years. During the period total Federal spending amounted to a staggering $1.4 trillion.

But unemployment went up. In 1972 the Nation's unemployment rate was 5.6 percent; by 1976 it had risen to 7.8 percent. The failure of Federal spending to curb unemployment is most conspicuous, and of greatest concern, among minority persons for whom special programs such as those funded in this appropriation bill are supposedly targeted. From 1972 to 1976, unemployment among blacks and other minorities increased from 10 to 13.4 percent and at one point rose to nearly 14 percent during this period.

Not only did this massive spending fail to cure unemployment, it probably made the situation worse. Deficits caused by unprecedented Government spending drained financial resources which would have otherwise been available for job-creating private sector investment. And the inflation fostered by such deficits—the dollar lost about 40 percent of its purchasing power in this brief period—also took a heavy toll.

The sour experience of recent years ought to convince anybody that more Federal spending is not the answer to the Nation's economic ills. Moreover, this particular appropriation, H.R. 4876, is especially in need of pruning because of the very nature of the programs being funded.

PUBLIC WORKS

Last August the Appropriations Committee appropriated $2 billion to fund the Public Works Employment Act of 1976. Under this program the Economic Development Administration in the Department of Commerce received approximately 25,000 applications for local public works projects, accepted some 22,000 for review, and selected 1,988 for funding.

My experience with the program to date has essentially been this application process. Project construction has not yet begun, outlays have not yet occurred and, in response to a question on the number of jobs created, the Department testified:

We have not at this point come up with

a firm revised estimate. We will not know the actual job creation figure until we have had a chance to evaluate the projects.

And yet, we acted with considerable haste to double the amount and appropriate an additional $4 billion in this bill at a time when there are close to 20 billions of dollars in more sound projects for capital improvements now held up by redtape and bureaucracy.

This wisdom of this action is further called into question because—

Increased public works spending will not affect employment this year.

A low percentage of the funds appropriated for such projects actually end up as wages—19 to 32 percent according to one estimate.

Projects and employment which would be generated by local communities will be delayed in anticipation of a chance for Federal dollars even though only one out of five applications will be funded.

Financial assistance from the Government in Washington to aid in the planning and construction of works of improvement is a form of aid as longstanding as the Nation itself. Originally justified as an activity designed to facilitate commerce among the States under the Commerce Clause of article I of the Federal Constitution, such assistance has become an important aspect of the Federal-State-local cooperation which has pervaded our sense of national unity. It has resulted in incalculable benefits to the people, especially in the protection it has afforded them and their property against natural disasters.

These works of improvement are designed to carry out important environmental objectives. They are investments to help us protect our environment against the ravages of floods, to improve navigation for both commercial and recreational purposes, to enhance crucially needed water supplies for our municipalities—a problem of rising dimensions again for the first time since the mid-1960's, to reduce losses to our economy, and to alleviate the human misery which accompanies any failure to come to grips with these problems.

The problem in assuring the adequacy of the Government's commitment to these programs is money. And let me spend a moment discussing this point. As my colleagues know, there are few Members who have voted as heavily for reductions in total authorizations and total appropriations as I have. But, as my colleagues are also aware, there are few that have as consistently supported public works programs as I have, provided that their funding did not increase total authorizations or appropriations, but rather came from a shift of authority or funds available to us. It seems to me that we who are Members of the Committees on Public Works and Transportation and Appropriations must do a more effective job of telling our colleagues, the agencies, the media, and our constituents of the crucial importance of using dollars in tight supply to provide benefits to our States and communities which are of a permanent nature.

At a time when the Federal Government must maximize the impact of every dollar it spends, authorizations and appropriations for public works take on a crucial character. How much more intelligent it is and how much more beneficial to our communities and their residents it is to spend money for these permanent works of improvement—which leave lasting, physical benefits—than to spend the same amount of money on make-work, public service jobs.

Calling a job a job does not make it a job. To be a real job, as defined by economists, it must be productive. I do not subscribe to the notion that Government ought to address the problem of high unemployment by automatically putting people on its own payroll. Instead, I believe Government ought to remove the disincentives to jobs creation in the private, productive sector of our economy—disincentives found in our high tax rates, our regulatory policies, etc. But, as long as Government is going to address the problem of high unemployment by using its dollars to create employment and that is the present policy, then I firmly believe we should use those dollars for activities which leave permanent, physical benefits to the Nation.

It makes more sense to me as a matter of policy, economics, logic, and even politics—and to the vast majority of taxpayers as well—to use Federal dollars to complete a pubic works project, than it does to create "make-work jobs."

Within this framework, let me discuss the status of major projects in New York and the Northeast.

A case in point is the threatened loss of untold millions of dollars by the Northeast States because of a timetable for approval of Federal construction grants for wastewater treatment plants that the Federal Government admits it cannot keep. New York State, in particular, faces the loss of $316 million of its allotment for fiscal year 1976 due to the inability of the U.S. Environmental Protection Agency—USEPA—region II office to process all of New York's grant applications in time to meet the September 30, 1977, deadline.

New York State Department of Environmental Conservation Commissioner Peter A. A. Berle has firmly stated that since Governor Carey announced the accelerated environmental public works program on June 3, 1975, his department has given the processing of grant applications for sewage treatment works top priority. The entire allotment of $1.046 billion which New York is entitled to are proceeding on schedule on the New York State level, and will be filed with the region II office by June 30, a full 90 days before the September 30 deadline.

Yet in a letter to Commissioner Berle dated December 2, 1977, Region II Administrator Gerald M. Hansler informed Commissioner Berle that, no matter how well-organized and conscientious New York State was in this effort, the "current staffing level" at the regional level prohibited that office from processing over a quarter of a billion dollars of the remaining funds in the New York State allocation. Commissioner Berle was further notified that "funds not obligated by September 30, 1977, will be subject to reallotment to all States, under the current law."

Repeated contacts by the region II states to USEPA have so far failed to provide the needed 42 additional staff positions—so much for the concern of the Federal Government for the little guy.

And it will be the "little guy" who is affected by this mismanagement of Government programs if New York State is forced out of the running for that $316 million. For each $100 million of grant funds lost to New York State, over 6,000 construction-related jobs will be lost to the State at a time when this industry is suffering the highest unemployment in the Nation, particularly in our State.

Both labor and management are justifiably concerned over this blatant injustice, and I have been working closely with the New York State Department of Environmental Conservation to forestall any loss of these construction funds. In addition to continuing my efforts to obtain additional qualified staff for region II, I have introduced legislation, H.R. 3751, to delegate duplicative review functions to State environmental conservation departments in an effort to speed up the process of review. My bill would amend the Federal Water Pollution Control Act so that "the Administrator may carry out any of his responsibilities for actions, determinations, or approvals—with respect to projects or proposed projects for treatment works by accepting a certification by the State water pollution control agency of itse performance of such responsibilities." Much of the grant application processing, particularly that involving environmental analysis, is duplicative. If this function were transferred to the States, much time could be saved.

If an extension of the September 30 deadline is ultimately needed to insure the retention of New York's full level of funding, I will support a limited extension of time for USEPA to conclude its review of our State's projects. This is the less desirable solution, however, since any delay in funding approval will mean the loss of jobs to New York State, and since the EPA has a record of taking advantage of any and all time extensions to further expand its bureaucratic control regardless of the negative economic impact its actions might bring about.

One example of the shortsightedness of the EPA in these water pollution projects is the proposed elimination of funding for collector sewers from the the new Water Pollution Control Act appropriations. According to the EPA, collector sewers are "not the most effective way" to improve water quality. But in New York State the need for sewage collection systems is extremely strong because the State of New York did not allow State reimbursement for some years while they were eligible for Federal construction grants. As a result, New York State now has an overwhelming need for sewage collection systems—which, I might add, has a much more immediate public im-

pact because of the present poorer quality of septic systems and the adverse impact a denial of collector sewer funding will have on the already devastated construction industry.

The lack of a practical approach to the funding of these environmental projects has been graphically illustrated in my own State of New York, where a State environmental quality review—SEQR—act will go into effect for local municipalities on June 1, 1977. The oversight contained in this act is currently in effect for New York State construction projects, and it is slated to monitor private industry beginning September 1.

Although this law was originally supported by Governor Carey and a wide constituency of well-meaning followers, almost all those concerned with the State's economy have been having second thoughts. In a State which has lost 400,000 jobs in the last 25 years—during a time when 46 of the 48 contiguous States increased their manufacturing employment—labor, business, and government leaders have grown increasingly restive over New York's increasing unpopularity among business concerns and its resulting steady increase in unemployment.

State Commerce Commissioner John Dyson, who is leading the charge against SEQRA, recently warned, "We are beyond crisis. We face a permanent economic decline in New York State if we do not do something now. This is much later in New York State than anybody realizes.

The horror stories of the economic impact of SEQRA pour in to Commissioner Dyson's office almost daily. The Associated General Contactors of New York State has flatly stated, "If the economic ship of the State of New York is currently floundering these rules and regulations will surely sink it." They cite the recent delays in highway construction as a case in point.

"As of mid-1975," AGC points out, "approximately $3.3 billion worth of road improvements in the State of New York, employing some 144,000 workers, were being held up. This includes job losses of approximately 70,000 construction industry workers and 74,000 in related fields—this does not take into effect in any way the so-called 'domino' effect on retail stores, car sales, restaurants, and other related businesses which are dependent, in part, on construction dollars.

"As of mid-year 1975, New York State's accumulation of unobligated Federal aid stood at some $900,000,000. Primarily due to so-called 'environmentalists,' New York State recently lost some $211,000,000 in Federal Interstate Funds, due to the inability of New York State to utilize them. Moreover, when President Ford released some $2 billion in Federal highway funds to the States for the purpose of bolstering the Nation's economy, New York State was unable to share in these funds because construction was not possible in this State."

According to David A. Pietrusza, of the State Office of General Services in Albany:

This virtual halt of highway work in the State, it is estimated, cost New York approximately $1.7 billion in payrolls and would have provided to the State and Federal Governments $325.6 million in income taxes. All this while 36 percent of the State's 107,776 mile highway system was judged deficient by the National Highway Roads Report, and the State's construction industry operated at only one-fourth of its 1971 billion level, and unemployment in certain areas for construction workers ran to and exceeded 80 percent.

The uncertainty of future regulation in construction and devlopment due to the vague language of this legislation, with descriptive language such as "significant effect," "good cause," and "appropriate time," has already succeeded in discouraging private investment, particularly in badly-needed housing starts, and the price in delays and lost opportunities for investment dwarf the increasingly prohibitive financial costs of actual construction. This, coupled with the anticipated massive logjam caused by the mandatory environmental impact statement in areas where they clearly are unnecessary, are expected to undo even the environmental benefits that programs such as pure waters projects are trying to accomplish. "We could have a reaction which would destroy even the gains which environmentalists have already made," says Commissioner Dyson.

Mr. Speaker, the $4 billion in additional public works projects which we voted on yesterday entails the same kind of governmental redtape and bureaucracy. As I have stated earlier, my experience with this same program when it was funded at a $2 billion level has been nothing but frustration and more bureaucracy.

Mr. Speaker, it is the height of arrogance for the U.S. Congress to try to sell the American people a bill of goods that has no more real value than another promise. I for one am not afraid to stand up and be counted in favor of the working American who is going to have to pay for this bureaucracy through hard-earned tax dollars. We need meaningful public works projects and we need them now, but we do not need this $4 billion increase in Government borrowing and false hopes.

IS ANYONE LISTENING?

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. CONABLE) is recognized for 10 minutes.

Mr. CONABLE. Mr. Speaker, the apparent indifference of the administration to the impending financial crisis in the social security system is appalling.

In fewer than 2 years, the system's disability insurance trust fund will be exhausted, and the old-age and survivors insurance trust fund is not much better off. As far as I can tell, the executive branch is doing nothing about the situation.

What is it waiting for? Is the administration merely playing a fiddling Nero to the system's burning Rome?

Or are there other motives?

It is well known that the gentleman from Massachusetts, the chairman of the Ways and Means Subcommittee on Social Security, long has favored infusing the system with general revenues. He has not been deterred by the absence of general revenues, or the existence of a mammoth Treasury deficit, or the necessity under his proposal of more borrowing, a higher public debt, and resulting inflationary pressures.

From other quarters, we hear rumors of a grand scheme being developed—somewhere in government—to propose a new national sales tax, the proceeds of which would be used to bail out the social security trust funds.

Is it possible that the strategy of the majority is to bide its time on social security, to wait until the last possible moment to take corrective action, and then to burst forth with either of these proposals as the only answer to the financial crisis? Certainly it can be argued that if we wait too long, we can be stampeded more easily into accepting an 11th-hour rescue offer. This is particularly true with a lopsided congressional majority.

Is this the ploy? I fervently hope not, for two overriding reasons:

First. Any move to pay benefits from sources other than contributions would destroy the system's insurance character, which has been primarily responsible for its widespread public support.

Second. The Congress should take the time to give careful and thorough attention to every social security proposal. To do otherwise would be a tragic disservice to the American people, most of whom have a direct interest in our social insurance programs.

THE SACCHARIN CONTROVERSY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. MCKINNEY) is recognized for 5 minutes.

Mr. MCKINNEY. Mr. Speaker, like my colleagues, I have been inundated with telephone calls and mail from riled constituents protesting the Food and Drug Administration ban on saccharin. Everywhere I went in Connecticut this past weekend I was accosted by citizens shocked by such flagrant Government interference in their lives. It has been a very long time since I have witnessed such a tumult of outrage over a Government action. It is all the more remarkable because this is not an organized "special interest" protest but represents instead the spontaneous outpouring of the "common interest" of saccharin-consumers.

Let me quote some of my constituents:

It is an insult to the intelligence of the American people to ban a substance based on tests at levels of 800 12-oz. soft drinks for life. Retest both saccharin and cyclamate at realistic dosages.

Let them put warnings on every bottle of "TAB" (etc.) if they must, but allow me the same freedom of choice that I now exercise with tobacco and alcohol. . . . The American public is entitled to freedom of choice.

I am a diabetic and it is vital to my survival not to have direct sugar. . . . Whoever made the law about cancer-producing substitutes should have put in an amendment about producing cancer in humans or else about reasonable levels for rats. . . .

The risks from artificial sweeteners are far less than those from excess amounts of sug-

ar. The heart problems from excess weight are far more serious than any problems coming from cyclamates and saccharin, to say nothing of the impact on diabetics.

I am fed up with government telling me what I can eat and what I can't eat. Warn me all you want, but if I want to eat something that you consider inadvisable, it's none of your business!

The decision of the FDA to ban the use of saccharin in food products . . . has in effect deprived American citizens of a freedom vital to the existence of a democracy, the freedom of choice. For many of us this deprivation is not just a matter of principle but of life and death. . . . There is no way to provide potential immortality for any of us. Having been given the necessary information, we must be free to choose our own pattern of living or the path to the beyond.

While recognizing that the Food and Drug Administration had no alternative but to ban saccharin under the Delaney amendment—which requires the FDA to act against any substance shown to cause cancer in humans or animals, no matter how remote the risks may seem—the public remains puzzled and angered by such an unequivocal requirement. They believe no persuasive case against saccharin has been made, that the Canadian tests do not prove that normal doses of saccharin are unsafe. Moreover, they know it has never been proved that every animal carcinogen causes cancer in man. Needless to say, most consumers feel the analogies of what humans would have to consume to equal the amount of saccharin fed the test rats are bizarre.

There is no denying that the automatic trigger mechanism of the Delaney amendment leaves no room for evaluation of conflicting scientific evidence, nor does it give the FDA any flexibility to assess the tests and ask whether it makes sense to issue a blanket ban. Furthermore, the Delaney clause says nothing about the dosage of the additives to be consumed or the kinds of tests to be conducted. In effect, the law admits no qualifications, while providing no guidelines. Many assert that the unqualified nature of the Delaney amendment prohibits rational decisionmaking for there is no room for weighing the benefits of saccharin or any other substance against its costs.

Outright repeal of the Delaney amendment would be a disservice to the American people for there is no question that the clause has served our citizens well over the years by protecting them from additives which have been proved dangerous.

Indeed, it can be argued that the uncompromising language of the law has been effective for it is difficult, if not impossible, to weigh and define acceptable risks to the public health. No doubt all of us have heard the argument that the effects of repeated contact with carcinogens, even in minute amounts, may not appear for 20 years or more.

However, equally persuasive arguments can be made that we need a more balanced approach to protect the public against carcinogens, to provide alternatives to the FDA other than banning a product when positive test results are reported. There are no absolutes in health today; yet the law provides an absolute. Surely the FDA should be allowed the option of deciding whether the dosage is excessive, whether the tests are reasonable, and whether the risk of exposure to food additives, such as saccharin, is as harmful to the public interest as Government dictates which deny access to that substance.

Since the FDA saccharin ban, a number of bills have been introduced in Congress, aimed at making the Delaney amendment more responsive to today's realities. I applaud the decision of Chairman PAUL ROGERS to schedule hearings on this issue, beginning Monday, under the jurisdiction of his Subcommittee on Health and the Environment. The committee's deliberations and findings should prove informative and I am confident that the Members will exercise the greatest care to insure that any recommendation to amend the existing standards is faithful to the basic principle of the Delaney concept to protect the public interest and health.

EDGAR L. KIEFER—BORN MAY 25, 1892—DIED MARCH 11, 1977

The SPEAKER. pro tempore. Under a previous order of the House the gentleman from Florida (Mr. YOUNG) is recognized for 10 minutes.

Mr. YOUNG of Florida. Mr. Speaker, on Monday I had the sad occasion to attend the funeral of a former member of my staff, Edgar L. Kiefer, who died in St. Petersburg, Fla., at the age of 84. Mr. Kiefer was a man who had been successful in three separate and unrelated careers. He was a performer on the vaudeville stage, and on Broadway when he was a young man. Then he rose to a position of management with Schweppes, Ltd. When he retired at 65, he decided to become involved in Republican politics in Pinellas County. For 16 years he directed the activities in the Republican Party, working full time, with no compensation other than the knowledge that he was doing a good job. Those who knew and worked with Ed Kiefer, or even felt his opposition during his political career, often referred to him as "The Little Giant," even though he was only 5-foot 4 inches tall with his shoes on. Ed and his wife, Carolyn, were married for 36 years. They had three daughters, Dorothy Kollhoffer, June Mysko, and Marjorie Frolich; four grandsons, Bill and Jonathan Mysco, and Peter and Paul Frolich; and a 2-month-old great granddaughter, Claire Mysco.

Michael Richardson, associate editor of the St. Petersburg Evening Independent, wrote a column about the life of Ed Kiefer, which appeared on Saturday, March 12, 1977. I share the feelings so well expressed in Mr. Richardson's column, and I wish to submit them for the RECORD:

THE THREE CAREERS OF ED KIEFER, WINNER

(By Michael Richardson)

I guess I'll never forget the first time I encountered him, the bigtime political boss, the reputed administrator who kept a party machine well oiled.

I expected a Diamond Jim Brady figure in pinstripes and a cigar. He turned out to be a diminutive Camels-smoker who talked about loyalty and patriotism as if he meant it.

Ed Kiefer. He died yesterday, and I'll miss him. One of my favorite politicians, he was. No facade. No pretense. No bull. Just dedicated, selfless, real, willing to admit he made a mistake. Smart enough to never make it twice. Genuinely concerned for his perception of the public interest.

He somehow managed to keep hundreds of people busy working for the party for nothing, maybe because he worked for nothing, too. He wouldn't take any money until the whole party threatened to fire him if he didn't take $100-a-month.

He sat behind a desk big enough to be his bed. (And sometimes, in the heat of a campaign, it did become his bed.)

The huge chair, his 5-foot-4 frame, his balding head and leathery look, all made him look a bit like an Oriental monarch. Indeed, in days long gone by, back in days with Eddie Cantor and the vaudeville stage, he had played a Chinese in a Broadway play.

That was his first career, picking up acting jobs with the boys of old New York—back when it was really new. His rich baritone voice helped him all his days, made him effective in thousands of phone calls through three careers.

On the New York stage, he didn't do badly, enjoyed himself and walked away from it when he was ready.

Then he rose quickly to a management career with Schweppes, Ltd. Successful there too, he picked his own retirement and headed for St. Petersburg.

Somebody suggested he get involved in Republican politics at 65.

"It was a case of doing something or just sitting around," he explained.

(I don't know if it was a hangover from his Schweppes days or the vernacular of his hometown, but Ed explained a lot of things by saying, "It was a case of . . .")

Ed Kiefer never did anything half way or with short cuts. So, starting as a precinct committeeman, he went to work. And when Lyndon Johnson and Barry Goldwater together managed to bury the local GOP in the 1964 campaign, the party faithful didn't have to look far to find the man who could bring the party back from the dead.

In two years he literally walked the county to build the party he believed in.

The rest is his story: Winning elections 1966; winning elections 1968; winning elections 1970; winning elections 1972.

But winning, to Kiefer, wasn't the ultimate experience. I'll let him tell it:

"You've got to like people; then, it's a case of beating the doors. During the time I was organizing, I contacted every precinct man and woman.

"Certain people want to attain something overnight. They're not prepared, they are defeated and they take it out on me.

"There are those who run on the party label, and those who run for the party."

Ed had little patience with the former and a fierce loyalty for the latter. An incumbent was entitled the support of the Kiefer party until he had publicly proven himself a bad official.

"You don't run against an incumbent," was the Kiefer rule. But exceptions were made if you were a poor incumbent. So, in 1970, Kiefer opposed incumbent GOP Gov. Claude Kirk and helped push a merchandising whiz from Bezlleair named Jack Eckerd into Florida politics.

Eckerd was just one of dozens Kiefer persuaded to "get involved."

He'd tell them: "It's a case of somebody's going to make the decisions. If you don't get involved, somebody not as good is going to be making decisions for us."

No cheap talk from Kiefer. Just the basics: Be loyal. Do your homework. Work at the job; don't loaf at the taxpayer's expense.

Show up at the party meetings. Buy your tickets. Shake hands. Don't expect the people to kiss your feet. They don't owe you anything; you owe them.

The way he told it, his favorite "star" was William Cramer, the former congressman, probably because it was Cramer's name at the top of the Pinellas ticket that helped people start down the ballot on the Republican side.

He loved Cramer's successor, U.S. Rep. C. W. Bill Young with whom he almost had an uncle-nephew relationship. Kiefer urged Young to run for Congress in 1970, when Young also entertained notions of running for governor of Florida.

In 1973 the Watergate embarrassment nearly broke the heart that had withstood two coronary attacks already. Kiefer had been honored as "Mr Republican of the South. He earned that title, and the pollution of the Nixonian dirty tricks hurt.

But nothing a few creeps did can tarnish Kiefer's contribution. He raised such a standard that when local Democrats were seeking leadership, they whispered, "We need a Kiefer, who'll work at it."

Ed earned his rest.

CONGRESS MUST TAKE INITIATIVE TO INSURE OUR ENERGY FUTURE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Iowa (Mr. GRASSLEY) is recognized for 5 minutes.

Mr. GRASSLEY. Mr. Speaker, the need for an extensive and coordinated national energy policy has been on the agenda of congressional priorities for the past several sessions, but the Congress has been negligent in attacking the problem of energy misuse and waste. The bitter winter experienced in many sections of the Nation this year have dramatized the consequences of this congressional failure and hopefully the Congress will undertake development of a national energy policy with all due dispatch.

Although the current winter created hardships for many Americans in terms of unemployment and higher fuel bills, the energy shortages that occurred may have produced one beneficial effect. I believe that many more Americans and Members of the Congress realize how closely our prosperity as a Nation is tied to our energy supply.

It is time that we develop a national energy program that will not only encourage conservation, but will make a national commitment to seek new energy sources. We cannot afford further delay in making a national commitment to plan for our future energy needs.

Some States, including my home State of Iowa, have taken the initiative to conserve energy. I was personally proud to be a member of the Iowa Legislature that authorized one of the first energy conservation programs. Iowa has become a recognized leader in energy conservation and my home State was able to escape many of the problems faced by other States.

While Governors in other States were making pompous claims that they did not believe the stories of energy shortages, Iowa Gov. Robert Ray moved ahead to make a State commitment to conserve our fuel. It was apparent that the failure to wisely use our energy resources could result in a devastating impact on our ability to produce food on the rich Iowa farmland. This kind of failure also would have a severe impact on the Iowa economy.

But, in recent weeks, we have found that prudence for the past 4 years could become an unjust and unfair paradox. Governor Ray and many Iowans have expressed a fear that Iowans will eventually be penalized for wise energy management.

As an example, let me cite an editorial comment from KCRG-TV in Cedar Rapids:

It seems almost certain that Iowa will be called upon to provide some natural gas supplies to the eastern United States. Iowa has a reserve because of good planning after the last energy crunch. Governor Ray now says he is worried about future supplies of gas in our state. The governor says losing our natural gas reserves because of poor planning by other states is not fair. It would be good for our Representatives in Washington to heed the governor's remarks and see to it that Iowa is not crippled because of wasteful practices in other states. The Iowa Plan should be held as an example for other states to follow. Perhaps the rest of the nation should be federally mandated to follow the lead set by Iowa.

The Iowa City Press Citizen, in an editorial, has expressed a concern that the potential for penalty to States that have made meaningful efforts to conserve gas may become victims of the emergency energy legislation sent to President Carter. In part, the editorial said:

The penalty comes in the emergency energy bill rushed through Congress to President Carter's desk. Its provisions include an authorization to divert natural gas from areas having adequate supplies to those suffering from a shortage. Or, in another way, it means gas can be taken from Iowa and sent to Pennsylvania.

I believe the vast majority of Iowans are willing to make the necessary sacrifices in times of national crisis and if the energy crisis reaches severe proportions in other States I believe Iowans would be willing to share our supplies. We certainly do not believe Iowa should have supplies while other residents in other States are freezing in their homes. That is why I voted against the Administration's plan to divert natural gas from States such as Iowa to East coast and States which I call comprehensive energy plans.

It is totally unjust and unfair for the people of Iowa to be penalized, because of the shortsighted approach taken by other States to the energy situation. The people of Iowa should be rewarded, not penalized, for their wisdom and commitment to reduce their use of energy. I would encourage other States to take a similar initiative until the Congress acts.

And, we must be careful to maintain energy reserves which may be necessary to our future. In Iowa, it is wise to recognize that 13 percent of the State's natural gas is used in the production of anhydrous ammonia for farm fertilizer. Any cut in ammonia production could result later in reduced farm production.

It was encouraging that President Aide Jack Watson, in a letter to Governor Ray, indicated that—

Any redistribution of supplies will be made with paramount emphasis on equity and fairness for all citizens.

Mr. Watson further recognized Iowa's energy conservation measures as "an example to the rest of the Nation."

Such reassurances from the Carter administration are heartening, but they do not resolve the potential for problems in the future. If we are to erase the doubts of Iowans about the possibility that they may be penalized for their energy conservation efforts and if we are going to achieve the goal of wise energy use, we must make a national commitment to an energy program.

We cannot afford further delays. The time has come for the Congress to take the initiative to establish long-range goals to insure our energy future. To do less will not only result in continued waste, but will set the stage for another crisis which could place our national economy in peril.

MEDICARE REIMBURSEMENT LEGISLATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Maryland (Mr. STEERS) is recognized for 10 minutes.

Mr. STEERS. Mr. Speaker, I am pleased to note that my distinguished colleagues, Mr. WILLIAM BRODHEAD and Dr. TIM LEE CARTER are joining me in sponsoring a bill to make more flexible the method of reimbursing medicare recipients for durable medical equipment.

Nearly 5 years ago, in May of 1972, the General Accounting Office issued a report entitled "Savings Available by Purchasing Durable Medical Equipment When Warranted by Anticipated Period of Need." The report cited present medicare law which allows beneficiaries to rent such equipment even when the periods of need as indicated by a physician show that purchase of the medical equipment would be more economical.

GAO analyzed the claims histories for durable medical equipment for five insurance companies in four States. The analysis reveal that out of a statistical sample of 420 reimbursements of the approximately 13,000 beneficiaries, a savings of $234,000, including $47,000 for the patients' share, could have been realized if the equipment had been purchased when the anticipated period of need indicated that purchase would have been more economical than rental.

Claims histories for a statistical sample of the approximately 7,000 beneficiaries at a sixth carrier in another State revealed that approximately $763,000 including $153,000 for the patients' share, could have been realized had the equipment been purchased rather than rented.

Several examples cited by GAO were as follows:

A Medicare patient having heart trouble rented a walker for 16 months. Her physi-

cian's prescription stated that the duration of medical necessity would be one year. The monthly rental charges would have equaled the $90 purchase price in five months. The rental charges for the item through August 1971 were $290.

A Medicare patient having emphysema rented a respirator for three years. His physician's prescription indicated that the patient would need this equipment indefinitely. The rental charges from September, 1968 through August, 1971 were $1,932. The purchase price of this item was $396.

A Medicare patient having a chronic, destructive skin condition rented a manual-crank bed with a trapeze bar for nearly four years. The physicians' prescription indicated that his patient's condition was irreversible and that equipment would be needed indefinitely. The rental charges from November, 1967 through August, 1971 for the bed and trapeze bar were $1,654 and $342, respectively. The purchase of the items would have cost $284 and $34 respectively.

These results are not surprising. Present medicare law reimburses a beneficiary for the purpose of durable medical equipment in small monthly installments equal to the monthly amounts that would have been paid had the equipment been rented. Medicare beneficiaries who live, for the most part, on shoestring budgets find it most difficult to dole out one big payment in any given month when reimbursement comes in the form of such small payments stretched out over a period of months. One of my constituents last summer wrote about this problem. I would like to read a brief exerpt from his letter:

As you can see from the enclosed notice, I bought a wheelchair on 30 September 1976 from Abbey Rents, Inc., for which I paid $147.50. Medicare B has informed me that they will reimburse me for the entire cost of the wheelchair, but that the reimbursement will be on the basis of monthly installments. Social Security laws require such a reimbursement to be made in installments. . . . my difficulty is that I had to pay Abbey Rents the entire amount, but that I will be reimbursed in "dribbles". My total monthly income is $332.40 paid as Disability Insurance by Social Security; the wheelchair cost over one-third of my total income. It was difficult for me to pay that cost then; it will be even more difficult for me to absorb that cost if I must do it in small installments, especially now that Thanksgiving and Christmas are approaching.

Along these lines, GAO concluded that, when the beneficiaries—rather than the carriers—decide whether to rent or purchase durable medical equipment, they often rent even though anticipated periods of need are long enough to justify purchase.

To correct the potential for abuse in this pay out system, I have introduced H.R. 3296, a bill which simply authorizes the Secretary to make a determination on the basis of medical and other evidence, as to whether purchase of the equipment would be less costly than rental. If such a determination is made the Secretary may then authorize purchase on a lease-purchase or lump-sum payment basis.

The bill also provides an incentive to purchase used equipment by waiving the 20-percent coinsurance amount whenever the purchase price of the equipment is at least 25 percent less than the reasonable charge for comparable new equipment.

Finally, the Secretary is authorized to encourage suppliers of durable medical equipment to make such equipment available on a lease-purchase basis whenever possible.

I am, of course, concerned that beneficiaries should not be delayed in acquiring equipment when it is medically necessary. Often, equipment is acquired before a rent-versus-purchase decision is made. In this regard, I would like to point out that 82 percent of the insurance carriers—19 of 23—interviewed by GAO allow the first month's rental of an item to be applied toward its purchase price. GAO concluded that—

Rent-versus-purchase decisions for equipment acquired from those suppliers would have to be made at the time of acquisition but could be made within the first rental month, to permit exercise of the purchase option if warranted.

In short, this legislation would serve both the interests of economy and certain hardship cases where beneficiaries cannot afford to be reimbursed for purchase in small monthly amounts.

I testified about this reimbursement problem and my legislation to correct it before the joint hearings on medicaid and medicare fraud abuse held by both the Health Subcommittee of the Interstate and Foreign Commerce Committee and the Health Subcommittee of the Ways and Means Committee. Both Mr. BRODHEAD and Mr. CARTER are members of those subcommittees and if their enthusiasm is any indication, I am hopeful that these subcommittees will be seriously considering this legislation in markup.

LEGISLATION TO BENEFIT OLDER AMERICANS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. MCDADE) is recognized for 5 minutes.

Mr. MCDADE. Mr. Speaker, today I am pleased to announce my introduction of a legislative package designed to address a number of everyday concerns of older Americans. Specifically, my proposals will freeze the inpatient hospital deductible under medicare at its 1976 level, include prescription drugs as a qualified medicare service, and remove the earnings limitation on social security.

From my many communications with senior citizens in my district, I believe that the measures I am submitting today are among the most widely favored means to assist this group through a financially difficult period. It is a constantly mentioned and universally accepted admission that inflation impacts most severely on individuals living on fixed incomes. Therefore, senior citizens, most of whom are forced to make ends meet on small, stable incomes, are exceedingly vulnerable to increases in rent, utility, food, and medical costs, the basic expenses of life. I am particularly concerned that in our attempts to deal with the effects of our Nation's economic woes on the population at large, we are overlooking the special problems faced by older Americans in this area. Accordingly, I feel it is imperative that we take reasonable and responsible steps to relieve a number of the pressures and anxieties this group now endures.

One area of vital interest to our senior citizens is the sharply rising costs of health care. Even though approximately 40 percent of the health care expenses of the aged are now covered by medicare, the inevitable physical problems caused by advancing years force this segment of the population to expend a disproportionate share of its income on medical services. In fact, according to 1975 estimates, an individual age 65 or older shouldered an average of $390 in out-of-pocket expenses for health care services.

For a person trying to make ends meet on a fixed income, this amount, in my view, is particularly burdensome. It is especially troubling, therefore, that effective on January 1 of this year the medicare beneficiary facing hospitalization is now required to personally contribute $124 for each visit, an increase of $20 over last year's figure.

Although the medicare deductible is established at the beginning of each year to reflect the average cost of a 1-day hospital stay, I feel the most recent adjustment from $104 to $124, an increase of over 20 percent, is an unreasonable amount to ask our seniors to defray.

One way to reduce the elderly's liability in this area is to maintain the inpatient hospital deductible at its 1976 level of $104, which is among the legislative remedies I am proposing today. In this way, we will be able to remove the burden of rapidly rising hospitalization costs from those least able to manage it.

Another important method of holding down seniors' medical expenses is to include prescription drugs as a qualified medicare service. It has been demonstrated that prescription medications have been a principal reason for the sharp increases in the elderly's personal contributions to health care costs and now account for approximately 25 percent of their out-of-pocket medical payments.

Elderly individuals with conditions requiring continuing treatment with prescription drugs find their bills for these items have become major entries in their budgets. In fact, I am particularly concerned that some chronically ill persons requiring extensive and expensive medications may be neglecting their health needs simply because they cannot afford to purchase prescribed remedies.

I believe it is important, therefore, to institute a program which would account for the elderly's considerable drug needs. This can be accomplished by including medications requiring a physician's prescription under the medicare program, which is one of the proposals I have introduced today. This, in my view, is a most reasonable approach to keeping seniors' medical expenses in line with their incomes.

Last, I believe we should take steps to eliminate social security's limitation on

earned income. This is a provision which unfairly penalizes the individual who is otherwise eligible to collect social security benefits but wishes to remain on the job and earns more than the law allows. Currently, a social security recipient may clear up to $3,000 per year without receiving a $1 reduction in benefits for every $2 he earns above the limit.

When an individual reaches a certain age it definitely should not signify that he or she no longer has any productive years remaining. I know that there are a number of older workers who are fully willing and able to continue their employment past the standard retirement age but object to this discriminatory social security provision. These individual's have paid into the social security fund for many, many years but are prevented from recovering contributions simply because they do not meet the official retirement standard.

Additionally, I feel it is unjust to take earned income into account in the computation of social security payments but not subject income from bank accounts, stocks, and other holdings to the retirement test.

Furthermore, the absurdity of the present law becomes apparent through the exemption of individuals age 72 and older from the earned income provision. It is time to correct this most inequitable rule.

I therefore urge my colleagues to examine carefully the special circumstances of the elderly and to act favorably on my proposals.

DOES THE COMPTROLLER OF THE CURRENCY DICTATE FOREIGN POLICY?

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, over the past several months a number of reputable newspapers have charged that the Comptroller of the Currency directed U.S. commercial banks to cease and desist from making any more loans to either the government or private industry in Italy. One newspaper, the Italian Tribune News, in a signed article by Enzo de Chiara, charges that American banks have been told by the Comptroller of the Currency that Italy is a bad risk together with other underdeveloped countries, and no more loans should be made by the banks to the Italian Government or private firms.

This charge, that the Comptroller of the Currency directed U.S. banks to cease making loans to Italy, previously appeared in an article by Milo Farneti, in the Journal of Commerce, dated January 6, 1976, under a Rome dateline. The article states that it was understood in Italy that some U.S. banks were exceeding their country limit on lending to Italy, and that Italy was effectively put in the risk country class by the Comptroller of the Currency.

In a January 8, 1976, article in the Journal of Commerce, under a Washington dateline, it was charged by the writer, Mr. Oscar E. Naumann, that the U.S. Comptroller of the Currency told U.S. banks that any non-lira loan to an Italian Government entity for more than 1 year was considered substandard. The article goes on to state that the Comptroller's office was not telling banks they should not make loans to Italy, and that in fact, they had never issued such orders to U.S. banks.

Mr. Speaker, one does not have to accomplish an aim such as this by formal order. It was and is well understood by the U.S. financial community that loans to the Italian Government or private industry within Italy should not be made because such loans would be subject to criticism by the U.S. Comptroller of the Currency's examiners.

Mr. Speaker, having been informed of this situation, I wrote the chairman of the House Committee on Banking, Finance and Urban Affairs, the Honorable HENRY S. REUSS, on March 15, indicating I was shocked to read the Comptroller of the Currency had classified Italy as a bad risk country, and asked for an immediate investigation of the matter.

The chairman of the House Banking Committee graciously consented to my request and wrote the Acting Comptroller of the Currency, Robert Bloom, asking him to examine the charge and respond immediately with all the necessary information to substantiate or refute the charges made in the various newspaper articles I have mentioned above. I insert my letter to the chairman of the Banking Committee and his letter to the Acting Comptroller of the Currency in my remarks at this point:

SUBCOMMITTEE ON CONSUMER AFFAIRS OF THE
COMMITTEE ON BANKING, FINANCE AND URBAN AFFAIRS,
Washington, D.C., March 15, 1977.

Hon. HENRY S. REUSS,
Chairman, House Committee on Banking, Finance and Urban Affairs, Washington, D.C.

DEAR MR. CHAIRMAN: I was shocked to read in the Italian Tribune News, dated January 28, 1977, that the United States Comptroller of the Currency has classified Italy as a bad risk country and directed U.S. banks to stop making loans.

Mr. Chairman, I cannot believe this is true; therefore, I ask if you would use your good offices to write the Comptroller of the Currency inquiring into this matter. If the facts are correct, I shall immediately request a full-scale investigation by the Committee. Any element of truth to the charge that the Comptroller has engaged in such action would, as I understand it, constitute a flat violation of the law.

Mr. Chairman, I would appreciate your expeditious consideration of this matter. I enclose a copy of the article from the Italian Tribune News for your information.

With every best wish,
Sincerely,

FRANK ANNUNZIO,
Chairman.

WE ITALIANS

(By Enzo de Chiara, Washington Correspondent of the Italian Tribune News)

Primarily, because of the political and economic situation that has developed in Italy, I firmly believe that the only way to further the future of democracy (if this is indeed consistent with the foreign policy of the new administration of the United States) would be to eventuate the following:

1.) The United States should provide assistance through new and solid investments and development of trade with Italy. The red light in American banks, turned on by the comptroller of currency, naming Italy a bad risk, together with other undeveloped countries, should immediately be turned on to green.

2.) The United States should discontinue channeling funds, whether officially or unofficially, to the Italian public enterprises, because those are controlled by the leftists!

3.) Substantial political support to U.S. banks should be provided by the U.S. government in order to expedite loans made internationally to the private industrial and economic sector of Italy. I particularly emphasize this point because strong private industrialists could support the policies of capitalism and therefore guarantee (business man to business man) the continuation of democracy in Italy and continued development of economic prosperity.

As far as I know, Angelo Rizzoli is the only publisher in Italy who is untrammeled by any political influence. He alone is fighting with all his strength to maintain his position as gentleman, publisher and single largest controller of mass media in Italy. How long can a publisher survive in the difficult economic and political climate of Italy without receiving assistance from those who espouse peace, democracy and free enterprise is the major question among Italian leaders in our own capital.

COMMITTEE ON BANKING, FINANCE AND URBAN AFFAIRS,
Washington, D.C., March 14, 1977.

Hon. ROBERT BLOOM,
Acting Comptroller of the Currency, Department of the Treasury, Washington, D.C.

DEAR MR. BLOOM: Enclosed is a copy of a letter I received from the Honorable Frank Annunzio, Chairman of our Subcommittee on Consumer Affairs, and an article which appeared in the Italian Tribune News on January 28, 1977. The letter from Mr. Annunzio and the article are self-explanatory.

I would appreciate receiving any and all information in refutation, or in support, of the charges contained in Mr. Annunzio's letter. Your immediate attention to this matter would be appreciated.

Sincerely,

HENRY S. REUSS,
Chairman.

Mr. Speaker, it is true that Italy, until recently, has passed through some substantial economic upheavals. However, all of the economic experts indicate that the current economic policy in Italy is leading to a steady, vigorous upturn in economic activity. Industrial production increased 12 percent in 1976; and real GNP has grown by nearly 6 percent in the last year. The Government of Italy does have the situation under control, and we can look forward to our friend and ally—Italy—recouping from its economic crisis of 1974 and 1975.

Mr. Speaker, the action of the Comptroller of the Currency, if it is true, is not only bad policy at any time, but comes at a most unfortunate period of time for Italy. At this precise moment, staff of the International Monetary Fund is surveying the Italian situation, both the Government and private sector, to determine whether or not they will make

recommendations to the International Monetary Fund Board of Directors to grant an IMF loan to the Government.

The Government of Italy has instituted a new tax program, and is getting its labor costs under control. Inflation this year should be substantially reduced as a result of the new tax program, and further deflationary action will be taken. Italy is seeking standby authority to borrow from the International Monetary Fund in the amount of $450 million in special drawing rights, which in U.S. dollars is approximately equivalent to $520 million.

Mr. Speaker, my contacts in Italy indicate the negotiations between the IMF and Italy are proceeding favorably toward an amicable agreement in the very near future. I find it shocking, to say the least, that if the charges against the Comptroller are true, it would allow a minor agency of our Government that has no foreign policy responsibilities to not only interfere without the knowledge of the rest of our Government and our President but to interfere in a very delicate situation and in effect determine or thwart U.S. foreign policy.

I hope these charges against the Comptroller are not true. I know the Chairman of the House Banking Committee will get to the bottom of this matter. He has given me his assurance that this is so.

Perhaps it is true that the Comptroller of the Currency should involve itself in foreign policy matters (although I do not believe it), but certainly this should not be done on a unilateral basis without collaboration with the rest of the Government.

Mr. Speaker, I conclude by making a prediction that the International Monetary Fund will agree to grant Italy a standby credit in the amount of approximately $520 million. I make a further prediction that the Italian economy will continue to improve and we will soon see our friend and ally, Italy and its people, completely recovered from its economic problems of 1974 and 1975.

CAMPAIGN FINANCING ACT OF 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Arizona (Mr. UDALL) is recognized for 5 minutes.

Mr. UDALL. Mr. Speaker, for the American political system, last year was a real watershed. For the first time in recent memory, we elected a President who does not owe his job in large part to a few wealthy individuals or big money pressure groups.

This was especially gratifying for those of us who helped to write the Federal Elections Campaign Act of 1971 and the 1974 amendments to that law that created the public financing system. We proved that public financing does work, as I have been saying for 10 years, and indeed as Theodore Roosevelt was saying before most of us were born. Now I think we should put the same "not for sale" sign on the Congress.

More than anything else—more than sex scandals or junkets or the issues of pay and fringe benefits—I believe the institution of Congress is damaged, both in public perception and in the integrity of its functioning, by the escalating costs of campaigning and the massive amounts of special interest money being pumped into election campaigns.

In 1976, this trend reached the flood stage, as investments from business, professional and labor groups in congressional campaigns nearly doubled—from $12.5 million in 1974 to $22.6 million. I use the word "investments" advisedly. This money is used, not to buy specific votes, but to assure a generally favorable atmosphere for each group's legislative aims—aims which involve public policies that mean vast amounts of money to those groups at the expense of the general public.

The bulk of this money finds its way into the campaigns of incumbents—particularly senior incumbents on the committees which affect those groups' aims. The result is that, to an increasing degree, only those who are themselves wealthy or are closely tied to special interests can challenge incumbents with any hope of parity in campaign resources. And democracy, like the free market, can only function properly when there is active, spirited competition.

To combat these problems, I believe it is time to take the next logical step after the great success of public financing in the Presidential election. Today, with Representatives PHILLIP BURTON, JOHN ANDERSON, and TIM WIRTH, and more than 70 cosponsors, I am proud to introduce the Campaign Financing Act of 1977.

This bill has been drafted to meet the constitutional requirements enunciated by the Supreme Court, and to reflect the lessons—both good and bad—from our first experience with public financing last year. It would reduce the maximum special interest group to a Federal campaign from $5,000 to $2,500. To halt senseless escalation in congressional campaign costs and enhance the role of the small contributor without freezing out challenges to incumbents, it contains the following provisions:

Matching funds from the dollar checkoff would be available in the general election to candidates who agree to abide by the spending limit, in accordance with the Supreme Court decision in Buckley against Valeo. After meeting a threshold requirement of $10,000 in donations of $100 or less, candidates would receive $1 for each $1 raised, up to a ceiling of $100 for each contributor and $50,000 overall.

The spending limit for candidates who accept matching funds would be $150,000.

Personal spending by candidates accepting matching funds would be limited to $25,000 for House races and $35,000 for Senate races—the same figures as in the 1974 act.

To reduce potential incentives for "opting out" of the public financing system, whenever a non-publicly-financed candidate spent more than $150,000, his opponents would be freed from the $150,000 spending limit imposed on candidates who accept matching funds. In the more usual situation, where all candidates participate in the public financing system or nonpublicly financing candidates do not spend more than $150,000, the spending limits would remain in force.

While I believe the Presidential campaign financing system was a pronounced success, it is clear that in drafting that law we had less than perfect foresight. Like any new concept, it had a few bugs in it. There are some changes needed, and this bill embodies several important amendments. I think these changes will strengthen it even further:

Spending limits in the Presidential general election would be increased from the current $21.8 million to $30 million, composed of a grant of $25 million from the check-off fund and up to $5 million in private individual contributions of $50 or less.

State and local parties would be allowed to raise and spend up to 2 cents per voter to promote their Presidential candidate.

Independent and third-party candidates would be eligible for matching funds during the course of the campaign, rather than after the general election. The eligibility threshold would be the same as in the major-party primaries—$5,000 in gifts of $250 or less in 20 different States.

Mr. Speaker, I urge my colleagues to join us in pushing for this reform to strengthen the Congress and the American political system. I believe it makes sense, I believe it will work, and I believe it is time for the Congress to act.

Mr. STEERS. Mr. Speaker, today I am joining my most distinguished colleagues, Messrs. UDALL, ANDERSON, BURTON and WIRTH in introducing the Campaign Financing Act of 1977. The public financing of congressional campaigns will do much to restore the confidence of the American people in their Government.

Presently, the pressure on candidates for office to gather funds is considerable and excessive. This opens the door for well-funded special interest groups to secure an inordinate amount of access to these candidates through large campaign contributions. Individual voters simply cannot match the financial strength of organized interest groups who are no longer permitted to contribute in large amounts to Presidential campaigns. The passage of this bill would equalize the ability of voters and interest groups to influence candidates for office which is essential for the smooth operation of a representative democracy.

Another advantage of the Campaign Financing Act of 1977 is that incumbents will not have the great fund-raising advantage they now enjoy, due to the fact that potential financial backers are reluctant to support challengers, while they are eager to support incumbents. Under the proposed legislation, if a challenger should be eligible for the funds, he or she would receive sufficient funds adequately to present his or her message to the voters. Put simply, this will enable elections to be won on merits, since the electorate will have well-defined choices to make.

The Campaign Financing Act of 1977 will be a constructive change in our most basic political process, the selection of

our elected representatives, and I strongly urge those of my colleagues who have not yet decided to support this bill to consider doing so.

GENERAL LEAVE

Mr. BARNARD. Mr. Speaker, I ask unanimous consent that all Members may be permitted to extend their remarks, and to include therein extraneous material, on the subject of the special order today taken by the gentleman from Arizona (Mr. UDALL).

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Georgia?

There was no objection.

AMERICAN CONGRESS OF REHABILITATION MEDICINE GOLD KEY AWARDS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Kentucky (Mr. PERKINS) is recognized for 10 minutes.

Mr. PERKINS. Mr. Speaker, my dear colleague and good friend, JOHN BRADEMAS, the chairman of the Subcommittee on Select Education and the majority whip, was recently honored with the Gold Key Award by the American Congress of Rehabilitation Medicine. This award, the highest honor bestowed by the American Congress of Rehabilitation Medicine, gives well-deserved recognition to the outstanding leadership and untiring effort that JOHN BRADEMAS has put forth in advancing programs related to rehabilitation of the handicapped.

A Gold Key Award was also presented to Senator HARRISON WILLIAMS in recognition of his vigorous and effective efforts in this field as well.

The third recipient of the Gold Key Award was Prof. Sir Ludwig Guttmann, a distinguished pioneer, innovator and world-renowned scholar in rehabilitation medicine.

Mr. Speaker, I would like to include in the RECORD at this point a recent article describing the Gold Key Awards:

THREE RECEIVE GOLD KEY AWARDS

The American Congress of Rehabilitation Medicine presented its highest honor—the Gold Key Award—to three individuals who have made significant contributions to advancing the cause of rehabilitation medicine. The three are Professor Sir Ludwig Guttmann, director of the Stoke Mandeville Sports Stadium for the Paralyzed and Other Disabled in Aylesbury, England; Rep. John Brademas of Indiana, the Democratic Party whip in the U.S. House of Representatives; and Sen. Harrison A. Williams, Jr., of New Jersey, chairman of the U.S. Senate Labor and Public Welfare Committee.

REPRESENTATIVE JOHN BRADEMAS

The citation accompanying Representative Brademas' Gold Key stated:

"This Gold Key is awarded to John Brademas, for his extraordinary efforts as Chairman of the Select Subcommittee on Education and as deputy whip of the Democratic Party in the House of Representatives on behalf of the handicapped and programs related to rehabilitation of the handicapped. Mr. Brademas was educated at Harvard University and is presently a member of the Board of Overseers of Harvard University. He also was a Rhodes Scholar.

"As Chairman of the Select Education Subcommittee, Congressman Brademas has been responsible for the passage of legislation which has significantly expanded and improved the Rehabilitation Act. Through his efforts, the Act has focused on the severely disabled; a major research and training title has been added to the Rehabilitation Act and special programs regarding spinal cord centers have been established. In addition, through his efforts the Rehabilitation Services Administration has received recognition as an independent legal entity with power over the rehabilitation program being vested in the Commissioner of the Rehabilitation Services Administration, thus eliminating many problems of confusion with regard to program responsibility at the federal level. Not only has the Subcommittee which he chairs been active in legislating with regard to the Rehabilitation Program, but it is also legislated with regard to education programs for handicapped children and programs for the aged, many of whom suffer from disabling conditions. Congressman Brademas, through his chairmanship and his position as deputy whip for the Democratic Party in the House of Representatives, has also been a very strong leader with regard to the civil rights of the disabled, the aged, and other minority groups.

"Of particular importance, however, is that Congressman Brademas has not only served as an able chairman and proponent and manager of legislation, but he has also used his chairmanship and committee to actively oversee the operation of the programs which his subcommittee has created. The oversight function of Congressional committees is one which is extremely important to the effective operation of programs. The oversight function performed by Congressman Brademas's subcommittee with regard to the Rehabilitation Act has produced major change. Congressman Brademas has also always provided an attentive ear to those organizations on behalf of the handicapped which have come to him to plead their case. To those of us in the rehabilitation movement who have worked closely with him, his name is a fitting addition to a list which includes Franklin Roosevelt, Hubert Humphrey, Howard Rusk, Mary Switzer and Mary Lasker."

SEN. HARRISON A. WILLIAMS, JR.

The citation accompanying Senator Williams' Gold Key stated:

"This Gold Key is awarded to Harrison A. Williams, Jr., Chairman of the Senate Labor and Public Welfare Committee for extraordinary service on behalf of the handicapped and the rehabilitation program. As Chairman of the Senate Labor and Public Welfare Committee, Senator Williams is responsible for the passage and review of major programs dealing with the handicapped, as well as nearly all health and education legislation. He has been a major proponent of the rehabilitation program and the major amendments to that program which were enacted in 1973. He has also shown a major interest in rehabilitation research and training activity, as well as in the rehabilitation services supported under the Federal-State Rehabilitation Program. Through his efforts, regulations under the Rehabilitation Act now require the establishment of peer review for research and training activity which had formerly been a part of the Rehabilitation Program but had been abandoned by the Administration after 1970.

"Beyond the Rehabilitation Act and the Education for the Handicapped Act, Senator Williams has been very involved in all major health legislation during the past few years. Through his leadership, rehabilitation services have become an integral part of major health legislation enacted during the past five years, including the Health Revenue Sharing legislation, Health Maintenance Organization legislation, and Health Manpower legislation. In addition, Senator Williams has been a leader in attempts to reform the Workers Compensation laws to, among other things, set national standards for medical and other services to disabled workers. His legislation, unfortunately not yet enacted, would require that comprehensive medical rehabilitation services be provided in all states to disabled workers.

"The nation and the disabled owe much to the efforts of Senator Harrison A. Williams, Jr., and the Gold Key Award is to demonstrate the appreciation of professionals in the medical rehabilitation field for his efforts in support of programs for the rehabilitation of disabled people and health programs generally."

PROFESSOR SIR LUDWIG GUTTMANN

The Congress selected Sir Ludwig to receive the Gold Key in "recognition of his unique contributions to the medical, social and recreational problems of the neurologically disabled througout the world for the past 53 years."

Sir Ludwig's Gold Key citation continued: "As director of the National Spinal Cord Injuries Center for the United Kingdom since World War II, Sir Ludwig's name has become synonymous with, and a symbol of hope and health, for the spinal injured of the world. No one has done more to extend the life expectancies of this group over the past half century.

"He pioneered the sports movement for handicapped persons, organizing what has become the International Olympics for the Paralysed. He has guided the International Wheel Chair games away from the political, racial and religious pressures imposed upon some athletes and their countries into a force for world peace, communication and understanding.

"Sir Ludwig graduated from the Medical School of the University of Freiburg, Germany, in 1923. He subsequently was appointed reader of neurology and neurosurgery at the University of Breslau. When in 1933 the Nazi regime came to power, he became director of the neurology department at Jewish Hospital in Breslau and in 1937 he became the medical director of that hospital. In this capacity he was able to help people persecuted by the Nazis to escape to other countries, ignoring the dangers to his own life. In 1939 he emigrated to England, where in 1943 he was asked to establish a spinal injuries center at Stoke Mandeville Hospital in Aylesbury. It was here that he developed his concept of comprehensive management and rehabilitation of traumatic paraplegics and tetraplegics. He continued to direct the program at Stoke Mandeville after World War II and upon his retirement from the directorship of the center in 1966, he was knighted by Queen Elizabeth II.

"Sir Ludwig has been awarded numerous honorary degrees in law, medicine and science from universities and scientific associations over the world. Spinal injury centers in many countries have been named in his honor and streets in Heidelberg, Germany, and Doorn in the Netherlands bear his name.

"He is an unprecedented author and editor of numerous scientific articles, journals and books. He was founder and president of the International Medical Society of Paraplegia for nine years and he is editor of the *International Journal of Paralegia*. His own management on spinal cord injuries exceeds 400 patient case studies. He has consistently probed the scientific credibility of his own methods and has sought to stimulate

his medical and surgical colleagues around the world to explore with penetrating insight and honesty their own approaches to patient care.

"He is a man of warm and deep compassion, and to all men he has always a word of support and encouragement. He has never retired and is still the director of the Stoke Mandeville Sports Stadium for the Paralyzed and other Disabled, which he built in 1968.

"This Gold Key Award is therefore presented to Sir Ludwig in recognition of his service to the improvement of the quality of life for all mankind disabled by disease or injury, and to the causes of international understanding and peace."

STATEMENT IN SUPPORT OF PENNSYLVANIA AVENUE CORPORATION FISCAL YEAR 1977 APPROPRIATIONS—TITLE I, CHAPTER VI, H.R. 4877, THE FISCAL YEAR 1977 SUPPLEMENTAL APPROPRIATIONS ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. DIGGS) is recognized for 5 minutes.

Mr. DIGGS. Mr. Speaker, my colleagues will consider today H.R. 4877, a bill introduced by Mr. MAHON, making supplemental appropriations for the fiscal year ending September 30, 1977, and for other purposes. The bill provides appropriations for many agencies and for equally as many projects that are worthy of our support. H.R. 4877 provides appropriations for one project I particularly support, one proposed to revitalize Pennsylvania Avenue. Provisions of title I, chapter VI of the bill, if enacted, will not only appropriate $4.081 million in Federal grants and some $25 million in borrowing authority for the Pennsylvania Avenue plan, but will also initiate actions that will provide the first visible signs of improvement in the avenue's appearance in many years.

The funds that will be appropriated for the Pennsylvania Avenue plan through enactment of H.R. 4877 will be spent for preservation of the Willard Hotel, for new landscaping, for public improvements along the avenue, and for purchases of property to be developed as new housing, office, and commercial facilities within the 21-block Pennsylvania Avenue project area. The impact of the project, when completed, will benefit both citizens of the District of Columbia, and those in other parts of this country.

The history of activities undertaken to revitalize the avenue includes support by four consecutive administrations and by several Congresses. Congressional support for revitalization of the avenue included enactment of the Pennsylvania Avenue Development Corporation Act of 1972 (Public Law 92–578), review of Corporation plans in 1974, and enactment of legislation to finance the Corporation's expenses from 1972 through 1976. To date, in spite of such wide-ranging support for the project, no visible change has been made in the avenue, although several detailed plans have been developed for the project. Favorable consideration of H.R. 4877 will begin the process of changing plans and proposals into actual, visible improvement for Pennsylvania Avenue.

I support favorable consideration of provisions included in H.R. 4877 to appropriate funds for the Pennsylvania Avenue Development Corporation's programs and activities.

BLIND FEDERAL POLICIES CRIPPLE DOMESTIC TUNA INDUSTRY

The SPEAKER pro tempore. Under a pervious order of the House, the gentleman from California (Mr. VAN DEERLIN) is recognized for 5 minutes.

Mr. VAN DEERLIN. Mr. Speaker, the two leading morning newspapers in southern California may well be the Los Angeles Times and the San Diego Union, the latter based in my own congressional district.

On many if not most matters these two dailies do not see eye to eye. In this morning's editions, however, the Times and the Union both come down hard on a matter that should be of concern to us all—the Federal Government's disgracefully shabby treatment of our domestic tuna industry.

The very existence of this industry is threatened by mindless Federal policies. If the industry dies, it will take 30,000 jobs with it, and these are concentrated in areas already suffering painfully high unemployment.

I urge our colleagues to heed well the admonitions in the following editorials:

FISHERMEN GRIEVANCE LEGITIMATE—CARTER MISSING THE BOAT

On the final day of the Senate Commerce Committee hearing on the crisis crippling the U.S. tuna industry, Sen. Daniel Inouye of Hawaii was the only one of the committee's 18 members present. By congressional standards this still constitutes a "hearing," but it points to the problem faced on Capitol Hill by San Diegans trying to save the tuna fleet.

The word around the Senate—and around the House of Representatives as well—is that there is no real interest in amending the 1972 Mammal Protection Act to make it more realistic when it comes to protecting the porpoise.

Members of Congress are capable of reducing the most technical issue to a simple plus or minus on the political scale. Indifference toward the plight of the tuna industry shows how that issue comes out on the bottom line. Should Congress risk the criticism of environmental lobbies because some fishermen out in San Diego are raising a fuss?

Obviously it takes more time and study than Congress is willing to invest to understand what the fuss is all about—why a seemingly innocuous federal law is ruining a way of life deeply rooted in one part of the United States, and why the law is defeating its purpose by consigning the tuna catch to a foreign fleet under no legal restraint to protect the porpoise.

If Congress is presenting a brick wall, San Diego has to press its case elsewhere, and the issue finally comes to rest on the doorstep of President Carter and his Secretary of Commerce, Juanita Kreps.

The administrative machinery of the government is capable of fulfilling the intent of the Mammal Protection Act without making the kind of demands on fishermen that have brought the tuna industry to its knees.

It's easy to recall what happened when the U.S. auto industry was confronted with antipollution requirements under the 1970 Clean Air Act, which were demanding more than Detroit could produce. The government did not shut down the auto industry. Federal agencies worked out timetables which gave Detroit a more reasonable time to develop engine technology that would produce cleaner exhaust. Delay was preferable to the blow to the U.S. economy of closing auto plants.

We see the same issue in microcosm in San Diego, where Mayor Wilson estimates the collapse of the tuna industry would add 3 to 4 percentage points to an unemployment rate already above 10 per cent. Because this economic impact would be regional rather than nationwide does not make it any milder in human terms—or any more sensible in terms of what would be accomplished.

The tuna boats that sail from San Diego and return with their catches are a part of the American heritage worth saving. The porpoise is worth saving, too, and our tuna industry knows how to save it—given a chance. The blind and bungling enforcement of the law has created a senseless hardship for hundreds of American families and is threatening, to destroy a precious bit of character of an American community.

If this doesn't attract the attention of President Carter, what he said during his campaign about the federal government being remote and unsensitive to the people will simply be confirmed by his own Administration.

GUESSING AN INDUSTRY TO DEATH

Congress should act, and quickly, to amend the Marine Mammal Protection Act of 1972 to reflect present realities in the tuna fishing industry.

The statute, as now written, could force American fishermen into bankruptcy, and could also hasten the extinction of the very creatures it was meant to protect.

The California tuna fleet of more than 100 vessels is lying idle in San Pedro and San Diego because the National Marine Fisheries Service, which enforces the statute, has a *suspicion* that the Eastern spinner, one of the species of porpoise that run with schools of yellowfin tuna, *may* be nearing depletion.

The air-breathing porpoises can drown despite the best efforts of ships' crews to free them from the deep folds of their three-quarter-mile-long nets. But there is no reliable information that the spinner is actually in danger of depletion.

Despite that, the fisheries service last week was able to persuade a federal court in Washington to set a zero quota on the killing of spinners, while allowing the U.S. fleet to take 9,972 porpoises of other species before April 30, when new limits will be set.

The American captains had no choice but to bring their ships back to port from the fishing grounds in the far Eastern Pacific. The killing of even one spinner, which is found in six out of ten schools of yellowfin, could bring penalties of up to one year in jail and a $20,000 fine.

The only evidence the fisheries service had to support its insistence on the zero quota for the spinner was an assumption that "the probability of it being depleted was slightly greater than that of not being depleted."

Incredibly, it is that slight probability that threatens to bring a $2 billion annual industry, employing 30,000 workers, to a standstill. No wonder the American vessels came back to port with their flags at half-mast.

But the Marine Mammal Protection Act permits such blind restrictions on American seiners, which have had remarkable success in reducing the porpoise kill, while foreign governments impose no controls whatever on their vessels.

Nor is this the first time that the San Pedro and San Diego fleets have had to leave the seas at great financial loss because of the policies of their own government.

We support the goal of the protection act—to save the porpoise from extinction.

But it serves the opposite purpose when it immobilizes an American fleet that is investing huge sums in research and equipment to lower the porpoise kill, and leaves the fishery to foreign-flag seiners that are responsible for most of the slaughter.

And, again, all of this is done without exact knowledge of the industry's impact on porpoise populations.

Government officials admit that they are only guessing that the spinner faces depletion, and they also admit that their quotas on other species are set on the basis of "approximations that are not very precise."

Reliable information should be forthcoming from a massive air and surface census of porpoise populations that was begun this month by the National Marine Fisheries Service over the 5-million-square-mile area of the tropical Pacific.

Until those results are known, the service should back off from panic quotas that current knowledge does not justify, and Congress should amend the law to forbid regulation by guestimate in the future.

If nothing is done, there are three certain losers: the consumer, who will have to pay higher prices for the smaller American catch; the tuna industry, which cannot operate profitably under the present rules, and the porpoise, which will be left to the mercy of foreign crews that kill them at will and with impunity.

THREAT OF A RED BLITZKREIG IN EUROPE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. ASPIN) is recognized for 15 minutes.

Mr. ASPIN. Mr. Speaker, one of the latest wrinkles in the Russians-are-(or-are-not)-coming debate centers on the threat of a Red Blitzkreig in Europe.

Senators SAM NUNN of Georgia and DEWEY F. BARTLETT of Oklahoma, along with retired Army Lt. Gen. James F. Hollingsworth, have suggested that the Warsaw Pact is geared for just such a blitzkreig.

They are concerned that the pact may be so well prepared that it could send 54 divisions across the border after only 48 hours of intense preparation instead of the 3 weeks assumed in NATO's planning.

On the other side of this debate, I have challenged a number of assumptions about the no-notice attack. It is my belief that the Warsaw Pact could not conduct a no-notice attack with more than a handful of divisions.

However, missing so far from this debate is a calculation of the fiscal impact of the changes proposed by Senators NUNN and BARTLETT and General Hollingsworth. They have made numerous proposals for beefing-up our forces in order to meet the threat of a no-warning attack. But no one has priced them out.

I have now done so. Taking the proposals one by one, I find that the cost of meeting the threat would run on the order of $46 billion. The accompanying chart breaks down the cost of their proposals.

These costs derive from three stated concerns of the Senators and the general: First, that we must prepare to meet a surprise attack and halt it in a quarter of the time now planned; second, that we must organize our forces to fight the war at the Iron Curtain and not fall back across West Germany; and third, that we must reequip our forces to give them much more firepower.

Within these three broad categories, the general and the Senators have made a number of more specific proposals.

The pricing of these proposals was not always easy since the general and the Senators have not always been precise in their recommendations. In fairness to them and to other analysts, I am including a lengthy and detailed explanation of the origin of every single number that appears on my chart.

The proposals fall into four categories of precision: Those which the Senators and the general address specifically with the associated numbers quantified; those addressed specifically with the associated numbers not quantified; those addressed only in broad terms; and those not specified but which follow naturally from their stated goals.

In the first category are those proposals addressed specifically and for which the quantities are crystal clear. For example, it is suggested that we replace our Sheridan light tanks in Europe with M60's. We know how many Sheridans there are and we know the cost of each replacement M60.

The second category encompasses those proposals which are specifically addressed, but which are not quantified. For example, the general and the Senators stated that we would need to bring more reinforcements to Europe and get them there soon enough to stop a Pact attack in one-fourth the time currently envisioned. They did not, however, say how many divisions would have to be brought over. However, it is logical that if they wish to stop an attack within 2 weeks rather than 8 weeks, we must achieve in Europe at the end of 2 weeks the same ratio of Pact to NATO forces that we now plan to have after 8 weeks. That requires the deployment of six additional U.S. divisions in the first 2 weeks of war. They have said we must bring additional units into play through increased air transport and the prepositioning of equipment in Europe for our troops to pick up on arrival. I have, therefore, priced out the cost of bringing six divisions into battle in one-fourth the time now planned by using increased air transport and prepositioned war material.

The third category contains proposals whose need is addressed only in broad and sometimes vague terms. For example, one need is that "the readiness of deployed U.S. forces must be improved." Unlike the guidance to halt an attack in one-fourth the time now planned through airlift and prepositioning, this guidance gives no clue as to how much to improve readiness or by what degree. I have been forced here to go to various specialists to choose logical and specific programs that would fulfill the guidance. I acknowledge that there can be considerable room for different views as to logical programs. That is why I have intentionally chosen relatively conservative and modest programs and not picked the most expensive or outrageous suggestions.

The fourth and final category of proposals encompasses those items which are not specifically mentioned but which derive logically from other proposals. For example, nowhere do the general or the Senators mention the need for additional aircraft shelters to protect planes that will be brought to Europe under their reinforcement program. The shelters are simply a logical derivation of their other proposals; otherwise, the planes will be easy targets sitting in the open or housed in ordinary hangars unprotected from bomb blast.

I wish to point out that 75 percent of all the funds listed in the chart as a cost of the Hollingsworth-Nunn-Bartlett proposals derive from proposals they have addressed in specific terms—categories 1 and 2—and only 25 percent from vague proposals or items not cited—categories 3 and 4.

Now let me address the three concerns of the Senators and the general—the need to meet a surprise attack and halt it quickly; to wage the battle at the boarder; and to give our forces much more firepower. The chart covers each of these concerns in turn.

First, the general and the Senators have said our forces in Europe must be made ready to fight within 48 hours. The items numbered 1 and 2 on the chart provide our forces with the additional men and maintenance budgets so they can fight within 48 hours and will not need 2 or 3 weeks of advance preparation as at present. The general and Senators have also said we must be able to move additional divisions from the United States to Europe in one-fourth the time now assumed. Items 3 through 8 provide principally the air transport capacity needed to accomplish that. Items 9 through 11 provide additional manpower and equipment for these reinforcements so they are ready to get into the transport planes on the new, accelerated schedule.

Second, the general and the Senators have stated that NATO must be prepared to fight the battle at the border and to exchange space—that is, large areas of West Germany—for time, as presently envisioned. Items 12 through 14 accomplish that, as the three have suggested, by bringing half of the U.S. forces up near the anticipated war zone—they are now in south Germany rather than on the north German plain, the traditional invasion route—and by buying the additional small transport aircraft needed to support these forces in a crisis.

Third, and finally, the three call for "a quantum jump in NATO firepower," in the Senators' words, and cite several weapons systems as "representative" of the improvements needed. Items 15 through 21 provide for additional weapons. While the Senators were not specific about the quantities they felt were needed, I have taken examples given by defense specialists for the purpose of compiling this chart. Items 22 and 23 round out the specific improvements suggested to make our forces ready to meet a blitzkrieg.

The chart breaks out the costs that are one-shot and those that recur every year. For example, there will be a one-time cost of $670 million to increase the manpower assigned to Europe by 20 percent.

I have referred here to "the general and the Senators." In some cases one member of the trio has been explicit on one point on which the others have been silent. Since none has repudiated the proposals of the others, I have treated the proposals as a group effort. I do this for the sake of simplicity and I point it out for the sake of fairness.

I should also note that while I am critical of the trio's perception of a threat and their prescription for meeting it, I am not saying that every one of these programs is a waste and ought not to be pursued. Some of the programs, such as that for aircraft shelters, may have merit.

Also I must emphasize that my estimates are intentionally conservative. No attempt was made to price out every single proposal made by General Hollingsworth and the two Senators. For example, the Senators called for "air-and artillery-delivered mines, laser-guided weapons, and tactical applications of cruise missile technology. The new potential of multiple rocket launchers also should be explored." None of these items is on the chart. And some details of the programs listed had to be ignored, because meaningful data were scarce—for example, the costs of keeping $7 billion in additional stored equipment—the war reserve stocks—in operating condition, and the bill for running all the traditional cargo aircraft that would be bought under this program.

Finally I have not touched on the additional costs that would be imposed on our NATO allies under the Hollingsworth-Nunn-Bartlett proposals. The movement of battalions to the north, for example, would require the German Government to purchase large tracts of land on which to build the new bases for our troops.

It is easy to argue whether some particular number on the chart ought to be $100 million higher or $100 million lower. There is, after all, a built-in margin of error on the order of plus or minus 10 percent in any analysis of this sort.

I am not trying to say that these proposals will cost precisely $46.4 billion. I am trying to say that these proposals involve an expenditure of a magnitude that would require an increase in taxes, a huge addition to our national debt or the wholesale obliteration of other national programs. We must not embark on any new program until we know the cost implications.

Mr. Speaker, I include the chart at this point in the RECORD:

RESTRUCTURING U.S. FORCES

[In millions of current dollars]

Hollingsworth-Nunn-Bartlett Guidelines	1 time costs	Recurring costs—1st 5 yr
PREPARE TO MEET AND STOP A SURPRISE ATTACK		
Increase Readiness of Forces in Germany		
1. 20 percent increase in manpower [1]	670	550
2. Raise key operating tempo and maintenance levels 20 percent [1]		800
Speed Up Pace of Reinforcements Sent From United States		
3. Modify current cargo planes to increase capacity sufficient to move 2 fully equipped divisions; add to war stocks [2]	1,610	550
4. Store enough additional equipment in Europe for 2 more mechanized divisions [2]	1,540	
5. Procure new transport capacity sufficient to airlift 200,000 more tons (another 2 divisions) to Europe in 1st 2 weeks [2]	6,080	
6. Purchase of tanker planes for aerial refueling of cargo aircraft listed above and for fighter reinforcements [2]	3,130	
7. More aircraft shelters in Europe to protect fighters brought in as reenforcements [2]	510	
Upgrade Readiness of Reinforcement Units

RESTRUCTURING U.S. FORCES

Some of the Hollingsworth-Nunn-Bartlett proposals are very specific and the budget implications are precise. In other cases their proposals are stated in more general terms which make it more difficult to pin down precise dollar figures.

I would now like to make clear the origin of each figure used in the chart and its relation to the series of proposals made by Hollingsworth-Nunn-Bartlett.

PREPARE TO MEET AND STOP A SURPRISE ATTACK

The first Hollingsworth-Nunn-Bartlett concern has been stated by the Senators thus:

> Current U.S. force planning assumptions as to the prior warning time and likely duration of a future conflict in Europe must be revised.[1]

A more detailed formulation, based on information about General Hollingsworth's recommendations, is that: First, the United States must be prepared to meet a 54-division surprise attack on no more than 48 hours warning and; second, the United States must be prepared to halt a pact advantage in one-quarter of the time currently planned—that is, in about 2 weeks instead of 8 weeks.[2]

To accomplish this, the Senators say:

> The readiness for immediate combat of deployed U.S. . . . forces must be improved.[3]

Two specific programs flow from this requirement.

First, 20-percent increase in manpower.

To meet an attack with little notice requires more personnel in Europe so that units are manned at sufficiently high levels to be ready to go at all times. To begin with, this would require roughly a 10-percent increase in manning in Europe so that operating strengths of divisions equal 100 percent of the manning required.[4] But even manning at 100 percent of mobilization requirements is not enough, since some personnel would be on leave—an average of 8 percent of unit manpower—or would otherwise not all be readily available. The requirement for an additional 10 percent to account for these disparities is assumed.

These requirements translate into a 20-percent increase in personnel in Germany—42,500 extra men.[5] If, to be conservative, we assume that these extra personnel are provided not by creating new slots but by transferring servicemen from the United States, there would be one-time basing and relocation costs—$670 million in fixed costs[6]—plus the added expenses associated with keeping personnel in Europe—$550 million in recurring costs over the next 5 years.[7]

Second, raise key operating tempos and maintenance activities 20 percent.

Current Army divisions in Europe that are rated "C–2," substantially ready, would require 3 to 4 weeks to attain a fully trained status. Even divisions rated "C–1" or fully ready can require up to 2 weeks to be fully trained. With little warning time, such delays are unacceptable. To meet a short-notice attack would require larger training and operating budgets so that our forces are at adequate levels of readiness. Also, expanded maintenance budgets would be needed so that more equipment will be ready for deployment on short notice.

Unfortunately, there is no defined relationship between additional operations and maintenance funding and higher states of readiness,[8] other than vague generalizations like more money means preparedness. Almost any added allotments are inherently arbitrary. In this area, funding for only three of a large number of activities affecting the readiness of overseas forces has been increased.[9] The three activities, which ac-

Footnotes at end of article.

count for only 5 percent of all Army and Air Force O&M funding in fiscal year 1977, have been increased by the same proportion used for personnel, 20 percent. This figure does not seem unreasonable when analyzed at a detailed level.[10] The result is an $800 million increase in 5-year recurring costs.

That accounts for the troops already deployed in Europe. But the H–N–B proposals also look at the troops stationed in the United States which will be called on in the event of war. The Senators have written:

> The pace at which U.S. . . . reinforcements can be transferred to the Central Region must be hastened.[11]

There are two reasons the entire schedule of reinforcements to Europe would have to be compressed. First, a massive short-notice attack would eliminate the 3 weeks of warning time assumed until now. Second, and more important, General Hollingsworth has specified that a pact advance must be halted in one-quarter the time currently planned, which is consonant with the Senators' advice that the expected duration of a European conflict be shortened.

This second requirement has staggering implications. Currently, according to Defense Department analyses consistent with the General's and Senators' assumptions, both the pact and our NATO allies mobilize very quickly. Assuming that what determines whether a Pact advance is halted is the ratio of Pact to Allied forces, stopping a Pact assault in one-fourth the time currently planned would require the attainment of a favorable force ratio in one-fourth the time. But because the Pact would mobilize its forces quickly,[12] to stop an advance in one-fourth the time currently planned would require that the United States deploy at D+X÷4 virtually all the forces it currently plans to deploy at D+X.[13]

A more rigorous analysis confirms this general conclusion.[14] To implement the general's prescription for our forces and to meet the Senators' advice on the likely duration of a conflict—that is, to stop a pact advance in about 2 weeks—the United States would have to deploy in those 2 weeks nearly all the divisions it currently plans to deploy in about 8 weeks. Moreover, it would have to begin deployment without the 3 weeks warning time currently anticipated. In practical terms, we would have to deploy about six extra division equivalents to Europe in the first 2 weeks of a European conflict.[15]

As Senators NUNN and BARTLETT have said, these troops can be speeded to Europe "only through an expansion of airlift resources available to NATO and prepositioned stocks of equipment that are both sufficient and properly maintained." [16]

Third, Modify current cargo planes to increase capacity sufficient to move two fully equipped divisions; add to war stocks.

The Air Force has proposed a series of steps involving increased use of existing aircraft and modification of C–141, and commercial aircraft that would in theory double our airlift capacity in the early stages of a conflict. These steps would entail fixed costs of $1,610 million and 5-year recurring costs of $400 million.[17] Reconstituting existing POMCUS—prepositioning of materiel configured in unit sets—stocks involves minor fixed costs after the fiscal year 1977 funded delivery period.[18] Better maintenance of these stocks so that they would be ready for earlier reinforcement involves recurring costs of about $150 million over the next 5 years.[19]

Adoption of these measures would allow the deployment of about two extra divisions in the first 2 weeks of a war. This would still leave us four divisions short of requirements. To get the remaining four divisions to Europe by D+2 weeks, it is assumed that a 50–50 mixture of POMCUS and airlift is used—given that both steps are recommended by the Senators and that exclusive reliance on either route is very ill-advised.

Fourth, store enough additional equipment in Europe for two more mechanized divisions.

For each division added, POMCUS outlays include procurement, transportation and site preparation costs. These would total about $1,540 million for two mechanized divisions.[20] Added recurring costs involved with manning sites and maintaining the equipment have not been included.

Fifth, procure new transport capacity sufficient to airlift 200,000 more tons—another two divisions—to Europe in first 2 weeks.

There would still be a need for a fifth- and sixth-division equivalent to be deployed in the first 2 weeks of conflict, and these would have to be airlifted. Moreover, there would be a need to transport the personnel from the third and fourth divisions cited above to join up with their POMCUS stocks in Europe. Roughly speaking, fulfilling both these needs would require the capability to airlift about 200,000 additional tons in the first 2 weeks of a war.[21]

This added capacity could presumably be obtained either by "enhancing" existing aircraft or by acquiring new planes. Five-year costs of already proposed enhancement options average $30,400 per 1,000 tons of material delivered by D+2 weeks. The least cost effective of enhancement options already proposed entails 5-year expenditures of $69,500 per ton delivered by D+2 weeks.[22] It would cost $95,500 in procurement costs alone to deliver an extra 1,000 tons by D+2 weeks if new C–5A aircraft are acquired and optimally employed.[23]

According to economic theory, the cost of additional airlift capacity beyond enhancement options already proposed should range from a minimum of $69,500 on up per 1,000 tons delivered in the first 2 weeks of a war. The reasoning here is simple. If there are options beyond those already proposed that cost less than $69,500 per 1,000 tons, then surely the Defense Department would have proposed those before proposing ones costing $69,500.

In reality, it is safe to conclude that DOD has not recommended the most cost-effective mix of options. To be conservative, it is assumed that the Defense Department can find a whole new group of enhancement programs that require no new aircraft and that are on the average as cost-effective as those already being proposed; that is, they entail 5-year costs of $30,400 per 1,000 tons delivered in 2 weeks. Using this assumption, the price of providing the needed 200,000 tons of additional material in the first 2 weeks of a war would be $6,080 million.

Sixth, purchase of tanker planes for aerial refueling of cargo aircraft listed above and for fighter reinforcements.

If we merely want to sustain current airlift capabilities, there is no need for an advanced tanker. If, however, we want to meet new reinforcement requirements set by the H-N-B proposals, the ATCA—advanced tanker cargo aircraft—is needed for several reasons:

To assure rapid deployment of tactical aircraft to Europe needed in support of our ground forces;

To meet added refueling demands resulting from airlift expansion programs, particularly in light of pressing time problems; and

To minimize theater fuel availability problems that would otherwise be a critical constraint.

All of these rationales have been offered to justify the ATCA, which would also provide a bonus cargo capacity consistent with expanded requirements. Since an advanced tanker would be an indispensable component of a rapid deployment program, fixed costs of $3,130 million are included.[24]

Seventh, more aircraft shelters in Europe to protect fighters brought in as reinforcements.

To assure that tactical aircraft can effectively reinforce ground forces in Europe, they must survive upon arrival. Those aircraft already in place have been provided shelters, but many more are needed to house the early waves of reinforcements. Fixed costs total $510 million.[25]

At present, the U.S. Army maintains the equivalent of five divisions in Europe. An additional two divisions are currently available for deployment from the continental United States—Conus—on short notice. Beyond those two, divisions would not even arrive in Europe in the time General Hollingsworth recommends that we stop a pact advance and the timely arrival of even these two Conus divisions would be in doubt if a massive short-notice attack is assumed. To assure extremely rapid deployments, most Conus divisions would have to be brought up to and maintained at much higher states of readiness.[26]

Eighth, 10-percent manpower increase in U.S. Army divisions designated as reinforcements.

Merely to bring the operating strengths of the early reinforcing divisions up to wartime-required strengths so that they can be deployed on shorter notice would require about a 10-percent manpower increase. Recurring costs would total on the order of $950 million over 5 years.[27]

Ninth, 20 percent increase in key Army operations and maintenance activities.

Footnotes at end of article.

As above, there is no definable relationship between added O. & M. costs and higher readiness. The same admittedly arbitrary procedure is used to resolve this problem. Three accounts that are most relevant to the readiness of reinforcing Army units—only 25 percent of total Army O. & M. funding—have been increased by 20 percent. Recurring costs would total $2,000 million over 5 years.[28]

Tenth, fill half of existing equipment shortfalls for in-place and reinforcing Army units.

To guarantee that units are fully equipped before battle, and therefore fully effective in meeting the overwhelming Soviet threat, is a very expensive venture. It requires not only the provision of required initial issue quantities to these forces but also sufficient maintenance float equipment to assure that units are in a high state of readiness. To eliminate just half the share of existing equipment shortfalls accounted for by those divisions which could be committed in the early stages of a European war would require an estimated $3,000 million.[29] This includes equipment both for the CONUS-based divisions discussed here and the Germany-based divisions discussed in items 1 and 2.

WAGE BATTLE AT BORDER

The second of the major H-N-B concerns has been described by the Senators this way:

> Current postural deficiencies which threaten NATO's ability to conduct a successful forward defense should be corrected with the aim of permitting the Alliance to wage the main defense battle close to the inter-German border.[30]

Eleventh, shift 33 of 67 battalions in Germany closer to border.

The first way to permit the alliance to fight close to the border is to "shift * * * the weight of NATO's combat firepower deployed in the Central Region to the east and to the North," in the Senators' words.[31] A variety of recommendations have been made concerning the portion of our forces in Europe that should be redeployed. It appears that about half our "firepower" would need to be relocated.[32] In terms of battalions, this means moving about 33 of 67 in Europe to new locations, for a total one-time cost of $1,160 million.[33]

Twelfth, replace Sheridan light tanks with M–60's.

The Senators next write that—

> "Covering forces" . . . should be strengthened to the degree necessary . . .[34]

A number of steps could be taken to do this. Just one that has been recommended by Hollingsworth is to replace Sheridan light tanks in Europe with M–60 tanks, thus "heavying-up" the force. This would involve one-time costs on the order of $350 million.[35]

Thirteenth, provide more in-theater transport: 145 additional AMST cargo aircraft.

A strategy of defending at the inter-German border, adequately supporting such a fight, and assuring that reinforcements arrive at the front in a timely fashion once they enter Europe requires much greater and longer movements of men and equipment within the NATO theater.

To meet the needs outlined thus far, General Hollingsworth has recommended procurement of the advanced medium short takeoff and landing—AMST—transport aircraft. Clearly, the purchase of the AMST represents a decision to increase our tactical airlift capability and, since explicitly recommended, its cost should be attributed to the H-N-B proposals. On the other hand, it can be argued that merely to maintain existing capabilities would require procurement of some AMST's—or some other plane—since by the early 1980's part of the existing inventory may need replacement.

To be consistent with the principles of cost attribution stated in the methodology section of this study, the following approach was used. It was first determined how many AMST's would be required to maintain present capabilities in light of a high level of retirements of existing craft. Then, the cost of all proposed AMST's over and above this number were attributed to the H-N-B proposals.

More specifically, present Air Force tactical aircraft assets could produce about 210 million ton-miles of airlift service per month.[36] Capability is a function of aircraft payload and speed. It was assumed that C–130E's and C–130H's, which have significant service life remaining,[37] would remain in the fleet. All C–130A/B/D's, C–123's, and C–7's were assumed to be retired, even though many would have years of useful life remaining. About 132 AMST's would be needed to replace all of these retiring craft.[38] But 277 TMST's are included in the program endorsed by Hollingsworth. Thus, 145 of the planned AMST's represent an explicit decision to increase our capabilities to meet the threat and fight the war envisioned by the general and the Senators. One-time costs of these planes would total $3,120 million.[39]

QUANTUM JUMP IN FIREPOWER

The third H-N-B concern is stated succinctly:

> A quantum jump is needed in NATO's conventional firepower.[40]

While this is succinct, it is also vague. One man's quantum jump may be another's incremental step. But more specifics have seen supplied by the general and the Senators. For example, Senators NUNN and BARTLETT call artillery procurement "top priority." [41] Several steps, most of which have been specifically recommended by either the general or the Senators, could be undertaken.

Fourteenth, non-nuclear Lance (NNL) missiles.

Thus far, moneys have been appropriated to buy 360 of these missiles. The Rumsfeld budget contained funds to buy 360 more, although President Carter has asked Congress to scrap the entire program. The Army has indicated that a larger number of NNL's could be used to augment firepower.[42] A modest effort to buy NNL's would require one-time costs totaling $330 million.[43]

Fifteenth, cannon-launched guided projectiles (CLGP's).

Senators NUNN and BARTLETT specifically declare their support of an "accelerated exploitation of ongoing technological advances in munitions and delivery systems." [44] Just one of several programs they point to is that of CLGP's, for which one-time costs would be $1,150 million.[45]

Sixteenth. Additional standard artillery over and above current funding.

The Army has recently undertaken a number of studies to determine revised artillery, artillery ammunition, and artillery support requirements. A revision in procurement goals is occurring that is consistent with the H–N–B proposals, although this revision may not go far enough to satisfy these advocates. Budget projections by the outgoing administration included substantial real growth to implement revised artillery goals. If the costs entailed by these measures over and above the level provided for in the fiscal year 1977 budget are counted, added recurring costs for cannon artillery, artillery ammunition, and acquisition systems would average $850 million annually or $4,250 million over 5 years.[46]

Seventeenth. Additional antitank systems over and above current plans.

Two different means of achieving added antitank capabilities are immediately evident. First, a stepup in the funding of Cobra-Tow helicopters could be adopted. Second, the buy of antitank guided missiles could be increased. For one representative program in this area, the costs over and above sustaining the fiscal year 1977 program would be $760 million in one-time costs and $650 million in 5-year recurring costs.[47]

Eighteenth. More Air Defense: additional fighter aircraft and antiaircraft missiles.

A plethora of measures could be adopted to increase our antiair capabilities. Senators NUNN and BARTLETT assert that—

> NATO's air defenses must be transformed into a capability to inflict unacceptable losses upon intruding Soviet tactical air forces.[48]

It is difficult to measure or to put a price tag on requirements like an ability to inflict unacceptable losses. As a minimum, it would entail the procurement of new systems of air defenses for U.S. forces in Europe contemplated by DOD—one-time costs of $4,470 million.[49]

Nineteenth. Additional buy of Improved Hawk.

Since it was singled out by both the Senators and the general, additional procurement of the Improved Hawk antiaircraft missile system has also been included at a one-third cost of $350 million.[50]

Other programs they cite are "air- and artillery-delivered mines, laser-guided weapons and tactical applications of cruise missile technology. The new potential of multiple rocket launchers also should be explored." None of these items are priced out here. Insofar as they are cited by the Senators, they would add an unknown sum to the total cited in the chart.

Twentieth. Bare-base kits so Navy fighters can join land battle plus night capability for portion of A–10 force.

An additional means of increasing firepower, and particularly antitank capabilities, would be through improvements in ground attack aircraft. Two reforms not yet planned by DOD that relate directly to stopping a pact advance in Central Europe are to equip a portion of our A–10 attack force to fight at night in adverse weather and to procure barebase kits so that Navy tactical aircraft could contribute to a land-battle in Europe. Total one-time costs are $260 million.[51]

Twenty-one. AWACS radar aircraft over and above current funding.

H–N–B also call for improved command, control, and communications—CCC—capabilities. In order to deploy the firepower in our forces more effectively—in the words of Senators NUNN and BARTLETT, "to accommodate the demands of the modern battlefield"—the Senators have recommended that the Alliance's present CCC capabilities be enhanced.[52] These improvements could also help meet the other guidelines discussed above.

One system singled out for recommendation by the Senators and the general is the airborne warning and control system—AWACS. Since funds have already been budgeted for many of these planes, they are part of existing capabilities as defined in this paper. However, the cost to procure the remaining number of planes desired by the Air Force has been included. One-time costs total $1,160 million.[53]

Twenty-two. Fill half of current Army deficiencies in war reserve stocks.

The Senators say:

> Restoring and maintaining . . . war reserve stocks must be given top priority.[54]

Several different stocks of equipment and material relate to the different requirements established by Senators NUNN and BARTETT and General Hollingsworth. But particular emphasis has been placed on war reserve stocks. For example, the Senators insist that ammunition stocks—a primary component of war reserves—"be brought up to levels based on revised requirements."[55] Filling out these stocks would not only meet the requirements to improve firepower, but would also be crucial to fighting the short notice and extremely intense conflict postulated. Current shortfalls in war reserve requirements for the Army alone total over $14 billion.[56] A large share of these relate to European needs. If merely half of the current—but not revised—Army deficiences were filled as a means of implementing the Senators' recommendation, one-time costs would total $7,000 million. This does not consider added maintenance and storage costs for such items.

METHODOLOGY

The determination of costs was based on a calculation of the prices of those measures—over and above the continuation of existing capabilities—that flow directly out of new requirements set by the H–N–B proposals or are specifically recommended by the general or the Senators. In general, with respect to personnel and operations and maintenance activities, "existing capabilities" are defined as those provided for in the fiscal year 1977 defense budget. With respect to procurement and construction activities, "existing capabilities" are those in-place at the end of the fiscal year 1977 funded delivery period.

Some of the measures included as part of the H–N–B proposals are already under consideration or are envisoned by the Defense Department.[57] For example, many of the costs in fiscal year 1978 and beyond of the proposed Air Force airlift enhancement program are counted in this study. There are several reasons for this. First, these sorts of measures represent explicit decisions to increase our ability to meet a large short-notice attack which is what Hollingsworth and the two Senators are advocating and therefore cannot be ignored in this accounting of the cost of the full H–N–B system. Second, to exclude the costs of all of these proposals would produce a very arbitrary and ephemeral accounting system. A new administration may drop some of the proposed programs, which would suddenly mean a paper cost increase in the H–N–B system. Similarily, if the Defense Department tomorrow decided it wanted to adopt the entire H–N–B package and projected budgets to accommodate everything proposed, it would not mean that these proposals could suddenly be achieved free of charge.

On the other hand, the vast majority of force improvements envisoned by DOD that affect our capabilities in Europe—and all of those already implemented by DOD[58]—are not attributed to the H–N–B proposals. This is because many of the DOD's force improvements do not flow directly out of the H–N–B requirements, or are not specifically mentioned by General Hollingsworth or Senators NUNN and BARTLETT, or are part of replacement programs needed to maintain existing capibilities.

For example, all of the costs associated with the Army's new tank, new personnel carrier, and new helicopters have been ignored, even though they would improve our defense in Europe. As another illustration, the billion-dollar C–5A wing modification is not included as part of the airlift enhancement programs since it is needed merely to sustain existing capabilities and does not represent a decision to increase our ability to reinforce early in a conflict.

Potential cost savings associated with a new strategy for defending Europe have not been calculated. There may be hedges against a long war that are superfluous, the elimination of which would free additional funds for the purposes envisioned by the general and the Senators. But thus far, neither General Hollingsworth nor Senators NUNN and BARTLETT have pinpointed any. Indeed, in their latest report the Senators state that new plans should be adopted "without weakening powerful hedges in NATO force structure against a protracted war."[59] Moreover, even if such savings were endorsed and readily available, there is no reason to assume that they should automatically finance H–N–B proposals above all other needs.

By any standards, the estimate developed in this study of the cost of the H–N–B prescription for our conventional force posture is conseravtive. No attempt has been made to price out every recommendation made by General Hollingsworth or Senators NUNN and BARTLETT. Many requirements they would impose have been only partially met. Adoption of all measures outlined in the chart would still entail a degree of risk relative to the threat they envision which may be unacceptable. And even in pricing out the proposals, many details have been ignored—especially in the operations area where data are scarce.

In addition, all costs that would have to be borne by our European allies have been ignored. These would be substantial. For instance, West Germany would have to pick up a hefty tab for the costs of additional land needed for the sites of equipments and units that would be moved or newly placed. As another example, the general and Senators strongly recommend that our NATO allies purchase AWACS. Of course, it is possible that our allies would not incur extra commitments or would reduce their contributions to NATO's defense in light of our increases. In either of these cases, the United States would have to spend more money.

For those estimates that have been made, the range of error is on the order of plus-minus 10 percent—and all estimates are rounded to the nearest tens of millions. Costs are in current dollars[60] and are calculated over a 5-year period. Since the general and the Senators have stressed the urgency of their proposals, it is assumed that they would all be implemented in this space of time. In no way does this mean that added outlays would end after 5 years. Substantial budget increases would still be needed thereafter.

Finally, real world political constraints—such as congressional opposition to some of the proposals or opposition by our allies to measures like U.S. redeployments—have been ignored, even though they would pose formidable obstacles to effective adoption.

Mr. Speaker, I include the footnotes to my speech at this point in the RECORD:

FOOTNOTES

[3] *New Threat*, p. 20.

[4] Based on published Joint Chiefs of Staff readiness criteria.

[5] OASD (Public Affairs), "Fact Sheet—U.S. Military Personnel Outside the United States, As of Sept. 30, 1976," Dec. 7, 1976 shows total Army and Air Force personnel in Germany as 212,500.

[6] Derived as a portion of cost figures found in Office of the Secretary of Defense, "A Report to Congress on U.S. Conventional Reinforcements for NATO," June, 1976, p. VI 1–2.

[7] *Ibid.*

[8] An assertion consistently supported. For example, see the testimony of Lt. Gen. John A. Kjellstrom, Comptroller of the Army, *Department of Defense Appropriations, 1976*, 94 Cong. 1 Sess. (1975), pt. 2, p. 546.

[9] The activities were Army OMA "General Purpose Forces" activity allocated to "Europe Forces," amounting to approximately $390 million in the FY 77 budget; a Europe-oriented share of Army OMA "Central Supply and Maintenance" activity going to "Depot Maintenance Activities," roughly $220 million; and O & M costs for U.S. Air Forces in Europe (USAFE), about $200 million annually. Data for budget costs were based on "Department of Defense Appropriations Bill, 1977," Report of the Senate Appropriations Committee, 94th Cong. 2 Sess. (1976), pp. 135, 137; and unclassified portions of "Readiness of the Air Force in Europe," Report to Congress by the Comptroller General of the U.S., 1973.

[10] For instance, the added funding would greatly reduce maintenance backlogs that are normally accepted but would not be tolerable if a no-notice attack is assumed.

[11] *New Threat*, p. 20.

[12] Based on OSD "Conventional Reinforcements" report, p. IV–3.

[13] Within the relevant range of time.

[14] Unfortunately, problems of classification preclude a more thorough discussion of this issue.

[15] Richard D. Lawrence and Jeffrey Record, *U.S. Force Structure in NATO* (Washington, D.C.: The Brookings Institution, 1974), Table D–1, p. 132, shows 13 divisions at M+60 vs. 7 at M+15, a difference of 6.

[16] *New Threat*, p. 20.

[17] Fixed costs are for FY 1978 to completion, recurring costs are those for FY 1978, and appear in "Information on the Requirement for Strategic Airlift," Report to the Congress by the Comptroller General of the U.S., 1976, Appendix I, pp. 25–6. Fixed costs are those for C–141 stretch and refueling, CRAF (including incentive payments to airlines), and war reserve material for C–5A and C–141. Recurring costs are for C–5 and C–141 personnel.

[18] Department of the Army information.

[19] Based on General Accounting Office figures.

[20] Figures obtained from the Congressional Budget Office. Included are $670 million in equipment procurement, $20 million in sea transport costs, and $80 million in site preparation for each division.

[21] One infantry division and its support requires over 70,000 tons. A mechanized division requires an additional 18,900 tons in equipment alone, for a total of about 90,000 tons per divisions. See Air Force and Lockheed figures in *The Posture of Military Airlift*, Hearings before the Research and Development Subcommittee of the House Armed Services Committee, 94 Cong. 1 Sess. (1975), pp. 235–351. Roughly speaking, an additional 10,000 tons are needed for each division given POMCUS.

[22] Derived from GAO figures appearing in *supra*, note 20. 15-day period is used, assuming 2 weeks plus 24 hours of 48-hour warning period. Data used were as follows:

Method	15-day tonnage	5-year cost*	5-year cost**
Increase C–5A spares and crews	8,850	$472.5	$53,400
Increase C–141 spares and crews	7,400	$285.3	$38,600

Totals	71,550	$2,173.7	***$30,400

*In millions of dollars.
**Per ton, 15 days.
***Weighted average.

[23] Based on Air Force cost figures for 78 more C–5As in *Posture of Military Aircraft*, p. 383 and tonnage figures for C–5As, as modified, found in the GAO report cited above.

[24] *Supra*, note 20, p. 26 for FY 78 and beyond.

[25] Congressional Budget Office, "Planning U.S. General Purpose Forces" The Tactical Air Forces," January 1977 shows costs of $170 million for planned construction of 217 shelters. Tripling this program would roughly handle reinforcing aircraft arriving in early stages (D+30 or before) of the war.

[26] Added costs associated with readiness of Air Force tactical aircraft requiring rapid redeployment have not been addressed, though costs here would be notable.

[27] Assumes a 10 percent increase in manning of five CONUS divisions or about 1,600 men per division priced out at $23,000 per slot.

[28] The three accounts were Army OMA for CONUS "General Purpose Forces" activity, $312 million in FY 1977; a CONUS share of Depot Maintenance funding, $221 million in FY 77; and Army Combat Operations funding, $1,471 million. See DoD Bill for 1977, Sen. Approp. Report, pp. 135, 137; *Department of Defense Appropriation Bill, 1976*, House Appropriations Committee Hrngs., 94 Cong. 1 Sess. (1975), pt. 7, p. 701.

[29] Existing active and reserve force shortfalls total $27 billion. See Statement by Edwin Greiner, Acting Assistant Secretary of the Army (Installations and Logistics) and Major Gen. Philip R. Feir, Assistant Deputy Chief of Staff for Research, Development and Acquisition, Dept. of the Army, before the House Armed Services Committee, Feb. 3, 1977, p. 16. Based on unclassified samples of AAO requirements, active and Maintenance Float needs probably account for at least a third of these shortfalls, assuming that reserve stocks are the most depleted. Of these needs, about two-thirds relate to early European commitments. Only half of these are filled under the analysis (the assumption being that normal replacement programs account for the rest).

[30] *New Threat*, p. 19.

[31] *Ibid.*

[32] For example, Gen. Haig has indicated that half our battalions are located 50 to 100 kilometers from their necessary defensive positions, indicating a need to shift them. Similarly, two Brookings analysts have recommended that one of two Army corps in Europe be relocated, thus implying a shift of about half the firepower. See Lawrence and Record, *op. cit.*

[33] A figure that is used by Gen. Haig and has also appreared in more popular analyses (see Arnaud De Borchgrave, "Nightmare for NATO," *Newsweek*, (February 7, 1977), p. 37) for the cost of moving one battalion is $35 million. For 33, it would be the amount given.

[34] *New Threat*, p. 19.

[35] Based on the cost of 560 M–60s at $627,000 apiece.

[36] Statement by Leonard Sullivan, Jr., Assistant Secretary of Defense (PA&E), in *Posture of Military Airlift*, p. 546.

[37] Statement by Brig. Gen. Jasper A. Welch, Jr., Assistant Chief of Staff, U.S. Air Force, in *ibid.*, p. 281.

[38] We currently have 84 C–130Bs, 140 C–130A/Ds, 64 C–123s, and 48 C–7s. Air Force figures in *Military Posture*, Hearings before the Research and Development Subcommitee of the House Armed Services Committee, 94 Cong. 2 Sess. (1976), p. 5, p. 678. Because of speed and payload characteristics, the AMST is twice as productive as the C–130. Statement by Lt. Gen. Alton Slay, U.S. Air Force, Deputy Chief of Staff, Research and Development, in *ibid.*, p. 681. Thus, 112 AMSTs would be needed to replicate the capability of the retiring 224 C–130s. C–123s are at best half as capable as the C–130s while C–7As are no more than ⅓ as capable, based on payload characteristics. Industry figures in *Posture of Military Airlift*, p. 329. At most, about 21 AMSTs would be needed to replace them.

[39] GAO Airlift Report, p. 23, shows a program unit cost of $21.5 million.

[40] *New Threat*, p. 19.

[41] *Ibid.*

[42] Testimony by Maj. Gen. Philip R. Feir, *Department of Defense Appropriations for 1977*, 94 Cong. 2 Sess. (1976), pt. 5, p. 901.

[43] This is to buy an additional 1440 missiles, which would provide a total that corresponds to the mid-point of one set of Army proposals for the desirable missile buy. Costs are in current dollars, assuming annual procurement of 360 missiles per year with constant inflation.

[44] *Ibid.*, p. 20.

[45] Based on Defense Department Selected Acquisition Report (SAR) figures minus all costs incurred thus far in the program.

[46] Based on figures in Secretary of Defense, *Annual Defense Department Report, FY 1970*, Jan. 17, pp. 161–2.

[47] Data on Cobra-Tow costs from *ibid.*, p. 160 and involve a doubling of FY 1977 purchase for recurring costs of $130 million. One-time cost for more ATGMs is based on adopting the option suggested by Congressional Budget Office, "Planning U.S. General Purpose Forces: Army Procurement Issues," December, 1976, p. 54.

[48] *New Threat*, p. 20.

[49] Defense Department figures for end FY 81 in-place air-to-air dedicated fighter force aircraft and necessary air-to-air missiles plus SAM–D and Roland deployments to Europe. Does not include non-Europe or CONUS-deployed equipment. *Department of Defense Appropriations*, Cong. 2 Sess. (1976), pt. 4, pp. 1191–2.

[50] Includes enough funds to pay for 2,000 Hawks sent to Iran, Israel, and Jordan alone. Along with other sales drawdowns, these quantities have hurt out capability, the Senators assert.

[51] CBO, "Tactical Air Forces" Issue Paper, Chapter V contains these options with related cost figures.

[52] *New Threat*, p. 20.

[53] Department of the Air Force figures.

[54] *New Threat*, p. 20.

[55] *Ibid.*, p. 19.

[56] Statement by Edwin Greiner, *supra*, note 32, p. 17.

[57] Perhaps on the order of one-third.

[58] For example, the addition of a U.S. brigade in Northern Germany and the addition of an F–111 and an F–15 wing.

[59] *New Threat*, p. 18.

[60] There was no insidious reason for the use of current dollars. It was simply much easier to calculate recurring costs of a variety of different programs in current dollars than to try to change available current dollar costs for a variety of different years and different programs into constant dollars.

DEPARTMENT OF STATE: CONSOLIDATION OF WESTERN HEMISPHERIC AFFAIRS FROM ARCTIC TO ANTARCTIC

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 5 minutes.

Mr. FLOOD. Mr. Speaker, as shown by many addresses in and out of the Congress, my major interests have included the fostering of better relations between the United States and other countries of the Western Hemisphere by means of foreign policies derived from reasoned lines of thought.

In the Department of State, as shown by the 1976 Congressional Directory, there are in addition to the Secretary of

State, a Deputy Secretary of State; three Under Secretaries of State: one for Political Affairs, a second for Economic Affairs, and a third for Security Assistance; a Deputy Under Secretary for Management; and 14 Assistant Secretaries of State.

Of the Assistant Secretaries of State, all have regional or other administrative responsibilities. The jurisdiction of the Assistant Secretary for Inter-American Affairs covers all of South America, a large part of North America south of the United States, and the Caribbean. It does not include Canadian relations, which are under the Assistant Secretary for European Affairs, even though Canada is not a part of Europe and, since the 1931 Statute of Westminster, has been an independent nation.

In view of the evolving world situation and the growing importance of Western Hemispheric nations in the defense of Western civilization, the time is opportune for a long over-due demonstration of leadership of the United States in the Western Hemisphere from the Arctic to the Antarctic. This will include Canada, the Caribbean Basin countries and those of the Central American Isthmus.

As an important step in the reorganization of the Federal Government now being undertaken by President Carter, I would urge the statutory increase by the Congress of the rank of the Assistant Secretary of State for Inter-American Affairs to that of Deputy Secretary of State for the Americas, who would report directly to the Secretary of State. To implement this proposal, I have introduced the following measure:

H.R. 4072

A bill to provide authorizations for the Department of State, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "American Foreign Affairs Western Hemispheric Act".

It is the policy of Congress that, to foster and develop a consistent and comprehensive foreign policy, the foreign affairs agencies should recognize the uniqueness of relations which bind the United States of America to other countries and territories located geographically with it in the Western Hemisphere of the world. Known collectively as the Americas, these countries and territories extend from the Arctic to the Antarctic and are bound uniquely to one another.

Taking into account this situation, it is the sense of Congress that there should be located in the Department of State a Deputy Secretary for the Americas, responsible directly only to the Secretary of State.

SEC. 2. (a) For the reasons given in section 1 of this Act, the first section of the Act of May 26, 1949, as amended (22 U.S.C. 2652), is amended to read as follows: "That there shall be in the Department of State, in addition to the Secretary of State, a Deputy Secretray of State, a Deputy Secretary of State for the Americas, an Under Secretary of State for Political Affairs, an Under Secretary of State for Economic Affairs, an Under Secretary of State for Security Assistance, a Deputy Under Secretary of State for Management, and eleven Assistant Secretaries of State.

"(b) The Deputy Secretary of State for the Americas shall answer directly to the Secretary of State, and to the Deputy Secretary of State, only when the latter is acting as Acting Secretary of State; in the absence of the Secretary of State and the Deputy Secretary of State for the Americas shall act as Acting Secretary of State."

(c) This Act shall come into force immediately upon enactment.

HEARINGS ON EMERGENCY CONTROLS ON INTERNATIONAL ECONOMIC TRANSACTIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. BINGHAM) is recognized for 5 minutes.

Mr. BINGHAM. Mr. Speaker, I rise to announce the commencement on March 29 of a series of hearings on "Emergency Controls on International Economic Transactions," to be held by the Subcommittee on International Economic Policy and Trade, which I chair. These hearings are on two bills which I have introduced: H.R. 1560, a bill to repeal section 5(b) of the Trading With the Enemy Act of 1917, and H.R. 2382, the Economic War Powers Act.

Section 5(b) of the Trading With the Enemy Act is a broad, open-ended emergency authority which goes back to 1917. Over the years, it has come to be used by the President for routine regulation of international economic transactions. Some of the activities currently carried on under this authority are trade embargoes on trade with North Korea, Cambodia, Vietnam, and Cuba, blocking of Chinese and East European assets, export controls on U.S. subsidiaries abroad, and enforcement of the Export Administration Regulations notwithstanding the lapse of the Export Administration Act last September 30.

The National Emergencies Act, enacted last year, terminated most emergency authorities, but exempted section 5(b) of the Trading With the Enemy Act from termination because of that section's importance to the day-to-day functioning of the Government. Under the terms of the National Emergencies Act, the Committee on International Relations is to study section 5(b) with a view to converting as much of the authority contained therein as possible to standard, nonemergency legislation. These hearings will contribute to that study.

Clearly section 5(b), which authorizes the President to do whatever he wants for as long as he wants without reference to Congress, is sloppy legislation. What should take its place? In its broadest sense, that is the question we will be asking in the subcommittee's hearings.

A partial answer lies in H.R. 2382, the Economic War Powers Act, which will also be the subject of these hearings. This bill would prescribe the conditions under which future trade embargoes could be imposed, continued in effect, and terminated, and spells out a role for Congress in these very important decisions.

I am giving active consideration to other possible alternatives to section 5(b), and I urge anyone who wishes to present proposals to contact the subcommittee staff.

These hearings are directed at formulating a policy framework and more satisfactory procedures for any future use of economic sanctions in the foreign policy field. They are not for the purpose of examining the wisdom of existing embargoes.

On March 29, the subcommittee will hear three distinguished legal scholars. They are Prof. Stanley Metzger of Georgetown University Law School, Prof. Andreas F. Lowenfeld of New York University Law School, and Prof. Harold G. Maier of Vanderbilt University Law School. The hearing will take place at 2 p.m. in room 2200 of the Rayburn House Office Building.

We are urging the administration to give high-level consideration to these issues, and I hope soon to announce a further hearing with administration witnesses. We are also in contact with interested members of the public, who will be heard subsequently.

RULES OF PROCEDURE ADOPTED BY SELECT COMMITTEE ON ASSASSINATIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. STOKES) is recognized for 10 minutes.

Mr. STOKES. Mr. Speaker, on March 7, 1977, the Select Committee on Assassinations adopted Rules of Procedure in accordance with the mandate of the House. These rules contain a stringent set of safeguards which are for the purpose of preserving the civil and constitutional rights of potential witnesses. These formal safeguards prevail both in field investigations and the formal sessions before the committee. The adopted rules which illustrate the extensive concern the committee has for the constitutional and civil rights of all prospective witnesses include rules that witnesses may be accompanied by an attorney and that the committee will provide a witness with an attorney if he is financially or otherwise unable to secure counsel; and that the attorney for a witness may submit written questions to the committee to be asked of his client.

Moreover, the rules provide strict investigative guidelines which provide that no witness shall be recorded without his prior knowledge and consent; that there will be no electronic surveillance or wiretapping of any person; that no witness be subjected to polygraph or voice-stress-analysis examination without specific written authorization of the witness and a majority of the committee or subcommittee; that the results of such tests, or the failure or agreement to take such tests, shall not be used as the basis of finding of fact or used in any report or at a public hearing; that in all field interrogations of prospective witnesses, committee counsel and investigators shall first identify themselves as representing the Select Committee on Assassinations, present official credentials, and advise each prospective witness of the nature of the investigation being conducted; and finally, that the use of any investigative technique must be specifically authorized by the full committee.

In addition, the committee has adopted rules to insure that classified and sensitive materials will be properly safe-

guarded, and which prohibit the staff from discussing committee business outside of the committee unless specifically authorized by the chairman or subcommittee chairman.

The rules as adopted will insure that the Select Committee on Assassinations will be able to conduct a full, complete, and effective investigation into the assassinations of President Kennedy and Dr. King, and that it will be conducted in a manner which is credible and will bring honor to this House.

Mr. Speaker, I anticipate that in the very near future the House will consider a resolution to recreate the Select Committee on Assassinations. In this regard, the committee and I would welcome the comments and suggestions of our colleagues relative to these rules.

The adopted rules will be printed in the RECORD pursuant to the rule today.

A REASONABLE RESPONSE TO THE SACCHARIN BAN

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. KRUEGER) is recognized for 5 minutes.

Mr. KRUEGER. Mr. Speaker, the proposed ban on saccharin announced last week by the Food and Drug Administration points out the shortcomings of the so-called Delaney amendment to the Federal Food, Drug, and Cosmetic Act.

As you know, this amendment requires the Secretary of Health, Education, and Welfare to ban any food additive which, after "appropriate tests" is found to induce cancer in man or animal.

This amendment does not lodge any additional power in the FDA; that is, the FDA's power to ban food additives is not dependent upon the language of the Delaney amendment. It serves merely as a "red flag," which removes from the Secretary any authority to take less drastic steps than an outright ban against additives found to induce cancer after these "appropriate" tests.

Now, I notice in the Washington Post that the FDA is blaming its decision to ban saccharin upon the Congress, and in light of the existence of the Delaney amendment, there is no doubt but that a great deal of the responsibility for this action does lie here. I do think it my duty, however, to rise to a partial defense of the Congress by pointing out that HEW and FDA determine the meaning of the term "appropriate test"—subject to court review, to be certain—so that it is not entirely the Congress fault that the unfortunate fate of a few Canadian rats has had an equally unfortunate impact upon American consumers of artificial sweeteners.

With this one clarification in mind, we can still proceed to the inescapable conclusion to which the Washington Post article leads us, however. The Delaney amendment is an unwieldy tool with which to judge and act upon questions of a most delicate nature; in a subject area open to much dispute and some conjecture we rely upon an enforcement mechanism which stands flatfooted upon the ground, as if this were a question of black and white.

In my opinion, Congress should act expeditiously to amend the law to allow FDA and the Secretary of HEW greater discretion in selecting the appropriate remedy in the gray areas where they are forced by lack of hard data or precedent to make what amounts to little more than a judgment call.

In 1958, when the Delaney amendment was adopted, our knowledge of carcinogens was not so well developed as today; few of us suspected the extent to which cancer-causing agents may have pervaded our environment. Evidence now seems to indicate that potential carcinogens are so widespread that it is nearly pointless to try to evade them all.

Until we have more information about the nature of the disease and its causes, I fear that the general public has little defense but to become increasingly fatalistic about its continual exposure to substances which, in one forum or another have been labeled as "cancer-causing agents."

In light of all this confusion, the Delaney amendment becomes a greater obstacle to the general public than a safeguard, unless an important change is made. As testing methods become more and more precise, an increasing number of food additives formerly regarded as safe—sometimes for decades—will be swept off the market by the Delaney amendment in much the same way the manager's cane used to whisk bad acts from the vaudeville stage. Please note that more precise tests are not necessarily more valid tests, particularly if the underlying assumptions are incorrect, namely, hypothetically, the rat-human connection.

Obviously, the Congress needs to introduce a modicum of discretion and commonsense into a rigid statute, if we are to keep any food products on the shelves until the time when we unlock the mysteries of cancer and isolate its causes.

Today, I am introducing a bill to do just that. My proposal amends the Delaney amendment to allow the Secretary of HEW to balance the potential danger of a food additive's remaining on the market against the benefits which society might derive from its continued availability. In the case at hand, the Secretary would balance the dangers posed by the continuing availability of saccharin, as demonstrated by the Canadian rat tests, with the demonstrated need which diabetics and chronically overweight people have for this commodity.

Once the Secretary had determined that the potential benefits of keeping saccharine on the market outweighed the drawbacks, three paths lay open to him: First, he could order further testing of the substance to verify or improve upon the results of the previous tests, and the product could remain on the market during this evaluation period; second, he could require all foods containing the additive to be labeled with a public warning that ingestion of the additive may be hazardous to the health of the consumer; or third, in the most severe cases, he could allow the additive to remain on the market only with a physician's prescription.

I think that this is a balanced approach, and do not believe that it in any way compromises the ability of the FDA and HEW to remove a carcinogenic food additive from the market. Realistically speaking, the importance of the Delaney amendment lies in its moral force rather than in its effectiveness as a tool. The legislative history of the 1958 amendments to the Food, Drug and Cosmetic Act make this point clear:

> . . . the bill is aimed at preventing the addition to the food our people eat of any substances the ingestion of which reasonable people would expect to produce not just cancer but any disease or disability . . . the bill reads or means the same with or without the inclusion of the clause referred to (the Delaney amendment). This is also the view of the Food and Drug Administration.

In response to all those Americans who could be asked to forego saccharin in the near future and countless other substances in the long run, I think that the Congress has an obligation to change this law, so that there will be at least as much chance of equity as of inequity arising from its enforcement. The present situation is, I believe, unacceptable, and will grow more so as time goes by.

For instance, a staff member of mine, patriotic in his breakfast beverage, drinks diet soda, not coffee, each morning. He observed last week that even on the hottest Texas summer day, he had consumed, as best he recalled, only 23 cans. Even with substantial force-feeding he saw no way in which he could have consumed many more. Certainly he could not drink the 777 additional cans necessary to imbibe the quantity of sacharin carcinogenic to the bladder of a Canadian rat. And I believe that anyone who can drink 23 cans in a day probably has a bladder of more strength than any rat.

The moral of the story, of course, is that we must be reasonable in our assessments. The text of my reasonable legislation follows:

H.R. 5138

A bill to amend the Federal Food, Drug and Cosmetic Act to provide the Secretary of Health, Education and Welfare with greater latitude in regulating food additives found to induce cancer in man or animal

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 409 (c) (3) of the Federal Food, Drug and Cosmetic Act (21 U.S.C. 348(c)(3)) is amended—

(1) by redesignating clauses (i) and (ii) of subparagraph (A) as subclauses (I) and (II) respectively, and by inserting after "shall not apply with respect to" in such paragraph the following: "(i) any food additive intended to be used as an ingredient of food for human consumption with respect to which additive the Secretary has determined that the benefits derived from the availability of the additive outweigh the dangers its availability poses to the public health and safety; and (ii)"; and

(2) by adding after and below subparagraph (B) the following:

"In the case of a food additive with respect to which the Secretary has made the determination described in subparagraph (A)(i), the Secretary may include in a regulation promulgated under this section for such additive such restrictions on the use of the additive as the Secretary considers appropriate. The term "restrictions" includes: (i) continued availability of the additive to the public while appropriate testing continues, to verify the results of prior tests; or (ii) a

requirement that foods containing such additive be labeled with warnings that consumption of such additive may be dangerous to the health of the consumer; or (iii) a requirement, in the instance of greatest public danger combined with the least probable public benefit from continued availability of the additive, that such additive be available to the public by physician's prescription only.".

LEGISLATION PROVIDING FOR DISPOSITION OF FUNDS TO PAY A JUDGMENT IN FAVOR OF COWLITZ TRIBE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Washington (Mr. BONKER) is recognized for 5 minutes.

Mr. BONKER. Mr. Speaker, I, along with my colleague, NORM DICKS of the State of Washington, am introducing legislation to provide for the distribution of funds appropriated to pay a judgment in favor of the Cowlitz Tribe of Indians in Indian Claims Commission docket No. 218.

We are introducing this legislation at the request of the Cowlitz Indian Tribe. They assure me that the tribe stands united in this request and that no faction within the enrolled membership is in opposition to this plan.

In 1973 the Cowlitz Tribe accepted a compromise settlement in docket No. 218 and the Indian Claims Commission awarded the tribe $1,550,000 for land taken without benefit of treaty or compensation. The tribe then presented its plan for distribution of the judgment awarded to the Secretary of the Interior.

On November 4, 1974, the Secretary submitted a plan for distribution of the judgment award that was diametrically opposed to that submitted by the Cowlitz Tribe. The tribe, however, was not notified of the Secretary's plan and only became aware of it shortly before it would have become law.

The tribe then appealed to Congressman LLOYD MEEDS and to Senators MAGNUSON and JACKSON from the State of Washington. On March 16, 1975, H.R. 5090 and S. 1334 were introduced. On December 15, 1975, the House passed H.R. 5090 after deleting section III(1) that provided for $10,000 to be set aside by the Secretary for the purchase of lands for the benefit of the Cowlitz Indian Tribe. No action was taken by the Senate after the hearing of record and the bills died with the adjournment of the 94th Congress.

We feel that this session of Congress should settle this matter through legislation which enables members of the Cowlitz Indian Tribe to receive the benefit of this land claim settlement before another year passes.

This bill has one difference from the previous bill. The tribe is requesting that 20 percent of the claim settlement be set aside for the acquisition of land, to be held in trust for the Cowlitz Indian Tribe. The amount requested is $310,000. This is an increase of $300,000 over the amount requested in 1975.

On this request, Congressman DICKS joins with me in requesting that hearings be held by the committee to which the bill is assigned, so that members of the Cowlitz Tribe may present to the committee their reasons for increasing the amount. Also, their reasons why it is absolutely essential that the money for the land acquisition be set aside in this fashion should be shared with the committee. We have no position on this issue. We feel the committee, after hearing the testimony of the Cowlitz Tribe, will be best qualified to make the decision.

Text of the bill follows:

H.R. —

An act to provide for the disposition of funds appropriated to pay a judgment in favor of the Cowlitz Tribe of Indians in Indian Claims Commission docket numbered 218 and for other purposes

Be it enacted b the Senate and House of Representatives of the United States of America in Congress assembled, That the funds appropriated by the Act of July 1, 1973 (87 Stat. 99), to pay a judgment to the Cowlitz Tribe of Indians in Indian Claims Commission docket numbered 218, together with the interest thereon, after payment of attorney fees and litigation expenses, and such expenses as may be necessary in effecting the provisions of this Act, shall be distributed as provided herein.

SEC. 2. (a) The Secretary of the Interior shall prepare a roll of all persons—

(1) who were born on or prior to and living on the date of this Act;

(2) who are lineal descendants, of one-sixteenth degree or more of Cowlitz blood, of members of the Cowlitz Tribe of Indians as it existed in 1863; and

(3) whose name or the name of a lineal ancestor appears as a Cowlitz Indian on any available census roll or other record or evidence acceptable to the Secretary.

(b) Applications for enrollment must be filed in the manner and within the time limits prescribed by the Secretary for that purpose. The determination of the Secretary regarding the utilization of available rolls or records and eligibility for enrollment of an application shall be final.

(c) No person shall be enrolled pursuant to this section as a descendant of the Cowlitz Tribe if such person has shared in or is eligible to share in a per capita distribution of a judgment against the United States recovered by any other tribe, except through inheritance, nor shall any person be so enrolled if such person is currently enrolled as a member of any other Indian Tribe.

SEC. 3. The funds authorized to be distributed herein shall be distributed as follows:

(1) Three hundred ten thousand dollars shall be set aside by the Secretary (Twenty per cent of judgment award, in compliance with P.L. 93-134) prior to per capita distribution, for the purchase of land to be held in trust for the Cowlitz Tribe. Site of said land to be subject to the approval of the Cowlitz Tribe.

(2) The balance shall be distributed by the Secretary per capita to those eligible for enrollment. Sums payable to adult living enrollees or adult heirs of deceased enrollees shall be paid directly to such persons. Sums payable to living enrollees who are minors or under legal disability shall be paid in accordance with such procedures, including the establishment of trust, as the Secretary of the Interior determines appropriate to protect the best interests of such persons.

SEC. 4. The provisions of section 7 of the Act of October 19, 1976 (87 Stat. 466) shall apply to funds distributed pursuant to this Act.

SEC. 5. The Secretary of the Interior is authorized to promulgate rules and regulations necessary to carry out the provisions of this Act.

CONGRESSMEN WEISS, UDALL, AND SEIBERLING URGE PROHIBITION OF SPENDING FOR SST IN H.R. 4088

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. WEISS) is recognized for 5 minutes.

Mr. WEISS. Mr. Speaker, we have sent the following letter to our colleagues urging them to halt back door efforts to construct a supersonic transport without explicit congressional consent:

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 16, 1977.

DEAR COLLEAGUE: On this Thursday, March 17th, H.R. 4088 (the National Aeronautics and Space Administration Authorizations for Fiscal Year 1978) will be considered on the floor of the House.

At first glance this bill seems to be a routine authorization bill, but in reality it is not.

On page 18 and 19 of the accompanying House Science and Technology Committee report (H. Rept. 95-67), NASA is required to undertake a study for an "overall program plan" for developing and constructing a Supersonic Transport. According to this report it is in the national interest for NASA in conjunction with the Departments of Transportation and Defense and EPA to conduct comprehensive planning to insure that a Supersonic Transport (SST) will be ready for airports in the U.S. by the early 1980's. The Committee mandated that this plan be ready by September 1977.

In mandating the NASA overall plan the House Science and Technology Committee renames the SST as the AST or Advanced Supersonic Transport. The Committee asks that we fund studies for this AST—somehow indicating that this is different from an SST. An SST is still an SST even if you call it an AST!

As you know, on March 18, 1971 (almost 6 years ago to date) both houses of Congress rescinded governmental funding of the SST on the basis of environmental concerns, excessive cost, and apparent lack of profitability.

This bill would permit NASA to carry out research with the prime purpose of developing such an SST as was rejected by Congress six years ago. There are tremendous doubts, already, about the European SST—Concorde. We believe it is an important matter which the whole House should decide.

We will introduce an amendment on the floor Thursday to preclude the use of funds for this study until such funding is specifically authorized by subsequent act of Congress.

We urge your support of this amendment.

Sincerely,

JOHN F. SEIBELING.
TED WEISS.
MORRIS K. UDALL.

SOCIAL SECURITY RIGHTS ACT

(Mr. SEIBERLING asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SEIBERLING. Mr. Speaker, today I am reintroducing the Social Security Rights Act to insure that the Social Security Administration—SSA—will take the steps necessary to improve its operations in order to eliminate its hearing backlog and claim processing delays.

The need for good government service was eloquently stated by Health,

Education, and Welfare Secretary Califano last week when he announced the reorganization of HEW:

Making government work is not glamorous. It is simply necessary, for without basic competence government cannot—and should not—have the confidence of the American people.

Enactment of the Social Security Rights Act would make the Social Security Administration work again.

In 1975, when the social security "hearings crisis" reached its peak, there were 111,000 requests for hearings pending, mainly on social security disability claims, and the median processing time was 224 days. Subsequently, the Congress passed legislation in December 1975 which SSA indicated would enable it to reduce the huge backlog of cases to approximately 75,000 and the median processing time to 90 days by July 1977. It is now March 1977, and the latest available figures—January 1977—show that although the backlog has been reduced to 81,592, the median processing time is still a long 220 days—after soaring to 304 days in January 1976. In the Cleveland Hearing Office, where my constituents' claims are heard, the median processing time is even higher, 266 days. Clearly, SSA will not reach its processing time goal. In fact, SSA officials report that they have entirely abandoned this goal. It is evident that the Social Security Rights Act is needed more than ever.

The Administrative Procedure Act—section 555h—requires that "within a reasonable time, each agency shall proceed to conclude a matter presented to it." For the last 7 years, the median processing time for SSA hearings has been wholly unreasonable by any standard. Since 1970, hundreds of thousands of social security disability claimants have been denied their right to decisions on their claims within a reasonable time.

On October 29, 1976, the U.S. District Court, District of Connecticut, in White against Mathews, ordered the Department of Health, Education, and Welfare to incrementally reduce hearing processing time in Connecticut to 120 days by July 1978. In his September 29 ruling in this case, District of Connecticut Chief Judge T. Emmet Clarie found the "lengthy and persistent delays" deny "due process rights to aggrieved applicants and conflicts with the statutory purposes and provisions of the Social Security and Administrative Procedure Acts." The court further ordered that HEW "grant prospective payments to those claimants who fail to receive their final decision within the maximum delays" in the order.

The court's finding for reasonable action by SSA is consistent with section 3 of the Social Security Rights Act which would place a limit of 120 days on the amount of time SSA can spend in processing social security benefit claims at the hearing level. It would give claimants the right to request and to receive emergency payments within 10 days, based on their earnings records, if they have not received notification of decisions on their claims within 120 days, or if their claims have been approved but their benefit payments delayed.

The time limits set forth in the Social Security Rights Act are entirely reasonable. They are based on the average processing times SSA experienced in the late sixties before additional program responsibilities and increased claim submissions adversely affected SSA's processing ability and they give SSA an additional 30-days leeway.

The idea of setting time limits for processing Government benefit claims is not new. It has worked well under the food stamp program where applications for benefits must be reviewed and decided within 30 days and in the aid to families with dependent children program where the limit is 45 days. More recently, pursuant to title II of the Social Security Act, which requires that States administer unemployment insurance programs in such a way "to insure full payment of unemployment compensation when due," the Labor Department issued regulations requiring claims to be paid within 15 days.

If time limits are appropriate and workable for these programs, how can we not justify providing needy social security claimants with similar rights? Census Bureau statistics show that approximately 25% of families with incomes below the poverty level are social security recipients. Most claimants have contributed regularly with every paycheck to their social insurance and they deserve to have their cases considered promptly.

When Congress passed the black lung and SSI programs, the social security disability program and the SSA appeals system suffered tremendously. Although at the time, SSA overestimated its ability to take on these programs, surely Congress must take the final responsibility for the imposition of extra burdens on SSA and consequent delays in claim decisions. The Social Security Rights Act will require both the SSA and the Congress to address in a realistic manner how new programs or program revisions can be administered by SSA.

This point is important in view of legislation I understand may pass the Congress this session which would require the review of some 70,000 black lung cases again by SSA and in view of the possibility of the passage of a national health insurance program in the not too distant future. Furthermore, we must now take into account the additional burden being placed on SSA as a result of HEW Secretary Califano's reorganization order which puts the Assistance Payments Administration and other organization units related to aid to families with dependent children under SSA.

In a report issued on October 1, 1976, titled "Problems and Progress in Holding Timelier Hearings for Disability Claimants," the General Accounting Office, GAO, recommended several steps the SSA should take to eliminate its hearing delays, including some which apparently would incur little additional costs. However, the GAO believes, with regard to hearing delays, that "the most serious problem is the backlog." GAO concluded that reasonable processing time cannot be achieved until the "backlog is considerably reduced." In the past 18 months, SSA's Bureau of Hearings and Appeals has reduced the backlog from from 110,000 to approximately 81,500. The Bureau estimates that a workable backlog is around 70,000 cases. It appears that SSA has the capability to reduce its backlog by another 10,000 by the end of 1977. However, passage of the Social Security Rights Act will insure that SSA will stay on the right track and that the kind of crisis which occurred in the early seventies will not happen again.

Furthermore, while the White decision—referenced above—is a most welcome one, the net result will be that SSA will divert administrative law judges from other hearing offices to bring the Bureau of Hearings and Appeals in Connecticut into compliance with the court order—worsening the hearing delays elsewhere. We cannot have piecemeal justice for disability and other SSA claimants depending on where they live and whether they have the resources to take SSA to court to get prompt action on their claims. Clearly, national legislation is needed.

Social security programs reach almost all Americans at some point in their lives. The SSA disability and appeals systems have been in deep trouble for many years, and Congress can no longer ignore its responsibility for this situation. We must act to resolve it by setting fair and reasonable standards for SSA claim processing and benefit services to the public and by providing SSA with any additional personnel and other resources they may require to meet these standards. Enactment of the Social Security Rights Act would insure the achievement of the purpose of social security programs, to provide insurance against loss of earnings in the event of retirement, death, or disability.

A summary and copy of the bill I introduced follows these remarks:

SECTION-BY-SECTION ANALYSIS

The purpose of the Social Security Rights Act is to give individuals the right to receive emergency benefit payments under three circumstances: First, if they experience long delays in obtaining decisions on their social security claims; second, if they experience long delays in obtaining benefits for claims already approved; or third, if they are already receiving social security benefits and their monthly benefits are interrupted for no apparent reason.

Section 2 of the Social Security Rights Act would permit individuals, who are already receiving social security benefits and whose check does not arrive within 5 days of the date regularly fixed for delivery, to submit a request to the Social Security Administration for a replacement benefit check. The Social Security Administration would be required to provide any individual submitting such a request with a duplicate check, or an explanation as to why he or she is not entitled to receive it, within 10 days.

Section 3 of the Social Security Rights Act would place limitations on the amount of time the Social Security Administration can spend in processing

social security benefit claims at all levels of the determination and appeal process as follows: Initial claims, 90 days; reconsideration requests, 90 days; hearing requests, 120 days; and Appeals Council reviews, 120 days. The act would also give claimants the right to request and to receive emergency payments within 10 days, based on their earnings records, if they have not received notification of decisions on their claims within the specified periods of time, or if their claims have been approved but their benefit payments delayed.

H.R. 5151

A bill to amend title II of the Social Security Act to require that procedures be established for the expedited replacement of undelivered benefit checks, to require that decisions on benefit claims be made within specified periods and to require that payment of benefits on approved claims begin promptly

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Social Security Rights Act."

EXPEDITED REPLACEMENT OF LOST, STOLEN, OR UNDELIVERED BENEFIT CHECKS

SEC. 2. (a) Section 205 of the Social Security Act is amended by adding at the end thereof the following new subsection:

"Expedited Replacement of Lost, Stolen, or Undelivered Benefit Checks

"(r) In any case in which the check issued to or for an individual in payment of any benefit due him or her under this title is lost or stolen or for any other reason has not reached him or her on the day regularly fixed for delivery of such check or within five days thereafter, such individual may submit to the Secretary a written request (in such manner and form as the Secretary shall prescribe in regulations) for the issuance of a new check in replacement thereof; and the Secretary shall take such action as may be necessary to assure that, within no more than ten days after such request is submitted, either (1) the replacement check is issued and delivered to such individual as requested or (2) a full and complete explanation of the reasons why the individual is not entitled to the check for which he or she has requested a replacement shall be furnished to the individual in writing.".

(b) Section 205(q) of such Act is amended by adding at the end thereof the following new paragraph:

"(6) Nothing in this subsection shall require any individual to utilize the procedures established under paragraph (1) with respect to any allegation or claim, in lieu of the procedures established under subsection (r), if the allegation or claim is one to which subsection (r) is applicable.".

TIME LIMITATIONS FOR DECISIONS ON BENEFIT CLAIMS AND FOR PAYMENT OF BENEFITS ON APPROVED CLAIMS

SEC. 3. Section 205(b) of the Social Security Act is amended—

(1) by inserting "(1)" after "(b)"; and

(2) by adding at the end thereof the following new paragraphs:

"(2)(A) Subject to subparagraph (B)—

"(i) the decision of the Secretary as to the rights of any individual initially applying for a payment under this title shall be made within ninety days after application for such payment is filed;

"(ii) the decision of the Secretary on a reconsideration of any decision described in clause (i) shall be made within ninety days after application for such reconsideration is filed;

"(iii) the decision of the Secretary upon any hearing held with respect to any decision described in clause (i), whether affirming, modifying, or reversing such decision, shall be made within one hundred and twenty days after the request for such hearing is filed; and

"(iv) the decision of the Secretary upon any Appeals Council review held with respect to any decision described in clause (i), whether affirming, modifying, or reversing such decision, shall be made within one hundred and twenty days after the request for such a review is filed or after the Appeals Council itself makes a decision to review a decision.

"(B) If any decision with respect to the right of an individual to any monthly benefit under this title is not made within the period specified in the applicable clause of subparagraph (A), such individual shall upon request (and within ten days of making such request) be paid an amount equal to such monthly benefit as determined solely on the basis of such individual's application and the applicable record of wages and self-employment income; and if such decision remains unmade at the end of any calendar month beginning after the close of such period, such individual shall upon request (and within ten days of making such request) be paid an additional amount equal to such benefit as so determined

"(C) Amounts paid to an individual under subparagraph (B) shall in no event be considered overpayments for purposes of section 204.

"(3) Whenever an individual claim to monthly benefits under this title is approved, payment of such benefits shall begin no later than the day regularly fixed for delivery of benefit checks in the second month following the month in which the claim was approved. If the benefit check is not received by such individual on such day or within the succeeding five days thereafter, such individual shall upon request (and within ten days of making such request) be paid an amount equal to the monthly benefit so approved; and if the benefit check is not received by such individual on the day regularly fixed for delivery of checks in any subsequent months or within five days thereafter, such individual shall upon request (and within ten days of making such request) be paid an additional amount equal to the monthly benefit so approved.".

EFFECTIVE DATES

SEC. 4. The amendments made by section 2 shall apply with respect to checks issued in payment of amounts due for months after the month in which this Act is enacted. The amendments made by section 3 shall apply with respect to applications (for payment or reconsideration) and requests (for hearings or appeals Council Review) made, and claims approved, on or after the date of the enactment of this Act.

RULES OF THE SELECT COMMITTEE ON ASSASSINATIONS AS ADOPTED MARCH 7, 1977

(Mr. STOKES asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. STOKES. Mr. Speaker, I submit the following rules adopted by the Select Committee on Assassinations:

RULE 1—GENERAL PROVISIONS

1. The Rules of the House, and in particular the Committee rules enumerated in Clause 2 of Rule XI, are the rules of the Select Committee on Assassinations, to the extent applicable, and by this reference are incorporated. Any subcommittee shall be part of the committee, and subject to the authority and direction of the committee and to its rules so far as applicable.

RULE 2—MEETINGS

2.1 The regular meeting time of the Committee is 10:00 a.m. on every Monday, Tuesday and Thursday of each month when the House is in session. Additional meetings may be called by the Chairman as he may deem necessary or at the request of a majority of the Committee in accordance with Clause 2(c) of Rule XI of the House of Representatives.

2.2 The Committee and any subcommittee thereof may not sit, without special leave, while the House is reading a measure for amendment under the five-minute rule.

2.3 In accordance with Clause 2(g) of Rule XI, each meeting of the Committee or any subcommittee thereof, shall be open to the public except when the Committee or subcommittee, in open session and with a majority present determines by roll call vote that all or part of the remainder of the meeting shall be closed to the public: *Provided However*, that no persons other than Members of the committee, such congressional staff as they may authorize, shall be present at any meeting which has been closed to the public.

2.4 *Record votes.* A roll call vote of the Committee may be had on the request of one Member. The result of each roll call vote shall be recorded and the record shall be made available for inspection by the public at reasonable times at the Committee office. Such record shall include a description of the amendment, motion, order or other proposition; the name of each Member voting for or against, and whether by proxy or in person, and the Members present but not voting.

2.5 *Quorum.* One-third of the committee shall constitute a quorum for the purposes of transacting business other than reporting. However, a quorum for the purpose of taking testimony and receiving evidence by the committee or a subcommittee shall consist of two Members.

2.6 *Records.* It shall be the duty of the Clerk and Staff Director to keep or cause to be kept a verbatim transcript of all committee or subcommittee proceedings, including the record of votes on any matter on which a record vote is taken and of all quorum calls together with all motions, points of order, parliamentary inquiries, rulings of the chair and appeals therefrom. The record shall show those Members present at each meeting.

2.7 *Proxies.* A vote by any Member in the committee or in any subcommittee may be cast by proxy, but such proxy must be in writing for use during each roll call in which such Member's proxy is to be voted. Each proxy shall designate the Member who is to execute the proxy authorization and shall be limited to a specific measure or matter and any amendments or motions pertaining thereto; except that a Member may authorize a general proxy only for motions to recess, adjourn or other procedural matters. Each proxy to be effective shall be signed by the Member assigning his vote and shall contain the date and time of day that the proxy is signed. Proxies may not be counted for a quorum. The Member does not have to appear in person to present the proxy.

2.8 *Notice of Meetings.* The Chairman, in the case of hearings to be conducted by the committee, and the appropriate subcommittee chairman, in the case of hearings to be conducted by a subcommittee, shall make public announcement of the date, place, and subject matter of any hearing to be conducted on any measure or matter at least 1 week before the commencement of that hearing unless the committee determines that there is good cause to begin such hearing

at an earlier date. In the latter event the chairman or the subcommittee chairman whichever the case may be shall make such public announcement at the earlier possible date. The Clerk of the committee shall promptly notify the Daily Digest Clerk of the Congressional Record as soon as possible after such public announcement is made.

RULE 3—HEARING PROCEDURES

3.1 *Participation of Members.* All other Members of the committee may have the privilege of sitting with any subcommittee during its hearing or deliberations and may participate in such hearings or deliberations, but no such Member who is not a Member of the subcommittee shall vote on any matter before such subcommittee.

3.2 *Interrogation of Witnesses.* Committee Members may question witnesses only when they have been recognized by the Chairman for that purpose, and only for a 5-minute period until all Members present have had an opportunity to question a witness. The 5-minute period for questioning a witness by any one Member can be extended only with the unanimous consent of all Members present. The questioning of witness in both full and subcommittee hearings shall be initiated by the Chairman, followed by the ranking minority party Member and all other Members alternating between the majority and minority. In recognizing Members to question witnesses, in this fashion, the Chairman shall take into consideration the ratio of the majority to minority Members present and shall establish the order of recognition for questioning in such a manner as not to disadvantage the Members of the majority. The Chairman may accomplish this by recognizing two majority Members for each minority Member recognized. The Chairman or any Member may recognize staff counsel for the purpose of questioning a witness for a period to be determined by the Chairman.

3.3 *Additional Rules.* The following additional rules shall apply to all investigative hearing procedures:

(1) The Chairman at an investigative hearing shall announce in the opening statement the subject of the investigation.

(2) A copy of the committee rules and this clause shall be made available to each witness.

(3) Witnesses at investigative hearings may be accompanied by their own counsel for the purpose of advising them concerning their constitutional rights.

(4) The Chairman may punish breaches of order and decorum, and of professional ethics on the part of counsel, by censure and exclusion from the hearings; and the committee may cite the offender to the House for contempt.

(5) If the committee determines that evidence or testimony at an investigative hearing may tend to defame, degrade, or incriminate any person, it shall—

(a) receive such evidence or testimony in executive session;

(b) afford such person an opportunity voluntarily to appear as a witness; and

(c) receive and dispose of requests from such person to subpena additional witnesses.

(6) Except as provided in subparagraph (5), the Chairman shall receive and the committee shall dispose of requests to subpena additional witnesses.

(7) No evidence or testimony taken in executive session may be released or used in public sessions without the consent of the Committee.

(8) In the discretion of the Committee, witnesses may submit brief and pertinent sworn statements in writing for inclusion in the record. The Committee is the sole judge of the pertinency of testimony and evidence adduced at its hearing.

(9) A witness may obtain a transcript copy of his testimony given at a public session or, if given at an executive session, when authorized by the Committee.

3.4 Witness' counsel may submit written questions to be propounded to his or her client. Such questions will be asked by the Committee if a majority of the members consent.

3.5 Any objection by witness' counsel must be specifically ruled upon by the chairman or presiding member and such rulings shall be the ruling of the Committee, unless a disagreement thereon is expressed by a majority of the Committee present. In the case of a tie, the rule of the chair will prevail.

3.6 The Chairman of the Committee or subcommittee shall offer each witness and/or counsel, at the conclusion of his or her testimony, the opportunity to explain or amplify that testimony. The time afforded each witness or counsel shall not exceed 5 minutes, unless extended for good cause by the Chairman. The Committee or subcommittee may ask additional questions to the witness at the conclusion of any such explanation or amplification.

3.7 If a witness who desires counsel, but is financially or otherwise unable to secure counsel, informs the Committee in writing at least 48 hours in advance of his or her inability to retain counsel, the Committee will secure *voluntary* independent counsel for the witness. Such attempts by the Committee to secure counsel will not include the payment of fees to an attorney representing a witness at a Committee hearing. Failure of a witness to agree to the counsel provided will not excuse the witness from appearing and testifying.

3.8 A witness shall, upon request, be given an opportunity to inspect the preliminary transcript of his or her testimony to determine whether it was correctly transcribed and may be accompanied by his or her counsel during such inspection. If the testimony was given in executive session, the witness may only inspect the preliminary transcript at a location to be determined by the Committee. Any corrections in the transcription of the testimony of the witness which the witness desires to make shall be submitted in writing to the Committee within 5 days after the transcription of his or her testimony. However, changes shall only be made for the purpose of making minor grammatical corrections and editing, and not for the purpose of changing the substance of the testimony. Any questions arising with respect to such editing shall be decided by the Chairman.

The Committee will furnish the witness a copy of the transcript of his or her testimony when it is made public, at no expense.

RULE 4—STATEMENTS UNDER OATH BY DESIGNATED COUNSEL

4.1 Pursuant to House Resolution 222, Counsel on the committee staff may be designated to obtain statements from a witness who is placed under oath by an authority who is authorized to administer oaths in accordance with the applicable laws of the United States or of any State.

4.2 Subpoenas may not be utilized to obtain such statements. Counsel must advise the person that such statements are voluntary. The person giving a statement shall be provided a copy of that statement by designated counsel. Such statements are not to be considered testimony before the committee, but may be used by the committee or its staff in pursuing investigative leads and as a basis for questioning witnesses before the committee; and may be incorporated as part of the record only when (a) the person is dead or (b) the committee determines that in the interest of justice and economy, with due regard to the importance of presenting oral testimony, the statement should be so used.

4.3 Witnesses giving statements under oath to designated counsel must be advised by counsel that they have the right to have their own counsel while giving such statements.

RULE 5—SUBPENAS

5.1 *Procedure.* Subpenas shall be issued only in accordance with the procedure specified in Clause 2(m)(2)(A) of Rule XI of the Rules of the House of Representatives. Each subpena shall be served with a copy of H. Res. 222, 95th Congress, first session, and a copy o fthe Rules of this Committee which are in effect at the time of issuance of the subpena.

5.2 *Power to Sit and Act; Subpena Power.*

(a) For the purpose of carrying out any of its functions and duties under House Resolution 222 the Committee or subcommittee is authorized (subject to subparagraph (b)(1) of this paragraph)—

(1) to sit and act at such times and places within the United States, including any Commonwealth or possession thereof, or in any other country, whether the House is in session, has recessed, or had adjourned, and to hold such hearings, and

(2) to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memoranda, papers, documents, tangible objects, and other things of any kind, as it deems necessary. The Chairman of the Committee or subcommittee, or any Member designated by the Chairman, may administer oaths to any witness.

(b)(1) A subpena may be authorized and issued by the Committee or subcommittee under subparagraph (a)(2) in the conduct of any investigation or series of investigations or activities, only when authorized by a majority of the Members voting, a majority being present. The power to authorize and issue subpenas under subparagraph (a)(2) may be delegated to the Chairman of the Committee or subcommittee pursuant to such rules and under such limitations as the Committee or subcommittee may prescribe. Authorized subpenas shall be signed by the Chairman of the Committee or subcommittee or any Member designated by the Committee or subcommittee.

(c) Compliance with any subpena issued by the committee under subparagraph (a)(2) may be enforced only as authorized or directed by the House.

5.3 Except as otherwise specifically authorized by the Committee, no Member of the Committee or staff shall make public the name of any witness subpenaed by the Committee.

5.4 Witnesses shall be subpenaed at a reasonably sufficient time in advance of any hearing in order to give the witness an opportunity to prepare for the hearing, employ counsel should (s)he so desire, and/or produce the materials called for by a subpena *duces tecum*. The Committee shall determine, in each particular instance what period of time constitutes reasonable notice; however, in no case shall it be less than 24 hours, unless the witness waives such notice.

RULE 6—BROADCASTING OF COMMITTEE HEARINGS AND MEETINGS AND GENERAL PRESS POLICY OF THE COMMITTEE

6.1 Upon approval by the Committee, all Committee and subcommittee hearings which are open to the public may be covered, in whole, or in part, by television broadcast, radio broadcast, and still photography, or by any such methods of coverage.

6.2 The Chairman of the full Committee or the Chairman of the subcommittees are authorized to determine on behalf of the full Committee or its subcommittees, respectively, whether hearings which are open may be broadcast, unless the committee or its subcommittees respectively by majority vote determine otherwise.

6.3 Permission for such coverage shall be granted only under the following conditions:

(1) Live coverage by radio or television shall be without commercial sponsorship.

(2) No witnesses served with a subpoena by the committee shall be required against his or her will to be photographed at any hearing or to give evidence or testimony while the broadcasting of that hearing, by radio or television, is being conducted. At the request of any witness who does not wish to be subjected to radio, television, or still photography coverage, all lenses shall be covered and all microphones used for coverage turned off.

(3) Not more than four television cameras, operating from fixed positions, shall be permitted in the room. The allocation among the television media of the positions of television cameras in the room shall be in accordance with fair and equitable procedures as devised by the Executive Committee of the Radio and Television Correspondents' Galleries.

(4) Television cameras shall be placed so as not to obstruct in any way the space between any witness giving evidence or testimony and any Member of the Committee or the visibility of that witness and that Member to each other.

(5) Television cameras shall not be placed in positions which obstruct unnecessarily the coverage of the hearing or meeting by the other media.

(6) Television and radio media equipment shall not be installed in, or removed from, the room while the committee is in session.

(7) Floodlights, spotlights, strobelights, and flashguns shall not be used, except that the television media may install additional lighting in the room, without cost to the government, in order to raise the ambient lighting level to the lowest level necessary to provide adequate television coverage at the then current state of the art.

(8) Not more than five press photographers shall be permitted to cover a hearing or meeting by still photography. In the selection of these photographers, preference shall be given to photographers from Associated Press Photos and United Press International Newspictures. If request is made by more than five of the media for coverage, that coverage shall be made on the basis of a fair and equitable pool arrangement devised by the Standing Committee of Press Photographers.

(9) Photographers shall not position themselves, at any time during the course of the hearing or meeting, between the witness table and the Members of the Committee.

(10) Photographers shall not place themselves in positions which obstruct unnecessarily the coverage by the other media.

(11) Television and radio media personnel shall be then currently accredited to the Radio and Television Correspondents' Galleries.

(12) Still photography personnel shall be then currently accredited to the Press Photographers' Gallery.

(13) Personnel providing coverage by the television and radio media and by still photography shall conduct themselves and their coverage activities in an orderly and unobtrusive manner.

6.4 The staff of the Committee shall not discuss with anyone outside the staff either the substance or procedure of their work or that of the Committee unless specifically authorized by the Chairman or the Subcommittee Chairman.

RULE 7—INVESTIGATIVE GUIDELINES

7.1 *Tape Recordings.* No conversation of Committee Members or staff with any person shall be recorded without the prior knowledge and/or written consent of the person whose conversation is to be recorded. A transcribed copy of any recording so made will be furnished to the recorded party upon his or her request, at no expense to the recorded party.

7.2 (a) *Polygraphs.* No person will be required to take a polygraph test, nor shall any such tests be made or given without the specific, written authorization of the person concerned. No such tests may be made or given without the specific, prior and written authorization of a majority of the Committee or subcommittee, a majority being present. No such test may be used as a basis for a finding of fact, or be referred to in any public report or public hearing. Results of any such test shall not be disclosed to any person, other than the person tested, who is not a Member of the Committee or staff employee authorized by the Chairman. Nor shall the failure or agreement to take a polygraph test form the basis of any finding of fact, or be referred to in any public report or public hearing, or be otherwise publicly disclosed.

(b) *Voice Analysis.* No recording made with the permission of the recorded party pursuant to Rule 7.1 shall be subject to mechanical voice analysis without a written consent from the recorded party specifically authorizing such analysis. No such tests may be made or given without the specific, prior and written authorization of the Committee or subcommittee, a majority being present. Results of any such test shall not be disclosed to any person, other than the person tested, who is not a Member of the Committee or staff employee authorized by the Chairman. Neither the results of any such test nor the failure or agreement to take such test shall form the basis of any finding of fact, or be referred to in any public report or public hearing, or be otherwise publicly disclosed.

7.3 *Electronic Surveillance; Wiretapping.* There shall be no electronic surveillance or wiretapping of any person.

7.4 *Interrogations.* In all interrogations of prospective witnesses, committee investigators and counsel shall first identify themselves as representatives of the Select Committee on Assassinations of the United States House of Representatives and shall present official credentials issued by the Clerk of the House. The investigator or counsel shall advise each such person of the nature of the investigation being conducted.

7.5 Prior to the utilization of any investigative techniques not otherwise covered by these Rules, such techniques would be discussed and voted upon by the full Committee.

RULE 8—TRAVEL

8.1 *Travel of Member and Staff.*

(a) Consistent with the primary expense resolution and such additional expense resolutions as may have been approved, the provisions of this rule shall govern travel of Committee Members and staff. Travel to be reimbursed for any Member or any staff Member shall be paid only upon the prior authorization of the Chairman. Travel may be authorized by the Chairman for any Member and any staff Member in connection with the attendance of hearings conducted by the Committee of any subcommittee thereof and meetings, conferences, and investigations which involve activities or subject matter under the general jurisdiction of the Committee. Before such authorization is given there shall be submitted to the Chairman in writing the following:

(1) the purpose of the travel;

(2) the dates during which the travel is to be made and the date or dates of the event for which the travel is being made;

(3) the location of the event for which the travel is to be made; and

(4) the names of Members and staff seeking authorization.

(b)(1) In the case of travel outside the United States of Members and staff of the Committee or of a subcommittee for the purpose of conducting hearings, investigations, studies, or attending meetings and conference involving activities or subject matter under the legislative assignment of the Committee or pertinent subcommittee, prior authorization must be obtained from the Chairman. Before such authorization is given, there shall be submitted to the Chairman, in writing, a request for such authorization. Each request, which shall be filed in a manner that allows for a reasonable period of time for review before such travel is scheduled to begin, shall include the following:

(A) the purpose of the travel;

(B) the dates during which the travel will occur;

(C) the names of the countries to be visited and the length of time to be spent in each;

(D) an agenda of anticipated activities for each country for which travel is authoriezd together with a description of the purpose to be served and the areas of Committee jurisdiction involved; and

(E) the names of Members and staff for whom authorization is sought.

(2) Requests for travel outside the United States shall be initiated by the Chairman and shall be limited to Members and permanent employees of the Committee

(3) At the conclusion of any hearing, investigation, study, meeting or conference for which travel outside the United States has been authorized pursuant to this rule, each subcommittee (or Members and staff attending meeting or conferences) shall submit a written report to the Chairman covering the activities and other pertinent observations or information gained as a result of such travel.

(c) Members and staff of the Committee performing authorized travel on official business shall be governed by applicable laws, resolutions, or regulations of the House and of the Select Committee on Assassinations pertaining to such travel.

RULE 9—PROCEDURES, REGULATIONS AND RULES

9. The Rules, Regulations, and Procedures of the Select Committee on Assassinations shall be established, modified, amended or repealed only by a majority vote of the committee, a majority of the committee being present, provided that prior written notice of the proposed change has been provided each Member of the committee not less than 48 hours before those changes are to be discussed by the committee.

RULE 10—PROCEDURES FOR HANDLING ASSASSINATIONS INQUIRY MATERIAL

10.1 Before the commencement of any presentation at which testimony will be heard or papers and things considered, each Committee Member will be furnished with a list of all papers and things that have been obtained by the Committee by subpoena or otherwise. No Member shall make the list or any part thereof public unless authorized by a majority vote of the committee, a quorum being present.

10.2 The chief counsel, after discussion with the chairman and the ranking minority Member, shall initially recommend to the Committee the testimony, papers, and things to be presented to the Committee. The determination as to whether such testimony, papers, and things shall be presented in open or executive session shall be made pursuant to the rules of the House and of this Committee.

10.3 Before the Committee is called upon to make any disposition with respect to the testimony or papers and things presented to it, the Committee Members shall have a reasonable opportunity to examine all testimony, papers, and things that have been obtained by the inquiry staff. No Member shall make any of that testimony or those papers or things public unless authorized by a majority vote of the Committee, a quorum being present.

10.4. All examination of papers and things other than in a presentation shall be

made in a secure area designated for the purpose. Copying, duplicating, or removal of classified or other material deemed sensitive by the Committee is prohibited except where authorized by a Member.

10.5 Any Committee Member may bring additional testimony, papers, or things to the Committee's attention.

10.6 Only testimony, papers, or things that are included in the record will be reported to the House; all other testimony, papers, or things will be considered as executive session material.

10.7 The Committee or its subcommittees will at all times endeavor to obtain access to full, complete and unedited material considered relevant for its investigations and now held by any local, state or federal criminal justice or intelligence agency.

Any agreements regarding Committee or subcommittee access to agency files made between the Committee and the appropriate local, state, or federal agency will be made by majority vote of the full Committee.

Rule 11—Rules for the Assassinations Inquiry Staff

In addition to rules of conduct for staff contained in other rules of this Committee and the House, the following rules shall apply:

11.1 Staff officers of the Committee shall operate under strict security precautions. One guard shall be on duty at all times to control entry. All persons entering the Committee area shall identify themselves.

11.2 Classified or other material the Committee deems sensitive shall be segregated in a secure storage area. They may be examined only at supervised reading facilities within the secure area. Copying or duplicating of such documents and other things is prohibited except upon the authorization of a Committee Member.

11.3 Access to classified information supplied to the committee shall be limited by the Committee and chief counsel to those Committee staff members with appropriate security clearances and a need to know and to a designated personal staff member of each Committee Member, that personal staff member also having the appropriate security clearances and a need to know.

11.4 Testimony taken or papers and things received by the staff shall not be disclosed or made public by the staff unless authorized by a majority of the Committee.

11.5 Executive session transcripts and records shall be available to designated staff for inspection in person but may not be released or disclosed to any other person without the consent of a majority of the Committee.

11.6 The professional and clerical staff of the Committee shall be appointed and their remuneration determined in such manner as the Committee shall determine by a majority vote, a majority of the Committee being present, within the budget approved for such purposes by the Committee.

The professional and clerical staff of the Committee:

(A) shall be appointed without regard to race, creed, sex, or age, and solely on the basis of fitness to perform the duties of their respective positions;

(B) shall not be assigned any duties other than those pertaining to Committee business.

The Committee may terminate the services of any professional or clerical staff member by a majority vote, a majority of the Committee being present.

RULE 12—SUBCOMMITTEES

12.1 Each subcommittee is authorized to exercise all powers conferred on subcommittees by the Resolution establishing the Select Committee on Assassinations, including but not limited to the authority to meet, hold hearings, authorize subpenas, receive evidence, and report to the full Committee on all matters referred to it or under its jurisdiction. Subcommittee Chairman shall set dates for hearings and meetings of their respective subcommittees after consultation with the Chairman and other subcommittee Chairman with a view toward avoiding simultaneous scheduling of full Committee and subcommittee meetings or hearings whenever possible.

12.2 There shall be the following standing subcommittees of the Select Committee on Assassinations:

(a) Subcommittee on the Assassination of John F. Kennedy; and

(b) Subcommittee on the Assassination of Martin Luther King, Jr.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. STUMP, for March 16 and 17, on account of official business.

Mr. KETCHUM (at the request of Mr. RHODES), for today and the balance of the week, on account of official business.

Mr. BOLAND, for the balance of the day and March 17, on account of official business.

Mr. JONES of North Carolina (at the request of Mr. WRIGHT), for today, on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. LEACH) to revise and extend their remarks and include extraneous matter:)

Mr. KEMP, for 10 minutes, today.

Mr. CONABLE, for 10 minutes, today.

Mr. MCKINNEY, for 5 minutes, today.

Mr. YOUNG of Florida, for 10 minutes, today.

Mr. GRASSLEY, for 5 minutes, today.

Mr. DON H. CLAUSEN, for 15 minutes, today.

Mr. ASHBROOK, for 1 hour, on March 22, 1977.

Mr. RUDD, for 1 hour, on March 22, 1977.

Mr. STEERS, for 10 minutes, today.

Mr. MCDADE, for 5 minutes, today.

(The following Members (at the request of Mr. BARNARD), to revise and extend their remarks, and to include extraneous matter:)

Mr. SHARP, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. HEFTEL, for 10 minutes, today.

Mr. UDALL, for 5 minutes, today.

Mr. PERKINS, for 10 minutes, today.

Mr. DIGGS, for 5 minutes, today.

Mr. VAN DEERLIN, for 5 minutes, today.

Mr. ASPIN, for 15 minutes, today.

Mr. FLOOD, for 5 minutes, today.

Mr. BINGHAM, for 5 minutes, today.

Mr. KRUEGER, for 5 minutes, today.

Mr. BONKER, for 5 minutes, today.

Mr. WEISS, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. FORD of Michigan, and to include extraneous material notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost $1,691.

Mr. PEPPER, remarks to precede vote on Obey amendment.

Mr. PATTEN, remarks to precede vote on Obey amendment.

Mr. CONTE, remarks to precede vote on Obey amendment.

Mr. WON PAT, immediately following the remarks of Mr. PHILIP BURTON on his amendment offered in the Committee of the Whole today.

(The following Members (at the request of Mr. LEACH) and to include extraneous material:)

Mr. KEMP in three instances.

Mr. JOHNSON of Colorado.

Mr. DERWINSKI in three instances.

Mr. STEIGER.

Mr. MCKINNEY.

Mr. MCCLOSKEY.

Mr. HYDE.

Mr. RUDD in six instances.

Mr. STEERS in two instances.

Mr. MARTIN in two instances.

Mr. RINALDO.

Mr. SYMMS.

Mr. ANDERSON of Illinois in two instances.

Mr. GILMAN.

Mr. MCCLORY in three instances.

Mr. ABDNOR.

(The following Members (at the request of Mr. BARNARD) and to include extraneous matter:)

Mr. SOLARZ.

Mr. FARY.

Mr. GONZALEZ in three instances.

Mr. ANDERSON of California in three instances.

Mr. ROSE.

Mr. JACOBS in two instances.

Mr. LE FANTE.

Mr. LONG of Maryland.

Mr. FISHER in two instances.

Mr. MAZZOLI in two instances.

Mr. MOAKLEY.

Mr. MCDONALD in four instances.

Mr. CHARLES H. WILSON of California in two instances.

Mr. HAMILTON.

Mr. SIMON.

Mr. BLOUIN.

Mr. EILBERG.

Mr. DRINAN in two instances.

Mr. BEVILL.

Mr. WIRTH.

Mr. STOKES.

Mr. STARK.

Mr. EDWARDS of California in two instances.

Mr. ZEFERETTI.

Mr. VENTO.

Mr. OBERSTAR.

Mr. EDGAR.

Mr. BONKER.

Mr. OTTINGER.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 925. An act to provide temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976–77 drought; to the Committee on Interior and Insular Affairs.

ENROLLED BILLS SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 1746. An act to amend the United Nations Participation Act of 1945 to halt the importation of Rhodesian chrome; and

H.R. 3839. An act to rescind certain budget authority recommended in the message of the President of January 17, 1977 (H. Doc. 95–48), transmitted pursuant to the Impoundment Control Act of 1974.

BILLS PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, bills of the House of the following title:

H.R. 1746. To amend the United Nations Participation Act of 1945 to halt the importation of Rhodesian chrome; and

H.R. 3839. To rescind certain budget authority recommended in the message of the President of January 17, 1977 (H. Doc. 95–48), transmitted pursuant to the Impoundment Control Act of 1974.

ADJOURNMENT

Mr. BARNARD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 7 o'clock and 18 minutes p.m.), the House adjourned until tomorrow, Thursday, March 17, 1977, at 11 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1029. A letter from the Acting Assistant Secretary of Defense (Installations and Logistics) transmitting the annual report for fiscal year 1976 on independent research and development and bid and proposal costs, pursuant to section 203(c) of Public Law 91–441; to the Committee on Armed Services.

1030. A letter from the Chairman, U.S. Consumer Product Safety Commission, transmitting corrections to the Commission's annual report on its activities under the Freedom of Information Act, previously submitted pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

1031. A letter from the Acting Comptroller General of the United States, transmitting a report on problems with Government acquisition and use of computers from November 1965 to December 1976 (FGMSD–77–14, March 15, 1977); to the Committee on Government Operations.

1032. A letter from the Public Printer, transmitting his annual report for the 15-month period ended September 30, 1977; to the Committee on House Administration.

1033. A letter from the Administrator, Federal Energy Administration, transmitting an interim report on electric utility rate design proposals, pursuant to section 203 of the Energy Conservation and Production Act (Public Law 94–385); to the Committee on Interstate and Foreign Commerce.

1034. A letter from the Secretary, Foundation of the Federal Bar Association, transmitting a report on the audit of the foundation for the year ended September 30, 1976, pursuant to section 3 of Public Law 88–504; to the Committee on the Judiciary.

1035. A letter from the Acting Assistant Secretary of the Army (Civil Works), transmitting a report on the natural salt pollution control study, Brazos River Basin, Tex., in partial response to a resolution of the Senate Committee on Public Works adopted August 12, 1954, and a resolution of the House Committee on Public Works adopted June 13, 1956 (H. Doc. No. 95–101); to the Committee on Public Works and Transportation and ordered to be printed with illustrations.

1036. A letter from the Acting Comptroller General of the United States, transmitting a report on management deficiencies in the Reserve Officer Training Corps (FPCD–77–15, March 15, 1977); jointly, to the Committees on Government Operations, and Armed Services.

1037. A letter from the Chairman, Federal Deposit Insurance Corporation, transmitting the second annual report of the Corporation's Office of Bank Customer Affairs, pursuant to section 18(f)(5) of the Federal Trade Commission Act, as amended (88 Stat. 2197); jointly, to the Committees on Interstate and Foreign Commerce, and Banking, Finance and Urban Affairs.

1038. A letter from the Chairman of the Board of Governors, Federal Reserve System, transmitting the Board's second annual report on its activities under section 18(f) of the Federal Trade Commission Act, pursuant to section 18(f)(5) of the Act (88 Stat. 2197); jointly, to the Committees on Interstate and Foreign Commerce, and Banking, Finance and Urban Affairs.

1039. A letter from the Chairman, U.S. Nuclear Regulatory Commission, transmitting the sixth report on abnormal occurrences at licensed nuclear facilities, pursuant to section 208 of the Energy Reorganization Act of 1974 (Public Law 93–438); jointly, to the Committees on Interstate and Foreign Commerce, and Interior and Insular Affairs.

REPORTS OF COMMITTEES OF PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MOAKLEY: Committee on Rules. House Resolution 411. Resolution providing for the consideration of H.R. 4800. A bill to extend the Emergency Unemployment Compensation Act of 1974 for an additional year, to revise the trigger provisions in such act, and for other purposes. (Rept. No. 95–83). Referred to the House Calendar.

Mr. FASCELL: Committee on International Relations. H.R. 5040. A bill to authorize additional appropriations for the Department of State for fiscal year 1977. (Rept. No. 95–84). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ALLEN (for himself, Mr. ANNUNZIO, Mr. JONES of Tennessee, Mr. GORE, and Mrs. FENWICK):

H.R. 5100. A bill to amend title II of the Social Security Act so as to prohibit any reduction in the monthly benefits of a fully insured individual, who is otherwise entitled to old-age insurance benefits, by reason of any outside earnings which may be received by such insured individual; to the Committee on Ways and Means.

By Mr. BROWN of California (for himself, Mr. LUJAN, Mr. WIRTH, Mr. AMBRO, Mr. WALGREN, Mr. SCHEUER, Mr. BEILENSON, Mr. WALKER, and Mr. WINN):

H.R. 5101. A bill to authorize appropriations for activities of the Environmental Protection Agency, and for other purposes; to the Committee on Science and Technology.

By Mrs. COLLINS of Illinois (for herself, Mr. BADILLO, Mr. BRODHEAD, Mrs. CHISHOLM, Mr. CLAY, Mr. CONYERS, Mr. DIGGS, Mr. FAUNTROY, Mr. HAWKINS, Mr. METCALFE, Ms. MIKULSKI, Mr. MURPHY of Pennsylvania, Mr. MURPHY or New York, and Mr. SCHEUER):

H.R. 5102. A bill to amend the Public Works and Economic Development Act of 1965, as amended, to establish an emergency Federal economic assistance program, to authorize the President to declare communities of the Nation which meet certain economic and employment criteria to be economic disaster communities, and for other purposes jointly, to the Committees on Public Works and Transportation, and Banking, Finance and Urban Affairs.

By Mr. CONABLE (for himself and Mr. ROSTENKOWSKI):

H.R. 5103. A bill to amend the Internal Revenue Code of 1954 to provide for excise tax refunds in the case of certain warranty adjustments on tires, and for other purposes; to the Committee on Ways and Means.

By Mr. CONTE (for himself, Mr. CLEVELAND, Mr. OBERSTAR, Mr. ROBINSON, Mr. EARLY, Mr. JENRETTE, and Mr. ROE):

H.R. 5104. A bill to amend the Public Health Service Act to provide assistance for the planning and development of schools of veterinary medicine; to the Committee on Interstate and Foreign Commerce.

By Mr. CONTE (for himself, Mr. ROSE, Mr. KASTEN, Mr. PREYER, Mr. HEFNER, Mr. MARTIN, Mr. ANDREWS of North Carolina, Mr. MOORHEAD of California, and Mr. CORNWELL):

H.R. 5105. A bill to amend the Public Health Service Act to provide assistance for the planning and development of schools of veterinary medicine; to the Committee on Interstate and Foreign Commerce.

By Mr. COTTER:

H.R. 5106. A bill to provide for reimbursement through the Federal Disability Insurance Trust Fund to private physicians for services in supplying medical evidence of record needed to evaluate claims for social security disability benefits under title II of the Social Security Act; to the Committee on Ways and Means.

By Mr. DICKS:

H.R. 5107. A bill to authorize construction of the project for navigation and other purposes on the Blair and Sitcum Waterways, Tacoma Harbor, Wash.; to the Committee on Public Works and Transportation.

By Mr. DINGELL (for himself, Mr. BROYHILL, Mr. CLEVELAND, Mr. DUNCAN of Tennessee, Mr. EDWARDS of Alabama, Mr. HORTON, Mr. WHITLEY, Mr. ENGLISH, Mr. RUPPE, Mr. RUNNELS, Mr. BEVILL, Mr. CHARLES WILSON of Texas, Mr. DERWINSKI, Mr. GRADISON, Mr. VANDER JAGT, Mr. WALKER, Mr. DAN DANIEL, Mr. STUMP, Mr. MURPHY of Pennsylvania, Mr. TAYLOR, Mr. MCCORMACK, Mr. JONES of Oklahoma, Mr. COLLINS of Texas, Mr. SYMMS, and Mr. MITCHELL of New York):

H.R. 5108. A bill to amend the Clean Air Act to establish certain motor vehicle emission standards, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. DRINAN (for himself, Mr. ROSE, Mr. JOHN L. BURTON, Mr. HARRINGTON, Mr. MURTHA, Mr. CONYERS, Mr. ROSENTHAL, Mr. LUNDINE, Mr. WOLFF, Mr. DUNCAN of Tennessee, Mr. MOFFETT, Mr. LAFALCE, Mr. BINGHAM, Mr. BLOUIN, Mr. MITCHELL of Maryland, Mr. STARK, Mr. BONIOR, Mr. ROE, Mr. DELLUMS Mr. BRODHEAD, Mr. SOLARZ, Mrs. SPELLMAN, Mr. HARKIN, Mr. STOKES, and Mr. TSONGAS):

H.R. 5109. A bill to amend the Internal Revenue Code of 1954 to deny any deduction for amounts paid or incurred by an employer pursuant to an employee health or accident plan if such plan does not provide certain pregnancy benefits; to the Committee on Ways and Means.

By Mr. EDWARDS of Alabama:

H.R. 5110. A bill to impose quantitative limitations on the importation of shrimp into the United States during calendar years 1977 and 1978, and to impose a duty on imported shrimp; to the Committee on Ways and Means.

By Mr. EDWARDS of Oklahoma (for himself, Mr. QUAYLE, Mr. HANSEN, Mr. MCDONALD, Mr. MOTTL, and Mr. SCHULZE):

H.R. 5111. A bill to provide that the salaries of the Members of Congress shall be subject to reduction if a level of inflation determined by the Congress to be acceptable is exceeded, and to repeal provisions of law allowing cost-of-living adjustments for such salaries; to the Committee on Post Office and Civil Service.

By Mr. FINDLEY:

H.R. 5112. A bill to provide a tax credit for home insulation costs; to the Committee on Ways and Means.

By Mr. HEFTEL:

H.R. 5113. A bill to establish a Department of Education, and for other purposes; to the Committee on Government Operations.

By Mr. LAGOMARSINO:

H.R. 5114. A bill to amend the Administrative Procedure Act to provide that rulemaking hearings required by statute which primarily concern a single unit of local government, geographic area, or State be held within such unit, area, or State; to the Committee on the Judiciary.

By Mr. McDONALD (for himself and Mr. SYMMS):

H.R. 5115. A bill to repeal titles XV and XVI of the Public Health Services Act; to the Committee on Interstate and Foreign Commerce.

By Mr. McHUGH (for himself and Mr. MAGUIRE):

H.R. 5116. A bill to provide for limitations on congressional campaign expenditures and for partial public financing of congressional primary and congressional general elections; to the Committee on House Administration.

By Mr. MEEDS:

H.R. 5117. A bill to provide temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976–77 drought; to the Committee on Interior and Insular Affairs.

H.R. 5118. A bill to amend the Ports and Waterways Safety Act of 1972, to amend sections 4417a and 4442 of the Revised Statutes of the United States, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. PEPPER (for himself, Mr. ROYBAL, Mr. ROONEY, Mr. BIAGGI, Mr. BEARD of Rhode Island, Mr. BLOUIN, Mr. BONKER, Mr. DOWNEY, Mr. FLORIO, Mrs. LLOYD of Tennessee, Mr. FORD of Tennessee, Mr. HUGHES, Mr. DRINAN, Mrs. MEYNER, Ms. OAKAR, Mr. RUSSO, Mr. WALSH, Mr. GRASSLEY, Mr. RINALDO, and Mr. MARKS):

H.R. 5119. A bill to amend the Age Discrimination in Employment Act of 1967 to provide that all Federal employees described in section 15 of such act shall be covered under the provisions of such act regardless of their age; to the Committee on Education and Labor.

By Mr. PEPPER (for himself, Mr. BADILLO, Mr. BAUCUS, Mr. BINGHAM, Mr. BONIOR, Mr. BRODHEAD, Mr. CARNEY, Mr. CLAY, Mrs. COLLINS of Illinois, Mr. CONYERS, Mr. DELLUMS, Mr. DIGGS, Mr. DODD, Mr. DUNCAN of Tennessee, Mr. EDGAR, Mr. EDWARDS of California, Mr. FASCELL, and Mr. GILMAN):

H.R. 5120. A bill to amend the Age Discrimination in Employment Act of 1967 to provide that all Federal employees described in section 15 of such act shall be covered under the provisions of such Act regardless of their age; to the Committee on Education and Labor.

By Mr. PEPPER (for himself, Mr. HARKIN, Mr. HARRINGTON, Mr. HAWKINS, Ms. HOLTZMAN, Mr. HOWARD, Mr. HYDE, Mrs. KEYS, Mr. KILDEE, Mr. KOCH, Mr. KOSTMAYER, Mr. LAGOMARSINO, Mr. LEHMAN, Mr. LONG of Maryland, Ms. MIKULSKI, Mr. MINETA, Mr. MOAKLEY, Mr. MURPHY of Pennsylvania, Mr. NEAL, Mr. NIX, Mr. NOLAN, Mr. OTTINGER, Mr. PATTEN, and Mr. RAHALL):

H.R. 5121. A bill to amend the Age Discrimination in Employment Act of 1967 to provide that all Federal employees described in section 15 of such act shall be covered under the provisions of such act regardless of their age; to the Committee on Education and Labor.

By Mr. PEPPER (for himself, Mr. RANGEL, Mr. RICHMOND, Mr. RODINO, Mr. RYAN, Mr. ST GERMAIN, Mr. SCHEUER, Mr. STOKES, Mr. TONRY, Mr. UDALL, Mr. WAXMAN, Mr. WEISS, Mr. CHARLES H. WILSON of California, Mr. YATRON, and Mr. ZEFERETTI):

H.R. 5122. A bill to amend the Age Discrimination in Employment Act of 1967 to provide that all Federal employees described in section 15 of such act shall be covered under the provisions of such act regardless of their age; to the Committee on Education and Labor.

By Mr. PERKINS:

H.R. 5123. A bill to authorize a Federal civil defense program, and for other purposes; to the Committee on Armed Services.

By Mr. RINALDO:

H.R. 5124. A bill to amend the Federal Water Pollution Control Act relating to the adoption of a system of charges for waste treatment services; to the Committee on Public Works and Transportation.

By Mr. STEERS (for himself, Mr. BRODHEAD, and Mr. CARTER):

H.R. 5125. A bill to amend title XVIII of the Social Security Act with respect to payments made under such title for durable medical equipment; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. SYMMS:

H.R. 5126. A bill to repeal the earnings limitation of the Social Security Act; to the Committee on Ways and Means.

By Mr. WALSH:

H.R. 5127. A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer a deduction from gross income for expenses paid by him for the education of any of his dependents at an institution of higher learning; to the Committee on Ways and Means.

By Mr. WAXMAN (for himself, Mr. BADILLO, Mr. BRODHEAD, Mrs. BURKE of California, Mrs. CHISHOLM, Mr. CONTE, Mr. DELLUMS, Mr. EDGAR, Mr. HAWKINS, Mr. MILLER of California, Mr. MURPHY of New York, Mr. PATTEN, Mr. PATTERSON of California, Mr. SCHEUER, Mr. SEIBERLING, Mr. SOLARZ, Mr. STARK, Mr. CHARLES H. WILSON of California, and Mr. DRINAN):

H.R. 5128. A bill to amend the National Labor Relations Act to provide that the duty to bargain collectively includes bargaining with respect to retirement benefits for retired employees; to the Committee on Education and Labor.

By Mr. CHARLES H. WILSON of California:

H.R. 5129. A bill to amend title 10, United States Code, to authorize the use of health maintenance organizations in providing health care; to the Committee on Armed Services.

By Mr. WIRTH:

H.R. 5130. A bill to regulate commerce to assure increased supplies of natural gas at reasonable prices for consumers, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. YATRON:

H.R. 5131. A bill to reimburse certain employees of the Government Printing Office for uncompensated leave earned by such employees during fiscal year 1932; to the Committee on Post Office and Civil Service.

By Mr. ABDNOR:

H.R. 5132. A bill to amend the Internal Revenue Code of 1954 to exempt certain agricultural aircraft from the aircraft use tax, to provide for the refund of the gasoline tax to the agricultural aircraft operator, and for other purposes; to the Committee on Ways and Means.

By Mr. CORNWELL:

H.R. 5133. A bill to amend the Disaster Relief Act of 1974 relating to assistance to be provided to States and local governments during any emergency, and for other purposes; to the Committee on Public Works and Transportation.

By Mr. FLOOD (for himself, Mr. MCDADE, Mr. YATRON, Mr. GOODLING, Mr. AMMERMAN, Mr. ERTEL, Mr. SHUSTER, and Mr. WALKER):

H.R. 5134. A bill relating to the appointment of district judges; to the Committee on the Judiciary.

By Mr. GILMAN:

H.R. 5135. A bill to provide for the termination of all American assistance to any country which fails to take adequate steps to control illegal trade in narcotics; to the Committee on International Relations.

By Mr. KEMP (for himself, Mr. MITCHELL of New York, and Mr. MOORHEAD of California):

H.R. 5136. A bill to provide for the elimination of inactive and overlapping Federal programs, to require authorizations of new budget authority for Government programs and activities at least every 4 years, to establish a procedure for zero-base review and evaluation of Government programs and activities every 4 years, to require disclosure of the projected costs and savings of actions proposed through bills and joint resolutions of the Congress, and for other purposes; to the Committee on Rules.

By Mr. KEMP (for himself and Mr. MOORHEAD of California):

H.R. 5137. A bill to reorganize the executive branch; to require rules and regulations proposed by executive agencies to be acted upon by the Congress; to impose certain additional requirements upon the President and executive agencies; and to tighten the standards of official conduct by officers and employees of executive agencies; jointly, to the Committees on Government Operations, the Judiciary, Post Office and Civil Service, Rules, and Ways and Means.

By Mr. KRUEGER:

H.R. 5138. A bill to amend the Federal Food, Drug and Cosmetic Act to provide the Secretary of Health, Education, and Welfare with greater latitude in regulating food additives found to induce cancer in man or

animal; to the Committee on Interstate and Foreign Commerce.

By Mr. LEVITAS (for himself, Mr. ROUSSELOT, Mr. GARY A. MYERS, Mr. MCEWEN, Mr. CARTER, and Mr. EMERY):

H.R. 5139. A bill to amend chapter 49 of title 10, United States Code, to prohibit union organization in the Armed Forces, and for other purposes; to the Committee on Armed Services.

By Mr. MARTIN:

H.R. 5140. A bill to amend the Federal Food, Drug, and Cosmetic Act to provide for the evaluation of the risks and benefits of food additives and to permit the continued use of saccharin until an evaluation is completed; to the Committee on Interstate and Foreign Commerce.

By Mr. McDADE:

H.R. 5141. A bill to amend title II of the Social Security Act to provide for the payment of reduced old-age insurance benefits to women at age 55, and to provide for the payment of full wife's or widow's benefits at such age; to the Committee on Ways and Means.

H.R. 5142. A bill to amend title II of the Social Security Act so as to remove the limitation upon the amount of outside income which an individual may earn while receiving benefits thereunder; to the Committee on Ways and Means.

H.R. 5143. A bill to amend part A of title XVIII of the Social Security Act to reduce the inpatient hospital deductible under the medicare program to its 1976 level; to the Committee on Ways and Means.

H.R. 5144. A bill to amend the Tariff Schedules of the United States to repeal the special tariff treatment accorded to articles assembled abroad with components produced in the United States; to the Committee on Ways and Means.

H.R. 5145. A bill to amend title XVIII of the Social Security Act to include the cost of drugs requiring a doctor's prescription among the medical expenses with respect to which payment may be made under the supplementary medical insurance program; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. McEWEN (for himself, Mr. CONABLE, Mr. YOUNG of Alaska, Mr. RANGEL, and Mr. PIKE):

H.R. 5146. A bill to amend the Tariff Schedules of the United States to provide for the duty-free entry of competition bobsleds and luges; to the Committee on Ways and Means.

By Mr. OBERSTAR:

H.R. 5147. A bill to amend the Internal Revenue Code of 1954 to allow a deduction for retirement savings in the case of individuals who have limited participation under pension plans and to expand the cases in which joint and survivors annuity coverage is to be provided under certain pension plans; to the Committee on Ways and Means.

By Mr. REGULA:

H.R. 5148. A bill to amend the worker adjustment assistance provisions of the Trade Act of 1974 in order to provide that workers may be covered under certification of eligibility to apply for such assistance if they are totally or partially separated from adversely affected employment within 2 years before the date of the petition for such certification; to the Committee on Ways and Means.

By Mr. RINALDO:

H.R. 5149. A bill to regulate commerce by establishing a nationwide system to restore motor vehicle accident victims and by requiring no-fault motor vehicle insurance as a condition precedent to using a motor vehicle on public roadways; to the Committee on Interstate and Foreign Commerce.

By Mr. ROYBAL (for himself and Mr. MINETA):

H.R. 5150. A bill to provide for payment by the United States for certain medical services and treatment provided to U.S. citizens and permanent residents suffering from physical injuries attributable to the atomic bomb explosions on Hiroshima and Nagasaki, Japan, in August 1945; to the Committee on the Judiciary.

By Mr. SEIBERLING:

H.R. 5151. A bill to amend title II of the Social Security Act to require that procedures be established for the expedited replacement of undelivered benefit checks, to require that decisions on benefit claims be made within specified periods and to require that payment of benefits on approved claims begin promptly; to the Committee on Ways and Means.

By Mr. SIMON (for himself and Mr. RONCALIO):

H.R. 5152. A bill to amend the Federal Coal Mine Health and Safety Act of 1969 to revise the black lung benefits program established under such act in order to transfer the residual liability for the payment of benefits under such program from the Federal Government to the coal industry, and for other purposes; to the Committee on Education and Labor.

By Mr. TRAXLER (for himself, Mr. CARR, Mr. WEISS, Mr. BLANCHARD, Mr. ERTEL, Mr. BAUCUS, Mr. BEDELL, Mr. MAGUIRE, Mr. CORNWELL, Mr. STARK, and Mr. FITHIAN):

H.R. 5153. A bill to authorize the Secretary of Agriculture to make financial assistance available to agricultural producers who suffer losses as the result of having their agricultural commodities or livestock quarantined or condemned because such commodities or livestock have been found to contain toxic chemicals dangerous to the public health; to the Committee on Agriculture.

By Mr. WEAVER:

H.R. 5154. A bill to amend title 5, United States Code, to extend certain benefits to former employees of county committees established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. FOLEY (for himself, Mr. WAMPLER, Mr. POAGE, and Mr. SEBELIUS):

H.R. 5155. A bill to enable wheat producers, processors, end product manufacturers, and consumers of wheat foods to work together to establish, finance on an equitable basis, and administer a coordinated program of research and education to promote and improve human nutrition through the use of wheat and wheat products as human foods within the United States; to the Committee on Agriculture.

By Mr. JONES of Oklahoma:

H.R. 5156. A bill to amend the Federal Food, Drug, and Cosmetic Act to require appropriate tests before a food additive may be banned as inducing cancer in man or animal and to permit the marketing of such an additive with appropriate warning labeling; to the Committee on Interstate and Foreign Commerce.

By Mr. UDALL (for himself, Mr. PHILLIP BURTON, Mr. ANDERSON of Illinois, Mr. WIRTH, Mr. FOLEY, Mr. BOLLING, Mr. BROOMFIELD, Mr. ROSE, Mr. JOHN L. BURTON, Mr. PATTISON of New York, Mr. PANETTA, Mr. STOCKMAN, Mr. MIKVA, Mr. COHEN, Mr. BOLAND, Mr. CONTE, Mr. MITCHELL of Maryland, Mr. RUPPE, Mr. REUSS, Mr. HOLLAND, Mrs. KEYS, Mr. MINETA, Mr. DUNCAN of Tennessee, Mr. WINN, and Mr. MITCHELL of New York):

H.R. 5157. A bill to provide for limited public financing of congressional general election campaigns, to provide that candidates receiving public funds in Presidential elections may accept certain contributions and make increased expenditures, and for other purposes; to the Committee on House Administration.

By Mr. PHILLIP BURTON (for himself, Mr. UDALL, Mr. ANDERSON, of Illinois, Mr. WIRTH, Mr. AKAKA, Mr. ASPIN, Mr. AUCOIN, Mr. BAUCUS, Mr. BEARD of Rhode Island, Mr. BEDELL, Mr. BEILENSON, Mr. BINGHAM, Mr. BLANCHARD, Mr. BLOUIN, Mr. BONIOR, Mr. BONKER, Mr. BRODHEAD, Mr. BROWN of California, Mr. CARR, Mr. CONYERS, Mr. COUGHLIN, Mr. DELLUMS, Mr. DICKS, Mr. DOWNEY, and Mr. DRINAN):

H.R. 5158. A bill to provide for limited public financing of congressional general election campaigns, to provide that candidates receiving public funds in Presidential elections may accept certain contributions and make increased expenditures, and for other purposes; to the Committee on House Administration.

By Mr. ANDERSON of Illinois (for himself, Mr. PHILLIP BURTON, Mr. UDALL, Mr. WIRTH, Mr. ECKHARDT, Mr. EDGAR, Mr. EDWARDS of California, Mr. FASCELL, Mrs. FENWICK, Mr. FISHER, Mr. FLORIO, Mr. FORD of Tennessee, Mr. FRASER, Mr. GEPHARDT, Mr. GILMAN, Mr. HANNAFORD, Mr. HARKIN, Mr. HARRIS, Mr. HOLLENBECK, Mr. HOWARD, Mr. KOCH, Mr. KOSTMAYER, Mr. LEHMAN, Mr. LEVITAS, and Mr. LUNDINE):

H.R. 5159. A bill to provide for limited public financing of congressional general election campaigns, to provide that candidates receiving public funds in Presidential elections may accept certain contributions and make increased expenditures, and for other purposes; to the Committee on House Administration.

By Mr. UDALL (for himself, Mr. PHILLIP BURTON, Mr. ANDERSON of Illinois, Mr. WIRTH, Mr. MAGUIRE, Mr. MARKEY, Mr. MAZZOLI, Mr. MCCLOSKEY, Mr. MCHUGH, Mr. MCKINNEY, Mr. MEEDS, Mrs. MEYNER, Mr. MILLER of California, Mr. MOFFETT, Mr. NOLAN, Mr. OBERSTAR, Mr. OTTINGER, Mr. PATTERSON of California, Mr. PEASE, Mr. PRITCHARD, Mr. PURSELL, Mr. RAHALL, Mr. RANGEL, Mr. Mr. RICHMOND, and Mr. RINALDO):

H.R. 5160. A bill to provide for limited public financing of congressional general election campaigns, to provide that candidates receiving public funds in Presidential elections may accept certain contributions and make increased expenditures, and for other purposes; to the Committee on House Administration.

By Mr. PHILLIP BURTON (for himself, Mr. UDALL, Mr. ANDERSON of Illinois, Mr. WIRTH, Mr. ROSENTHAL, Mr. SANTINI, Mr. SEIBERLING, Mr. SHARP, Mr. SIMON, Mr. SOLARZ, Mrs. SPELLMAN, Mr. STARK, Mr. STEERS, Mr. STOKES, Mr. STUDDS, Mr. TSONGAS, Mr. VENTO, Mr. WALGREN, Mr. WAXMAN, Mr. WEAVER, Mr. WEISS, Mr. WHALEN, Mr. WOLFF, and Mr. KREBS):

H.R. 5161. A bill to provide for limited public financing of congressional general election campaigns, to provide that candidates receiving public funds in Presidential elections may accept certain contributions and make increased expenditures, and for other purposes; to the Committee on House Administration.

By Mr. CONTE:

H.J. Res. 329. Joint resolution requiring that the Congressional Medal of Honor previously awarded to Dr. Mary Edwards Walker in 1865 be restored to her; to the Committee on Armed Services.

By Mr. OBERSTAR (for himself, Mr. RUPPE, Mr. BREAUX, Mr. EILBERG, Mr. RINALDO, Mr. YOUNG of Missouri, Mr. MARKEY, and Mr. QUAYLE):

H.J. Res. 330. Joint resolution proposing an amendment to the Constitution of the

United States with respect to the right of life; to the Committee on the Judiciary.

By Mr. RUSSO:

H.J. Res. 331. Joint resolution designating February 15 of each year as Susan B. Anthony Day; to the Committee on Post Office and Civil Service.

By Mr. RYAN (for himself, Mr. AUCOIN, Mr. BADILLO, Mr. BURGENER, Mr. CAPUTO, Mr. EDWARDS of California, Mrs. FENWICK, Mr. FISHER, Mr. GILMAN, Mr. HOLLENBECK, Mrs. MEYNER, Mr. MOLLOHAN, Mr. PIKE, Mrs. SPELLMAN, Mr. STEERS, and Mr. WAXMAN):

H. Con. Res. 163. Concurrent resolution urging the Canadian Government to reassess its policy of permitting the killing of newborn harp seals; to the Committee on International Relations.

By Mr. MARTIN (for himself, Mr. ABDNOR, Mr. EMERY, Mr. BLOUIN, Mr. CHARLES H. WILSON of California, Mr. AUCOIN, and Mr. PRESSLER):

H. Res. 408. Resolution expressing the sense of the House that no ban on saccharin should take effect without prior congressional approval; to the Committee on Interstate and Foreign Commerce.

By Mr. SLACK:

H. Res. 409. Resolution expressing the sense of the House that no ban on saccharin should take effect without prior congressional approval; to the Committee on Interstate and Foreign Commerce.

By Mr. STEIGER (for himself, Mr. QUIE, Mr. RUPPE, Mr. LE FANTE, Mr. VENTO, Mr. NOLAN, Mr. NEAL, Mr. VOLKMER, Mr. D'AMOURS, Mr. DEL CLAWSON, Mr. HUGHES, Mr. EDWARDS of California, Mr. FITHIAN, Mr. DOWNEY, Mr. CARTER, Mr. SAWYER, Mr. STANTON, Mr. GINN, Mr. SCHULZE, Mr. COCHRAN of Mississippi, Mr. PATTISON of New York, Mr. CORCORAN of Illinois, Mr. ZABLOCKI, Mr. FISHER, and Mr. JACOBS):

H. Res. 410. Resolution to require that the Congressional Record contain a verbatim account of remarks actually delivered on the floor, and for other purposes; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII:

45. The SPEAKER presented a memorial of the Legislature of the Commonwealth of Virginia, relative to the claims of the Newport News Shipbuilding & Dry Dock Co. against the Navy; to the Committee on Armed Services.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. D'AMOURS:

H. R. 5162. A bill for the relief of Edward R. Davies; to the Committee on the Judiciary.

By Mr. McFALL:

H.R. 5163. A bill for the relief of Marinelle Khristy Cruz; to the Committee on the Judiciary.

By Mr. MADIGAN:

H.R. 5164. A bill for the relief of J. L. Simmons Co., Inc.; to the Committee on the Judiciary.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 4088

By Mr. GARY A. MYERS:

On page 21 after line 24 add the following new section:

"SUNSHINE IN GOVERNMENT

"SEC. 7(a) Each officer or employee of the Administrator who—

"(1) performs any function or duty under this Act; and

"(2) has any known financial interest in any person who applies for or receives financial assistance under this Act;

"Shall, beginning on February 1, 1978, annually file with the Administrator a written statement concerning all such interests held by such officer or employe during the preceding calendar year. Such statement shall be available to the public.

"(b) The Administrator shall—

"(1) act within ninety days after the date of enactment of this Act—

"(A) to define the term 'known financial interest' for purposes of subsection (a) of this section; and

"(B) to establish the methods by which the requirement to file written statements specified in subsection (a) of this section will be monitored and enforced, including appropriate provision for the filing by such officers and employees of such statements and the review by the Administrator of such statements; and

"(2) report to the Congress on June 1 of each calendar year with respect to such disclosures and the actions taken in regard thereto during the preceding calendar year.

"(c) In the rules prescribed in subsection (b) of this section, the Administrator may identify specific positions of a nonpolicymaking nature within the Administration and provide that officers or employees occupying such positions shall be exempt from the requirements of this section.

"(d) Any officer or employee who is subject to, and knowingly violates, this section, shall be fined not more than $2,500 or imprisoned not more than one year, or both."

Renumber the following sections.

Page 21, after line 24, insert the following:

SEC. 7. Notwithstanding any other provision of law, in making appointments to positions within the National Aeronautics and Space Administration which involve any activity with respect to which funds are authorized to be appropriated under this Act—

(1) in the case of any position within the competitive service, the examination rating of any individual who is granted a pardon by Presidential Proclamation 4483 shall be considered to be 5 points below that to which such individual would otherwise be entitled, and

(2) in the case of any position within the excepted service, only individuals who were not granted such a pardon shall be considered unless there are no such individuals who are qualified and available for such position.

Page 22, line 1, strike out "Sec. 7" and insert "Sec. 8".

Page 22, line 6, strike out "Sec. 8" and insert "Sec. 9".

Page 16, after line 19, insert the following new subsection (and redesignate the succeeding subsections accordingly):

(h) no part of any funds available to the Administrator may be used for the preparation of an overall program plan relating to technology for Advanced Supersonic Transports, or for any other study, analysis, planning, research, or development relating to such transports unless such plan is specifically authorized by an Act of Congress enacted after the date of this Act.

H.R. 4250

By Mr. ALLEN:

(Amendment in the nature of a substitute.)

Strike out all language which follows the enacting clause and substitute therefor the following language:

TITLE I—PROTECTION OF ECONOMIC RIGHTS OF LABOR IN THE CONSTRUCTION INDUSTRY

SEC. 101. (a) Section 8(b)(4) of the National Labor Relations Act, as amended, is amended by inserting before the semicolon at the end thereof ": *Provided further*, That nothing contained in clause (B) of this paragraph (4) shall be construed to prohibit any strike or refusal to perform services or any inducement of any individual employed by any employer primarily engaged in the construction industry on the site to strike or refuse to perform services at the site of the construction, alteration, painting, or repair of a building, structure, or other work and directed at any of several employers who are in the construction industry and are jointly engaged as joint venturers or in the relationship of contractors in such construction, alteration, painting, or repair at such site: *Provided further*, That nothing in the above proviso shall be construed to permit a strike or refusal to perform services or any inducement of any individual employed by any person to strike or refuse to perform services in furtherance of a labor dispute, unlawful under this Act or in violation of an existing collective bargaining contract, relating to the wages, hours, or other working conditions of employees employed at such site by any of such employers, and the issues in dispute involve a labor organization which is representing the employees of an employer at the site who is not engaged primarily in the construction industry: *Provided further*, Except as provided in the above provisos nothing herein shall be construed to permit any act or conduct which was or may have been an unfair labor practice under this subsection: *Provided further*, That nothing in the above provisos, shall be construed to prohibit any act which was not an unfair labor practice under the provisions of this subsection existing prior to the enactment of such provisos: *Provided further*, That nothing in the above provisos shall be construed to authorize picketing, threatening to picket, or causing to be picketed, any employer where an object thereof is the removal or exclusion from the site of any employee on the ground of sex, race, creed, color, or national origin or because of the membership or nonmembership of any employee in any labor organization: *Provided further*, That nothing in the above provisos shall be construed to authorize picketing, threatening to picket, or causing to be picketed, any employer where an object thereof is to cause or attempt to cause an employer to discriminate against any employee, or to discriminate against an employee with respect to whom membership in a labor organization has been denied or terminated on some ground other than his failure to tender the periodic dues and the initiation fees uniformly required as a condition of acquiring or retaining membership, or to exclude any labor organization on the ground that such labor organization is not affiliated with a national or international labor organization which represents employees of an employer at the common site: *Provided further*, That nothing in the above provisos shall be construed to permit any attempt by a labor organization to require an employer to recognize or bargain with any labor organization presently prohibited by paragraph (7) of subsection (b): *Provided further*, That if a labor organization engages in picketing for an object described in paragraph (7) of subsection (b) and there has been filed a petition under subsection (c) of section 9, and a charge under subsection (b) of section 10, the Board

shall conduct an election and certify the results thereof within fourteen calendar days from the filing of the later of the petition and the charge: *Provided further*, That nothing in the above provisos shall be construed to permit any picketing of a common situs by a labor organization to force, require, or persuade any person to cease or refrain from using, selling, purchasing, handling, transporting, in the products or systems of any other producer, processor, or manufacturer. In determining whether several employers who are in the construction industry are jointly engaged as joint ventures at any site, ownership or control of such site by a single person shall not be controlling."

(b) Section 8 of such Act is amended by adding at the end thereof the following new subsections:

"(h) Notwithstanding the provisions of this or any other Act, where a State law requires separate bids and direct awards to employers for construction, the various contractors awarded contracts in accordance with such applicable State law shall not for the purposes of the third proviso at the end of paragraph (4) of subsection (b) of this section, be considered joint venturers or in the relationship of contractors and subcontractors with each other or with the State or local authority awarding such contracts at the common site of the construction.

"(i) Notwithstanding the provisions of this or any other Act, any employer at a common construction site may bring an action for injunctive relief under section 301 of the Labor Management Relations Act (29 U.S.C. 141) to enjoin any strike or picketing at a common situs in breach of a no-strike clause of a collective-bargaining agreement relating to an issue which is subject to final and binding arbitration or other method of final settlement of disputes as provided in the agreement.

"(j) The provisions of the third proviso at the end of paragraph (4) of subsection (b) of this section shall not apply at the site of the construction, alteration, painting, or repair of a building, structure, or other work involving residential structures of three residential levels or less constructed by an employer who in the last taxable year immediately preceding the year in which the determination under this subsection is made had, in his own capacity or with or through any other person, a gross volume of construction business of $9,500,000 or less, adjusted annually as determined by the Secretary of Labor, based upon the revisions of the Price Index for New One Family Houses prepared by the Bureau of the Census, if the employer within 10 days of being served with the notice required by subsection (g)(2)(A) of this section notifies each labor organization which served that notice in an affidavit that he satisfies the requirements set forth in this subsection.".

(c) Section 8(g) of such Act is amended by redesignating the present section 8(g) as section 8(g)(1), and adding at the end thereof the following:

"(2)(A) A labor organization before engaging in activity permitted by the third proviso at the end of paragraph (4) of subsection (b) of this section shall provide prior written notice of intent to strike, picket or to refuse to perform services of not less than ten days to all unions and the employers and the general contractor at the site and to any national or international labor organization of which the labor organization involved is an affiliate and to the Construction Industry Collective Bargaining Committee: *Provided*, That at any time after the expiration of ten days from transmittal of such notice, and subject to prior approval of the Construction Industry Collective Bargaining Committee, in accordance with the provisions of Title II hereof, the labor organization may engage in activities permitted by the third proviso at the end of paragraph (4) of subsection (b) of this section if the national or international labor naitional or international labor organization involved is an affiliate gives notice in writing authorizing such action: *Provided further*, That authorization of such action by the national or interantional labor organization shall not render it subject to criminal or civil liability arising from activities, notice of which was given pursuant to this subparagraph, unless such authorization is given with actual knowledge that the picketing is to be willfully used to achieve an unlawful purpose.

"(B) In the case of any such site which is located at any military facility or installation of the Army, Navy, or Air Force, or which is located at a facility or installation of any other department or agency of the Government if a major purpose of such facility or installation is or will be the development, production, testing, firing or launching of munitions, weapons, missiles, or space vehicles, prior written notice of intent to strike or to refuse to perform services, of not less than ten days shall be given by the labor organization involved to the Federal Mediation and Conciliation Service, to any State or territorial agency established to mediate and conciliate disputes within the State or territory where such site is located, to the several employers who are jointly engaged at such site, to the Army, Navy, or Air Force or other department or agency of the Government concerned with the particular facility or installation, and to any national or international labor organization of which the labor organization involved is an affiliate.

"(C) The notice requirements of subparagraphs (A) and (B) above are in addition to and not in lieu of the notice requirements prescribed by section 8(d) of the Act.".

SEC. 102. The amendments made by this title shall take effect 90 days after the date of enactment of this title except (1) with respect to all construction work having a gross value of $5,000,000 or less which was contracted for and on which work had actually started on April 1, 1977, the amendments made by this title shall take effect one year after such effective date, and (2) with respect to all construction work having a gross value of more than $5,000,000 which was contracted for and on which work had actually started on April 1, 1977, the amendments made by this title shall take effect two years after such effective date.

TITLE II—CONSTRUCTION INDUSTRY COLLECTIVE BARGAINING

SHORT TITLE

SEC. 201. This title may be cited as the "Construction Industry Collective Bargaining Act of 1977".

FINDINGS AND PURPOSES

SEC. 202. (a) The Congress finds and declares that the legal framework for collective bargaining in the construction industry is in need of revision; and that an enhanced role for national labor organizations and national contractor associations working as a group is needed to minimize instability, conflict, and distortions, to assure that problems of collective-bargaining structure, productivity and manpower development are constructively approached by contractors and unions themselves, and at the same time to permit the flexibility and variations that appropriately exist among localities, crafts, and branches of the industry.

(b) It is therefore the purpose of this title to establish a more viable and practical structure for collective bargaining in the construction industry by establishing procedures for negotiations with a minimum of governmental interference in the free collective-bargaining process.

CONSTRUCTION INDUSTRY COLLECTIVE BARGAINING COMMITTEE

SEC. 203. (a) There is hereby established in the Department of Labor a Construction Industry Collective Bargaining Committee. The Committee members shall be appointed as follows:

(1) Ten members shall be appointed by the President from among individuals qualified by experience and affiliation to represent the viewpoint of employers engaged in collective bargaining in the construction industry.

(2) Ten members shall be appointed by the President from among individuals qualified by experience and affiliation to represent the viewpoint of the standard national labor organizations in the construction industry.

(3) Up to three individuals shall be appointed by the President from among individuals qualified by training and experience to represent the public interest, one of whom shall be designated by him to serve as Chairman.

(4) The Secretary of Labor, ex officio.

(5) The Director of the Federal Mediation and Conciliation Service, ex officio.

The employer, labor, and public members shall be appointed by the President after consultation with representative labor and management organizatons in the industry whose members are engaged in collective bargaining. Any alternate members who may be appointed shall be appointed in the same manner as regular members. An organizational meeting of the Committee shall be held at the call of the Chairman at which there shall be in attendance at least five members qualified to represent the viewpoint of employers, five members qualified to represent the viewpoint of labor organizations, and one member qualified to represent the public interest. All actions of the Committee shall be taken by the Chairman or the Executive Director on behalf of the Committee.

(b) The Secretary of Labor may appoint such staff as is appropriate to carry out the Committee's functions under this title and with the approval of the Committee, may appoint an Executive Director.

(c) The Committee shall, without regard to the provisions of section 553 of title 5, United States Code, promulgate such rules and regulations as may be necessary or appropriate to carry out the purposes of this title including the designation of "standard national construction labor organizations" and "national construction contractor associations" qualified to participate in the procedures set forth in this title.

NOTICE REQUIREMENTS

SEC. 204. (a) In addition to the requirements of any other law, including section 8(d) of the National Labor Relations Act, as amended, where there is in effect a collective bargaining agreement covering employees in the construction industry between a local construction labor organization or other subordinate body affiliated with a standard national construction labor organization, or between a standard national construction labor organization directly, and an employer or association of employers in the construction industry, neither party shall terminate or modify such agreement or the terms or conditions thereof without serving a written notice of the proposed termination or modification in the form and manner prescribed by the Committee effective sixty days prior to the expiration date thereof, or in the event such collective bargaining agreement contains no expiration date, sixty days prior to the time it is proposed to make such termination or modification. The notice required by this subsection shall be served as follows:

(1) A local construction lobar organization or other subordinate body affiliated with a

standard national contruction labor organization shall serve such notice upon such national organization.

(2) An employer or local association of employers shall serve such notice upon all national construction contractor associations with which the employer or association is affiliated. An employer or local association of employers, which is not affiliated with any national construction contractor association shall serve such notice upon the Committee.

(3) Standard national construction labor organizations and national construction contractor associations shall serve such notice upon the Committee with respect to termination or modification of agreements to which they are directly parties.

The parties shall continue in full force and effect, without resorting to strike or lockout, all the terms and conditions of the existing collective bargaining agreement for a period of sixty days after the notice required by this subsection is given or until the expiration of such collective bargaining agreement, whichever occurs later.

(b) Standard national construction labor organizations and national construction contractor associations shall furnish forthwith to the Committee copies of all notices served upon them as provided by subsection (a) of this section.

(c) The Committee shall prescribe the form and manner and other requirements relating to the submission of the notices required by this section.

ROLE OF THE COMMITTEE AND NATIONAL LABOR AND EMPLOYER ORGANIZATIONS IN COLLECTIVE BARGAINING

SEC. 295. (a) Whenever the committee has received notice pursuant to section 204 it shall take jurisdiction of the matter, with or without the suggestion of any interested party, by transmitting written notice to the signatory labor organization or organizations and the association or associations, of employers directly party to the collective bargaining agreement, during the ninety-day period which includes and immediately precedes the later of: (1) the ninetieth day following the giving of notice under section 204 (a); or (2) whichever is applicable, (A) the thirtieth day following the expiration of the collective bargaining agreement, or (B) the thirtieth day following the date proposed for termination or modification of such agreement.

(b) The Committee shall take such jurisdiction in accordance with the standards set forth in section 206. When the Committee has taken jurisdiction under this section, it shall in order to facilitate a peaceful voluntary resolution of the matter and the avoidance of future disputes: (1) refer such matter to voluntary national craft or branch boards or other appropriate organizations established in accordance with section 207; (2) meet with interested parties and take other appropriate action to assist the parties; or (3) take the action provided for in both preceding clauses (1) and (2) of this subsection. At any time after the taking of jurisdiction, the Committee may continue to meet with interested parties as provided herein.

(c) When the Committee has taken jurisdiction within the ninety-day period specified in this section over a matter relating to the negotiation of the terms or conditions of any collective bargaining agreement involving construction work between: (1) any standard national construction labor organization, or any local construction labor organization or other subordinate body affiliated with any standard national construction labor organization, and (2) any employer or association of employers, notwithstanding any other law, no such party may, at any time prior to the expiration of the ninety-day period specified in this subsection, engage in any strike or lockout, or the continuing thereof, unless the Committee sooner releases its jurisdiction.

(d) When the Committee receives any notice required by section 204 it is directed to request in writing at any time during the ninety-day period specified in subsection (a) of this section participation in the negotiations by the standard national construction labor organizations with which the local construction labor organizations or other subordinate bodies are affiliated and the national construction contractor associations with which the employers or local employer associations are affiliated.

(e) In any matters as to which the Committee takes jurisdiction under subsection (a) of this section and makes a referral authorized by subsection (d) of this section, no new collective bargaining agreement or revision of any existing collective bargaining agreement between a local construction labor organization or other subordinate body affiliated with the standard national construction labor organization, and an employer or employer association shall be of any force or effect unless such new agreement or revision is approved in writing by the standard national construction labor organization with which the local labor organization or other subordinate body is affiliated. Prior to such approval the parties shall make no change in the terms or conditions of employment. The Committee may at any time suspend or terminate the operation of this subsection as to any matter previously referred pursuant to subsection (d) of this section.

(f) No standard national construction labor organization or national construction contractor association shall incur any criminal or civil liability, directly or indirectly, for actions or omissions pursuant to a request by the Committee for its participation in collective bargaining negotiations, or the approval or refusal to approve a collective bargaining agreement under this title: *Provided*, That this immunity shall not insulate from civil or criminal liability a standard national construction labor organization or national construction contractor association when it performs an act under this statute it willfully achieve a purpose which it knows to be unlawful: *Provided further*, That a standard labor organization shall not by virtue of the performance of its duties under this Act be deemed the representative of any affected employees within the meaning of section 9(a) of the National Labor Relations Act or become a party to or bear any liability under any agreement it approves pursuant to its responsibilities under this Act.

(g) Nothing in this title shall be deemed to authorize the Committee to modify any existing or proposed collective bargaining agreement.

STANDARDS FOR COMMITTEE ACTIONS

SEC. 206. The Committee shall take action under section 205 in order to—

(1) facilitate collective bargaining in the construction industry, improvements in the structure of such bargaining, agreements covering more appropriate geographical areas, or agreements more accurately reflecting the condition of various branches of the industry;

(2) promote stability of employment and economic growth in the construction industry;

(3) encourage collective bargaining agreements embodying appropriate expiration dates;

(4) promote practices consistent with apprenticeship training and skill level differentials among the various crafts or branches;

(5) promote voluntary procedures for dispute settlement; or

(6) otherwise be consistent with the purposes of this title.

OTHER FUNCTIONS OF THE COMMITTEE

SEC. 207. (a) The Committee shall promote and assist in the formation of voluntary national craft or branch boards or other appropriate organizations composed of representatives of one or more standard national construction labor organizations and one or more national construction contractor associations for the purpose of attempting to seek resolution of local labor disputes and review collective-bargaining policies and developments in the particular craft or branch of the construction industry involved. Such boards, or other appropriate organizations, may engage in such other activities relating to collective bargaining as their members shall mutually determine to be appropriate.

(b) The Committee shall, from time to time, make such recommendations as it deems appropriate, including those intended to assist in the negotiations of collective-bargaining agreements in the construction industry; to facilitate area bargaining structures; to improve productivity, manpower development, and training; to promote stability of employment and appropriate differentials among branches of the industry; to improve dispute settlement procedures; and to provide for the equitable determination of wages and benefits. The Committee may make other suggestions, as it deems appropriate, relating to collective bargaining in the construction industry.

MISCELLANEOUS PROVISIONS

SEC. 208. (a) This title shall apply only to activities affecting commerce as defined in sections 2(6) and 2(7) of the National Labor Relations Act, as amended.

(b) Nothing in this title shall be construed to require an individual employee to render labor or services without the employee's consent, nor shall anything in this title be construed to make the quitting of labor by an individual employee an illegal act; nor shall any court issue any process to compel the performance by an individual employee of such labor or services, without the employee's consent; nor shall the quitting of labor by an employee or employees in good faith because of abnormally dangerous conditions for work at the place of employment of such employee or employees be deemed a strike under this title.

(c) The failure or refusal to fulfill any obligation imposed by this title on any labor organization, employer, or association of employers shall be remediable only by a civil action for equitable relief brought by the Committee in a district court of the United States, according to the procedures set forth in subsection (d) of this section.

(d) The Committee may direct that the appropriate district court of the United States having jurisdiction of the parties be petitioned to enforce any provision of this title. No court shall issue any order under section 205(c) prohibiting any strike, lockout, or the continuing thereof, for any period beyond the ninety-day period specified in section 205(a).

(e) The findings, decisions, and actions of the Committee pursuant to this title may be held unlawful and set aside only where they are found to be arbitrary or capricious, in excess of its delegated powers, or contrary to a specific requirement of this title.

(f) Service of members or alternate members of the Committee may be utilized without regard to section 665(b) of title 31, United States Code. Such individuals shall be deemed to be special Government employees on days in which they perform services for the Committee.

(g) In granting appropriate relief under this title the jurisdiction of United States courts sitting in equity shall not be limited by the Act entitled "An Act to amend the Judicial Code and to define and limit the jurisdiction of courts sitting in equity, and for other purposes," approved March 23, 1932 (29 U.S.C. 101).

(h) The Committee may make studies and gather data with respect to matters which may aid in carrying out the provisions of this title.

(i) Notwithstanding anything in subchapter II of chapter 5 of title 5, United States Code, in carrying out any of its functions under this title, the Committee shall not be required to conduct any hearings. Any hearings conducted by the Committee shall be conducted without regard to the provisions of subchapter II of chapter 5 of title 5, United States Code.

(j) Except as provided herein, nothing in this title shall be deemed to supersede or modify any other provision of law.

(k) In all civil actions under this title, attorneys appointed by the Secretary may represent the Committee (except as provided in section 518(a) of title 28, United States Code), but all such litigation shall be subject to the direction and control of the Attorney General.

COORDINATION

SEC. 209. (a) At the request of the Committee, the other agencies and departments of the Government shall provide, to the extent permitted by law, information deemed necessary by the Committee to carry out the purposes of this title.

(b) The Committee and the Federal Mediation and Conciliation Service shall regularly consult and coordinate their activities to promote the purposes of this title.

(c) Other agencies and departments of the Federal Government shall cooperate with the Committee and the Federal Mediation and Conciliation Service in order to promote the purpose of this title.

DEFINITIONS

SEC. 210. (a) The terms "labor dispute", "employer", "employee", "labor organization", "person", "construction", "lockout", and "strike" shall have the same meaning as when used in the Labor-Management Relations Act, 1947, as amended.

(b) As used in this title the term "Committee" means the Construction Industry Collective Bargaining Committee established by section 203 of this title.

SEPARABILITY

SEC. 211. If any provision of this title or the application of such provision to any person or circumstance, shall be held invalid, the remainder of this title or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

AUTHORIZATION OF APPROPRIATIONS

SEC. 212. There are authorized to be appropriated such sums as may be necessary to carry out this title.

EXPIRATION DATE AND REPORTS

SEC. 213. (a) This title shall expire on December 31, 1982.

(b) No later than one year following the date of enactment of this title and at one-year intervals thereafter, the Committee shall transmit to the President and to the Congress a full report of its activities under this title during the preceding year.

(c) No later than June 30, 1982, the Committee shall transmit to the President and to the Congress a full report on the operation of this title together with recommendations, including a recommendation as to whether this title should be extended beyond the expiration date specified in subsection (a) of this section, and any other recommendations for legislation as the Committee deems appropriate.

EXTENSIONS OF REMARKS

PARDON FOR VIETNAM VETERANS

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. DRINAN. Mr. Speaker, President Carter's pardon, which excludes Vietnam veterans from its coverage, raises serious questions of fairness and discrimination. By including only those who violated the selective service laws, the Carter pardon has had the effect of discriminating against poor and minority persons of draft age. During the campaign, President Carter himself recognized that the poor and the minorities were disproportionately represented among our fighting forces in Vietnam.

In the March 7, 1977, edition of the Christian Science Monitor, Representative KASTENMEIER, chairman of the Judiciary Subcommittee which reported an amnesty bill in the 94th Congress, describes in some detail the factual underpinnings of these inequities. He points out that the administrative review system for upgrading less-than-honorable discharges is not an adequate remedy to meet the dimensions of the problem.

After examining Chairman KASTENMEIER's cogent statement, I could hope the reader would conclude, as I do, that President Carter must issue a new pardon to cover those previously excluded. The article is inserted here for that examination:

THE UNFINISHED AMNESTY AGENDA

(By Robert W. Kastenmeier)

President Carter has in a great measure addressed the inequities of the Vietnam era Selective Service System through his pardon of draft violators. The pardon was swift, effective and is being administered well. I urge the President to address the troublesome status of many Vietnam veterans in the same spirit.

The Vietnam war was fought disproportionately by America's poor and minorities; they did not have the resources or sophistication to seek deferments or to find legal specialists to assist in avoiding induction. During the Vietnam era, over 60 percent of the draft age eligible males did not serve in the armed forces and suffered no disruption in their lives. Many are urging that some relief be given to those persons who did serve but who found they could not continue to serve or who simply could not adjust to Vietnam era military life.

A relatively small number of these persons went AWOL and face charges for those absence offenses. A far greater number—suffer the post-service difficulties related to possession of an other-than-fully-honorable discharge. In order to make any judgments concerning possible remedies for these persons, it is important to review recent military discharge policy.

The armed forces issue five types of discharge certificates to enlisted members: honorable, general, undesirable, bad conduct, and dishonorable. The latter two are "punitive" discharges awarded as part of a sentence of a court-martial pursuant to the Uniform Code of Military Justice (UCMJ), an enactment of Congress. The former three are "administrative" discharges; these are not explicitly authorized by act of Congress but rest exclusively on Department of Defense directive.

The standards are administrative procedures in these regulations vary widely from service to service. Most of the regulations have been deficient in providing the rudiments of due process of law, such as proof beyond a reasonable doubt, compulsory attendance of witnesses, a verbatim transcript, or even a judicial officer to make rulings or objections.

During the Vietnam years, use of administrative discharges increased markedly. Regrettably, employers rarely distinguish between the different categories of less-than-fully honorable discharges. Many assume all were given for serious offenses. Consequently, hundreds of thousands find their discharge papers a constant impediment to employment.

Further, the problem goes beyond employment. Veterans holding administrative discharges suffer discrimination of many kinds. They find it harder if not impossible to obtain credit, licenses, rental housing, mortgages, life and medical insurance. Their discharge is perceived to raise questions about their character and makes them "bad risks." Ironically, the term "undesirable" conjures up a far worse image than does "bad conduct" and an undesirable discharge may provoke far more prejudice from society than the bad conduct discharge, awarded only after a full court martial proceeding.

Despite the stigmatizing effect of general and undesirable discharges, they were generally not given for conduct which was genuinely criminal in nature. Literally hundreds of thousands of these discharges were given for medical (bed-wetting, alcoholism) or psychological problems (character and behavior disorders, homosexual tendencies), or a general lack of aptitude for military regimen. Less-than-fully-honorable discharges given for absenteeism were generally received after Vietnam or lengthy stateside service, after denial of applications for conscientious objector status or hardship discharge, or to soldiers who should never have been inducted or accepted for enlistment in the first instance.

Moreover, a particular act or pattern of behavior could result in varying types of discharges from service to service, from year to year, and even from command to command within the same service in a given year.

There are administrative remedies for veterans who want to upgrade their discharges. Each service has a Discharge Review Board (DRB) and a Board for Correction of Military

Records (BCMR). But most applicants cannot afford the time and expense to leave work and travel to the hearing sites. Furthermore, counsel is not provided by the government and free specialized legal advice is not generally available. Each service has its own rules about considering post-service conduct and other types of mitigating factors.

This leads to a review system in which the well-off, well-informed, or lucky prevail. Only those people can realistically take advantage of certain liberalizing trends, retain competent counsel and seek rehearings.

Currently there is a significant backlog of review cases in each of the services. The Army DRB alone has a present backlog of 7,000 cases, and is receiving 1,000 new cases each month. Even if it can be assumed that 50,000 Vietnam era veterans have already applied and that 10,000 cases can be processed a year, it would take 55 years for all the Vietnam era cases to be processed under the current system even if they were given priority.

This discharge system applies only to those who have already left military service with a less-than-fully-honorable discharge. However, a significant group of Vietnam-era military personnel have not yet been discharged.

Some 4,200 Vietnam-era military personnel are now administratively labeled as "deserters at large." These men are disproportionately from lower socioeconomic backgrounds and members of minority groups.

Those men most sincerely opposed to the war would not take President Ford's "virtual amnesty" because they could not accept the premise of the program that they were morally culpable. (Many of these persons were those who applied for "conscientious objector" discharges in the early years of the war when such requests were denied by the Army in 85 percent of the cases.)

Approximately 694,000 veterans received other-than-fully-honorable discharges in the vietnam era by administrative proceedings.

These include 419,000 labeled as "general" and 275,000 labeled as "undesirable." However, a recent report by the Comptroller General indicated that Vietnam-era veterans "get different discharges in apparently similar circumstances," so it is important to note that characterization as "general" or "undesirable" is not, per se, meaningful.

Approximately 50,000 Vietnam-era veterans were given bad conduct or dishonorable discharges by courts martial. Many of these persons committed serious offenses which have a parellel in civilian life. Others, however, suffer the lifelong stigma of a bad discharge and possibly a felony conviction for relatively minor offenses many of which were directly related to opposition to the Vietnam war. For example, black soldiers who spoke out against "racism" in the war, soldiers who published antiwar newspapers or leaflets, and those conscientious objectors who refused orders to carry a gun or participate in further training were issued punitive discharges.

As with other forms of less-than-fully-honorable discharges, minority group persons received disproportionate percentages of courts martial. In a study by the Defense Department of 1,471 random courts martial at selected installations, "34.3 percent involved black servicemen. Blacks represented only 11.5 percent of the entire armed forces population, as of June 30, 1972."

It seems clear that this legacy of arbitrary, and in many cases senseless disruption of individual lives by the government has created a large class of people who are, in a very real sense, victims of the Vietnam war. I urge the President to study this victimization and to rectify it as only he is able.

LITHUANIAN INDEPENDENCE

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. HYDE. Mr. Speaker, 1 month ago today marked the 59th anniversary of the reestablishment of independent Lithuania and the 726th anniversary of the founding of the Lithuanian State.

In honor of this occasion, I wish to pay tribute to the courageous, freedom-loving people of Lithuania who are still under Soviet occupation and oppression, and to Lithuanian Americans in my district who yearn for the liberation and independence of their homeland.

I believe all of us in the House of Representatives concur that if our Government intends to emphasize its concern for human rights in the world, there is no better place to begin than with a demand that all of the signers of the Helsinki agreement comply with all of its provisions.

I take great pride in sharing with my colleagues on this important anniversary a resolution passed on February 19 by the Lithuanian Americans of Melrose Park, Ill.; and a statement from the Lithuanian Americans in Cicero, Ill. Both urge that our U.S. representatives to the Belgrade Conference demand that the Soviet Union comply with the full implementation of the basket III provisions of the Final Act of the European Security and Cooperation Conference in Helsinki. I agree wholeheartedly with their sentiments.

The resolution and statement follow:

RESOLUTION

We, Lithuanian-Americans of Melrose Park, Illinois, at a meeting held on February 19, 1977 commemorating the 59th anniversary of the reestablishment of the independent state of Lithnania on February 16, 1918, and the 726th aniversary of the formation of the Lithuanian Kingdom in 1251, send our warmest greetings to the people of the Soviet-occupied Lithuania and pledge our unwavering support for the restoration of Lithuania's sovereignty and unanimously adopt the following resolution:

Whereas in 1918 the independent state of Lithuania was reestablished by the free exercise of the right of self-determination by the Lithuanian people; and

Whereas until 1940 Lithuania was a sovereign nation, a member of the League of Nations and signatore of numerous international treaties with the Soviet Union; and

Whereas the Soviet Union during June 15–17, 1940 invaded and occupied Lithuania, and subsequently, forcibly annexed the Lithuanian Nation into the Soviet Union; and

Whereas the Soviet Union continues to conduct a policy of colonization, Russification, ethnic dilution and religious and political persecution; and

Whereas the people of Lithuania to this day are risking and sacrificing their lives in defiance of the Soviet regime as most recently untold number of Lithuanian and Russian dissidents have been arrested and imprisoned for the publication or dissemination of "The Chronicle of the Lithuanian Catholic Church"; and

Whereas the United States Government maintains diplomatic relations with government of the Free Republic of Lithuania and consistently has refused to recognize the unlawful occupation and forced incorporation of this freedom-loving country into the Soviet Union; and

Whereas the 89th U.S. Congress unanimously passed House Concurring Resolution 416 urging the President to raise the question of the Baltic Nations status at the United Nations and other international forums; now therefore be it

Resolved, That we, Lithuanian-Americans will urge the President to vigorously implement the House Concurrent Resolution 416 to the fullest extent; and further

Resolved, That we urge the Secretary of State, during the Belgrade Conference, in compliance with the humanitarian provisions of the Final Act of the European Conference on Security and Cooperation, to protest the persecution and imprisonment of Lithuanians by the Soviets; and further

Resolved, That copies of this resolution be forwarded to the President of the United States, the United States Secretary of State, the United States Ambassador to United Nations, the United States Senators, members of the House of Representatives, the Lithuanian Minister in Washington, D.C., the Lithuanian Consuls in New York City and Chicago and the press.

THE BELGRADE CONFERENCE: A SECOND OPPORTUNITY

This summer, the United States will be attending the follow up Conference on European Security and Cooperation in Belgrade, Yugoslavia.

The people of Lithuania are anxiously awaiting the outcome of the Belgrade Conference, because it represents the only foreseeable means for them to benefit from the Basket III provisions of the Final Act of the European Security and Cooperation Conference in Helsinki.

Lithuania, a sovereign nation since 1251, reestablished its independence on February 16, 1918, but was invaded by the Soviet Union in 1940 and was forcibly annexed with Latvia and Estonia into the Soviet Union that same year.

For more than three decades, the Lithuanian people have endured religious persecution, political repression, complete denial of their basic human rights, and concentrated programs of Russification of their country by the Soviet Union.

Lithuanians have not suffered in silence. The Western World has seen and heard of the sacrifices of Lithuanian patriots, despite attempts by the Soviet Union to suppress all such communications with the Western World. The underground publications, "The Chronicle of the Lithuanian Catholic Church" and "Ausra" (The Dawn), are published and disseminated by Lithuanians, in spite of the constant threat of arrest and imprisonment by their Russian occupiers.

The Soviet Union has blatantly ignored the human rights provisions of its own constitution, the provisions for human rights in the United Nations Charter, and most recently it has ignored the implementation of the Basket III provisions of the Final Act of Helsinki.

There is world-wide concern for Soviet Jewry, and justly so, however, Lithuanians, Latvians, Estonians and the people of the other Captive Nations also deserve our concern, and actions.

We have a second opportunity, at the Belgrade Conference, to bring the force of world public opinion and the diplomatic power of the Western World to bear on the Soviet Union's disregard of the human rights provisions of the Final Act of Helsinki. The

Commission on Security and Cooperation in Europe, established by the United States Congress last year, has documented evidence of the Soviet Union's non-compliance with these provisions.

We urge the President of the United States, and the Secretary of State to direct our representatives to the Belgrade Conference to confront the Soviet Union about their non-compliance and evidence of bad faith. Since the Soviet Union seeks better relations with the Western World for its own purposes, let us make compliance with the Final Act of Helsinki a condition on which those relationships depend.

TUNA-PORPOISE SOLUTION SOUGHT

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. ANDERSON of California. Mr. Speaker, the following editorial from today's Los Angeles Times gives an excellent perspective of the problems currently facing the United States' tuna industry, due to restrictions on the taking of porpoise while catching yellowfin tuna. Ironically, the strict regulations being enforced by the National Marine Fisheries Service to protect porpoise may actually increase the number of those animals killed.

Because the eastern spinner porpoise may be reaching the point where it might become depleted, a total ban on taking the animal has been set. Since this species occurs in approximately 60 percent of all schools of porpoise associated with tuna, American boats are prohibited from fishing on a majority of the fish they find.

Foreign fishermen in the same waters are not regulated. And since the American fleet is currently tied up in port, they are fishing without competition or enforcement of even the most basic laws of conservation.

The following article from the Los Angeles Times gives a very clear picture of the current situation—and urges Congress to take the prompt action that is required:

GUESSING AN INDUSTRY TO DEATH

Congress should act, and quickly, to amend the Marine Mammal Protection Act of 1972 to reflect present realities in the tuna fishing industry.

The statute, as now written, could force American fishermen into bankruptcy, and could also hasten the extinction of the creatures it was meant to protect.

The California tuna fleet of more than 100 vessels is lying idle in San Pedro and San Diego because the National Marine Fisheries Service, which enforces the statute, has a *suspicion* that the Eastern spinner, one of the species of porpoise that run with schools of yellowfin tuna, *may* be nearing depletion.

The air-breathing porpoises can drown despite the best efforts of ships' crews to free them from the deep folds of their three-quarter-mile-long nets. But there is no reliable information that the spinner is actually in danger of depletion.

Despite that, the fisheries service last week was able to persuade a federal court in Washington to set a zero quota on the killing of spinners, while allowing the U.S. fleet to take 9,972 porpoises of other species before April 30, when new limits will be set.

The American captains had no choice but to bring their ships back to port from the fishing grounds in the far Eastern Pacific. The killing of even one spinner, which is found in six out of ten schools of yellowfin, could bring penalties of up to one year in jail and a $20,000 fine.

The only evidence the fisheries service had to support its insistence on the zero quota for the spinner was an assumption that "the probability of it being depleted was slightly greater than that of not being depleted."

Incredibly, it is that slight probability that threatens to bring a $2 billion annual industry, employing 30,000 workers, to a standstill. No wonder the American vessels came back to port with their flags at half-cast.

But the Marine Mammal Protection Act permits such blind restrictions on American seiners, which have had remarkable success in reducing the porpoise kill, while foreign governments impose no controls whatever on their vessels.

Nor is this the first time that the San Pedro and San Diego fleets have had to leave the seas at great financial loss because of the policies of their own government.

We support the goal of the protection act—to save the porpoise from extinction. But it serves the opposite purpose when it immobilizes an American fleet that is investing huge sums in research and equipment to lower the porpoise kill, and leaves the fishery to foreign-flag seiners that are responsible for most of the slaughter.

And, again, all of this is done without exact knowledge of the industry's impact on porpoise populations.

Government officials admit that they are only guessing that the spinner faces depletion, and they also admit that their quotas on other species are set on the basis of "approximations that are not very precise."

Reliable information should be forthcoming from a massive air and surface census of porpoise populations that was begun this month by the National Marine Fisheries Service over the 5 million-square-mile area of the tropical Pacific.

Until those results are known, the service should back off from panic quotas that current knowledge does not justify, and Congress should amend the law to forbid regulation by guestimate in the future.

If nothing is done, there are three certain losers; the consumer, who will have to pay higher prices for the smaller American catch; the tuna industry which cannot operate profitably under the present rules, and the porpoise, which will be left to the mercy of foreign crews that kill them at will and with impunity.

NATIONAL EMPLOY THE OLDER WORKER WEEK

HON. JOSEPH A. LE FANTE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. LE FANTE. Mr. Speaker, last year, to encourage and support educational efforts designed to make employers more aware of the advantages of hiring older workers, the Congress, by joint resolution, requested the President to designate the week of March 13, 1977, as National Employ the Older Worker Week.

President Carter, in issuing this year's proclamation, has called upon all Americans to recognize the knowledge and dedicated experience that older workers bring to their jobs and to promote opportunities for older Americans to secure employment.

Large numbers of qualified workers have discovered that their age is the only obstacle in the search for a useful rewarding job, the birthright of every American—regardless of race, religion, national origin, or even longevity. All too often, capable and devoted older workers have been discriminated against and stereotyped, resulting in untold economic and psychological damage to both themselves and their families. And while they have been denied the ability to fulfill their potential, our Nation has been deprived of a source of added productivity.

Today, the law acknowledges the special responsibility which we as a people owe to our mature workers who have labored so long and served so well.

Mr. Speaker, the proclamation of National Employ the Older Worker Week is in keeping with the effort to create a more favorable climate for the employment of older Americans and deserves our vigorous and unceasing support. For only through a policy of increased Government concern will the public, and prospective employers in particular, adopt the appropriate attitude that will assure our older Americans of an equal opportunity in the job market, which will culminate in the long awaited and eagerly sought elimination of age discrimination from our society.

WEST POINT'S 175TH BIRTHDAY

HON. JOHN G. FARY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. FARY. Mr. Speaker, there recently came into my possession some of West Point's historical background which I would like to pass on to my colleagues on this 175th anniversary of the founding of the U.S. Military Academy at West Point.

Mr. Speaker, it is with a great deal of pride that I introduce the following historical data into the RECORD today, because today March 16, 1977, is the 175th anniversary of the founding of our U.S. Military Academy.

West Point's heritage dates from the earliest days of the War of American Independence when the Second Continental Congress recommended that the Hudson River be blocked by fortifications to prevent the British from cutting the American colonies in two. In 1775, patriots began to construct fortifications on Constitution Island, across from the West

Point, and then in 1776 and 1777, built improved positions and installed an iron chain across the Hudson a few miles below West Point at Popolopen Creek. After the British destroyed these works in 1777, during an abortive move to assist Burgoyne's army near Saratoga, American leaders finally decided to fortify West Point.

From January 1778 through 1779, American commanders, with the assistance of American, French, and Polish engineers—Louis de la Radiere, Thomas Machin, Thaddeus Kosciuszko, Rufus Putnam, Louis Duportail, and Stephen RocheFontaine—had their soldiers build a modern fortified zone around West Point. Fortress West Point eventually contained several forts, redoubts, and batteries holding over 90 cannon and mortars and a new iron chain which stretched from West Point to Constitution Island. Fort Clinton, the main bastion, covered the river and the chain. Fort Putnam protected Fort Clinton from inland attack. The new fortification blocked the Hudson River and deterred the British from repeating their 1777 campaign for the duration of the war.

In 1780, Maj. Gen. Benedict Arnold, commanding West Point and the Hudson Highlands, attempted to sell West Point to the British, but he failed, turned his coat and joined the British Army. Arnold's accomplice, Maj. John Andre, was not so fortunate. Washington had the British officer hanged as a spy.

Following the American Revolution, Washington, Hamilton, Knox, and other Americans proposed that a military academy be founded to provide the Army with the engineers and artillerists who were so needed during the war. In 1802, Congress approved such an academy, and it was established at West Point where it has remained for 175 years. Growing and changing with the Nation, the U.S. Military Academy has produced generations of graduates who have served the United States as soldiers and civilians at home, abroad, and in space, during war and peace. Today, Americans can trace the heritage of the Military Academy and the American military tradition to West Point, a key to this continent during the American Revolution.

PHILADELPHIA EXPANDS USE OF 911 EMERGENCY NUMBER

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. EILBERG. Mr. Speaker, Philadelphia's Mayor Frank L. Rizzo has announced the expansion of the city's 911 emergency telephone number to include fire and rescue emergencies as well as police emergencies.

The 911 number has been in use for police emergencies since March of 1974, when Philadelphia became one of the first cities in the Nation to adopt the federally suggested number.

"The use of 911 for fire and rescue calls is being done to simplify and expedite the city's response in any life and death situation," according to Mayor Rizzo.

"At present," the mayor has stated, "many citizens reporting fires waste valuable seconds in calling the telephone operator, who then must repeat the information to the fire department."

"Use of the 911 number will eliminate this duplication, and enable the fire department to respond instantly to calls for assistance."

According to Fire Commissioner Joseph R. Rizzo, in 1976 Bell Telephone operators transferred 20,044 fire calls to the fire department; these constituted about 45 percent of the total 44,781 fire calls from all sources last year.

Mayor Rizzo pointed out that use of the 911 number was extremely successful for police emergencies in 1976.

"The police department handled 3.4 million calls last year; 50 percent of these calls were of an emergency nature," Mayor Rizzo said.

Mayor Rizzo is urging Philadelphians to use 911 only in emergencies involving stopping a crime or saving a life, as well as reporting fires. All routine police calls should be made to 231–3131; routine fire department calls, to 922–6000.

"We hope that all our citizens will immediately begin using 911 for fire and rescue calls," Mayor Rizzo said. "The city administration is determined, in every way possible, to help cut the tragic toll of fire injuries and deaths in Philadelphia."

The mayor said there are 54 trunk lines to the 911 emergency phone service at the police administration building's communications center to insure minimal delay in reporting a crime, fire, or medical emergency.

CONSERVE OUR ENERGY SUPPLIES

HON. MARC L. MARKS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. MARKS. Mr. Speaker, as a member of the Interstate and Foreign Commerce Committee which will consider much of our energy legislation this Congress, and as a resident of a State which was hard hit by the recent winter weather, I am pleased to provide the observations of Mr. Frank Gorell, president of Season-All Industries, on the need to conserve our energy supplies:

THE SIGNIFICANCE OF WINDOWS IN ENERGY CONSERVATION FOR RESIDENTIAL, INSTITUTIONAL, COMMERCIAL, INDUSTRIAL, AND PUBLIC STRUCTURES

In our struggle to cope with our energy problems, emphasis must be placed on conservation, and top priorities must be placed on actions which effect conservation . . . right now.

One of these greatest potentials is in residential and commercial buildings. The Federal Energy Administration has estimated that 25% of our consumption can be saved in our homes and buildings with cost-effective actions. Dennis Hayes in "Energy: The Case for Conservation" points out that we have the capacity in our homes and buildings to reduce our total energy budget by at least 16% over the next quarter century.

When Senator Kennedy introduced the Energy Conservation Act of 1976, he stated, "One of the most potentially productive sectors (for energy conservation) is found in residential and commercial buildings. FEA," he reported, "estimates the potential residential savings to be the equivalent of 900,000 barrels of oil (per day) over the next several years for space heating alone."

Senator Kennedy continued, "FEA currently estimates potential savings in the commercial building sector to be about 250,000 barrels per day."

The importance of windows in energy conservation in our homes and buildings has been dramatized by the National Bureau of Standards, which set us a conventional single-family house to pinpoint causes of heat loss, and scientifically measure the intensity of the different causes.

The results of this testing showed that "adding storm windows (to relatively draft-free primary windows) reduced necessary fuel by a big 24%."

Translating the NBS results to the average size house, the following chart shows that storm windows (over good existing windows) pay back the investment in fuel savings alone in from 2 to 6½ years in most parts of the country when heating fuel is in greatest use.

	Degree days	Payback in years: Electricity	Oil	Gas
Baltimore; Chattanooga; Roswell, N. Mex.	4,000	4.52	5.59	6.54
Pittsburgh; St. Louis; Wichita	6,000	3	3.72	4.35
Buffalo; Omaha; Cheyenne	7,000	2.57	3.18	3.73
Bangor, Maine; Sioux Falls; Minneapolis	8,000	2.25	2.79	3.26

Windows might well be the American home and building owner's single greatest "right now" opportunity to conserve energy . . . but the information being offered to conserve window energy does not, for the most part, recognize all the problems. It ignores the totally worn out window.

Apparently, these recommendations to caulk and weatherstrip and install storm windows are stressed because they are relatively familiar and easy to do, but they are not the solution to all the problems.

Caulking will eliminate leaks between the window frames and the wall, but not around the sashes. Weatherstripping will help, but neither it nor caulking will do anything to prevent the great loss of heat directly through the glass.

Installing storm windows will dramatically reduce heating and cooling losses, but only if the prime window is sound; if it does not permit air infiltration through open cracks. But, if the prime window is badly worn and beyond the help of weatherstripping, there is not much alternative. It has to be replaced. Up until a few years ago, this involved a major investment in time and money. In recent years, however, there is the custom-fit aluminum replacement window. It is an economical way to replace old windows, because custom-fit eliminates structural alteration to the wall.

There's no need to enlarge or reduce the opening, or refinish the outside. On the inside, not even the trim is touched . . . so there's no expense for replastering or new wallpaper.

Even existing draperies and curtains still fit . . . and the simplified installation is done from the inside in practically any weather.

Recently introduced are what is known as "thermally improved" replacement windows . . . custom-fit units which provide insulation in the frame and sash as well as the glass to minimize condensation and maximize fuel economy. In the Architectural Aluminum Manufacturers Association's rec-

ommendation to the FEA that custom-fit aluminum replacement windows be listed as an approved energy conservation measure, AAMA showed that thermalized replacement windows will save from $6.25 to $13.34 per window per year, depending on where the home or building is located and the type of fuel used.

Another similar recommendation to the FEA showed that fuel savings alone will repay the investment in thermally improved windows in from 5 to 15 years anywhere in this country.

The reason window energy conservation is not realizing its full potential was identified by Senator Kennedy, in introducing the Energy Conservation Act of 1976, as an apparent lack of specific knowledge about how to save energy. He submitted a study which indicated that people tend to favor the most obvious, but least significant, ways to save energy. Only 7% were installing ceiling insulation; only 2% were installing storm windows. And the energy conservation measure, replacement windows, was not even mentioned.

A separate survey conducted by National Family Opinion, Inc., to determine which energy conservation measures homeowners would apply if the proposed Insulation Tax Credit became law, showed dramatically improved interest in significant energy conservation measures, simply because those surveyed were first told about the savings potential of different measures. The survey indicated that up to 20% would install storm windows, and 10% would replace their old, worn-out windows with thermally improved windows.

The recommendation here is that windows be given more emphasis in energy conservation legislation. In addition, government publications should treat all the different solutions to the different window energy problems by listing replacement windows as an approved energy conservation measure. And because of the significance of windows and other insulation measures in homes and other buildings, it is recommended that the often proposed Insulation Tax Credit be quickly enacted into law.

PUBLIC FINANCING OF CONGRESSIONAL ELECTIONS

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. SIMON. Mr. Speaker, the Sun Democrat of Paducah, Ky., had an editorial on public financing of congressional election campaigns that I would like to call to the attention of my colleagues.

It is another indication that reflective people around the Nation believe that some major change is needed in the way we finance our campaigns.

PUBLIC FINANCING OF CONGRESSIONAL ELECTIONS

Special interest groups doled out more than $22.5 million to congressional candidates last year, almost double their 1974 contributions, according to a report recently released by Common Cause.

This huge pile of cash was stacked behind favored candidates by business, labor, and other big money interests like the American Medical Association (the largest single contributor) and the dairy industry. It dramatically underlines the need for public financing of congressional as well as presidential elections, a major plank of Jimmy Carter's presidential platform.

The 1976 presidential election was financed mainly by public funds from the voluntary tax check-off. This evidently caused pressure groups to turn most of their attention to Congress. As outgoing Common Cause President John Gardner lamented: "It might be said of the well-heeled special interest groups that being unable to buy themselves a president, they bought as many members of Congress as they could."

Already representatives of these groups are knocking on the doors of victorious senators and representatives with a handshake of congratulations and a hand out for favors in return for their investments."

Public financing of their elections would make congressmen less dependent on interest groups and more responsive to their constituents. At the same time, it would prevent a rich candidate from using his money to the disadvantage of a poorer candidate. Last year, Republican H. John Heinz III, the soup and catsup heir, pumped $2.2 million in personal funds into his successful Pennsylvania Senate campaign—considerably more money than his opponent could spend.

Admittedly, too much federal encroachment into certain areas of American society has caused problems. But in the light of Watergate and shenanigans of several congressmen, public financing of congressional elections deserves a chance.

RURAL TRANSPORTATION NEEDS OF THE ELDERLY AND HANDICAPPED

HON. MICHAEL T. BLOUIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. BLOUIN. Mr. Speaker, yesterday, I had the privilege of submitting testimony to the Department of Transportation's public hearing on the future of a prototype surface mass transit vehicle called "Transbus."

My testimony addressed the general problem of transportation for the elderly and handicapped in rural areas. I know this is a problem which is not unique to Iowa and I would like to enter the text of my prepared remarks in the RECORD:

TESTIMONY BY HON. MICHAEL T. BLOUIN

As I am sure the Department of Transportation is well aware, the number of elderly people in this country continues to grow. At 22.5 million nationwide, the number of people over age 65 now represents over 10 percent of the total population—and that percentage will increase to 11 percent by the year 2000.

The number of physically handicapped individuals in this country is estimated at 12 million nationwide, including 5 million cardiac patients who can no longer climb stairs or walk long distances, 2 million orthopedically impaired individuals and 250,000 wheelchair patients. As the population grows, so does the number of physically handicapped people.

It comes as no surprise to the Department or any of the rest of us that these people—both the elderly and the handicapped—have very special transportation problems. If we needed further evidence of that fact, the House Select Committee on Aging, on which I serve, provided it last year in a comprehensive study of transportation problems. The study concluded that "older Americans are severely hampered in getting to and from places they need to travel." "In many areas, there is no public transportation at all. Often when it exists, it goes to the wrong place at the wrong times for older Americans."

The Select Committee's study also found that even when it exists, public transportation "imposes physical and income demands of its own. High steps, quick movement and ill-designed routes may in effect deny the elderly *access* to existing systems."

Congress recognized the accessibility problem in the Urban Mass Transportation Act which mandated that vehicles financed by the Act be accessible to elderly and handicapped persons. The Department of Transportation responded to that mandate in the specifications it issued for the prototype transit vehicle called "Transbus."

I, for one, support the Transbus specifications, and so did the House Select Committee in its report last year. But at the same time, I hasten to impress upon the Department that the Transbus is a limited solution to a much broader problem.

Elderly and handicapped people in this country are not evenly distributed throughout the population. They are often concentrated in older neighborhoods in major cities, in special housing developments for senior citizens, in separate retirement communities, or in geographic areas with relatively attractive climates. The result is a wide range in the percentage of elderly, even in urban areas themselves. In Sterling Heights, Michigan, for example, the number of people over age 65 represents only 2.3 percent of the total population; by contrast, in Miami Beach, Florida, the over-65 population represents about 48.7 percent of the total population.

In areas like Miami Beach, and other urban or suburban areas, the prototype Transbus will work very well. It answers the accessibility problem for the elderly and handicapped in terms of surface public mass transportation. It may even work well in places like Cedar Rapids or Dubuque, Iowa, where large surface transportation buses are now in use. But it clearly will not work in places like Tipton or Cascade, Iowa, or places like Winneshiek County, Iowa.

For one thing, a bus which meets the Transbus specifications may have a very difficult time negotiating the secondary roads of rural Iowa. Not only are the roads often narrow and sometimes winding, but there are scores of structurally deficient bridges on the nation's secondary road system which are not safe for standard motor vehicles, much less a 12-ton, 45-passenger bus. And that is no exaggeration because I personally know of cases where school buses must be re-routed because county bridges are not sound enough to carry them.

Secondly, even if the Transbus could navigate secondary country roads, it would be rambling around out there more than half-empty, simply because it would be a rare occasion when 45 elderly or handicapped people from any one area would be traveling in the same direction at the same time.

In short, the Transbus is a limited solution to a much broader problem. Its application in rural areas—in places like Iowa—will be severely limited and, in many places, totally impractical.

I feel quite confident that the Department's planners are well aware of that fact, but it bears repeating for the record.

It is particularly important because the transportation problems of elderly and handicapped people in rural areas are particularly acute, and about 31.8 percent of the nation's elderly population lives in rural areas. The House Select Committee made the point very well in its report last year:

"Virtually all rural persons are poorly served by public transit," the report said, "and the rural elderly—between five and six million—are no exception. Distances are greater, populations less dense, and incomes among the elderly are generally lower than in urban areas. . . .

"In rural areas, with the exception of relatively infrequent inter-city bus or rail service, there is often no public transportation of any kind. If the elderly wish to make

trips to clinics, go shopping or just socialize they must either drive themselves or be driven."

The Select Committee's conclusion was hammered home again and again in the course of public hearings which the Aging Committee held at my request in Iowa, and in other areas throughout the country.

It was emphasized again and again in an Intergovernmental Conference on Transportation for the Elderly which I organized in Iowa a year ago.

And it was made particularly poignant in the response of one rural elderly person in Iowa who wrote to officials of the Eastern Iowa Rural Public Transportation Conference in 1975. Explaining her absence from the conference, she wrote: "I wish I could have been there. . . . Someone else is always talking for us. If I had transportation to get there, I would tell them! You ask what we need, well I'll tell you. I need a small bus to come to my house and get me. It should be small enough to come up the gravel road and be able to turn around in my driveway."

I am afraid the Transbus, despite its obvious advantages, could not fulfill that Iowan's expectations—and hers are typical of the needs of rural citizens for effective elderly and handicapped transportation services.

For that reason, I hope to impress upon the Department of Transportation the need to be flexible and much more imaginative in dealing with the transportation problems of elderly and handicapped people in both urban and rural areas.

CHICAGO'S GORDON TECHNICAL HIGH SCHOOL CELEBRATES 25TH ANNIVERSARY

HON. FRANK ANNUNZIO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. ANNUNZIO. Mr. Speaker, Gordon Technical High School, located in the 11th District I am honored to represent at 3633 North California Avenue in Chicago, is celebrating the 25th anniversary of its founding throughout this year.

Various jubilee events will be held to commemorate this occasion, including a dinner-dance to be held at the Sheraton O'Hare Hotel on April 30, and a liturgy celebrated on October 31 at the St. Mary of the Angels Church, to be followed by a grand "Open House Reception" at the school.

I am delighted to send greetings and extend my congratulations to Rev. Edwin F. Mitrenga, C.R., principal, and to all of the faculty and students of Gordon Technical High School as they participate in this 25th anniversary celebration, and I extend to them my best wishes for many more years of outstanding service to our Northwest Side Chicago community as they continue their inspiring example.

Mr. Speaker, a history of Gordon Technical High School follows:

HISTORY OF GORDON TECHNICAL HIGH SCHOOL

When Weber High School moved from its old location on Division Street to its present location, Father John Dzielski, C. R. conceived the idea of starting a fully accredited technical high school at the old site. After due consultation with the Provincial, The Very Reverend Casimir Guziel, C.R., as well as the officers of the North Central Association and State Educational Department, the new technical school came into being as a branch of Weber and referred to as Weber Tech. From the beginning, however, plans were made to make the school a separate educational institution.

The idea of a technical high school on the north side proved to be very popular. Therefore, in September of 1952, the former Weber Tech became Gordon Technical High School, named after Father Francis Gordon, former principal of Weber High School and a pioneer in Resurrectionist education. The new Gordon Tech had Father John Dzielski, C.R. as principal and employed a teaching staff of seven priests and five lay teachers.

Under Father Dzielski's guidance, the fledgling Gordon grew by leaps and bounds. In June of 1953, after only a year and a half of existence, Gordon received recognition from the North Central Association, indicating the achievement of high degree of academic excellence. For the 1953–54 school year enrollment rose to 305, and the school became a member of the Catholic High School Athletic League.

In 1954, Father Louis Gracz was appointed to the office of principal. The 1954–1955 school year saw the inclusion of other technical courses, a major one of which was auto shop. Bowling, driver training, and the band became activities of the school. The 1956 graduation class was the first to complete four years at Gordon Tech.

From 1954 to 1958 the school's enrollment doubled, and the school grew too large for the confines of the Division Street building. Father Gracz received permission from the Archdiocese to begin looking for a new site for the expanding Gordon Tech. After two months of searching, a seven and one-half acre site was found on the corner of Addison and California, adjacent to Horner Park. With money supplied by a grant from the Archdiocese, the firm of Fox and Fox was engaged to design a building that would suit the needs of a technical high school.

Monsignor William E. McManus broke the ground for the new site of Gordon Tech on January 3, 1960. By the second semester of 1961, the entire $3,250,000 was ready for use.

Father Gracz continued as principal until 1965, at that time Father Walter Wilczek took over as administrator.

From 1965 to 1973 under Father Wilczek's leadership, extensive improvements were made in administration and curriculum development and a school-wide intramural program. From a purely technical curriculum Gordon expanded to three separate programs for students: college preparatory, trade school prep, and a course of study preparing students for employment directly after high school.

The Language Department expanded to meet the demands of an ever increasing number of students; the Science Department developed a comprehensive and challenging four year program; and departments of Business and Communications were introduced. The enrollment grew to 2,600 boys, making Gordon the largest high school in the Archdiocese of Chicago.

Because of this phenomenal growth, many other improvements were required. It was under the urging of Bishop McManus that Fr. Wilczek worked with the Archdiocesan officials to accommodate the boys who were asking for entrance to Gordon Tech. Cardinal Cody supported these efforts with Project Renewal money. The improvements included an eighteen classroom addition at the north end of the main building; the complete revision and expansion of the library facilities; an addition to kitchen facilities; introduction of computerized programing; a second closed-circuit television station; the Individualized Instructional and Research Program designed for incoming freshmen and sophomores who have deficiencies in Mathematics, English and Science; and enlarged facilities for Physical Education.

In the Fall of 1973, Father Edwin Mitrenga became Gordon's fourth principal. Curriculum development and dedication to the improvement of all educational and religious functions that Gordon performs have been reemphasized.

1974–1977 brought the development of an Honors Program, Catholic League titles in at least one level of every sport, numerous technical and scholastic awards, active and spirited growth in activities and intramurals, remodeling and renovation of the Student Records, Student Services, and Business Offices, and a continued reevaluation of the entire school and its programs.

With continued dedication of administration and faculty, and students, Gordon has high hopes of sustaining what has already become a tradition of enthusiasm and excellence.

H.R. 5054—TO REMOVE RULE OF APPORTIONMENT FOR FEDERAL JOBS

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. STEERS. Mr. Speaker, yesterday my colleague from the Washington Metropolitan Congressional Caucus, HERB HARRIS, introduced H.R. 5054, legislation which will do away with an anachronistic provision of Civil Service law. I am pleased to be an original consponsor of this legislation, along with Mr. FISHER, Mr. FAUNTROY, and Mrs. SPELLMAN.

The Civil Service Reform Act of 1883 established a rule of apportionment for Federal jobs in the Nation's Capital so that the residents of Maryland, Virginia, the District of Columbia and other eastern States would not get too many Federal jobs and thus, exercise too much "power" in the Federal Government. The net effect of this 94-year-old provision is that potential Federal employees from at least a dozen States are denied Federal employment because their State has already met its hiring quota. And of course, this means that the entire system of "merit" hiring in the Federal service is a mockery. Federal agencies can only hire the best applicants for positions if that applicant happens to be from a State which has not yet met its quota—obviously, not a beneficial situation for the Government or for the individuals who are denied Federal employment merely because their State exceeds the quota.

As a Representative of one of the States which is "over-quota", I often hear from individuals who are denied Federal employment solely because of the apportionment rule. I think that a very good example of the present effect of the rule involves one of my constituents who was a Phi Beta Kappa graduate of Wellesley and had a 96.5 rating on the Federal Service Entrance Examination. She had obtained a job with an agency here in Washington as a temporary employee and, when her temporary appointment had to be converted to a permanent slot, she was denied because she was a resident of Maryland, an "over-quota" State. This happened in spite of the fact that her immediate supervisors, and even her superiors' superiors, recommended that she be hired because of the performance record she had established while serving the agency as a temporary employee. Obviously, my constituent was

harmed by the action, as was the agency for which she had worked and proven her abilities.

Mr. HARRIS' legislation will do much to bring about meaningful reform to an antiquated hiring policy of the Federal Government. The need for the quota system may well have been present in 1883—but now the provision only serves to hinder hiring the best applicant.

The apportionment rule is, in this day and age, counterproductive and I hope that the Post Office and Civil Service Committee will review this legislation and recommend favorable action.

LASER FUSION

HON. PAUL N. McCLOSKEY, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. McCLOSKEY. Mr. Speaker, on Friday, March 4, one of my constituents appeared before the House Subcommittee on Fossil and Nuclear Energy Research, Demonstration and Development of the Committee on Science and Technology to testify on the subject of laser fusion.

He is Dr. Robert Hofstadter, Max H. Stein Professor of Physics at Stanford University, and a Nobel laureate. He is former director of the high energy physics laboratory at Stanford. He is credited throughout the world for his contribution as a doctoral candidate to the understanding of the so-called hydrogen bond, which explains the mechanism by which hydrogen combines with so many elements. He is also known for his work in determining the precise dimensions of the nuclei of all elements in the periodic table.

Although Dr. Hofstadter's testimony will appear in the record of the hearings conducted by Mr. FLOWER's subcommittee, I think it appropriate to make it promptly available to Members of Congress, and therefore I submit it for inclusion in the RECORD:

TESTIMONY OF DR. ROBERT HOFSTADTER

My name is Robert Hofstadter. I am appearing as Executive Scientist of KMS Fusion, Inc., Ann Arbor, Michigan, which is a part-time activity in addition to my regular duties as Max H. Stein Professor of Physics at Stanford University.

For many years, I have been a consultant for the Harshaw Chemical Co., on the development of scintillation materials. For the last five years, I have worked on a part time basis with the staff of KMS Fusion in the development of a program designed for the civil applications of laser fusion. I hope laser fusion will become a major source of energy for the future needs of the nation. I have written an article titled, "Laser Fusion," which appeared in the IEEE Transactions on Nuclear Sciences, Vol. NS 24, No. 1, pp. 33 to 47, February 1977. I cite this record to show experience in scientific matters and in industrial work. This background is appropriate since what I am going to say may be at variance with other testimony you may have heard or will hear. I want to assure this Committee that I have given much thought to how civil energy needs may be advanced in the shortest possible time.

To support my point of view I will lean heavily on the work of KMS Fusion. Although this company's work has not been sufficiently appreciated in the past and is still being largely ignored, the company's staff produced the first implosions of thermonuclear fuels, and on May 1st, 1974 produced the first man made thermonuclear neutrons except for those made in hydrogen bomb explosions. Subsequently other laboratories have observed and confirmed these observations.

I regard the future of laser fusion energy as much closer than most others—but only if the program of development in this field is given adequate financial support and scientific freedom of investigation. I want to see laser fusion energy production in my life time and I am 62 years old. If I felt otherwise I would work on other subjects.

Interest is mounting in the civil energy application of laser fusion and I cite as evidence that a University of Wisconsin group under contract from the Electric Power Research Institute is providing an actual reactor design for a 3,000 megawatt unit. On the whole, however, a civil energy laser fusion program is nonexistent. I think our national policy needs a severe prod in order to reverse its direction. I should point out that our national program is essentially oriented toward weapons development, weapons simulation and weapons design. But civil energy needs, I submit, are very different from weapon needs, and there are innumerable deviations in the two approaches. My interest and KMS Fusion's interests are in the civil energy department.

Let me indicate what an industrial approach such as that at KMS Fusion could do to advance our civil energy needs in the shortest possible time.

I shall make a major point first. Civil energy production requires a device, similar to a large automobile engine, that delivers relatively small amounts of energy in each micro-explosion, but relatively often—such as perhaps ten times per second. The needs of weapon development or weapon simulation might be satisfied by only one micro-explosion per day or perhaps only one explosion per week. The aims are very different.

Now, what can an industrial approach do? I will itemize the relevant points below:

1. An industrial approach can define the laser fusion needs for fast cycling lasers, such as gas lasers, and possibly the free electron laser recently invented by my Stanford colleague, Dr. John M. Madey. As I indicated, fast cycling lasers are essential for civil energy.

2. Industry can help with the actual development of fast cycling lasers such as the iodine laser.

3. Industry can determine the usefulness of laser radiations of different wavelengths. The wavelengths of the laser light may be crucial in determining the efficiency of a real energy-producing reactor. KMS Fusion has already done research at two different wavelengths.

4. Our industrial approach can be directed to investigate and develop all-reflective optics so as to avoid power limitations and energy losses in glass lenses and other optical devices in conventional lasers. All-reflective optics will also permit the use of several wavelengths at once.

5. KMS Fusion is interested in exploring a variety of pellet configurations in obtaining the most information about their usefulness and suitability, begining with the hollow spherical pellets now widely used. The suitability and usefulness of a pellet for energy production depends greatly on how well it solves the problems of coupling laser energy to the target—problems that KMSF has spent a great deal of time investigating—and on how cheaply it can be manufactured.

6. In contrast to the largest developments underway in government laboratories, the KMSF approach has been to use a small two-beam reflector system. Most of the fundamental facts in the laser-fusion process can be discovered with this highly efficient technique. This is the same technique that first produced thermonuclear neutrons.

7. Our commercial approach can emphasize pellet technology from the viewpoint of immediate application to reactors. This would involve pellet engineering and automatic characterization and selection of pellets for use in a reactor. This includes learning how to make billions of pellets, quickly and easily, on a mass production basis. This procedure is to be contrasted with the one-target-a-day approach of weapons technology.

8. Industry can develop the best materials for pellets by carrying out a program oriented in this particular direction. It is recognized that KMS Fusion has the best materials group in this field in this country.

9. Industry can develop the pellet-injection system and engineer the suspension devices that may possibly be needed. Alternate modes of feeding pellets quickly into a reactor need to be studied and developed.

10. Industry can develop pellet standards and provide calibration devices for the entire laser fusion field.

11. A most important practical question relates to how the neutron and alpha particle output energies are best transferred from the pellet to the reactor. For example: the most common proposal is to use the particle-developed heat to drive electrical generators using heat exchangers of various types. An alternative proposal, in fact a KMSF suggestion, is to use neutron induced breakup of chemical materials to store energy in the form of hydrogen or methane or other materials. This process is called neutron or particle radiolysis.

12. The KMSF program can be used as the basis of future industrial participation and technology transfer.

The above items are examples of how industry, and specifically KMS Fusion, can help to advance the technology and engineering of laser fusion for civil energy needs. But it is extremely significant, in a newly developing subject of this importance, to recognize that alternative approaches are essential if it is desired to come up with the earliest possible realization of laser fusion energy.

In the case of fission energy, which was developed in war time, alternate methods of separating uranium isotopes were investigated simultaneously and alternate designs of the ultimate bomb were also developed. One of the successful designs was based on the implosion phenomenon, an invention of Dr. Seth Neddermeyer, a close friend of mine.

It is essential, in my opinion, to have several different groups working on the development of laser fusion energy and not to have the work directed exclusively from a single masterminding center. The advantages of a multifaceted approach by different groups are:

(a) new ideas are more easily produced by independent groups;

(b) each group can check on the accuracy and effectiveness of another group's results;

(c) the groups can stimulate each other by competition for the best results, and

(d) only the highest standards can survive.

It is to be noted that Russian competition has been a driving force in this field. In fact, the Russian scientist, Basov, is the inventor of the laser fusion concept.

The laser itself was developed in a private laboratory, namely the Bell Telephone Labs by C. H. Townes and Arthur Chawlow, who is now a colleague of mine at Stanford. Furthermore, the first laser, a ruby laser, was made by Theodore Maiman, a former Stanford graduate student who did his epoch-making work in an industrial laboratory.

Forty years of experience as a physicist have convinced me that several investigators, pursuing their own lines of thought, can make discoveries that no one can anticipate. Thus a single unidirected weapons approach,

such as the one now in effect in the United States, should be changed in my opinion. We need variety, freshness, and freedom of investigation.

I wish to thank the Committee for the opportunity that it has given me to present my point of view on laser fusion.

MINIMUM WAGE LAWS CREATE UNEMPLOYMENT

HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. RUDD. Mr. Speaker, the economic advantage by raising the minimum wage to $3 an hour is straight out of dreamland.

If economics can be controlled by legislation, why not make the minimum wage $10 an hour? The truth is that minimum wage laws force the least employable and the least skilled into the ranks of the unemployed.

The President is talking about a billion dollar program to provide jobs in our urban centers for young people who now cannot find work.

Study after study has disclosed that when a minimum wage is imposed, it costs jobs.

Nobel Laureate Milton Friedman asks the question: How can a teenager be better off unemployed at $3 an hour, rather than employed at, say, $1.75 or $2 an hour?

Years ago, University of Chicago economist Yale Brozen offered a study which disclosed that when the minimum wage passed $1 an hour there was a sudden rush to automate elevators, and thousands of elevator operators were thrown out of their jobs.

These elevator operators were people who had no other skill. But they could run an elevator. And a lot of us remember with great fondness the pleasure it was to have a friendly elevator operator stopping the car in response to our request.

Minimum wage laws approach the problem from the wrong end. They inspire automation. The minimum wage forces employers to weed out indifferent workers, and it denies jobs to tens of thousands of young people who would be much better off with a productive job instead of on the streets.

About 50 percent of all unemployed people today are 25 years of age and under. The vast majority of these are age 18 and under. More than 50 percent of all black teenagers are unemployed. Minimum wage laws are largely responsible for this tremendous unemployment among our young people. Most of them could get jobs if they were not priced out of the job market by the high wage floor that makes it economically undesirable to hire unskilled young workers.

We are all in favor of employees earning better salaries. But the way to higher earnings is through increased production, improved skills, and the right mix of manpower and machines.

To attempt to accomplish this by legislative fiat is to again invite disaster.

COMMON SITUS: UNCOMMONLY BAD

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. McDONALD. Mr. Speaker, as the campaign again mounts to allow employees of one contractor to close down an entire construction site, it is important to consider the two most obvious effects of the common situs picketing bill.

First, at a time when inflation and Government regulation is driving up the cost of construction and depressing the housing industry, it is doubly bad to add yet another roadblock to further building and progress.

Second, the additional cost will further retard construction, providing even greater incentive to contractors to use less expensive nonunion labor. Consequently, union workers will be worse off if the common situs bill becomes law. Sometimes one wonders whose side the labor union leadership is on.

This point and others are well argued in the following New York Times editorial urging Congress not to pass common situs.

The article follows:

AN UNCOMMONLY BAD BILL

The "common situs" picketing bill is back again in Congress, not as an Administration bill this year but with strong support from the A.F.L.-C.I.O. leadership and, not surprisingly, from legislators with ties to organized labor. Though altered in committee to provide certain moderating exemptions, the present bill, like the one President Ford vetoed in 1976, would permit the employees of one contractor on a building project to set up picket lines to keep members of other unions from working anywhere on the site.

The bill would accomplish this objective by making secondary labor boycotts legal in the construction industry. In 1976, then Secretary of Labor John Dunlop strongly supported the measure because it was coupled with a bill that advanced labor stabilization in the industry. Mr. Dunlop, in fact, resigned to protest the Presidential veto. The present bill lacks even the attraction it had for Mr. Dunlop and we hope it will not pass. A common situs law would make construction labor even more volatile than in the past, and increase building costs.

Proponents of the bill argue that if the building trades constituted a single union, a picket line would inevitably keep all its members off a struck site. Thus, they say, the common situs bill merely gives these workers the protection they would have if they chose to organize on an industry-wide basis.

This point is not persuasive. If all the building workers on a site were members of the same local, its leaders would surely hesitate before throwing up a picket line that would inconvenience all of its members for the benefit of a few. In any event, the building trades unions have had the same opportunity as other workers to coalesce into a single union. Since they have chosen to continue their separateness, why bless them legally with the benefits of the togetherness which they have rejected?

Shrinkage in the share of construction work now done by union labor has stimulated the demand for common situs picketing. The reason for the shrinkage, however, arises not from the lack of such a bill, but rather from the great differential between the cost of union and nonunion construction labor. By threatening to raise the cost of union labor still higher, the common situs bill would only invite builders to use more nonunion workers. The Congress and the President will, in this case, be helping labor best by ignoring the counsels of its leadership.

THE NEW NATURAL GAS DEREGULATION AMENDMENTS OF 1977

HON. TIMOTHY E. WIRTH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. WIRTH. Mr. Speaker, one of the most important, most complex, and most politically charged issues facing the United States is the question of what our national policy will be about natural gas—its regulation or deregulation, its price, its use, and its conservation.

This subject, of course, is not new to most Members of this Congress. Both the House and the Senate passed measures last year which would have changed our natural gas policies. The measures were substantially different, though, and a conference committee was never appointed to work out a compromise.

During the 94th Congress, and now in the 95th, I have served as a member of the Commerce Subcommittee on Energy and Power, the panel with jurisdiction over most natural gas issues. From that position, I have worked hard to learn about natural gas. I am continually learning, however, and I am not yet sure that I know the best policy for the Congress to adopt. Still, I would like to share with my colleagues my current thinking on this issue, and describe to them a legislative approach that should be considered.

The need for legislative action is clear. On the one hand, we are running out of natural gas. Our known and measured reserves of gas are sufficient to last us for only about 10 years, at our current rate of consumption. Much more important—and much more frightening—is the fact that since 1967 we have consumed those reserves more rapidly than we have discovered additional gas. As dramatically demonstrated by this year's winter, we will all pay a heavy burden if we run out of gas.

On the other hand, we are already paying more and more for the natural gas that we use, either directly through our home heating bills or indirectly through increased costs for other goods and services. This burden is felt most heavily by retired people and others on fixed incomes, many of whom cannot heat their homes without cutting back on other necessities of life. Further, the increased share that we, as a nation, are paying for higher natural gas bills has a limiting effect on the rest of our economy.

Before addressing what we might do to change our national policy on natural gas, I would like to provide some information on the current situation.

Natural gas is our best fuel and most valuable natural resource. It is used for an extraordinary variety of purposes: Space heating of buildings, generation of

electricity, fertilizer production, and the manufacture of clothing, plastics, and an increasing array of industrial and consumer products. Gas is our best source of heat, since it burns at an even temperature with a flame that can be easily adjusted. Perhaps most importantly, natural gas is by far the cleanest burning of the fossil fuels, making it the most environmentally sound of our current major sources of energy. The use of natural gas, rather than other fuels, keeps our air from being even dirtier than it now is.

Because it is such an excellent fuel, natural gas is consumed in great quantities in the United States. In 1975, we consumed about 20.3 trillion cubic feet of gas, which amounts to about one-third of all the energy that we used. The use of natural gas has been increasing more rapidly than the use of other fuels, with total consumption doubling in 15 years.

In 1938, Congress passed the Natural Gas Act, which gave the Federal Power Commission, FPC, the authority to regulate the transportation of natural gas between States, and to regulate the price of natural gas sold by interstate pipelines to local distributors. The underlying philosophy of this act was a recognition that interstate pipelines—of which there are now slightly more than one hundred—have a relationship with gas distributing companies that is somewhat akin to a monopoly. Since there are relatively few interstate pipelines, which of course are stationary and serve only a certain geographical area, distributors are not free to choose among many sources of supply. To protect the distributors from this situation where the normal marketplace protection of competition among sellers was not present, Congress extended governmental control over the pipelines.

In 1954, a divided Supreme Court ruled that an ambiguous phrase in the Natural Gas Act requires the FPC to also regulate the price of natural gas sold from producers to the pipelines if the natural gas would eventually be sold to a distributor in another State. This extension of the FPC's regulatory to the "wellhead" price of interstate gas had far-reaching effects. This price is the first price for which gas is sold, and inherently becomes a factor in the prices that are charged during subsequent resales of the gas.

The FPC was then faced with the difficult task of setting uniform wellhead prices that would be sufficient to cover the producers' costs and to provide appropriate incentives for companies to enter into the risky business of hunting for additional gas. This task was particularly difficult because even the producers did not have accurate cost figures. Historically, oil producers would find natural gas in the same formations as oil fields. Not recognizing the worth of the gas, the oil companies would burn it off—flare it—so they could get to the oil.

Later, people recognized that a good fuel was being wasted, and the natural gas was captured and sold. But the gas was sold far cheaper than the oil, since the oil was sold at prices sufficient to cover the costs of its discovery and drilling. When setting prices for the gas, however, the producers did not factor in the discovery and drilling costs; these were the costs of getting the oil, and the natural gas was an inexpensive byproduct. As a result, oil was properly priced and gas prices were artificially low.

From this low starting price, FPC regulation has kept natural gas unnaturally cheap. The Commission started with an unreasonable market price because of this historical fluke, and has tried to adjust those prices based upon retroactive calculations of costs—calculations that have not reflected changing situations and increasing costs.

Yet, situations have changed and costs have increased more quickly than regulation can keep up. We have consumed an enormous amount of natural gas in this country. Not surprisingly, that gas has been from the fields that are easiest to discover and tap. Now, the industry is having to search further, and drill deeper, to find additional supplies. As a result, industry productivity—measured as the ratio of gas recovered to depth of drilling—has decreased by more than one-half in the past 10 years.

Further, drilling costs have risen drastically. The gas industry is subject to the universal inflationary pressures on its overhead; in just 7 years, the cost of 1 foot of drilling has increased by over 50 percent for successful wells and by over 100 percent for dry holes. Even this is only part of the story. The industry now has to drill deeper to find untapped gas reserves, and deeper wells cost much more per foot than do shallower wells.

Even with the FPC's highly controversial price increase last summer—to $1.44 per thousand cubic feet (Mcf) for newly discovered gas—the producers' costs often exceed the prices they are allowed to charge. Nobody can expect an industry to sell a product at a loss. Consequently, the known supplies of gas—which are already dangerously low—are being consumed more rapidly than new gas is being discovered.

Worse yet, most of the new gas that is being discovered is not going into the interstate market to feed the gas-starved regions of the country. FPC price controls only apply to gas that is produced in one State and sold in another. If the gas stays in the intrastate market, its price is set by a free market. The intrastate market price is currently around $2.00–$2.25/Mcf, compared to the maximum $1.44/Mcf price in the interstate market; not surprisingly, newly discovered gas that is not yet committed to a long-term market stays in the producing State.

Faced with this system of governmental price control at a level below the free market price and often below production costs, and pointing to the worsening gas shortage, the natural gas industry has argued for immediate and total deregulation of wellhead prices. The industry says that the higher prices that would result from the free market would provide the necessary incentive for the discovery of new supplies. Deregulation would also end the illogical interstate-intrastate distinction, and get gas flowing to the regions where it is most needed.

The case on the other side is also strong. Many consumer groups point to home heating bills, which have increased greatly in recent years, and argue for the continuation of price controls, a rollback in the FPC price level, and extension of price controls into the intrastate market. Further, consumers point out that the Government relies on the natural gas industry as its only source of information about the size of our reserves, and suspect that the industry is conspiring to paint an inaccurate picture of shortages and to withhold known supplies in an effort to stampede Congress toward deregulation.

There groups recognize that the easy-to-produce natural gas is gone, and that reserves that remain to be discovered are scarce. However, maximum drilling can be achieved, they argue, at a price less than the "world" or "market" price. And scarce capital should be devoted to energy conservation and to new energy sources, not just to raising natural gas prices.

Finally, consumer groups will argue that an abrupt decontrol of all fuel prices—oil and/or natural gas—will cause a massive blow to the economy, removing consumer spending power, and plunging us deeper into recession. The United States went through this experience in the early 1970's, with the Arab oil boycott, the quadrupling of the price for imported oils and the subsequent recession in the United States. Why repeat this bitter experience?

My own belief is that the best approach lies somewhere between those two poles.

I believe that our natural gas crisis is real, and is not the product of a conspiracy among the 30,000 domestic oil and gas producers. While our economy is accustomed to an artificially low price for gas, and an abrupt increase in price would be too heavy a burden for consumers, some increased prices are necessary to assure continued gas supplies, and to price natural gas in closer equity with alternative fuels. Without those increased supplies, consumers will face even greater burdens. This past winter has demonstrated how great those burdens can be. Even if the exhaustion of our current supplies happens slowly enough to allow an orderly transition to the use of other fuels, the cost of every alternative fuel is greater than even unregulated gas. Synthetic gas made from coal, for instance, sells for about $4/Mcf, or twice the price of unregulated natural gas.

I am convinced that we need increased supplies of natural gas, and that we need to seek those supplies in a fashion that does not put too great of an immediate burden on consumers. In an attempt to meet this goal, I am today introducing the New Natural Gas Deregulation Amendments of 1977. This is the same bill that I introduced last May in an attempt to facilitate argument on a reasonable policy when the House and Senate could not agree on natural gas legislation. Since I am continuing to learn about this complex issue. I am not convinced that this legislation is in every respect the policy that should be adopted. I am convinced, however, that this is a reasonable approach that should be seriously considered.

The new natural gas deregulation amendments would:

Prohibit any new contracts for the use of natural gas as a boiler fuel, and prohibit existing uses of gas as a boiler fuel within 10 years, except where necessary to comply with air pollution standards. Coal, which is abundant, can be used for boiler fuels; natural gas should be saved for essential uses, rather than being used to produce one-third of industry's electricity.

Give a priority to the use of natural gas for essential agricultural uses and other essential uses.

Deregulate the price of gas from onshore wells if the gas is committed to interstate commerce for the first time after January 1, 1977. This will help to encourage gas to flow from the intrastate market to the interstate market; neither newly-discovered natural gas nor "old" gas that is currently locked away in the intrastate market would be subject to FPC price regulation. While this will mean some increase in consumer bills, it should be pointed out that the price of natural gas at the well-head is only about 17 to 25 percent of the total cost which the consumer pays for natural gas. About 25 percent of the cost is usually attributable to pipeline costs, and 50 percent to local distribution costs. Thus, as natural gas prices at the well-head increase, there is not a proportionate price increase in consumer bills.

Deregulate the price of off-shore gas that is first sold in the interstate market after January 1, 1977, subject to a price ceiling. The price ceiling would originally be the equivalent, on a Btu basis, of maximum weighted average of domestic crude oil. The FPC would revise the ceiling price every 5 years after considering enumerated criteria. Since off-shore gas is required by Federal leases to go to the interstate market, total deregulation is not necessary to keep this gas out of the intrastate market. This revised price will be sufficient to encourage accelerated production.

Require the FPC to biannually review the regulated price for old natural gas, and adjust the regulated price as existing contracts expire, if necessary to meet certain criteria.

Direct the FPC to conduct comprehensive natural gas studies, including independent evaluations of gas reserves.

Extend FPC jurisdiction to cover synthetic gas plants and synthetic gas prices. Synthetic gas would be priced under the same policies as would natural gas.

This legislation will not, of course, completely solve the natural gas crisis; additional programs and policies will be necessary to supplement the new natural gas deregulation amendments. Most importantly, further conservation measures are necessary to insure that we reduce our waste of natural gas. A nationwide plan of financing home implementation of conservation methods—probably by utility financing, with the costs added to consumers bills over an amortized period, but perhaps through tax credits for insulation costs—is sorely needed. Further, assistance is needed to retired people on fixed incomes and other low-income people to help them bear the burden of increased heating bills is necessary. The new Community Services Administration program of grants for this purpose is an excellent idea that should be vigorously pursued.

Other work, too, will have to be done to deal with the problems that we face. As a local official recently said to me:

> The energy crisis didn't happen to us, we created it and the only responsible way to deal with it is to change the policies that brought us to it.

I believe that the new natural gas amendments will be a step in this direction. I welcome any comments or questions from my colleagues; please feel free to contact me or Stephen Saunders of my staff—225–2161.

PREGNANCY-RELATED DISABILITY BENEFITS

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. DRINAN. Mr. Speaker, yesterday I joined with Representative HAWKINS, chairman of the Subcommittee on Employment Opportunities, and 90 Members of the House in introducing a bill (H.R. 5055) to overturn the decision of the Supreme Court in General Electric Co. against Gilbert. In that case, the Court held that an employer may refuse to provide pregnancy-related disability benefits to its female employees without violating the Federal equal employment opportunity statute, title VII of the Civil Rights Act of 1964.

The bill we introduced yesterday would amend title VII to define sex discrimination to proscribe employment practices which disadvantage female employees because of pregnancy. It would overturn the precise holding of Gilbert which denied wage continuation benefits during the period of disability. In addition the bill would cover a wide range of other discriminatory employment practices imposed because of pregnancy, such as unequal medical treatment and compulsory leave.

Today I am introducing a second bill to deal with the serious problems of female workers created by the Gilbert decision. This proposal would amend the Internal Revenue Code to deny tax deductions to an employer which does not provide pregnancy-related disability benefits under its accident or health plan. Under existing law, employers may claim deductions for their contributions toward such plans even if they exclude disabilities arising out of pregnancy. In my judgment we should not allow employers to obtain such tax breaks if they do not provide equal treatment for their female employees.

This bill would disallow tax deductions if an employer discriminated against pregnancy-related disabilities while providing benefits for other types of temporary absences from work or related medical conditions. As in the measure introduced yesterday, this bill would thus go beyond the immediate holding of Gilbert to remedy other forms of discrimination related to pregnancy.

To a very large degree, the proposal would be self-executing. Tax deductions provide a great incentive for the beneficiaries—in this case, employers—to comply with the prescriptions of the Internal Revenue Code. Unlike title VII, the need for an individual complaint enforcement mechanism is largely eliminated. This Tax Code approach would also reach more employers since title VII exempts companies with less than 15 employees.

Before concluding, I should also note the introduction of a third bill, which would overturn Gilbert in a less direct fashion. On February 16, Chairman EDWARDS of the Subcommittee on Civil and Constitutional Rights and I introduced H.R. 3504, the Civil Rights Amendments Act of 1977. Title I, the Equal Employment Opportunity Reorganization Act of 1977, would revise and strengthen title VII in a number of ways. Among other things, it would give the Equal Employment Opportunity Commission the authority to issue substantive regulations.

Under existing law, EEOC may promulgate only procedural rules. If the Commission were given substantive rulemaking power, it could prohibit the kind of pregnancy-related discrimination approved by the Supreme Court in Gilbert. Indeed prior to Gilbert, the EEOC had issued such a proscription in the form of a guideline, which the Court declined to follow. Title I of H.R. 3504 would also repeal the exception in title VII which the Supreme Court interpreted to authorize the gender-based compensation differential involved in Gilbert.

Because of the different scope, approach, and enforcement machinery, it is important that these three bills be given serious consideration for enactment. In my judgment, they propose complementary remedies to correct the deleterious impact of the Gilbert case on equal rights for women. I strongly urge all members to join as sponsors of each measure.

The text of the bill follows:

H.R. 5055

A bill to amend the Internal Revenue Code of 1954 to deny any deduction for amounts paid or incurred by an employer pursuant to an employee health or accident plan if such plan does not provide certain pregnancy benefits

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part IX of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to items not deductible) is amended by adding at the end thereof the following new section:

"SEC. 280C. HEALTH OR ACCIDENT PLANS WHICH DO NOT PROVIDE CERTAIN PREGNANCY BENEFITS.

"(a) DENIAL OF DEDUCTION.—No deduction shall be allowed under this chapter for any amount paid or incurred by an employer pursuant to an accident or health plan for the benefit of the employees of such employer—

"(1) if—

"(A) such plan provides for wage continuation benefits to employees during periods in which such employees are absent from work on account of temporary personal injuries, sicknesses, or other physical impairments, which are not work-related; and

"(B) such plan does not provide for wage continuation benefits to employees during periods in which such employees are absent

from work because of pregnancy disabilities on terms and conditions as favorable as the terms and conditions applicable to any other temporary personal injury, sickness, or physical impairment, which is not work-related; or

"(2) if—

"(A) such plan provides for payments (through insurance or otherwise) to employees as reimbursement for expenses incurred by them for the medical care of themselves, their spouses, and their dependents; and

"(B) such plan does not provide for such payments with respect to expenses incurred for medical care required for pregnancy or childbirth, or complications thereof, on terms and conditions as favorable as the terms and conditions applicable to any other type of medical care covered under such plan.

(b) DEFINITIONS.—For purposes of this section—

"(1) WAGE CONTINUATION BENEFITS.—The term 'wage continuation benefits' means the payment (through insurance or otherwise) of wages, salary, or other amounts to an employee during periods in which such employee is absent from work.

"(2) PREGNANCY DISABILITY.—The term 'pregnancy disability' means any personal injury, sickness, or physical impairment resulting from pregnancy or childbirth, or complications thereof.

"(3) MEDICAL CARE.—The term 'medical care' has the meaning given such term by section 213(e)."

(b) The table of sections for part IX of subchapter B of chapter 1 of such Code is amended by adding at the end thereof the following new item:

"Sec. 280C. Health or accident plans which do not provide certain pregnancy benefits."

(c) The amendments made by this section shall apply to amounts paid or incurred after the date of the enactment of this Act in taxable years ending after such date.

H.R. 4877

HON. JOSEPH L. FISHER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. FISHER. Mr. Speaker, today the House passed H.R. 4877, making supplemental appropriations for fiscal year 1977. Included in the bill are funds to carry out the provisions of Public Law 94–405, the Indochina Refugee Children Assistance Act. This legislation, which became law last September, authorizes $300 per child for school districts enrolling under 100 refugee children, and $600 per child for those enrolling 100 or more. The amount recommended by the Appropriations Committee to fund this act is $18,500,000 which I understand was determined based upon an analysis of the refugee population ages 5 to 17 and the formula in the basic law. Also contained in the bill are funds for adult refugees in the amount of $10,250,000.

I commend the committee for its quick action in providing funds for Public Law 94–405. Last session the authorization bill did not pass in time for the House to consider the corresponding appropriations bill; and the school districts which have absorbed an unusually large number of refugees, including my own, have been anxiously awaiting these funds to implement their programs. Both Arlington and Fairfax Counties have designed programs to assist the refugees, but could not begin them until they received word of the fate of the appropriations. I am confident that the programs implemented under the Indochina Refugee Children Assistance Act by school districts across the country will prove effective in helping both young and adult refugees assimilate into their respective communities.

A BIG YEAR FOR THE FARMER

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for March 16, 1977, into the RECORD:

[From Washington Report, Mar. 16, 1977]

A BIG YEAR FOR THE FARMER

This year will be one of major decisions about food and agriculture in the United States Congress. All the major agriculture bills expire and must be reconsidered. This includes the basic farm law, Food for Peace legislation and the Food Stamp Act. These decisions will be among the most important to be made by the 95th Congress. They come at a time of new troubles in agriculture. Instability in prices, higher farm production costs, the future of agriculture and the nature of government policy are all cause for concern.

As in the past, the central problem will be the balancing of needs of different groups with competing interests. The farmer sees the threat of falling prices as the key issue. The consumer worries about higher food prices at the food market. The nation wants to have a reliable and sufficient supply of food. Foreign nations, depending on their particular circumstances, worry about export competition, world prices, or the availability of food aid. It all adds up to a zero-sum game in which there can be winners only to the extent that there are losers.

For many years the American farmer has produced more food and fiber than domestic and foreign markets can accommodate at acceptable prices. The threat of surpluses remains. Government programs have focused on supporting prices and on handling government stocks required with the price supports. In recent years the costs of these government programs have dropped significantly, due less to fundamental changes in agricultural policy than to sharply increased world-wide demand.

Although there has been much talk about getting government out of agriculture, the basic thrust of farm policy has remained very much the same for forty years, with minimum prices for basic commodities putting a floor under farmers' incomes. These supports have not been used in recent years because market prices have been higher than minimum prices.

Farmers continue to face serious difficulties. They are heavily dependent on grain exports as a source of earnings. The better income of recent years has not been uniformly distributed to all of them. For example, livestock producers have been badly hurt by rising feed costs and falling livestock prices. As a general rule, crop producers have done better than livestock producers, though wheat farmers have not been doing well. Farm income has dropped 30% below the peak it reached in 1973. The value of land and the cost of production have increased rapidly. Food prices have contributed to inflation and the trend toward fewer and larger farms has continued.

The major questions for agricultural policymakers are several. First, at what level should commodity prices be supported? The 1973 Agricultural Act established target prices and a procedure through which farmers meeting the eligibility requirements received deficiency payments if the average market price dropped below the target price. The real question this year is whether to continue present target prices or to tie target prices to the cost of production. Farmers have favored the freedom to make their own planting decisions under the present program, but many of them have been critical of the low level of the target prices.

Second, should consumers be protected from high food prices? Currently they have no such protection. A domestic grain reserve might provide it, but the operating rules for such a reserve are critical to its effectiveness in reducing price instability. Moreover, proposals for reserves generate much controversy. They might reduce price instability, but they would also increase budgetary cost. Excessive sales from reserve stocks might be used as a tool to keep prices from rising to fair levels. Consumer groups tend to see grain reserves as a market stabilizer, humanitarian groups tend to see them as necessary to meet the world food crisis, but farmers have traditionally opposed them, fearing that the government could not resist consumer pressure in time of rising prices and would dump surpluses, thereby reducing the prices farmers receive.

Policymakers will also ponder what role the government should have in protecting farmers from natural hazards, and what reforms should be made in the food stamp program. This last question will bring on major battles over costs of the food stamp program, its work registration requirements and its eligibility rules even though declining participation in the program has somewhat cooled criticism of it. The issue of the President's flexibility in selecting the countries to receive U.S. food aid will also come up, as will the issue of an expanded program of agricultural research. With most of the arable land in the U.S. now under cultivation, with chemical fertilizers reaching a point of diminishing returns and with crop yields appearing to reach their peak, many scientists are now urging more research to develop better methods of production.

WALTER W. BATES TO BE AWARDED VAIL MEDAL OF HONOR

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. EDWARDS of California. Mr. Speaker, I want to take a moment to express my deep admiration for Walter W. Bates of Fremont, Calif., who will be awarded the Vail Medal of Honor this May.

At great danger to himself, Walter Bates battled treacherous undertows to pull to safety an elderly fisherman who would have been lost at sea.

Observers of human society know that there is no schedule or formula for heroism. Most often the decision to risk life and limb to save another is a split second one. In fact, such decisions are actually rooted in the fundamental character of an individual.

Acts of heroism, like Walter Bates inspiring rescue, serve as a reminder of the basic goodness of human beings and as an inspirational example to all people. Walter Bates deserves this award and also commendation from each of us who admire his good deed.

TRIBUTE TO MILES C. ALLGOOD

HON. TOM BEVILL

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. BEVILL. Mr. Speaker, on March 4, one of the most distinguished Representatives Alabama ever sent to Congress passed away. I am referring to former Congressman Miles C. Allgood, who died at the age of 99 after a long and illustrious career of public service.

Congressman Allgood served in the U.S. House of Representatives from 1923 to 1935. During that time, he served as chairman of the War Claims Committee, the forerunner of the modern-day Veterans' Affairs Committee. During his six terms, he also served as chairman of the Reclamation and Irrigation Committee.

Congressman Allgood was instrumental in getting the historic Tennessee Valley Authority legislation through the Congress and his opinions and advice on this subject were solicited and greatly respected by the Roosevelt administration, from the President on down.

Following his congressional career, Congressman Allgood served on the Farm Security Administration. He continued in this capacity until 1943, when he retired and returned to his home in Mentone, Ala.

The fact Congressman Allgood resided in my congressional district made my appreciation for his outstanding record as a public servant even greater.

Miles Allgood was a public servant in every sense of the word and his service to the people he represented will long be remembered.

Mr. E. E. "Red" Cox, a resident of the Fourth Congressional District and a former special assistant to the Comptroller of the Currency of the U.S. Treasury Department, has written an outstanding tribute to Congressman Allgood based on personal experiences.

Mr. Cox came to Washington as a result of Congressman Allgood's assistance and later served as administrative assistant to Alabama Congressman Albert Rains.

The article is a fitting tribute to Congressman Allgood and I hereby submit it for the RECORD:

AN OLD FRIEND FADES AWAY

(By E. E. (Red) Cox)

Alabama has lost one of its most distinguished citizens of our time. I have lost a good friend. Former United States Congressman Miles C. Allgood, age 99, of Mentone, a place he loved so much, passed away Friday, March 4. He was buried in Valley Head Cemetery. Funeral services were held in the Chapel of the Wilson Funeral Home.

As I stood by his graveside, along with my lovely wife, in the cold rain, with his wife, and many friends, I recalled some of the accomplishments and contributions he had made to our country.

He served in the House of Representatives 12 years, from 1923 to 1935. I first met Congressman Allgood in 1932 at the old Gadsden Mallard Hotel, where my brother-in-law, W. H. Cummings, was Manager. I had just graduated from Etowah High School. I was a clerk there and attended the Alabama School of Trades. The Congressman would use the lobby to meet with his friends. He was handicapped by the loss of one arm. He had a gregarious personality, hearty laugh, and a heart of gold. I would listen to him tell about Washington, the Panama Canal, Muscle Shoals, and why we should develop the Tennessee Valley. I would cling to every word he would say with amazement. When everything was quiet and we were alone, I would ask him questions about Washington. Such as "Where is Washington?" And "How do you get there?" I remember him saying, "Young man, you seem to be a very fine boy. I will just get you a job up there!" And he did.

I went to Washington and found him to be a great leader, along with Senator John Bankhead and Congressman William Bankhead, who was later Speaker of the House and was also the father of the famous actress, Tallulah. Congressman Allgood was Chairman of the War Claims Committee, now known as the Veterans' Affairs Committee, also Chairman of the Reclamation and Irrigation Committee.

The economic conditions of the farmer were so bad that President elect Roosevelt wanted to do somthing about it. In 1932, before he was inaugurated, he called Congressman Allgood and asked him to come to Warm Springs, Georgia. He was impressed with Congressman Allgood's knowledge of the conditions that existed, and in January 1933 his Secretary, Marvin McEntire, called from Albany, New York, and said President elect Roosevelt was formulating a party to visit and inspect the Muscle Shoals properties. He asked Congressman Allgood to give him a list of representatives interested in the project. Senator Norris of Arizona, some other interested Senators and Congressman Allgood, along with the Alabama Delegation, took the special train out of Washington with Mr. Roosevelt. I remember him telling how hundreds of people were gathered at the railroad stations with the hope of getting a glimpse of the President.

Later that year, Senator Norris introduced President Roosevelt's Tennessee Valley Authority Bill in the Senate. Then, Congressman Lister Hill introduced it in the House. The bill was passed by a large majority. I have a picture of President Roosevelt signing it into law, and beside him is Congressman Allgood who received the Third Pen he used.

On January 15, 1968, Senator Carl Hayden of Arizona, President of the Senate and Dean of the Senate, wrote to Mr. Allgood expressing his gratitude for the help he had given when they were serving in the House of Representatives from 1923 to 1927.

Congressman Allgood joined him in sponsoring the bill which made possible the Grand Coulee Dam on the Columbia River—the greatest water power in our Nation. He also helped to bring about a just settlement of the controversy between Arizona and California over the construction of the Hoover Dam on the Colorado River.

Congressman Allgood was blessed with an excellent secretary, R. Lee Barnes, from Guntersville, and formerly Superintendent of Schools in Marshall County. Lee was one of the best loved men that ever came from Alabama. He was President of the Little Congress (composed of secretaries of Members of Congress and, incidentally, was succeeded by Lyndon B. Johnson, who was then secretary to Congressman Richard Kleberg). Lee was responsible for my ambition to become a secretary to a Congressman. I could see the power they had when it came to dealing with the government. I got my chance when Congressman Albert Rains, one of the greatest, was elected. I worked with him as his Administrative Assistant until he retired.

President Roosevelt had great respect for Congressman Allgood and appointed him as a member of the Farm Security Administration, where he served until his retirement and return to his beautiful home in Mentone in 1943.

Congressman Allgood was a member of the Masonic Lodge of Gadsden and had just recently received the 50th Year Masonic Award.

Mr. Allgood loved to tell the story about the old man who gave his testimony in a church revival. He said he loved everybody and did not have an enemy in the world. He kept repeating this statement until, finally, the minister asked him, "How do you know you haven't an enemy in the world?" The old man replied, "I have outlived all of the old rascals."

I prize a letter I received from Mr. Allgood when I was appointed Special Assistant to the Comptroller of the Currency of the Treasury Department. He wrote me "I wish you to know that I class you and Lee Barnes as two of my top choice of friends and appointees. No one is prouder of you than M. C. Allgood." So you see, I have lost a good friend.

Congressman Allgood is survived by his wife, Mrs. Willie Allgood of Mentone; two sons: Dr. William D. Allgood of Fort Payne and Miles C. Allgood, Jr., of Ocean City, Maryland; and one daughter: Mrs. Mary Boisseau of Lee Hall, Virginia; and seven grandchildren.

My love goes out to his fine family and his many friends. May he rest in peace.

TRIBUTE TO HAROLD DEPUE

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. STARK. Mr. Speaker, I would like to take a moment of our time to reflect upon a gentleman from Castro Valley, Calif., of admirable qualities. Mr. DePue is about to retire from his position as superintendent of Castro Valley Unified School District after a long career of dedicated public service.

A native of the San Francisco Bay area, Mr. DePue has for over 30 years devoted himself to the public schools of that region. Before beginning his career in public service, Mr. DePue served in the military, where his performance was so successful that after only a relatively short period of time, he was promoted to the rank of lieutenant commander in the U.S. Navy. Mr. DePue began his professional career in the educational field as a teacher, moving quickly on at a very early age to the position of superintendent; first in Lodi, and subsequently in other school districts of the bay area including Castro Valley, where he served as superintendent of the entire school district.

The loss of Mr. DePue to the public schools of the San Francisco Bay Area will not pass unnoticed. However, mem-

bers of California communities will be happy to know that Mr. DePue does not plan on vanishing completely from the educational world of that State. His new venture in the field of consultant to regional adult vocational councils in southern Alameda County is certain to continue to bring assets and improvements to our public educational system. I am sure my colleagues join me in applauding Mr. DePue for his longstanding and valuable contributions to the quality of the public schools of our Nation.

CONNECTICUT'S VFW ESSAY CONTEST WINNER—CYNTHIA ELLEN LEVY

HON. STEWART B. McKINNEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. McKINNEY. Mr. Speaker, among the many important functions of government, perhaps the most fundamental is to stimulate reflection and discussion of important public issues. Basic concepts such as patriotism, loyalty, leadership, and morality are bound in tradition yet must be experienced and redefined by each new generation. This year, the Veterans of Foreign Wars, VFW, conducted a nationwide essay contest to provoke young peoples' expression of "What American Means to Me." It is my pleasure and privilege today to put before my colleagues in the House the thoughts of Cynthia Levy, of Stamford, Conn., whose observations and reflections won her the top Connecticut prize in the 1976–77 VFW Voice of Democracy scholarship program. Ms. Levy, a sophomore at Rippowam High School, is the daughter of Mr. and Mrs. Stanley C. Levy, Stamford, Conn. I found her comments informative and would like to thank both her and the VFW for their part in encouraging an open discussion of this important topic. The essay follows:

"WHAT AMERICA MEANS TO ME"

America is the Statue of Liberty and the Golden Gate Bridge, the Rockies, the Pacific Ocean and the Stone Mountain of Georgia. She is the Grand Canyon and the fifty small white stars on her Flag. But when I think of America, images play across my mind.

I see New York at Christmastime, crisp and cold, with people bustling back and forth, doing last minute errands, but not too busy to wish one another health and happiness for the Holiday Season.

I see a clear rushing stream at the end of a long tramp through the deep, pine-spicy woods.

I see a small child smeared with dirt from ear to ear happily fabricating inedible mudpies.

I see the mid-summer setting sun, reflecting a thousand times in someone's backyard pond.

I feel a puppy's joy when bounding through the first soft powdery snow of the year.

I feel the solemnity while people wait with baited breath to hear the outcome of the election returns.

And while people talk of the death of patriotism, I still feel stirrings when a school band struggles through the Star-Spangled Banner.

I feel a part of the World Series and the Rosebowl, the love of sports that virtually everyone shares in one form or another.

I can smell the apple blossoms at the first signs of spring and the unique blend of turkey and stuffing and all of the trimmings at Thanksgiving.

I hear the pop of a cork from a champagne bottle as everyone toasts for a good New Year.

America is the Robin that dares to appear even while the calendar still proclaims winter.

She is the talking pumpkin that delights toddlers every Halloween.

She is Charlie Brown, Dagwood and Dennis the Menace, all smilingly bumbling their way through life.

She is the cowboy on horseback, tiredly galloping in after a long day of branding, and at the same time. She is Wall Street closing with the Dow-Jones average up ten points.

She is ice cream sundaes and pizza after a late rehearsal. She is the commercials on television: Baseball, hot dogs, apple pie and Chevrolet, which children avidly eat up, and just as avidly deny as they grow older.

She is the first day of nursery school and high school commencement. She is a new born baby and a geriatric patient. She is acid rock and Mozart's Concertos. She is the first man on the Moon.

She is every ideal that her great people have stood for: Abraham Lincoln, Martin Luther King, and Eleanor Roosevelt.

She is all of these things, but more important, She is the people that they represent. The people who came here from all over the world, with their hearts open, ready to realize their hopes and dreams dating back to the time of the earliest Pilgrims. The people who had the strength of character, and determination needed to successfully settle the West, and revolt against the tyranny of England.

America is a truly international Nation, for nowhere else in the world can so many different races, creeds, nationalities and religions be guaranteed the right to work and strive together for a common good.

Nowhere else have people so consistently had the courage of their convictions to do what they felt was right.

Nowhere else have they been so successful, nor come so far.

Just as we were once bound together so that America could be proud of her people, now we are bound together to make her a country we can be proud of. I am proud of my country, proud to be American, to be one of a group of people, that I admire so highly.

The people, that's what makes America so special, for she is all of the thoughts and wishes, ideals and contradictions, hopes, dreams and desires that her people past, present, and future have believed in, but whatever else she may or may not be, I know that however far I may travel, America is the land to which I'll return, America, to me, Means . . . HOME.

WARNING

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. JACOBS. Mr. Speaker, warning: I have determined that the FDA is dangerous to your freedom.

CLEVELAND'S REV. A. A. WOMACK HONORED FOR 20-YEAR PASTORATE

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. STOKES. Mr. Speaker, I rise on this occasion to bring to your attention and to the attention of my colleagues in the House, the outstanding career of the Reverend A. A. Womack of Cleveland, Ohio. This notable theologian has served his church and his community for 20 years with unselfish devotion. As the distinguished pastor of the Mt. Haven Baptist Church, he has been both a religious mentor and a tireless advocate for social and political progress in the black community.

Mr. Speaker, on Sunday, April 24, 1977, the members and friends of Mt. Haven Baptist Church will give a testimonial dinner in honor of Reverend Womack. I can assure you that we in Cleveland are pleased to have the opportunity to demonstrate our affection and our thanks for his years of service to the community. So that my colleagues here assembled can better acquaint themselves with Reverend Womack's illustrious career, I would like to take this opportunity to give you a brief biographical synopsis of his background.

Andrew A. Womack was born in Prince Edward County, Va., one of seven children of the late Lincoln and Virginia Womack. He still holds membership in the Calvary Baptist Church there, where he was baptized.

After receiving his religious training from the Virginia Theological Seminary and College in Lynchburg, he returned to the county of his birth to administer to the Mercy Seat Baptist Church. Other churches who have flourished under the guidance of Reverend Womack have been the Dearington Baptist Church, Lynchburg, Reed Creek Baptist Church, Big Island, Mt. Olivet Baptist Church of Low Moor, First Baptist Church of Iron Gate, and Main Street Baptist Church of Clifton Forge. In March of 1957, Reverend Womack traveled from Virginia to Cleveland to become the pastor of his present church, Mt. Haven Baptist Church.

On April 1, 1938, he was married to the talented and gracious Miss Helen Lightfoot who has been his companion and helpmate throughout his religious career.

Mr. Speaker, Reverend Womack is active in many civic and educational pursuits. He is a 33d degree Mason and member of the Constantine Consistory 103 in Lynchburg, Va.; a member of the faculty of the S.S. and B.T.U. Congress; Local State, and National Financial Secretary of the O.B.G.A. Congress; chairman of the finance committee of N.O.D. Association; instructor in the Progressive Bible and Educational Institute; second vice president and registrar of the Cleveland Bible College and a member of the National Association for the Advancement of Colored People.

At this time, Mr. Speaker, I would like

to call upon my colleagues to join with me in congratulating Reverend and Mrs. Womack for their years of distinguished service. May I end by reading from a recent letter sent to me by one of his parishoners:

The life of Rev. Womack is summed up when it is stated that he is a born leader, a Christian gentleman, a wise counsellor, and exemplar to his people in both secular and religious matters.

Mr. Speaker, the only comment that I can add to such a warm and glowing assessment is a resounding "thank you" to Reverend Womack for all he has done for Cleveland and his people.

A NEW FORM OF TERRORISM

HON. LEO C. ZEFERETTI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. ZEFERETTI. Mr. Speaker, in January this Nation was shocked by the release of Abu Daoud, founder of the Palestinian Black September terrorist group responsible for the 1972 massacre of 11 members of the Israeli Olympic team at Munich. He was released by the French Government despite repeated pleas by West Germany and Israel for extradition.

The United States also had reason to be interested in the fate of Abu Daoud. As Black September's leader he sparked the assassinations of two U.S. diplomats in Khartoum, Sudan, in 1973. Despite the outcry of three world powers Daoud remains at large, unaccountable for the butchery he commanded.

Terrorism has long been a problem of international concern. But with the siege of three buildings in Washington, D.C., by a dozen armed Hanafi Muslims—who held 134 persons hostage for more than 40 hours, threatening to chop off heads, murdering one, and wounding several others—has shifted the battleground to the homefront.

All the elements of international terrorism were present in last week's siege: threats, demands, murder, involvement of public officials, and, once again, diplomats. Only this time the diplomats served as negotiators for the release of the hostages, as well as targets for terrorist gunfire.

And, once again, the terrorist group's leader, Kahlifa Hamaas Abdul Khaalis, was set free. Khaalis still faces prosecution but the fact that he is now free on his personal recognizance, charged with armed kidnaping, underscores the success with which terrorist groups espousing abstract demands are able to manipulate law enforcement procedures and make a mockery of the judicial system.

It is shameful that a court of law can be coerced into granting murdering terrrorists freedom without bail hours before their hostages have been returned to the safety of their homes and days before funeral services have been held for the victim of their fatal gunplay.

Where is justice when the criminals receive more consideration than their victims? How can the judicial system continue to function effectively when a terrorist is treated differently by the courts than any other person who commits a serious crime?

Granting freedom to the leader and other members of the Hanafis has actually promoted terrorism by showing that the greater the threat of violence the greater the criminal's chance of demanding, and receiving, liberal, even preferential treatment.

I feel that meeting the terms of an agreement negotiated under the threat of violence is a very dangerous precedent. We must not be expected to bargain in good faith with terrorists threatening death and destruction. Once we put ourselves in the position of give and take at the point of a gun there is no longer any real exchange, only take take take on the part of the terrorist.

And why should we give anything? As soon as we submit to terrorists' demands we strengthen their position by giving them more time to make more demands and gain more media exposure, which is what they really want.

It has happened time and time again. In the case of the Hanafis their original demand was for the withdrawal of a movie, "Mohammad, Messenger of God," from theaters in the United States because they felt the movie treated their religion offensively.

With each passing hour there was an acceleration of demands. By late afternoon the Hanafis had demanded an apology from Muhammed Ali and custody of the convicted slayers of Malcolm X and members of the Hanafi sect. The terrorists' plan was to revenge the deaths of Malcolm X and others by assassinating the murderers who were already serving time.

That is why we cannot bargain with terrorists, but must take swift strong action which will set positive precedent and discourage future terrorist acts. This action should be reinforced with economic sanctions against nations that give aid and comfort to terrorists. I recommend that trade preferences and foreign aid be cut off to any country that cooperates or condones terrorism.

I have cosponsored legislation currently before Congress that urges the President to accelerate negotiations with other nations in order to prevent and punish acts of terrorism. An international treaty is not only desirable but necessary if we are to come to grips with the oppressive and offensive acts of terrorism that are becoming increasingly prevalent.

I am aware that no agreement, law or plan will completely eliminate the specter of terrorism from the nations of the world, but intelligent plans for affirmative action will eliminate some of the stumbling blocks so often encountered when critical situations requiring split-second decisions arise.

FORMULATING A NATIONAL ENERGY PROGRAM

HON. MATTHEW J. RINALDO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. RINALDO. Mr. Speaker, it is common knowledge that the energy crisis is among the most serious problems facing America today. It is also common knowledge that the efforts of Congress and the White House to date have failed to make headway toward solving this grave problem.

It was in 1973 that President Nixon declared "Energy Independence" to be a national goal. Yet, despite reaffirmations by President Ford and President Carter that energy independence is a major national objective, American reliance upon imported oil and imported natural gas has grown dramatically over the past 4 years.

Clearly, energy policies adopted so far have failed even to stabilize the situation, let alone improve it.

Consequently, I welcome President Carter's emphasis on a comprehensive energy program. The current piecemeal approach is simply not sufficient to do the job that must be done.

I also commend President Carter for inviting Members of Congress, as well as private citizens, to offer their views as to what form a national energy program should take.

In a recent letter to Mr. James Schlesinger, the President's adviser on energy, I offered my own recommendations.

Some of these recommendations are proposals which I have supported in the past, but which Congress has failed to enact: tax credits for energy-saving home insulation; increased aid to energy-saving mass transit; reasonable energy efficiency standards for buildings and appliances; increased funding for basic research and development in the fields of solar, fusion, and geothermal power; loan guarantees to encourage development of a coal gasification industry.

Other recommendations were formulated in response to the current natural gas shortage: creation of an emergency stockpile of oil and natural gas, as well as the enactment of emergency Presidential allocation powers—to be held in reserve until authorized by an objective "trigger," such as a 10-percent shortfall of oil or natural gas.

In addition, I have recommended the adoption of general policy guidelines: use of financial incentives to promote energy conservation and avoidance of such heavy-handed measures as gasoline rationing or exorbitant parking and gasoline taxes; careful attention to environmental needs in the planning of specific energy development projects; recognition that increased oil and natural gas production, while imperative over the short run, involves resources too limited to serve as a solution over the long run; increased attention to renewable energy

sources, such as solar power, and abundant energy sources, such as coal.

Since the energy crisis is such a vital and urgent matter, I believe that my fellow Members of Congress may wish to examine my recommendations in detail. I am, therefore, inserting below the full text of my letter to Mr. Schlesinger:

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 14, 1977.

Mr. JAMES SCHLESINGER,
National Energy Policy Recommendations Task Force, Washington, D.C.

DEAR MR. SCHLESINGER: I appreciate your invitation to participate in the formulation of the Administration's energy program. I also commend you and President Carter for encouraging private citizens to offer their views on the form which this energy program should take.

I would direct the attention of the Carter Administration to the following points:

Conservation. As you note, the potential for energy conservation in America is enormous. While I do not believe that conservation alone will solve the energy crisis, I do feel that conservation should play a major role in any national strategy for dealing with energy problems.

I would stress financial incentives as the chief tool for promoting energy conservation. For example, I have sponsored legislation to provide tax credits to cover some of the costs of energy-saving home insulation; I believe that this approach should be an integral part of the Federal conservation effort. As another example of financial incentives to promote energy conservation, I would cite the energy-saving potential of mass transit and urge a firm commitment by the Administration to the support of a workable and attractive public transportation system.

There are some instances where mandatory standards would be appropriate; reasonable energy efficiency standards for appliances and new buildings are two prime examples. However, the mandatory approach, in most cases, tends to engender public frustration at a time when massive frustration already exists. I therefore advise you to reject proposals for gasoline rationing, except as a last resort in an extreme emergency, and I likewise urge you to avoid such "private transit disincentives" as exorbitant parking and gasoline taxes.

Imported Energy. I favor accumulation of oil and natural gas stockpiles as a deterrent to future oil embargoes and as an emergency source of supply during severe fuel shortages. I would not favor stockpiles so large that the price of fuel on the private market would be drastically increased.

In the event of an emergency situation, I would advise an immediate move to voluntary conservation appeals and mandatory allocation procedures; in fact, a good case can be made for allowing the President to hold emergency allocation powers in reserve. Such standing allocation powers, however, should not have a vaguely defined "trigger;" objective thresholds—for example, a 10% shortfall of oil or natural gas—should be used to determine when an emergency actually exists.

Supply Development. Of the various energy sources that you mention, I would place the greatest emphasis upon development of solar energy, geothermal energy, and coal-based synthetic fuels. I rank these energy sources high in priority because they are both abundant (at least potentially) and environmentally acceptable.

Of course, oil and gas will remain staples of the energy consuming public for some time to come. However, it is clear that America is beginning to reach the limits of its oil and gas reserves; newly discovered reserves have been declining in number on an annual basis and this trend may well continue. Consequently, while accelerated development of offshore and Alaskan fossil fuels is imperative as a short-term response to the energy crisis, long-term planning must stress the development of renewable resources (such as solar energy) or extremely abundant resources (such as coal).

I also believe that fusion power holds great potential, and I was disturbed by the omission of fusion power from your list of possible energy sources. Particularly in light of the recent breakthrough at Los Alamos, research funding for fusion power should increase.

I have tended to de-emphasize two of the energy sources that you mention: hydroelectric power and commercial nuclear power. The margin for increased use of hydro-electric power is simply not very large, at least in comparison to the potential use of solar or fusion power. As for nuclear energy, the grave safety questions raised about this energy source lead me to believe that America should proceed cautiously in this area; the need for cautious development is particularly clear in the case of the breeder reactor.

Implicit in my remarks is the answer to two of your questions. I believe that the Federal Government should play an extremely active role in conducting the basic research that is necessary for development of new energy sources. I also believe that in cases where the private sector is too cautious to provide the financing needed for pioneering energy enterprises (such as coal gasification plants), the Federal Government should be willing to establish loan guarantees or provide other forms of financing.

Other Issues. I do not believe that energy sources should be—or need to be—developed at a great cost to the environment. For example, although I support loan guarantees for the promotion of coal gasification plants, I have consistently supported the development of reasonable controls over strip mining activities. I believe that coal—which is a vast, largely untapped American resource—offers potential producers enough profit incentive easily to outweigh the additional costs of strip mining regulaton. I also believe that the coal gasification process, through which the problem of sulfur pollutants is largely bypassed, represents a striking example of the manner in which technology can reconcile energy and environmental imperatives.

By the same token, I do not feel that the need for energy development is inconsistent with limited Federal regulation on behalf of the American consumer.

Finally, let me note that I have co-sponsored legislation to implement the President's proposed energy agency reorganization. By placing virtually all present energy programs under the jurisdiction of a single Department of Energy, the plan would facilitate coordinated strategies and reduce duplication of effort. For the same reasons, I have also sponsored legislation to create a single Joint Committee on Energy in Congress.

Let me again thank you for your invitation to offer my views on one of the most pressing issues facing our nation.

Cordially,

MATTHEW J. RINALDO,
Member of Congress.

FANNIE LOU HAMER

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. EDWARDS of California. Mr. Speaker, it is with deep regret that we learned today of the death in Mississippi of Fannie Lou Hamer, a founder of the Freedom Democratic Party, a participant in numerous civil rights marches and voting rights lawsuits in the 1960's, and a leader of national prominence in the civil rights movement.

I first met Mrs. Hamer in the summer of 1963 when I visited Mississippi in support of the voting registration drive then underway in that State. My eldest son, Len, was spending the summer in Mississippi, working with many hundreds of young people in the massive voting registration effort. My son lived for that summer with Mrs. Hamer and her family in Ruleville, and both he and I learned to appreciate her as a dedicated fighter for equal treatment of all Americans and as a dear friend.

Mr. Speaker, the obituary from the New York Times for today is as follows:

FANNIE LOU HAMER DIES; LEFT FARM TO LEAD STRUGGLE FOR CIVIL RIGHTS

(By Thomas A. Johnson)

Fannie Lou Hamer, who became a nationally known advocate of equal rights for blacks during the 1960s, died of cancer yesterday in Mount Bayon Community Hospital in Mississippi, 30 miles north of her home in Ruleville. She was 60 years old.

Mrs. Hamer joined the mostly youthful civil rights activists working in the Mississippi Delta region in 1962, when she was 45, leaving her life as a share-cropper on a cotton plantation.

Over the next 15 years she became one of the most influential, respected and durable of the Deep South's black leaders. She used her thunderous voice and a homespun, rural wisdom to urge blacks in many a cotton or soybean field to register to vote, join labor unions or form agricultural cooperatives.

Mrs. Hamer's tone was quieter, but no less forceful, when she told Congressmen and northern audiences of the arrests, beatings and murders of civil rights workers in her state.

"She electrified this nation with a television appearance during the 1964 Democratic Convention in Atlantic City," a veteran observer of the civil rights scene has said, "She brought the authentic life and death reality of Mississippi into the homes of America."

At that same convention, the black-led Mississippi Freedom Democratic Party that she helped to found challenged the white-led regular party for seats, without success. But some of the black-led party's delegates were seated in 1968, and the black group displaced the whites in 1972.

Although she was beaten, arrested and shot at, Mrs. Hamer did not allow herself to hate whites, explaining many times, "I feel sorry for anybody that could let hate wrap them up. Ain't no such thing as I can hate anybody and hope to see God's face."

In spite of failing health, Mrs. Hamer helped during the winter of 1975–76 to unite the black and white portions of Mississippi's Democratic Party. A single, integrated unit represented the state during last year's Democratic Convention to New York.

Despite her national prominence, she lived in a three-room house in Ruleville, population 2,000.

"Why should I leave Ruleville and why should I leave Mississippi?" she once asked a writer. "I go to the big city and with the kind of education they give us in Mississippi, I got problems. I'd wind up in a soup line there. That's why I want to change Mississippi. You don't run away from problems, you just face them."

Mrs. Hamer was the youngest of twenty children born to Jim and Lou Ella Town-

send, sharecroppers on a Montgomery County plantation.

She worked in the fields from the age of 6. School attendance was allowed after the crops were in; she had a total of about six years of formal schooling. She remembered being hungry much of the time.

She married Perry "Pap" Hamer, a young man who had plowed the cotton fields that the Hamer family planted, in 1945 and they adopted two daughters, Jean and Virgie Ree. Jean died of malnutrition in 1968 "because all her life we were poor," Mrs. Hamer told an interviewer.

In 1962 Mrs. Hamer attended civil rights rallies at a Ruleville Baptist Church. She once said, "They talked about how it was our rights as human beings to register and vote. I never knew we could vote before. Nobody ever told us."

Mrs. Hamer became a field worker for the Student Nonviolent Coordinating Committee in December, 1962, and was immediately ordered out of the shack she shared with her family on Dave Milo's plantation near Ruleville.

"She told her husband, 'I'm going,' and she left the plantation rather than give up her registration work," said Joyce Ladner Carrington, a former S.N.C.C. field worker and the author of the book, "Tomorrow's Tomorrow."

Another former S.N.C.C. organizer, Dora Churnet, now a social worker in Washington, D.C., recalled, "Mrs. Hamer came into the Baptist church in Ruleville and said she had been ordered off the plantation. We sang freedom songs together. Somebody played the piano and Mrs. Hamer sang in that strong, authoritative voice. She said, 'They kicked me off the plantation, they set me free. It's the best thing that could happen. Now I can work for my people.'"

TRIBUTE TO SUPERIOR COURT JUDGE WILLIAM H. ROSENTHAL

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. ANDERSON of California. Mr. Speaker, on March 10 of this year a distinguished jurist decided to retire after a particularly productive life in public service. Superior Court Justice William H. Rosenthal is also one of my closest and most valued friends, and I would like to take this brief moment to congratulate him on his many fine accomplishments.

Born in October of 1907 in New York City, Bill Rosenthal has made the Los Angeles area his home for most of his life. After graduating from Southwestern University School of Law, Bill was admitted to the bar in 1934 and began the private practice of law.

William Rosenthal became a deputy city attorney for Los Angeles in 1937, serving with distinction until he was elected to the State Assembly in 1943. It was here that I first came to know Bill well. We sat in adjacent seats in the California Assembly, and I soon came to appreciate his wisdom and honesty as a representative. More importantly, the warm friendship that developed between us has grown through the years. He was my best man when my wife Lee and I were married, and we have kept in touch as we pursued our individual careers.

While a member of the assembly, Bill Rosenthal was responsible for several major accomplishments. He was the main author of the bill which established the law school at the University of California at Los Angeles, the first law school at a public institution outside the one at the University of California at Berkeley. He was also a cosponsor of the bill that outlawed "baby-selling" in the State of California.

Bill stepped down from the assembly in 1953, and returned to the practice of law. In 1959, newly elected Gov. Edmund G. Brown appointed William H. Rosenthal to municipal court. Two years later Governor Brown elevated Judge Rosenthal to the superior court, where he served the public interest in an outstanding manner up to his recent retirement.

As a member of the bench, Judge Rosenthal served in the domestic relations, civil, juvenile, and criminal courts. He is keenly interested in judicial reform, having served as chairman of the superior court's legislative committee on three separate terms. In 1971, he was one of those primarily responsible for the 39-point reform program adopted by the State of California.

In addition, Judge Rosenthal served on the executive committee of superior court during 1976; the personnel and budget on judicial reform committee in 1970, and 1972; and on the judge's special reform committee in 1971.

Outside the courtroom, Judge Rosenthal remained an active and enthusiastic member of many community organizations. He was an active sponsor for the Jewish Big Brothers, and recently completed a term as that organization's vice chairman. In addition, he is a member of the American Bar Association, the Los Angeles County Bar Association, the Lawyers' Club, the Masons, Shriners, and B'nai B'rith. Now that he has stepped down from the bench, I understand that he and his lovely wife, Lilith, plan to spend time at their Los Angeles home and their residence in Palm Springs, Calif.

Mr. Speaker, members of our judicial system constitute perhaps one of our most essential branches of society today. They are charged with upholding the law and at the same time protecting the rights of individuals. With men and women of the caliber that Bill Rosenthal has displayed throughout his career, I am confident that our courts will continue to be placed in good hands.

Few of us are privileged to meet men like Bill Rosenthal during our lifetimes; fewer still have been fortunate enough to know them as close friends. My wife, Lee, joins me in wishing Bill Rosenthal an active and happy retirement after a long career of dedicated public service. His wife, Lilith, and daughter, Lisa, must both be very proud of his many accomplishments.

CONGRESSIONAL CLEARINGHOUSE ON THE FUTURE

HON. CHARLES ROSE III

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. ROSE. Mr. Speaker, I would like to take this opportunity to speak to you and to my colleagues here in the House about the Congressional Clearinghouse on the Future.

In April 1976, 10 Members of the House and I established the Congressional Clearinghouse on the Future, and Anne Cheatham was made the director. The idea for the clearinghouse grew out of a series of sessions led by noted futurists and interested individuals who encouraged us and our staffs to look more carefully at ways we can anticipate our problems. Robert Theobald, John Osman, Hazel Henderson, Ted Gordon, and Dr. Edward Lindaman were early participants in congressional seminars which led to the creation of the clearinghouse.

Our goals are:

First. To assist Members of Congress as they become aware of the ways in which the future is affected by today's decisions.

Second. To help House committee members implement rule X, section 2(b)(1) which states that—

> All committees and subcommittees (except Budget and Appropriations) shall on a continuing basis undertake futures research and forecasting on matters under the jurisdiction of that committee.

Third. To help Members foresee the impact of legislation on State and local governments, on industries, and on private citizens.

Fourth. To let Members know that citizens' groups are eager to work in the planning processes of Government.

Since April 1976, the clearinghouse has been engaged in several activities designed to meet its goals. These four are of particular interest:

1. The publication of a monthly newsletter;
2. The seminar series, "Dialogues on America's Future";
3. Formation of a Congressional Talent Bank;
4. Identification of citizen participation projects around the country which are working on the future.

The newsletter, What's Next?, is read by individuals around the country and by over 400 individuals—Members of Congress and staff—on the Hill. Each newsletter is filled with suggestions about ways we can begin talking about the future with the people back home. Articles appear which explain how various futures research groups function and how they might aid our committee staffs.

An index of the CONGRESSIONAL RECORD is included every month noting entries we make that are directly related to the future. And a comprehensive list of upcoming publications is included in the Book Forecast section, divided into categories that parallel our committee juris-

dictions. The January issue had a cover story on our new President's activities in Georgia including the formation of Goals for Georgia and the Commission on the Future of the South

The seminary series, "Dialogues on America's Future," has already begun. In January, Alvin Toffler, author of Future Shock, urged us to examine how Congress can more easily cope with rapid change and constant transition. He warned that if we do not begin now to think about the future, we may find that our form of government will not survive.

Dr. Margaret Mead has spoken to us about the future of the family in our changing world, and Dr. E. F. Schumacher, author of "Small Is Beautiful: Economics as if People Mattered," has explained his concept of intermediate technology. Herman Kahn, director of the Hudson Institute, Dr. Jay Forrester of MIT, Hazel Henderson of the Center for Alternative Futures, and Barbara Marx Hubbard, chairperson of the Committee for the Future, will make their presentations in the months ahead.

Mr. Speaker, the clearinghouse is doing us a tremendous service by asking these noted thinkers to visit and talk with us and with our staffs. All of them are urging us to think about the future, because they all believe the future is now. And they all share a belief that democracy is worth saving.

The clearinghouse has also created a Congressional Talent Bank composed of individuals from all around the country who are willing and eager to help us look at legislation from a future point of view. By using the expertise which is already existent in the country, we will not have to build another research group empire. The clearinghouse is a clearinghouse, and so we have sought out those who are already doing futures research and forecasting, as well as those who have developed methods of meaningful citizen participation, and we have asked for their help. They come from industry, small business, education, government—local, State, and regional—and from citizens' groups. They can help us sort out the future consequences of our actions today.

And finally, Mr. Speaker, one of our most important emphases has been on ways to involve our people in talking with us about the future. We all know the frustrations of the people back home. We know the anger. We know the hurt. We know the disappointment.

We believe that the citizens of this country must become engaged in the process of setting goals if we are to expect them to adopt the goals we name. The clearinghouse is seeking to find ways to help us begin this process of dialog about the future.

Mr. Speaker, we believe that the information we are sharing is of much importance to the Congress and to our democratic form of government. In this time of rapid change, we must anticipate if we are to survive. As C. P. Snow said:

The sense of the future is behind all good politics. Unless we have it, we can give nothing either wise or decent to the world.

WELFARE REFORM

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. CHARLES H. WILSON of California. Mr. Speaker, it seems that in most every major campaign—Congressional, Senatorial and Presidential—the issue of welfare reform raises its ugly head. Unfortunately, any substantial reform has only surfaced long enough to be recognized and then become buried again in bureaucratic red-tape.

Recently, the Los Angeles Times editorial section printed several articles that deal with the questions involved in reforming our $50 billion welfare system.

I would like to bring these articles to the attention of my colleagues along with my commendation to the Los Angeles Times for their interest in this difficult problem and the fair treatment given to all points of view.

THE LATEST STAB AT WELFARE REFORM

(By Joel Havemann)

If the Carter Administration were designing a national welfare system from scratch, there's no way it would come up with the jumble of programs that now add up to a $50 billion monster.

Who would design a system so unfair that benefits in one state are eight times less than in another? A system so complicated that in one major program nearly a fourth of the recipients are paid too much or too little? A system that can encourage fathers to leave their families, and heads of households not to work?

Jimmy Carter wouldn't. During his campaign, he promised a vastly simplified system, replacing most current programs with a single welfare payment that would vary only with the local cost of living. From the few details that Carter disclosed, his plan sounded rather like the negative income tax that former President Nixon proposed eight years ago. Nixon's plan was shot down in the Senate, and Carter may fare no better.

One source of opposition to Nixon's proposal was conservatives who rejected the idea of paying people who don't work. Carter is well aware of this trap. In discussions with his transition staff before his inauguration, he leaned toward removing the employable poor from the welfare population.

Only 10 or 12% of the present welfare population can work; most of the rest are children, mothers with young children, the aged and the disabled. Under the likely Carter approach, able-bodied adults in the 10 or 12% group would be trained for jobs or paid unemployment compensation. The other 88 or 90% would qualify for a single program of cash assistance.

Liberal opponents of Nixon's plan felt that the benefits from a negative income tax would be too small—they were then calculated at $1,600 a year for a family of four. Carter could have more trouble from this quarter.

He also faces a dilemma if he tries to make welfare benefits approximately equal across the nation: If he doesn't want to increase the total national welfare costs, he will have to slash the benefits now enjoyed by recipients in some states, such as California and New York—and he will face certain opposition from those states. If he raises benefits to the industrial state level, it will cost billions more a year—but the federal deficit is $70 billion, and Carter has promised a balanced budget by 1981.

Carter clearly has learned one lesson from Nixon's failure to solve the problem. Where Nixon planned his negative income tax in secrecy, James A. Califano Jr., Carter's secretary of Health, Education and Welfare, has brought in representatives of Congress and interest groups to develop a welfare reform proposal in full public view.

Consultants include staff members of four congressional committees, including the Senate Finance Committee—which was instrumental in killing Nixon's negative income tax. Lobbyists from five organizations of state and local officials, which have begged the federal government for years to relieve them of their welfare burden, are being asked for proposals. Even three representatives of the poor are being consulted—even though they were added only after a protest at the task force's first meeting Feb. 11.

If this group can unite behind a single welfare reform proposal, it will be very difficult for a majority in Congress to stop it. Indeed, a danger to Carter is that he himself will not be able to reject the task force's recommendations even if he does not agree with them.

The welfare system that the task force must try to reform is one that has developed over more than 40 years as Congress reacted to the needs of specific segments of the proverty population. Welfare programs will cost $49 billion in 1977—$34 billion from the federal government and $15 billion from states, counties and cities.

Aid to Families with Dependent Children (AFDC), enacted in 1935, was the first of the big welfare programs. Supplemental Security Income (SSI), enacted in 1972 to aid the aged, blind and disabled, is the only other major program providing cash assistance. Medicaid, food stamps and housing subsidies are some of the programs that meet specific needs.

The welfare system may be inefficient, but it is not a complete waste. The Congressional Budget Office has reported that without welfare, 11.2 million families would have had incomes below the poverty line (in 1976 $5,764 a year for a family of four). Welfare lifted more than half of these families above the line—but 5.4 million families remained at a level where they could not afford the bare necessities.

Benefit levels in many states are pathetically low. In Mississippi, the maximum AFDC payment for a family of four is $60 a month. In Texas and West Virginia, which do not supplement federal SSI benefits, the maximum SSI payment for a couple (most are elderly) is $251.80 a month. And, as the National Governors' Conference reported last year, "A substantial number of poor persons receive little or no aid at all."

Welfare benefits are distributed unfairly among the states. A study by National Journal of five major welfare programs showed that benefits ranged from $370 per poor individual in Wyoming to more than $3,000 in Hawaii. In the Northeast as a whole, benefits were three times what they were in the South.

Furthermore, welfare programs are strangling in red tape. Eligibility requirements are different for different programs; it takes a mathematician to compute the payments to which a recipient is entitled. In the first half of 1976, 24.6% of all AFDC recipients were paid too much or too little. Some of the errors are due to the "welfare cheats" that politicians love to hate, but the vast majority is the inevitable result of regulations that hardly anyone understands.

In 23 states, the regulations encourage families to break up because those states deny AFDC payments to poor families with unemployed fathers living at home. And the

regulations reward unemployment: If a poor mother earns just enough money to lose her AFDC eligibility, she also may lose her eligibility for Medicaid, which might be worth hundreds or thousands of dollars a year to her family.

Look what the regulations meant for one individual—Ramon Gonzalez, a former Brooklyn factory worker whose legs were crippled in a 1974 car accident. He received $2,275 in retroactive SSI benefits in one lump sum in 1975, and he put most of it in the bank. That meant he was no longer eligible for SSI benefits because he had assets of more than $1,500, and so his assistance was cut off. He was restored only after the New York Times put his case on the front page.

This is the welfare mess that Carter has inherited. Califano has directed the welfare reform task force to examine all the possible solutions, ranging from a single generous cash allowance for everybody to a crackdown on welfare cheats. Two approaches seem the likeliest.

If Carter can mobilize support—and find the money—he will move toward a single cash assistance grant for the unemployable poor coupled with job training for those who can work. A program of this sort could be phased in so that recipients who would lose under the new program could stay with the old.

If this approach doesn't work, Carter may simply seek to overhaul current welfare programs without eliminating any of them.

The task force is to report to the President by the end of May. No matter what options Carter chooses, Congressional procedures mean that nothing new can be put in place before Oct. 1, 1978. Until then, the nation's 11 million poor families are going to have to live with a hodgepodge of welfare programs that nobody really wants.

Modernize the System, Don't Wholly Discard It

(By Richard P. Nathan)

Again there is talk of cleaning up the "welfare mess" by instituting a brand new system which would end red tape and save the taxpayers' money.

My suggestion is that we abandon the search for a utopian solution to welfare problems and instead build on the programs we have. Such a modernization approach is the best way this rich country of ours can provide adequate income assistance for the poor on a basis that is fair, firm and efficient.

Things have changed since welfare economists first began talking about a negative income tax as a way of reforming welfare. Need was greater then; in the past 10 years, however, welfare type programs have grown to such an extent that the "poverty gap" is closing. Today millions of poor people receive non-cash assistance in the form of medical care, food stamps and housing subsidies. While official Census Bureau statistics show that 11.4% of U.S. families are below the poverty level, the figure drops to 6.9% if such non-cash assistance is counted as income.

Thus the nation's progress in meeting social needs over the past decade has eliminated much of the argument for designing a completely new welfare system.

There are many other reasons why the modernization approach is better. Although some states still provide very low welfare assistance under federal programs, many of the wealthier states are providing a level of family aid which can be considered adequate. The institution of a single new national payment level as proposed under negative income tax plans could cause losses for many families and the aged in these wealthier states. This is one reason why I believe the negative income tax idea has become the favorite strategy of conservatives, such as economist Milton Friedman: They see it as a way to reduce and control welfare spending.

Furthermore, the existence of a "welfare mess" tends to be overstated. Any system that provides aid to people in the lowest-income groups, who are highly mobile and often have limited job and literacy skills, is going to be difficult to administer.

Currently there are three major income support programs for the poor: one program for families (Aid to Families with Dependent Children), one for the Aged and disabled, and a food stamp program to supplement low welfare benefits (which in addition boosts the income of the working poor). The reason we have this three-part system is that as a nation we have different ideas about the way in which aid should be provided to the aged and disabled as compared with able-bodied, unemployed heads of families.

Implementing a new supervision under these conditions would be immensely difficult and controversial and would take at least 5 years. In the meantime, needed improvement in the management of current welfare programs would be neglected.

Yes, we do have management problems, and many eligible persons are not receiving adequate aid. We ought to attend to these problems now.

One immediate step we should take is to transfer food stamps from the Department of Agriculture to Health, Education and Welfare and merge it with Aid to Families with Dependent Children. Most AFDC recipients now receive food stamps, but must fill out completely different (and long and complicated) applications. Eligibility rules and waiting periods are different. Such a transfer, along with other important changes, would have far-reaching consequences and produce what I would call a new "Family Benefit System."

Under this approach, aid would be provided to all poor families headed by unemployed fathers. Today in many states, the family is not eligible for aid if the father stays with the family. This is why so many AFDC families are headed by women, and why our welfare system has been accused of weakening family ties. At the same time, welfare program links to employment agencies should be strengthened. Although such links appear on paper, in reality many welfare clients are given little assistance in finding jobs.

Increased child care services also should be part of the Family Benefit System. Although the mothers of children under 6 should not be forced to work outside the home, many women on AFDC, even these mothers, would prefer to be self-supporting if given the choice of a decent job backed up by child care.

For the working poor, not eligible for welfare, the food stamp program should continue to serve as a supplement to income on a basis (as it does currently) that embodies a strong work incentive. But we should remove the requirement that families purchase their food stamps. At present, a family with $300 monthly income must lay out $83 in cash to purchase $166 in food stamps, the theory being that a family *should* eat $166 worth of food. The program forces the poor to spend X dollars on food: In other words, we don't trust them to decide how much food they need. In the case just described, the family should be able to apply for and receive $83 in food stamps without having to lay out a matching sum in cash.

Sen. Charles McC. Mathias (R-Md.) has proposed that food stamps be expanded to include fuel. Such measures to expand the benefits of the food stamp program should be seriously considered as part of this new system.

Another improvement in efficiency would be made if we put the administration of welfare programs, including Medicaid, under state rather than county governments. Many states now have automated data systems. Under computerized state systems, it is much easier to check applications and eligibility across county lines, eliminating one source of error and abuse. States also could take advantage of economies in scale while at the same time relieving county units of administrative burdens.

The aged poor and the disabled receive welfare assistance under the Supplemental Security Income program (SSI), which is administered by the Social Security Administration along with (although not as part of) the social security system. Adopted in 1972, the SSI program is just beginning to work smoothly and should not be tampered with.

Besides combining food stamps and AFDC, and including families headed by unemployed fathers, we should also set a floor under the combined program; the states could then add to that minimum amount. The minimum should be adjusted for cost of living differences among states and urban areas and should be automatically and regularly increased when the inflation rate rises. Simplified national eligibility standards should also be adopted to cut red tape and error rates and make it easier for administrators to assure that only eligible persons receive assistance.

To summarize, the modernization approach would be less controversial and would avoid raising the emotional issue of income redistribution to such a high decibel level. With modernization, people in need would be helped sooner, and the public as a whole would benefit by faster action to make welfare programs operate more efficiently on a basis that eliminates opportunity for error and abuse.

Start All Over Again, Using Simple Cash Grants

(By Caspar W. Weinberger)

If we are truly to reform welfare, we must begin with a definition of our goals and decide the best way to achieve them. If our goal is simply to equalize income and transfer income from the rich to the poor until we have achieved a dull gray mediocrity, then we are well launched on that path.

Our welfare programs—it would be inaccurate to call the existing jerrybuilt accumulation a system—coupled with our taxation policies, will have the inevitable result of government-ordered equality of income before too much longer.

It is my belief that we need a new, unified, coordinated public assistance program to help the poor, the ill, the disabled and the elderly while they need help, and that benefits should be paid permanently only to those who cannot work and help themselves. Further, such a public assistance program should encourage those receiving benefits to help themselves to the greatest extent possible.

Finally, it is essential that this new system replace and not be added to the existing maze of literally hundreds of different federal and state programs which are supposed to help the poor but which for the most part lose sight of that purpose in seeking their ultimate goal, which seems to be redistribution of income.

Yet there has never been any conscious decision by the American people that they want to have their income redistributed.

We are now spending well in excess of $35 billion in federal funds and many billions more at the state and local levels on income security programs. Indeed, if we count Social Security, which is increasingly taking on the aspects of a welfare program,

the federal cost alone for such programs in fiscal 1977 will exceed $177 billion.

What is needed most by the poor is cash to meet their own needs. The Income Supplement Plan, which was strongly recommended by the Department of Health, Education, and Welfare when I was secretary, provides for simple cash grants, based on need and measured by income and assets. Able-bodied adults would be expected to meet a strong work requirement in order to receive income supplements.

This program would be put into effect only if we simultaneously eliminated the three largest federal welfare programs: Aid to Families with Dependent Children, food stamps, and Supplemental Security Income. Any attempt to add a cash grant program to all the public assistance we now have would simply compound the evils that have brought us to the situation where we are today.

The new program would be administered by the Internal Revenue Service. Congress would set a basic income figure. Any family whose income fell below that level would receive a single federal cash grant in whatever amount necessary to bring the family's income up to the point set by Congress. When income exceeded that point, the family would cease to receive the new grant and instead would pay taxes.

The income level at which a family would cease to receive this grant would be the sum of personal exemptions and standard deductions in our tax system. Under the present tax schedule, a hypothetical family of four with no income would have an assured income of approximately $5,800. In another family, income of perhaps $3,200 might be supplemented by a federal grant of $2,600.

It has already been proposed that standard deductions and exemptions be increased. In any event, those deductions and exemptions would be deliberately adjusted to produce a figure which would equal the cash value of the various public assistance programs destined to be eliminated.

Increasing standard deductions and exemptions would have an additional benefit because it would mean a tax cut for low and middle income families.

When the plan was proposed, there were objections to the strong work requirement which I considered to be an essential feature. Experience has shown that without such a requirement, welfare families would not have sufficient incentive to leave public assistance programs. On the contrary, there would be every reason for them to stay, not because they are "welfare loafers" but simply because the present level of public assistance is so high in many situations that there's little if any inducement to leave the public rolls.

Another feature of the Income Supplement Plan which commends itself particularly is that it would be administered by the Internal Revenue Service and would be paid entirely on the basis of need measured by income and assets. This would eliminate at one stroke all of the highly intrusive interviewing of welfare applicants, would reduce the cost of paperwork and eliminate much red tape.

Many who objected to the plan took the position that poor families were unable to make decisions as to their spending, and therefore an all-wise government had to parcel out benefits in the form of food stamps, clothing allowances, housing subsidies, fuel stamps and the like. I've never seen any evidence that poor families are any less able to make decisions as to their own needs than middle or upper income families.

The plan would be substantially more efficient in helping to eliminate poverty. Some 86% of the funds would go to those below the poverty line. In contrast, less than 50% of the funds now being paid into the food stamp program go to people below the poverty line. Administrative costs of the proposed plan would be less than 5% of the gross amount transferred, rather than the 15% or more it now costs to administer the food stamp program.

Furthermore, all low-income Americans would be assisted according to a uniform national criteria. At the moment there are so many anomalies in the vast number of separately administered programs that it is possible for a family with an absent father (conveniently absent or otherwise) to receive substantially more money in public assistance than a similar family across the street can earn—with the father living at home, working and receiving no government benefits.

Finally, with its sliding scale of benefits, the proposed system would automatically adjust for recessions and depressions and provide more income as individual family income diminished during those times. At present, Congress usually reacts to recession or depression by adding a large number of new uncoordinated programs—many of which do not reach the people most in need but all of which become a permanent part of our public assistance payments.

If we keep on adding more programs we will require a larger and larger amount of the Gross National Product to pay for government. This means that less investment capital will be available for the development of jobs, because the only way in which new jobs can be satisfactorily and permanently created is by private sector investment. Enough capital must be available for investment in new factories, businesses, additional agricultural facilities and the like.

DEPOLITICIZING HEALTH CARE

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. McDONALD. Mr. Speaker, Representative STEVE SYMMS and myself today are introducing a bill to repeal titles XV and XVI of the Public Health Services Act, which were created by Public Law 93–641, the "National Health Planning and Resources Development Act of 1974."

The consequences of Federal health planning will be disastrous and thus Public Law 93–641 should be repealed immediately, for the following reasons:

First, the law provides both the mechanism and the means for total, centralized control of health care by the Federal Government. Title XV establishes the mechanism by (1) directing the Secretary of the Department of Health, Education, and Welfare to issue guidelines concerning national health planning policy, (2) setting "national health priorities," and (3) creating a nationwide network of "health systems agencies," "health service areas," and "State health planning and development agencies."

Title XVI provides the means by authorizing Federal aid for developing "health resources"—essentially building new medical facilities or modernizing old ones—and Federal funding for the health systems agencies established in title XV. Acceptance of these funds brings a medical facility under Federal control, if indeed it isn't already taking orders from HEW through prior acceptance of funds from Federal programs such as medicare, medicaid, Hill-Burton, and so forth.

Obviously, this is a major step toward complete nationalization of the health care professions, as was made clear by its proponents:

> The important concept embodied in this legislation, that health financing should be closely related to health planning, has subsequently been reflected in almost all major proposals for national health insurance through a series of devices intended to assure that national health insurance does not pay for costly services which the planning process determines are unneeded. (House Report 93–1382, to accompany H.R. 16804, p. 8)

Aside from the intentions of its sponsors, however, Federal health planning by its very nature will lead to total federal control of health care. One of the law's alleged purposes is to control the cost of health care, which has been rising at a rate higher than that of inflation for the past several years. But it attempts to do this by treating the effect, the rising prices, not the cause, which is the government programs that socialize health care. When payments of medical services are collectivized, as under Medicare and Medicaid, the individual pays the same amount regardless of the cost and frequency of his own treatments. If health care is "free" on demand, demand soars and prices rise.

The health planners propose to stop this by ordering prices to hold still. They propose "maximum allowable cost" for drugs, and "professional standards review" for the elderly and indigent under Medicare and Medicaid, to make sure the government pays for no "unnecessary" services. The Professional Standards Review Organizations, already estabilshed by another law, have the authority to control doctors' fees, to review confidential medical records in order to "standardize" allowable medical services, and to review hospital admissions.

Thus "free" medicine for the elderly and indigent is leading directly to government rationing of health care services to these citizens. And now the health planners are talking about "a series of devices" to insure that the government "does not pay for costly services which the planning process determines are unneeded," thereby extending government rationing of health care to everyone.

Such controls, however, will not work unless they are total. Prices will continue to rise so long as the government continues its involvement in health care, leading the planners to lobby for complete nationalization. There are only two ways to deal with the consequences of the insatiable demand induced by government health care programs. One is to eliminate the government programs and allow the market to bring supply and demand back into balance. The other is to give the government total control over supply.

The health planners leave no doubt which option they choose, and are already claiming Public Law 93–641 to be inadequate. For example, Dr. Charles C. Edwards, former Commissioner of the Food and Drug Administration and former Assistant Secretary for Health at HEW, "renewed his call for a National Health Authority to regulate medicine as a public utility" in a keynote address before a meeting of the American Association for Comprehensive Health Planning last month (American Medical News, July 26, 1976). "I am suggesting," Dr. Edwards said, "that health planning be merged with health cost regulation. Because without such a merger—without effective cost-containment—health planning, even under the best of circumstances, will remain an exercise in frustration and a bitter disappointment." Dr. Edwards continued by endorsing "regional rate-setting agencies operating under Federal guidelines."

In other words, health planning will not work unless the government has total control over the supply of health services, without which those who wish to determine how much, if any, health care each individual American citizen will be allowed, will be "frustrated" and "disappointed".

Second, federal health planning is politicizing the entire field of health care. Instead of market demand determining and directing the supply of medical facilities and services, these decisions increasingly are being made by Government and quasi-government officials. The decision to build a new hospital is not being determined by the demand for medical services by the people in a given area, but by officials of a "health systems agency" who, in conjunction with officials of the "State health planning and developing agency" and officials of HEW's appropriate "regional planning center", attempt to determine if their health plans are in accord with the "national health priorities" set by Congress and the "national guidelines for health planning" issued by the Secretary of HEW. Thus decisions affecting the health of millions of people must go through layer after layer of health planners before anything can be done. And since the decision is political, not economic, those with political pull will get the new hospital, if anyone does, not necessarily those who need it most.

Such a system is designed not to provide health services, but to prevent them from being provided.

Third, this law undoubtedly will distort and disrupt the delivery of health services to rural and non-rural areas. Not only do such areas lack the political pull to compete with the more densely populated urban areas, but the "national health priorities" established by Congress discriminate against less populated regions. These priorities, as mandated by Section 1502 of Title XV, included:

(1) The provision of primary care services for medically underserved populations, especially those which are located in rural or economically depressed areas.

(2) The development of multi-institutional systems for coordination or consolidation of institutional health services (including obstetric, pediatric, emergency medical, intensive and coronary care, and radiation therapy services).

(7) The development by health service institutions of the capacity to provide various levels of care (including intensive care, acute general care, and extended care) on a geographically integrated basis.

Apparently, primary care services are to be provided in rural areas, but other levels of care only on a "geographically integrated" basis. What about a rural hospital which provides intensive care? Must its patients be transferred to urban hospitals? Or what about a rural hospital which wants to add facilities for intensive care? Must it wait until the population in its vicinity reaches some figure arbitrarily determined by a bureaucrat in a regional health planning agency?

Fourth, Public Law 93–641 is unconstitutional, probably on many grounds. At the very least it is a violation of the Tenth Amendment. In fact, several states have already filed suit charging that the law is an illegal intrusion on a state's rights.

If we continue down the road being paved by Federal health planners, the American people will be denied the right to control their own health. Government planners not only will be setting doctor and hospital fees, but rationing medical care as well. Whether or not someone should have an operation no longer will be a medical decision arrived at by the individual and his doctor, but a political decision arrived at by government health planners. In Great Britain, where health planners have been in control for many years under the National Health Service, patients are waiting in line for up to a year for a hospital bed to have a *needed* operation.

This is what government health planning will lead to in our country if we do not change our course and begin systematically eliminating government control of health care.

Repealing Public Law 93–641 would be an excellent first step toward depoliticizing the field of medicine.

EPA AND AMERICAN AGRICULTURE

HON. JAMES P. (JIM) JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. JOHNSON of Colorado. Mr. Speaker, I would like to commend to the House the following statement which was made by my friend and colleague, Mr. WILLIAM WAMPLER, ranking minority member of the House Committee on Agriculture, as we began our hearings in the committee last week on EPA's performance in regulating the use of pesticides.

For too long now, EPA has been insensitive to the impact of its decisionmaking on the American agricultural community. Mr. WAMPLER'S comments eloquently and reasonably characterize the perspective we must keep in mind as we proceed to review governmental policies that directly affect the livelihood of the farmer and his ability to provide safe and plentiful supplies of food and fiber to the American consumer and the rest of the world:

STATEMENT OF HON. WILLIAM C. WAMPLER OF VIRGINIA

Mr. Chairman: The prime concern of this Committee is to ensure that the farm policies we establish provide the climate for the production and distribution of an abundant, economical and safe supply of food, fiber and wood products for the use of the American public.

At the same time we must assure those that produce, process and distribute these products that the farm policies we legislate establish a climate in which they too can operate in relative freedom and with reasonable profits.

In recent years our farmers, their suppliers, the processors and the distributors have been able to reduce the back-breaking labors endured by their forefathers to the point that one American farmer can now produce enough to feed over fifty people, a tremendous increase when we remember that the farmer of the Revolution could only feed himself and three other people.

The ability of our farmers to do this occurred mostly in the last quarter of our century, and was due to mechanization, the use of improved fertilizers to increase crop growth, and the use of pesticides and herbicides to reduce pests and control weeds.

All of us on this Committee are aware that mechanization, fertilizers, and pesticides and herbicides require energy. All of these innovations to some degree also affect our environment. We are also aware there is no magic technology available to us on the drawing board which can be substituted for these innovations and still maintain the production of these vital farm products. There are those who point to our current supplies of corn and wheat and say we can afford to cut back on these crops. If we could halt the growth of the world's peoples and have good weather—maybe—but we know better.

The problem we face is to reduce through science and education, sensible policies, laws and regulations where necessary, the undesirable effects of these necessary adjuncts to agriculture to a reasonable level and still permit us to enjoy safe and economical level and still permit us to enjoy safe and economical food, fiber and wood products.

For the past several years I have been critical of the past Administrator of the Environmental Protection Agency for the way he has administered the FIFRA Act. I hasten to add that this has been during a Republican Administration.

The Department of Agriculture, the State Agricultural Departments, our Land-Grant Colleges and a large body of scientists have also disputed the administration of this law and the science practiced by EPA. The Food and Drug Administration and the National Cancer Institute are at variance with EPA's definition of the term Carcinogenicity and with the assessment of carcinogenesis data, that which determines whether or not certain testing and evaluations signify that a chemical substance is cancer causing and therefore should be banned from use. I hasten to add we need one policy definition on this subject and that this subject is the basis for much of the problems facing us in the administration of FIFRA. I might add that other Committees of the Congress have raised some very serious concerns over EPA's scientific tests and evaluations in other environmental areas.

The Department of Agriculture has recently informed this Committee that several hundred pesticides with approximately

15,000 uses are under suspicion at EPA and that the banning of these pesticides could seriously reduce America's agricultural food supply and our ability to export American farm products which in turn pay for much of the oil imported into our country.

Amid all these controversies a new administration has arrived on the scene. I shall, of course, give the new Administrator my full cooperation to straighten out this mess.

During the course of these Hearings I expect to listen to and question as many witnesses as possible in order that we can develop a record to assist the new Administrator and the Congress in resolving the FIFRA controversies.

NEW YORK STATE BLACK AND PUERTO RICAN LEGISLATIVE CAUCUS

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. RANGEL. Mr. Speaker, on February 20, 1977, I attended the sixth annual dinner of the New York Black and Puerto Rican Legislative Caucus in Albany, N.Y.

As a former member of the New York Assembly and former chairman of the Congressional Black Caucus, I was interested in the events of that evening.

The highlight of the evening was an exceptionally informative speech by Assemblyman Albert Vann, Democrat of Brooklyn, entitled: "A Time for Unity: A Plan for Action."

I thought my colleagues would be interested in reading it. The address follows:

A TIME FOR UNITY: A PLAN FOR ACTION

AFRICAN PROVERB

(By the time the Fool has learned the game, the players have dispersed.—Ashanti-Ghana, West Africa.)

For too long this axiom has been indicative of Black people and Puerto Ricans, particularly within New York State. By the time we begin to get a fix on the game of politics, the game has changed and in a sense we find ourselves trying to catch up with the players, or to find out who the players were. It is my hope that 1976 was the last year the proverb just mentioned could even be remotely associated with our people. If all of us realize that 1977 is the time for unity and we desperately need a plan for action then our political, economic and social fortunes will grow to the immense proportions that adequately reflect our need, and our political potential.

To me it is most fitting and in concert with the theme of our Sixth Annual Dinner of the New York State Black and Puerto Rican Legislative Caucus, that we also pay tribute to a spokesman for the oppressed and exploited who as much as any single individual changed the course of recent history—and who during the final weeks of his life issued a call for unity and announced a plan for action. Perhaps it was because of his recognition of a time for unity and his revolutionary plan that El Hajj Malik-Shabazz/Malcolm X had his life dramatically snuffed out exactly twelve years ago tomorrow on the twenty-first of February. Malcolm was a powerful force in the cause of unity and action, and all of us, as we continue to struggle would do well to heed his words: "We must strive to ignore or submerge all artificial divisions among us by focusing our activities, energies and loyalties upon one goal—freedom from oppression, exploitation and degradation," all praises due to Malcolm X.

Currently, Black people in this country, Puerto Ricans and other minorities, as a result of last fall's Democratic Party victory over the Grand Old Party in the presidential election have joined the bandwagon of euphoria sweeping the nation generally. Ironically one hundred years ago a similar kind of excitement swept through the Black community because of a Republican victory over the Democrats—during the era of Reconstruction. The elation was short-lived as the GOP quickly abandoned Black folks and turned their attention to urbanization, modernization and imperialism—it was in fact during this period of imperialistic adventure that the United States began to systematically exploit Puerto Rico beginning with a bogus war in 1898 with Spain. This country's attitude toward Blacks was a return to "Business as Usual"—the dream for a better day was deferred. This country's attitude toward Puerto Ricans was and has not been completely eradicated since.

When Franklin D. Roosevelt was inaugurated for his second term in 1937—forty years ago—the election which preceded his swearing in was one, incidently, in which Black voters reached what was at that time a new level of voter sophistication and engaged in a mass exodus from the ranks of the Republican Party—the Party for which they had voted faithfully for seventy years. FDR was re-elected with better than a 90% Black plurality. The Black community had great expectations for the Roosevelt administration. They (perhaps like now) expected to be paid off for putting FDR over the top. The spirit of euphoria was again widespread, but ephemeral—and Franklin D. Roosevelt's New Deal turned out to be a raw deal for Blacks because most of the programs and all of the so-called alphabet agencies (AAA, NRA, CCC, TVA, etc.) discriminated, overtly and covertly against Blacks. In sum, New Deal programs fell far short of Black needs—despite overwhelming Black support for the new Democratic administration.

This brief look at history should be convincing evidence that the charge before us at this point in time is to spend less of our energy celebrating and concentrate on seizing the time for unity and developing our plan for action. While we welcome all of the cooperation and assistance possible from Washington—the Carter administration and the 96th Congress—unlike the past, we must resist being lulled into a false sense of security by dependence on their largesse. The Black & Puerto Rican communities have problems of Herculean proportions in the State of New York, but, following the imperatives of self-reliance and self-determination—what we need desperately is a plan for their resolution. The Black & Puerto Rican Caucus and other coalitions of its kind throughout this State and across the country, among professionals, non-professionals, businessmen, plain hard-working people and students must assign the earliest priority to the development of a comprehensive, viable plan to combat the horrors of deprivation, devastation and degradation which daily visits our communities with such persistence that they appear to be residents.

The noticeable lack of organization, unity, and political astuteness have been impediments to improvements in our communities. We have always been long on diagnosis but found wanting with prognosis. Consequently, we suffer.

I had intended to give a profile of our condition in New York State, but I don't really think that it is necessary because you know our conditions. You know, for instance, that our unemployment rate is two to three times greater than the national averages. You know that our senior citizens on whom we should be able to draw for wisdom and guidance are found too often to be in desperation because they do not have sufficient resources to meet their basic needs. You know, of course, that society is saying that our youth are going to hell and they further propose to hold them in purgatory (jail) until they get there. What they do not express is that if our youth are going to hell it is because the adult society has already gone. It would be easy to continue to elaborate on our inadequate conditions, but let us move on. As bad as things are for us as a community, they can become worse. The proof of this is the Executive Budget of the State of New York, whereby the Governor of this State in his attempt to balance the budget, and perhaps to maintain his political viability, has proposed to devastatingly eliminate vitally needed human services. At the same time, the Governor proposes a reduction in taxes which produce precious little in the way of savings to the State, but reaps havoc for poor people and working people as it translates into additional elimination of education, health and social services.

The responsibility of this Black and Puerto Rican Caucus, along with enlightened legislative leadership, with the support of our colleagues of goodwill, is to balance off this budget of complexed competency with simple compassion and humanity. To restore life and health and hope to the disenfranchised people of the State. And then to move on the offensive with a plan for the future.

With this in mind tomorrow the New York State Black and Puerto Rican Legislative Caucus, in unison with the New York State N.A.A.C.P. will be convening its Sixth Annual Conference to meet this very end.

It is an indication of our peoples commitment to "The Struggle" that we convene this Conference a near 200 miles from the site where the original organizers of the N.A.A.C.P. convened the historic Niagara Movement, back in 1905. It is especially fitting that we can still assemble to organize a plan for action a few months after the forces of racism and injustice had written their premature, postmortem on the N.A.A.C.P., one of our peoples most effective national organizations.

Yes, perhaps we have begun to learn the real essence behind that wise old African proverb. That we will no longer be fooled into merely reacting. That we will now start acting. I am pleased and very proud that we will unite today and tomorrow more ready than ever to follow the charge of W.E.B. Debois, Monroe Trotter and Sister Ida B. Wells Barnett who at their Historic Niagara Movement declared, some 70 years ago, "We will not be satisfied with less than our full manhood rights . . . We claim for ourselves every right that belong to a free-born American—political, civil, and social—and until we get these rights, we will never cease to protest and assail the ears of America with the story of its shameful deeds toward us. We want full manhood sufferage, and we want it now, henceforth and forever."

Finally and in conclusion, we in the Caucus are not so naive that we dismiss lightly or as irrelevant the very pressing concerns of race, and color. Racism, although having suffered some severe blows in the recent past—and perhaps on retreat—is alive and well, and in some places living swell. But racism is no longer an issue to be preoccupied with because racism without political and economic power to back it us "ain't nothin." I repeat, racism without political and economic power to back it up "ain't nothin." Therein lies a major element of our plan for tomorrow, the months ahead and the years to come. The development of our political and economic base of power which is to be used in the cause of social justice and human service and can only be made possible when we come together in unity and "Harambee" pull together.

ASSOCIATION OF NEW YORK STATE EDUCATORS OF THE EMOTIONALLY DISTURBED

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. SOLARZ. Mr. Speaker, last weekend our colleague, RICHARD OTTINGER spoke before the Association of New York State Educators of the Emotionally Disturbed. Mr. OTTINGER made perhaps the clearest and most comprehensive statement on this important human concern to date, and I am proud to bring his erudite comments to the attention of all my colleagues in the Congress.

The article follows:

ASSOCIATION OF NEW YORK STATE EDUCATORS OF THE EMOTIONALLY DISTURBED

It is a very real privilege to be able to participate in the activities of this very important group of people who have dedicated their time and efforts to educating the emotionally disturbed.

It seems that there is still a serious lack of public awareness of what the term "emotionally disturbed" includes. I understand that even the experts cannot agree on a proper definition. Likewise the term "handicapped" poses problems for many people who do not fully realize that this covers a wide range of disabling conditions that include blindness or limited eyesight, deafness or partial loss of hearing, orthopedic impairments, speech defects, mental retardation, emotional disturbances and specific learning disabilities.

Despite these problems, there is a growing attitude that people with handicapping conditions *are* human beings who can lead productive and constructive lives if given the right support and education. Handicapped children do grow and develop, no matter what the affliction. Once grown, many of them are capable of leading productive lives if given the proper opportunities. I think the progress that is taking place in this area is largely due to the efforts of handicapped persons themselves, who were described by The Washington Star newspaper in 1975 as "the newest military minority." Certainly credit is due also to those of you who have entered the field of special education because you recognize the potential that many of the handicapped have.

Since I have been asked to speak about legislation affecting education and the handicapped, and this legislation includes people who have all kinds of disabling conditions, I do want to restrict my remarks to issues involving the emotionally disturbed. I think it might be interesting to cite some of the statistics relating to handicapped persons—a class that includes those with mental and emotional problems as well as physical and learning disabilities.

Estimates on the total number of handicapped individuals in the United States vary. The 1970 census revealed that there were nearly 12 million disabled persons in the United States aged 16 to 64, *not* including those who live in institutions. This is over 11 percent of the total population in that age group. Nearly 10 percent of the population aged 16 to 64 in New York State fell into this category. Ronald Conley, in the Economics of Mental Retardation, has estimated that almost three percent of the total United States population is mentally retarded. With respect to those needing mental health care, the Department of Health, Education and Welfare did an interesting study in 1975. This study estimated that in a typical United States community of 150,000 citizens, of the 3,000 children born in the community annually, at least 600 will need some form of mental health service during their lifetime and that one-quarter of those same children will be treated in mental hospitals.

The Rand Corporation did a study in 1970 that estimated there were close to 10 million handicapped youth in the United States in the age group ranging from birth to 21 years. The Bureau of Education for the Handicapped of the U.S. Office of Education found in 1976 that there were at least 1,310,000 emotionally disturbed children in the U.S. between the ages of birth to 19. It is believed that 81 percent of these children are not receiving adequate educational services.

What are some of the special problems that affect the handicapped? Certainly the inability to achieve economic independence through education and employment and to live independent lives through the provision of proper housing and transportation facilities is the most tragic. We simply have not provided sufficient educational services, employment opportunities and, for those with physical disabilities, the right kind of housing and transportation.

There is also great concern over the labeling of children, especially those who are either learning disabled or emotionally disturbed. Im sure many of you who are teachers will remember at least one tour of a school either as a student teacher or on an interview for a job. The room where the emotionally disturbed and mentally retarded children were "taught"—or perhaps I should say "kept"—was often the last to be shown, if at all. Times are changing, but it really hasn't been all that long since special education was brought out of the closet and up from the basement! Under the recent revisions to New York State's education law, attempts have been made at long last to try and lessen the stigma and remove the derogatory labels so often used to describe our "exceptional" citizens. Gone is the term "feeble-minded"; gone, too, is that horrible phrase "mental defective." Elimination of these words may seem simple, but they were with us in the education law until July of last year.

I think it might be interesting also to look for a moment at the history of attempts to legislate equal opportunity for the disabled. Again, since Federal law does not single out the emotionally disturbed, these laws cover the whole range of handicapping conditions.

Many of the laws that have been enacted at Federal, State and local levels affecting the handicapped provide services and assistance rather than guarantee the civil rights of this group. I think we need both. Regarding assistance, legislation has been passed to provide books and sound production records for the blind and other physically handicapped residents of the U.S. Direct support to the disabled is given through Federal programs like Social Security and Supplemental Security Income. Rent supplements are provided for elderly and handicapped individuals who need assistance in securing adequate housing. The Vocational Rehabilitation Program assists disabled persons who are capable of returning to productive activity to acquire new skills and training and then helps in job placement.

Some of the laws which do affect the civil rights of the handicapped are relatively weak; these ought to be much stronger antidiscrimination statutes which make it quite clear that unequal treatment of the handicapped is not to be tolerated. Some progress has been made. As far back as 1870 statutes existed to protect the rights of the handicapped with respect to literacy tests required for voting. Legislation has been passed to guarantee access to mass transportation facilities and to remove architectural and attitudinal barriers in buildings. The Rehabilitation Act of 1973 specified that each department, agency and instrumentality in the executive branch of the Federal Government must submit an affirmative action program plan for the hiring, placement and advancement of handicapped individuals.

The mere fact that we in the Congress are examining these problems in depth is an encouraging sign, but we must all strengthen and broaden our interest and commitment. A big turning point in increased opportunity for the handicapped came on November 29, 1975, when Public Law 94–142 was signed. Congressman John Brademas, who chairs the House subcommittee that originally drafted this legislation, has called the bill "the most significant education measure enacted into law during the first session of the 94th Congress" and "an historic advance in meeting the challenge of educating America's handicapped children." We can all hope that the Education for All Handicapped Children Act of 1975 will prove to be both significant and effective in insuring that every young person in the United States—regardless of physical, emotional or mental problems that exist—will receive as complete an education as possible. To me, even the title is significant, for it states the intention of the Congress to insure the education of All Handicapped Children.

Public Law 94–142 opens by stating, "It is the purpose of this Act to assure that all handicapped children have available to them . . . a free appropriate public education which emphasizes special education and related services designed to meet their unique needs, to assure that the rights of handicapped children and their parents or guardians are protected, to assist States and localities to provide for the education of all handicapped children, and to assess and assure the effectiveness of efforts to educate handicapped children." In its deliberations on the bill Congress found that there are more than eight million handicapped children in the U.S. today, and more than half of these children are not receiving appropriate educational services. About one million of these children are excluded entirely from the public school system. In addition, there are many handicapped children whose problems go undetected throughout their school years. We have a responsibility to provide a free, appropriate education for all handicapped children and, given the proper resources, State and local educational agencies can and will provide effective programs to meet the special needs of disabled children. Following are some of the results this new Federal law is expected to produce:

1. We all know that it costs far more to educate a handicapped child than it does to educate someone without any disabling condition. The new law will channel Federal funds to States and local school systems to help them meet the burden of educating handicapped children and will do so, beginning in Fiscal Year 1978, by means of a new incentive mechanism linking the amount of Federal funds the local school district or State receives to the number of handicapped children the district or State actually serves. The Federal share of the cost of educating handicapped children will rise gradually until it reaches approximately 20 percent by 1982. In Fiscal 1978 the Federal funds will be equally divided between the State and the local school district. Thereafter, 75 percent of the money will go to the States for administrative costs, technical assistance and supportive services. The legislation requires that the Federal funds received by local or State agencies must be spent only for the additional expense attendant to the higher costs of educating handicapped children.

2. The new law also contains a program of incentive grants to States in the amount of $300 for each handicapped child between the

ages of 3 and 5 already being served in an educational program.

3. Local education agencies must establish and maintain individualized programs of instruction for each handicapped child, and input from parents and other interested parties must be provided for.

4. States are required to furnish a free and appropriate education for all handicapped children aged 3–18 by September 1, 1978, and all handicapped children aged 3–21 by September 1, 1980, if they are to qualify for Federal aid under the Act.

5. Certain safeguards of the rights of handicapped children and their parents are provided, such as the opportunity to examine records on the child's identification, evaluation and educational placement, prior notice of any intention to change a child's educational program, and an impartial due process hearing on any complaint before a State or local educational agency with a right to administrative and judicial appeal of the decision. I know that this requirement has caused alarm in some quarters for people who view this as the establishment of a binding contract to provide a particular education program for a given child. It was not the intent of Congress that this should be used as a binding contract.

6. The Act requires that recipients of Federal aid under the Act must take affirmative action to employ and advance handicapped persons.

7. Funds are authorized to States, local or intermediate educational agencies for the removal or alteration of architectural barriers in educational facilities.

8. The National Center for Educational Statistics is required to report annually to Congress on the numbers of handicapped children in each State and the extent to which the new law is meeting their needs.

9. The term "handicapped" is redefined to include the learning disabled, to specifically exclude those with only cultural or economic hardships, and to change the term crippled to orthopedically impaired.

10. State plans are required to include programs and procedures for the development and implementation of a comprehensive system of personnel development, including inservice training of general and special education personnel, instructional and support personnel and detailed procedures to assure the appropriate and adequate education and training of all personnel necessary to carry out the provisions of the proposal. Personnel development is certainly a critical area. I understand there are presently only 100 colleges in the United States that offer training for special education teachers.

11. In cases where handicapped children are placed in private and other nonpublic schools by the local education agency, State plans are required to contain provisions relieving parents of any cost.

12. If a State education agency determines that a local education agency is adequately providing special educational services to all handicapped children residing within the area of its jurisdiction out of State and local funds, the State education agency may reallocate the Federal funds not required to other local agencies that need the funding in order to expand their services. I know that in cases where the local agency is meeting the needs of its handicapped children, this provision may be viewed as a penalty for providing good services. This provision certainly will require careful oversight, because too frequently State and local agencies don't give education of the handicapped the priority it deserves.

13. States are required to assure that handicapped children are educated with nonhandicapped children and that special classes and segregation will only occur if the nature of the severity of the handicap is such that separate schooling or special programs can provide better educational services.

14. States must make provisions for the establishment of an advisory panel made up of handicapped persons, experts in the area of education of the handicapped and State and local education officials to advise the State on the unmet needs of the handicapped, in the development and reporting of data and in making policy decisions. In the interest of time I will not attempt to cover every single point of this new law, but have tried to select what I believe are some of the more important features.

In order to comply with some of the requirements of the new Federal law, it became incumbent upon the New York State legislature to pass certain revisions of the state education code. This activity was completed last summer and the result is Chapter 853 of the code. While I would not want to attempt to give a detailed analysis of the State law, I do know of some of the concerns that have been raised and will try to go over a few of these with you.

I understand that the State has cut in half the time allowed for identifying and placing handicapped children by the local school district. Many school districts may find it difficult to comply with this time limit, which is substantially more harsh than what federal law and regulations alone would demand.

The due process requirements of the law specify that an outside hearing officer must be hired by the local agency, resulting in extra costs at the local level of perhaps more than $100 per day for such services.

I understand that the State has placed special education directors under the direct supervision of the local Boards of Education, rather than under the Superintendents of Schools. This is viewed by some as having the effect of making Boards administrative, rather than policy-making, units.

Another problem that has arisen is the question of guardianship. The State has specified that once the child has reached the age of 18, he or she must be treated as an adult unless surrogate court proceedings are instituted to designate a legal guardian. Since with certain handicaps children may not be capable of managing their own affairs at age 18, some feel that unnecessary legal procedures will have to be followed and that this will result in extra expense, delays which place a hardship on the child and much bureaucratic red tape.

There may be other concerns that I am not aware of that are based on State law and/or regulations. These will have to be dealt with at a State level, and I would urge you to take your views on these matters to your representatives in the State legislature.

On the Federal level, I know that problems other than those few I touched upon in the course of outlining the provisions of that law will arise. For example, there will continue to be controversy over the proper definition of "learning disabled." Hopefully a rather complex mechanism in the funding formula which determines how much money is going to be necessary for educating the handicapped will force the U.S. Office of Education to come to grips with that definition. I know, too, that there will continue to be problems with identifying children who are truly emotionally disturbed rather than just disruptive pupils, and that it may be some time before we have an accurate and all-encompassing definition of the child who is emotionally disturbed.

Another important question that is bound to arise is what constitutes an appropriate education? Some educators feel that special programs where the handicapped are grouped together are the most effective, while others believe that the handicapped should not be isolated from other children and should have close association with their non-handicapped peers.

On the more positive side, I think an important part of the new legislation is the increased opportunity it provides for involvement of the community. Unfortunately, there still remains a great deal of misunderstanding and fear on the part of many when it comes to interacting directly with those who are handicapped. Perhaps this more widespread involvement will help to put some of the old myths to rest and diminish the prejudices that are bred by ignorance. Earlier this week the television cameras helped us all to get a better look at the lives of emotionally disturbed children through a presentation called "A Circle of Children." Those of you who saw the program noted the look of fear and revulsion that the woman at the swimming pool had when she thought disturbed children might share towels with normal children. The state trooper displayed confusion and lack of understanding when Brian climbed atop the police car.

The need for progress in public understanding is especially important in view of the fact that in New York many handicapped people who have previously been institutionalized are now being sent back out to live in the community. There is a need not only for proper facilities to serve them—shamefully lacking in too many communities—there is a need also for increased community attention and understanding. I'm happy to report that in Westchester County a Committee has already been established to help provide the transitional services that will have to be made available.

I think the intent of Congress in passing P.L. 94–142 was clearly to insure that all the handicapped are educated to the fullest extent of their abilities and to provide the necessary means for accomplishing this. The law was carefully drawn after hearings were held and the testimony of many experts in the field of special education was heard. A total of 404 Members of the House were persuaded to vote in favor of the bill when it came to the floor, and only seven Members voted against it. It passed by a similarly lopsided margin in the Senate. President Ford didn't want to sign the bill, but it was obvious he had no real choice.

In any social welfare program the authorizing legislation attempts to create a flexible framework for implementation. The administering agency has the power, through regulations, to deal with certain specifics in carrying out the will of Congress. The Congress, however, has the power to, and must, keep a close watch on regulations as they develop in order to insure that legislative intent is not thwarted. It may become necessary to pass certain technical amendments to the legislation in order to overcome problems that were not apparent at passage. We have some very well-equipped people on the education committees of both the House and the Senate who keep close watch over these problems and who will be ready to move if and when the need arises.

Another point I think we should all keep in mind is that the money appropriated to carry out the State aid program will need to be increased. It is estimated that in Fiscal 1978 a minimum of $500 million will be appropriated for carrying out the requirements of P.L. 94–142. Since the money is forward funded, it will actually reach its final destination in Fiscal 1979. I hope that Congress and the new Administration will remain committed to providing adequate funding for the implementation of the bill. The interest of Mrs. Carter and her declared intention to establish a Commission on Mental Health are good harbingers of Presidential interest.

In closing, I would like to add a word about

the general philosophy of aid to the handicapped—I have touched on it before. I am encouraged by the emphasis today on guaranteeing the rights of handicapped people to the same types of opportunities we all enjoy. There is a move underway in the 95th Congress to include the elderly and the handicapped as special protected classes under Titles VII and VIII of the Civil Rights Act. The result of this would be the outlawing of the use of a physical, mental or medical disability which is unrelated to the ability to perform a job or secure housing, as grounds to deny individuals equal access to housing or employment in any business or agency, public or private, profit or nonprofit. The enactment of this legislation on a national level should mean that handicapped persons will have a great chance to lead the dignified and independent lives of which so many are capable. The nation, too, will benefit from the increased productivity that will be realized.

I think what I have covered is a little bad news and a lot of good news. The bad news is that the legislation Congress and the State Legislature have enacted has some serious imperfections and presents some problems that have to be addressed. The good news is that we're moving in the right direction toward providing a complete education for handicapped children. I think there is a new mood and inspiration in Washington now to provide real hope that progress will be made.

EARTHQUAKE PREDICTION

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. CHARLES H. WILSON of California. Mr. Speaker, one of the most frightening and dangerous of all natural disaster phenomenon is earthquakes. When they occur, people are left helpless in the wake of vast devastation and resulting hazards such as floods and fire.

Although there is little that can be done when an earthquake does occur, millions of lives and thousands of dollars in property damage can be saved if we can achieve some knowledge of when and where an earthquake might occur and determine what preventive measures could be implemented.

The State of California is particularly vulnerable to the effects of an earthquake. The continuing instability of the San Andreas fault has led to dire predictions that California might drop off into the ocean leaving Las Vegas, Nev., as the Nation's western seaport. But, the idea is not at all humorous when experts in the field of earthquake study say a major quake in California could result in almost 12,000 deaths, 48,000 serious injuries, and anywhere from $15 to $25 billion in property damage.

With those figures in mind, it seems amazing to me that the possibility of a California earthquake has been more in the minds of the movie and television industry than in the minds of Government officials.

Scientists and researchers believe that reliable methods of earthquake prediction can be possible within the next few years. To date, most of our efforts have been directed toward a general study of earthquakes or seismology which has greatly increased our understanding of earthquake phenomenon.

I would like to direct the attention of my colleagues to the success the Chinese have had with regard to earthquake prediction. On February 4, 1975, public officials delivered a warning to the people in the northwestern portion of China that they should move from their homes in preparation for a major quake. That evening an earthquake that hit 7.3 on the Richter scale struck the region almost completely destroying towns. But, casualties were surprisingly minimal, due to the advance warning.

Although their methods relied on what could be called more "primitive" predictions such as changes in animal behavior or changes in water levels, the success of their prediction cannot be faulted. Without sufficient warning many lives could have been lost.

Last year, Congress failed to pass legislation that would have provided the funds necessary to improve earthquake research. The Earthquake Hazards Reduction Act of 1977 has been reintroduced in this Congress by Representative GEORGE BROWN my colleague from California. A companion bill has also been introduced in the Senate from California Senator ALAN CRANSTON. Both of these bills would provide for a central office that would coordinate all Government programs designed to reduce earthquake hazards and to provide support for those programs.

Too often, a tragedy must occur before Government becomes truly committed to stopping something before it happens. This has been evidenced by new Government efforts to improve oil tanker safety after the breakup of the *Argo Merchant* off the coast of Nantucket Island and increased concern over dam safety after the Teton Dam disaster in Idaho.

Currently, the State of California has proposed a study to determine what buildings are structural deficient and cannot withstand the effects of a major earthquake. It is this type of research that we need. But, of course, research in this area requires funding. I cannot agree with those who say a program of this type costs too much money. Where saving lives is concerned, dollar signs, in my opinion, are secondary. For these reasons, I urge my colleagues in the House and the Senate to pass the Earthquake Hazards Reduction Act in this Congress.

SOUTH BOSTON PRIDE WEEKEND

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. MOAKLEY. Mr. Speaker, I am pleased to be able to share with my colleagues the following article which appeared in the Boston Globe recently. State Representative Raymond L. Flynn, who represents my home town of South Boston in the State house of representatives, is the author.

The article follows:

[From the Boston Evening Globe, Mar. 2, 1977]

RENEWED PRIDE IN SOUTH BOSTON

(By Raymond L. Flynn)

The past weekend in South Boston was dubbed "South Boston Pride Weekend." When it was over, Southie was puffing with pride over its success.

First, on Friday afternoon the South Boston High School hockey team, playing a strong Weymouth South High School team at our own Gerry Ridge's Arena in Braintree, triumphed, 4–3, after two sudden-death periods on a brilliant final goal by Bob Flaherty.

The real victory, however, was not in the score but in the fact that there was a real possibility a few weeks ago that South Boston High teams would not be allowed to play at all in postseason games because of the actions of a few mindless spectators at earlier Southie games. The decorum of the crowd at Braintree on Friday is, perhaps, best expressed by the former headmaster at South Boston High School, the much-respected Bill Reid, who praised the efforts of the "Red & Blue Club" and all the fans when, after the game, he urged the whole town be nominated for a good sportsmanship award.

Everywhere throughout the crowd one could see the buttons worn by members of the "Red & Blue Club," a newly-formed group of enthusiastic alumni and supporters dedicated to keeping the spirit of sportsmanship high at the Southie games.

Then, on Sunday afternoon, several thousand marchers, banners flying and placards bearing many original slogans, strode up Broadway to the beat of Eddie Adams's "Southie Bay" (sung to the tune of "Galway Bay"). They renewed their pledge against busing in the shadow of South Boston High School, the school chosen as a target for forced busing in Boston but one that became a symbol and a monument against tyranny of government.

The march, called the Men's March Against Forced Busing, was led by Eddie Meagher and Jimmy Kelly and the South Boston Marshals. After a spirited and orderly march, the crowd was addressed outside the high school by Sen. Bill Bulger, Rep. Mike Flaherty, Councilman Dapper O'Neil and others.

Seen with the marchers were Charlie Senior from Hyde Park, Paul Chin of Ocean Kai, Dan Yotts, Bill "Lunch" Connolly, Jamie Duggan, Paul Manning and Dr. Mike Donovan. Mrs. Hicks, Pixie Palladino and Marie Ryan were in the audience.

But the best, it seems, was saved for last.

On Sunday night more than 1200 flocked into Gate of Heaven Church where the North Shore Philharmonic Orchestra, conducted by John Finnegan, treated the standing-room-only crowd to an ecumenical, concert sponsored by the South Boston Clergy Association. The concert was a benefit to raise funds for the St. Patrick's-Evacuation Day Parade Committee, whose funds have been cut back this year by the city.

Looking across the faces of this enraptured audience one caught the real spirit of South Boston and perhaps the city itself. Predictably, there were no TV cameras to record one of the great happenings in the history of Boston's neighborhoods.

As the concert progressed, each new melody seemed to sound the right note for the appreciative audience. Home from San Francisco, South Boston's own operatic star, Lorie Walsh, sang "God Bless America." A lump rose in the throat and a tear gathered in the eye as the audience gratefully swung into a spirited rendition of "Southie Is My Home Town."

From all parts of the city they were there, singing together. There were Msgr. Powers, Fr. Baltrushunas, Rev. Mr. Martin, all the

priests and nuns, John Donovan, Bill Ryan, Atty. John McDonough, Mrs. Hingston, Rita Mulkern, Frank O'Connor, Helen Nee, Ellie Cherry, the Federicos, Ed Ketvirtus, Vinny Colins, Bob Feeney and the people from the South Boston Savings Bank, the Cashman girls, Dan Horgan of the Tribune, the spirited crowd from Marian Manor and the Foley apartment, members of the Polish-American Club and a thousand other proud and important people. Charles Harvey's group of fine-looking ushers in black tails was a highlight of what must be called "the social event of the season."

A new spirit has come out of the events in South Boston. Perhaps we, by our perseverance, have outlasted our detractors. But it is more than that. It is the growing confidence that people all across the city are beginning to pull together in their determination to bring renewed pride not only in their own neighborhood, but in our great and much-maligned city itself.

LOCKHEED, BOEING AND UNEQUAL JUSTICE

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. McDONALD. Mr. Speaker, Lockheed Aircraft Corp. has been knocked from pillar to post in a journalist orgy of denunciation over the past few months. However, it seems that a standard applies when the same matters come up relative to another aircraft company—Boeing. Mr. Bill Shipp, of the Atlanta Constitution, who is not one of my favorite writers, but "even a blind hog gets an acorn now and then," wrote an article on this matter which appeared in the March 3, 1977 issue of the paper. I invite my colleagues to read and ponder this double standard:

LOCKHEED, BOEING AND UNEQUAL JUSTICE

(By Bill Shipp)

This is about Lockheed and Boeing and the application of justice.

We all know about Lockheed's payoffs to foreign government officials to the tune of about $25 million. We know the names of many of the officials, and the federal court has ordered Lockheed to run out the whole list in the near future.

The Lockheed payoffs played an important role in toppling the government of Japan, and it certainly cast a pall over the Lockheed sales force. Who would want to deal with a Lockheed sales representative if he feared his name might show up in public on orders of the court?

Sen. Frank Church's committee also had a heyday with Lockheed and leaked a lot of names of alleged bribees, at least some of whom turned out to be innocent.

Bribery is bad business. Nobody can argue against that. And Lockheed and many of the persons who received payoffs have suffered the consequences of conducting business with a "black bag," although it should be noted that Lockheed apparently violated no U.S. laws in its hiring big names abroad.

It turns out, however, that Lockheed's $25 million payoffs are peanuts compared to the reported $77 million that the Boeing aircraft company has pumped into purses of at least 18 "highly placed" persons in nations around the world.

Boeing is the world's largest builder of commercial aircraft. And you're really not a first-class potentate if you don't own one of its 747's, just as you've not really a grand field marshal if you don't own some Lockheed hardware.

So you say, here we go again. Another big scandal with a lot of important people being named as takers of big bucks from Boeing. It'll be Lockheed all over again.

Not quite. Boeing got into the same kind of problem that Lockheed was involved in—a Securities and Exchange Commission probe into questionable payments.

The SEC subpoenaed the names of the persons receiving payments from Boeing. Boeing complied but asked that the names be kept secret.

The district federal court in Washington, in what seemed to be reasonable in view of what Lockheed was ordered to do, said no soap. The names would not be sealed.

Boeing appealed to the District of Columbia Circuit Court of Appeals that ruled Friday that the lower court was wrong; the names indeed would be sealed. And wonder of wonders, the SEC has said it has no objection to keeping the names secret.

Because the 18 Boeing "consultants" are officials of foreign governments or "persons closely associated with them," according to a State Department memorandum connected with the case, disclosure could embarrass the governments and Boeing. The SEC said it might eventually seek some kind of disclosure if a complaint against Boeing is filed.

That declaration has the ring of "we aren't really interested in pursuing the matter."

The federal government has all but confessed to paying off a Middle East monarch. And poor Lockheed has laid its soul bare and been vilified as an international bad guy for paying off international big shots.

PENSION LAW AMENDMENTS

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. OBERSTAR. Mr. Speaker, today I am introducing legislation amending the Internal Revenue Code with respect to certain persion plans. My bill essentially makes two major changes in the pension law—one dealing with the establishment of individual retirement accounts—IRA's—and the other with the use in ordinary pension plans of the qualified survivor's annuity.

Section I of this bill would change one of the basic requirements of the current IRA law, that the individual seeking to establish an IRA not be covered by another pension or profit-sharing law. The Pension Reform Act of 1974 created the IRA as a means by which individuals not participating in other pension or profit-sharing plans would be able to save for their retirement with tax-deferred savings dollars. The individual not so covered by another pension or profit-sharing plan can establish a custodial account with a bank, savings and loan association, life insurance company, or credit union. This account, known as an IRA, serves as a vehicle for his or her retirement savings, as the participant may add the lesser of 15 percent of earned income or $1,500 a year to the account and receive an income tax deduction for all contributions. Under provisions of the Tax Reform Act of 1976, furthermore, an individual who is eligible to establish an IRA may establish an IRA with two accounts—one for him or her and one for a nonworking spouse. The total contributions to the two accounts may not exceed $1,750 or 15 percent of earned income, whichever is less.

This bill would remove the requirement that an individual not be covered by another pension or profit-sharing plan to establish an IRA. If enacted, the bill would permit those individuals covered by another plan, including plans established by the United States or a State government, to establish an IRA and contribute to that account the difference between the lesser of 15 percent of earned income or $1,500 a year, and the amount contributed to the employee's account in the regular plan by the employer. In the case of a spouse IRA, the difference between the amount contributed by the employer and the lesser of 15 percent of certain income or $1,750 could be added to this supplementary IRA.

The effect of this change would be felt by those individuals whose current pension or profit-sharing plans do not provide for benefits as great as an IRA offers. For example, if an individual is currently covered by a corporate pension plan into which his or her employer contributes an annual 10 percent of his or her salary, and the individual has only $10,000 a year in earned income, he or she would be able to establish an IRA and make deductible contributions up to $500 a year, supplementing the other benefits under the normal pension plan.

This measure is of particular importance to individuals currently covered by only a profit-sharing plan of their employer. Since a profit-sharing plan only requires the employer to make additions to the retirement account of the employee when there are net corporate profits, in years in which no such profits are made there are no contributions.

However, present law on IRA's does not permit the employee covered by only a profit-sharing plan to set up an IRA. Under my bill, such an IRA could be established and in years in which there were no profit-sharing plan contributions, tax-deferred retirement savings could be made with the IRA.

Section 2 of the legislation deals with the so-called qualified joint and survivor's annuity. Under the 1974 pension reform law, any retirement plan which offers the employees an annuity—a monthly or other periodic payment for the life of the employee after retirement—the basic form of such benefit must be the "qualified joint and survivor annuity." This is an annuity for the life of an employee with an annuity for the surviving spouse or designated beneficiary of the employee upon his or her death. The survivor's benefit must be equal to at least one-half the employee's benefit under present law.

Section 2 changes some of the technical rules regarding the point and survivor's annuity offering. Currently, if a participant in the plan is eligible for early retirement, while the joint and survivor's annuity must be available, it does not need to be the primary benefit

but may, instead, be an elective option. Furthermore, if the plan permits early retirement, it does not have to offer a joint and survivors' annuity to an employee who retires at early retirement or within 10 years of participating in the plan. These two rules would be eliminated and a new rule substituted.

Under the new rule for early retirement plans, the plan offering early retirement must provide a joint and survivor's annuity for the surviving spouse at least as substantial as the annuity available had the participating employee retired on the day prior to his or her death. The import of this change is to require a joint and survivor's annuity of reduced size in pension or profit-sharing plans providing for early retirement, a rule not now in effect.

MUST SACCHARIN BE BANNED

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. McCLORY. Mr. Speaker, the decision to ban saccharin as an artificial sweetener, based upon certain Canadian findings resulting from studies conducted on mice, suggests the need for a prompt revision of the Food and Drug Administration regulations and a careful reconsideration of the so-called Delaney amendment upon which the FDA decision is predicated.

Mr. Speaker, several years ago, on the basis of similar type evidence, the FDA banned cyclamate, with consequences adversely affecting millions of Americans who were utilizing cyclamates in connection with dietary and other physical problems and causing financial losses to business concerns and individuals amounting to millions of dollars.

Mr. Speaker, there is no evidence that has come to my attention that cyclamate or saccharin have caused injury to any human beings. On the contrary, these artificial sweeteners are utilized effectively by those who undertake to control their weight for personal or for related health reasons.

Mr. Speaker, I would hope that the FDA order may be withheld, that the ban against saccharin may be rescinded, and that cyclamate may be reintroduced on the market at an early date.

Mr. Speaker, a most enlightening and informative editorial appeared in yesterday's Chicago Tribune, from which my colleagues and the entire Nation should take note. It is as follows:

MUST SACCHARIN BE BANNED?

The ban on saccharin announced by the Food and Drug Administration makes so little sense that it calls for an immediate review and revision of FDA regulations and procedures. The stranglehold the FDA now exercises allows it to outlaw products for the flimsiest reasons and obstruct the development and availability of new medications which may be needed.

The action on saccharin stems from Canadian research showing that when mice are fed the artificial sweetener in massive quantities for long periods, more of them will develop bladder cancer than mice without such dosing. A human being would have to drink 800 12-ounce bottles of a saccharin drink every day for a lifetime to get an equivalent quantity.

FDA regulations now call for the prohibition of any food additive known to cause cancer in animals. At the very least these rules should be revised to take into consideration the amounts of such substance that could be consumed.

Almost every food or drug, taken in massive overdoses, can cause injury, cancer, or death. [Two people, for example, have died in recent days from drinking too much water. One was an emotionally disturbed woman who consumed great quantities of water in fear of stomach cancer; the other was an abused child whose father forced her to drink water until she died.]

Before banning a product long used by humans, the FDA should look for evidence of harm to human beings. Although saccharin has been on the market since 1900, there is no evidence it has triggered cancer or caused any other injury to humans, or that more saccharin users develop bladder cancer than nonusers.

Finally and perhaps most importantly, the FDA should consider the effect of its prohibition. Saccharin is now the only noncaloric artificial sweetener available for dietetic foods. Cyclamate was ruled off the market in 1969 on similarly flimsy evidence [the FDA will begin hearings in April on a reconsideration of the ban]. Aspartame is still not on the market or even under active FDA consideration.

Yet there is a real need for such products beyond the whims of those who want to have their soft drinks and save the calories, too. The lack of a nonsugar sweetener will impose severe dietary limitations on diabetics. It will increase the consumption of sugar and with it, the incidence of cavities. It will make weight control more difficult and increase the risks of obesity in a nation where weight is a health problem. The dangers of the prohibition seem worse than the dangers of saccharin.

The FDA does, indeed, have a duty to protect us from unscrupulous manufacturers and hazardous substances. But it seems to be suffering from a combination of bureaucratic red tape, misguided zeal, and administrative overkill.

Not only is the FDA banning apparently harmless products; it is also keeping many new medications out of reach of the American people. The development of new drugs has come almost to a dead stop. Few pharmaceutical companies can afford the research it takes to prove that improbable overdoses won't harm a laboratory animal somehow. Some physicians are already arranging for patients to get drugs, like the new group of beta-blockers for treating heart disease, from Europe, where they are used effectively and apparently safely.

The FDA is allowing 60 days for public comment on the saccharin ban. Congress should take this occasion to do a like commenting on the FDA itself, and, if necessary, change the statute under which the FDA now operates.

ALTERING FLIGHT PLANS FOR AIRLINES

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. DERWINSKI. Mr. Speaker, today's Chicago Tribune's Perspective page carried an article by John E. Robson, Chairman of the Civil Aeronautics Board. Mr. Robson is resigning from his position, effective April 30, after a career marked by a most effective performance.

His comments on the subject of the regulations and reform in the airline industry are most pertinent. The article follows for the Members' attention:

ALTERING THE FLIGHT PLANS FOR AIRLINES

(By John E. Robson)

The winds of government reform that helped blow Jimmy Carter from Plains, Ga., into the Oval Office also have dramatically affected Congress: Sweeping in a battalion of fresh faces and sweeping out most of the former leadership; stimulating internal reorganization and attempts to deal with ethics problems; and altering old provinces and practices of congressional power.

Whether the promise of meaningful reform is realized depends, of course, on what Congress actually does. And one of the early and significant tests of Congress' stomach for change is the issue of airline regulatory reform.

The case has been made for reforming the federal economic regulatory laws enacted 40 years ago in the infant days of commercial aviation. Indeed, the plan to reduce regulatory protection and inject more competitive forces into the aviation system—offering greater freedom to enter the airline business, to expand or contract air service, and to lower or raise fares—has claimed the support of an amazingly broad political and economic spectrum.

Recently, President Carter voiced strong support for airline regulatory reform. In doing so, he joins former President Ford, the chairmen and ranking minority members of the House and Senate Aviation committees, Sen. Edward Kennedy [D., Mass.] and other prominent congressional leaders of both parties, a host of economists, and even the regulator itself, the Civil Aeronautics Board.

Several legislative measures have been introduced to accomplish the needed regulatory changes which can benefit both the traveling public and the aviation industry.

Now, the matter is squarely up to Congress.

Reform always steps on someone's toes. And, in the case of airline regulatory reform, the "toes" are most of the airlines's managements, labor unions, some airport interests, and segments of the financial community.

These resisters of regulatory change see their special interests challenged. Airlines which have long operated under protective regulation do not relish the prospect of a more rigorously competitive climate. Airline labor unions—whose generous pay scales and work rules have for many years kept them at the economic pinnacle of all U.S. workers—share their concerns over a reduction in the insulation they have historically enjoyed under the old regulatory regime.

Airline executives and labor groups already are collaborating to defeat any change in the regulatory laws.

The special pleaders can be expected to raise shrill voices in the legislative process—dramatizing [or overdramatizing] their predictions of lost jobs, diminished air service, and airline financial failures if Congress passes regulatory reform legislation.

Against the backdrop of revelations of airline political contributions and recent surveys which show that the American public ranks Congress, corporate executive and labor leaders well down the institutional totem pole, the regulatory reform squabble among airline chiefs, airline unions, and Congress may seem to cynics like a battle of second division ball clubs.

But airline regulatory reform is an important public issue and the implications of its resolution are broader than the regulatory

future of the American aviation system. For it presents the question of whether the institutions of our industrial society will yield to meaningful reform and possess the courage and resiliency to step forward into environments which may not be familiar and comfortable.

Resolution of airline regulatory reform will not be easy. Rarely has this nation reduced the degree of government regulation once imposed. And even the advocates of reduced regulation do not contend that transition to a more competitive air system will be without any difficulties for the airlines.

Congress' handling of airline regulatory reform will be a real litmus of its resolve to act decisively on contentious reform issues. If the Congress succumbs to special interest pressures and balks at enacting meaningful reform legislation, it may signal that the apparent winds of change are mere zephyrs.

Intuitively, though, I am optimistic that this new Congress will pass the test.

APPROPRIATE TECHNOLOGY AND DEVELOPMENT

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. LONG of Maryland. Mr. Speaker, because of growing capital scarcity in both rich and poor nations, the developing world needs technologies much less extravagant in the use of capital. I should like to share with my colleagues a helpful article from the January 1977, issue of UNIT—a publication about licensing, new product development, joint venture, and acquisition—written by Patricia Stafford of Wakefield Washington Associates, Inc. The article summarizes development and thinking in the field of "appropriate," intermediate," "village" or, as I call it, "light-capital" technology.

The full text of the article follows:

APPROPRIATE TECHNOLOGY AND DEVELOPMENT

(By Patricia Stafford)

Technology transfer is an old issue. However, increasing concern with the larger issue of development has activated a resurgence of interest in the interrelationship of science, technology, and development.

Small is Beautiful, authored by British economist, E. F. Schumacher, and the subsequent research of his Intermediate Technology Development Group have produced widespread interest in the concept of appropriate technology. Most broadly defined, appropriate technology is one perspective on this interrelationship of technology and development.

Schumacher's theory challenges some fundamental assumptions about the use of technology in development. The growing popularity of his ideas among policy makers in the U.S., Japan, Europe, and in developing countries has important implications for buyers and sellers of technology.

WHAT IS APPROPRIATE TECHNOLOGY?

Primarily, the concept of appropriate technology challenges the practice of wholesale technology transfer. That is, when technology is transferred from an industrialized to a developing country, it must undergo some process of adaptation. As an example, Schumacher points out that "the enormous cost and complication of production methods for the sake of labour saving and job elimination is avoided (when) technology is made appropriate for labour-surplus societies." Appropriate technology further implies technology adapted to the use of indigenous materials and is less energy consumptive than is the technology of the industrialized nations. To use the U.S. Agency for International Development's summary definition, "In terms of available resources, appropriate technologies are intensive in the use of the abundant factor, labor; economical in the use of scarce factors, capital and highly trained personnel; and intensive in the use of domestically-produced inputs."

In terms of output, appropriate technologies are scaled to the demands of their market. For example, the average Indian farm is 2.5 hectares. Like most farms in less developed countries its output is intended to be only marginally greater than the consumption requirements of the farmer's family. Agricultural technology designed for a Western industrialized nation where a small percentage of the population produce food in excess of the requirements of the entire nation, is clearly not appropriate. The concept of appropriate technology suggests a range of available agricultural technologies from the crude implements of the Indian farmer to the complex, expensive American tractor.

However, appropriate technology has deeper implications than this simple economic analysis indicates. The concept of appropriate technology actually redefines the concept of economic efficiency. Traditionally, economic efficiency has been viewed as producing maximum output with minimum input or cost. Evaluating the appropriateness of tecnnology emphasizes how production occurs and the consequent implications for the progress of all economic sectors, for the quality of the physical environment, and for the health and quality of life of the individual. The fundamental change in perspective and economic policy which this represents is what makes growing interest in appropriate technology so important.

INTEREST WIDESPREAD

Appropriate technology is becoming increasingly popular as a component of development strategy both nationally and internationally. Internationally the Appropriate Technology workshops organized at the U.N. Conference on Human Settlements at Vancouver in June have led to the establishment of an informal network of organizations interested in keeping abreast of the field and developing common actions and strategies in the international arena, for example, for the 1979 U.N. Conference on Science and Technology. The International Labor Organization is showing a keen interest in the appropriate technology movement, in particular its potential to increase employment opportunities in developing countries. This is reflected in the Declaration of Principles and Program Action approved at the World Employment Conference in Geneva in June. Already there is considerable jockeying for lead positions in the international community, evidenced at the informal workshop on appropriate technology held in Vienna in September. This was co-sponsored by the U.N. Industrial Development Organization and the Phillips Company of Holland.

An International Network for Appropriate Technology (INAT) was established this fall in Paris. The core of the Network consists of the "big five" of the major private voluntary organizations involved in appropriate technology. It is a loose federation designed to increase communication and coordination among organizations in the field and to collaborate in efforts to encourage acceptance of appropriate technology.

The World Bank has impressively documented its concern for and leadership in the field in its recently published internal study, "Appropriate Technology in World Bank Activities" The study states Bank policy concerning the use of technology as:

1. that the technology used in the projects, if financed, should be appropriate to development goals and to local conditions;

2. that the Bank, by itself, or in collaboration with others, should promote innovations needed to make available to developing countries technology appropriate to their needs;

3. that Bank-financed projects should develop local capacity to plan for, select, design, implement, manage, and, when necessary, to adapt and develop appropriate technologies.

Interest in appropriate technology is greatest in the developing countries themselves. A survey commissioned by the Agency for International Development revealed that five African nations—Nigeria, Tanzania, Ethiopia, Ghana and Kenya—have appropriate technology organizations "intended to become nationwide focal points." Further, more than a hundred community development groups, university engineering and agricultural facilities, research institutions and small industry extension units are active in appropriate technology in 32 African nations. In ten East and South Asian nations surveyed, 25 public agencies and universities were identified as being actively involved in appropriate technology. Pakistan, India, and Bangladesh each have appropriate technology units in one of their central ministries. According to the AID survey, government support of appropriate technology is just beginning in Latin America. The survey identified more than 300 organizations, nearly all private, concerned with appropriate technology in Latin countries. Forty-six of these have a very high and direct involvement in appropriate technology.

Developing U.S. interest in appropriate technology is evidenced by the recent establishment of a Center for Appropriate Technology by the U.S. Agency for International Development. For this, the U.S. Congress appropriated $20 million under Section 107 of the Foreign Assistance Act "to expand and coordinate private effort to stimulate the development and dissemination of appropriate technologies in developing countries."

At the U.S. National Conference on Science, Technology, and Development, sponsored by the State Department in November, Congressman Zablocki of the House International Relations Committee reported enthusiastic Congressional support for the goals of the AID appropriate technology efforts. Zablocki anticipated appropriate technology will be a major topic of discussion at the 1979 U.N. Conference on Science and Technology.

IMPLICATIONS

What are the implications of the developing appropriate technology movement for producers and users, buyers and sellers of technology? Perhaps the most certain benefit of the development and implementation of appropriate technologies will be the expansion of international trade. Currently the great majority of all trade takes place between the industrialized nations. Since appropriate technology suggests the introduction of a range of intermediate tools, machines, and processes, and a consequent range of initial and operational costs, it can be assumed that the market for technology will be expanded. A growing market for small and intermediately-scaled technology should also provide a greater export market for firms involved in such production.

A World Bank project is illustrative of an appropriate agricultural technology. The Bank is pursuing the development of a manually-operated hand-pump for lifting irrigation water. "Presently available diesel pumps cost about U.S. $1,300 and present maintenance problems due to the difficulty in procuring spare parts." The distinctive features of the proposed design are that prototypes are made of cheap, corrosion-resist-

ant material (plastic instead of cast iron) and operated by using human labor rather than diesel power. They promise to reduce both the capital and operating costs of the small farmer. The proposed pump is estimated to cost about U.S. $100.

A second Bank project addresses the problem of transportation in rural areas. In conjunction with the Schumacher Intermediate Technology Development Group, the Bank is studying the feasibility of small, powered transport vehicles, single-axle tractors with trailers, and powered utility vehicles that combine transport and agricultural functions. A potential appropriate technology in construction would be the adaptation of local materials (often agricultural or industrial waste products) to low-cost insulation, the reduction of energy costs being a large component of the appropriateness of a technology. The concern for reduction of energy costs, crucial in developing nations, suggests the development of small scale industry in design, construction, installation and maintenance of solar energy. It is clear that trade, licensing, and loan policies of the developing nations and supranational development agencies will increasingly encourage the development and introduction of such technologies in developing nations.

Appropriate technology implies an emphasis on increased production rather than increased output. The central idea is to spread economic development throughout all sectors and regions of the developing economy, to increase employment, to conserve energy use, to reduce production and transportation costs, to encourage the development of an industrial infrastructure throughout all sectors of the economy, and to reduce the cost of technology generally. There are two major criticisms of this approach. One is that the primary use of technology in development should be to maximize output, i.e., produce the most with the least, so as to meet the needs of developing nations as immediately as possible. However, this criticism disregards the fact that the introduction of complex high technology, almost exclusively in urban areas, has not reduced unemployment and has produced goods and services too expensive for the majority of the population. Secondly, appropriate technology has been criticized as technological imperialism. It may be hypothesized that this view stems from a narrow understanding of the concept of appropriate technology. If appropriate technology is construed to mean second-rate, small-scale, or low technology, it follows that promotion of such mechanisms constitutes a desire on the part of developed nations to hoard their best technology and to restrict rather than encourage development. However, if appropriate technology is more broadly defined, as is generally the case, as a range of optional technological approaches to various production tasks, this criticism is not valid. The Agency for International Development's proposal for an appropriate technology fund states that capital-intensive technologies are not invariably inappropriate in developing countries. "In some circumstances, efficient, labor-intensive technologies may not exist (e.g., petrochemical industries) or competitiveness in export markets may require precision machine-made products. Developing countries require a mix of technologies."

The definition of appropriate technology as a mix of technologies or a range of optional technologies is the most constructive. This perspective does not preclude the use of any technology; rather, it takes into consideration factors not previously considered in technology transfer: the managerial, educational, and industrial infrastructure of the developing nation; the optimum capital-labor ratio in terms of output and employment; and the benefits and costs to all sectors of the developing economy. In his keynote address to the National Conference on Science, Technology and Development, U.S. Secretary of State Henry Kissinger emphasized the importance of international economic issues over the next decade. The ability to meet the basic needs of all nations, he stressed, will be the most crucial factor in attaining world peace. If this analysis is accepted, a more rational development approach is clearly suggested. Appropriate technology, while no panacea to development problems, certainly constitutes such a rational approach.

APPROPRIATE TECHNOLOGY COMMUNICATION AND INNOVATION

The development of appropriate technology does not necessarily imply "going back" in history to outdated methods, as Schumacher himself has made a point of emphasizing. But rather it means developing, in many cases, new technologies that are employment generating, energy conserving, environmentally compatible, and highly responsive to current needs of communities here or of developing countries. This requires a great deal of innovation that can be stimulated and fostered by improved international communication among the producers and users, the buyers and sellers of appropriate technology.

The work of Dr. Dvorkovitz & Associates, in their World Bank of Technology and their World Technology Congresses and World Technology Fairs, have a promising potential for improving this communication and innovation process.

In the non-profit sector, the organization recently in Paris of INAT (International Network for Appropriate Technology) should also contribute importantly to the improvement of the international communication process, as should the recent creation in the public sector by the U.S. Agency for International Development of a Center for Appropriate Technology, as noted in the accompanying article.

ROWAN A. WAKEFIELD,
President, Wakefield Washington Associates, Inc.

ANNIVERSARY TRIBUTE TO LA TRIBUNA

HON. MATTHEW J. RINALDO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. RINALDO. Mr. Speaker, the oldest Spanish language newspaper in New Jersey is currently marking the 15th anniversary of its founding.

This newspaper, La Tribuna, is published in Newark and circulates in the Hispanic community of the 12th Congressional District, which I represent, and throughout the State of New Jersey.

It is a paper that has established and maintained high journalistic standards, and on this anniversary occasion I am proud to extend congratulations to the publisher, Carlos G. Bidot, and his dedicated staff.

La Tribuna is among newspapers regularly received and read in my Washington office. I find that it provides a valuable link with the Hispanic community and is extremely reliable in its standard of reporting. It is a credit to the Hispanic community of New Jersey and my hope is that it will continue to flourish in the years ahead.

EPA AND THE CORPS OF ENGINEERS SAY THAT THE SECTION 404 PROGRAM IS WORKING

HON. ROBERT W. EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. EDGAR. Mr. Speaker, the House will soon vote on amendments to the Federal Water Pollution Control Act. One of the more critical issues our colleagues will be examining is the issue of protection of our waters from environmentally hazardous discharges of dredge and fill material. Section 404 of the act, which regulates these operations, is a very important component of this Act. I feel that any modifications to section 404 should be attempted only after careful study of what is actually regulated, and how effective these regulations are in preserving water quality.

I would like to insert in the RECORD at this point three of the most definitive and important documents concerning the section 404 issue. They consist of a letter from Senator RANDOLPH and Senator BAKER, chairman and ranking minority member respectively of the Senate Public Works Committee, and replies from the Corps of Engineers and the Environmental Protection Agency.

I hope that my colleagues who wish to modify the section 404 will become familiar with these letters:

U.S. SENATE,
COMMITTEE ON PUBLIC WORKS,
Washington, D.C., November 10, 1976.

Hon. VICTOR V. VEYSEY,
Assistant Secretary of the Army, for Civil Works, Department of the Army, Washington, D.C.

DEAR MR. SECRETARY: Because the House and Senate were unable to resolve various differences in their proposals for amendment of the Federal Water Pollution Control Act before adjournment of the 94th Congress, the present program of regulations under Section 404 remains in effect.

During Senate Public Works Committee hearings on Section 404 authority of the Corps of Engineers, we were impressed that the regulations developed by the Corps, and the Environmental Protection Agency had genuinely attempted to respond to specific administrative problems through the use of an exemption for normal agricultural activities and a provision for the issuance of general permits. We anticipate that the Corps of Engineers will endeavor in its continued implementation of the Section 404 authority to exempt from permits and to issue general permits for appropriate activities. We hope that the careful delineation of such activities incorporated in the Senate amendment will be of assistance in this effort.

While we counsel care in the administration of the Section 404 program, we believe that the program is fundamental to the maintenance of the biological and physical integrity of the nation's waters. It has been the thrust of our legislative effort in the Senate to preserve the valuable protections for the nation's waters afforded by this program while avoiding the problems that have

been brought to our attention during the hearings on the program. We intend to renew this effort in the next Congress.

With that in mind, it would be useful for the Committee to have the report of the Corps and the Environmental Protection Agency on the progress of the Section 404 program (especially in the implementation of Phase II), problems that may have arisen as a result of the program and efforts that have been made to work out these problems at the administrative level.

Specific areas in which information will be helpful to the Committee would be: (1) the nature and extent of permit issuances for non-exempt agriculture, silviculture, and ranching-related activities; (2) the number of permit applications for such activities and an estimate of the number of such activities subject to the permit requirement but for which no application has been filed; (3) a survey of activities covered under the general permit provision of the regulations and the administrative and time requirements for implementation of this provision; (4) the role that control of the disposal of contaminated dredged spoil materials has in the program; (5) the extent to which mining activities are affected by the permit requirement and any problems which have arisen in connection with mining activities; (6) the status of State programs providing similar protections and State capability for assuming control of the Federal program; (7) a brief description of the general environmental impact of the program as of the date of your report.

We anticipate that the Committee will turn its attention to the water pollution program early in the 95th Congress, and request that you forward such a report on or before January 15, 1977.

Thank you very much for your assistance and cooperation.

With warm wishes and best regards.

Sincerely,

HOWARD H. BAKER, Jr.,
JENNINGS RANDOLPH,
Chairman.

DEPARTMENT OF THE ARMY,
OFFICE OF THE ASSISTANT SECRETARY,
Washington, D.C., January 25, 1977.

Hon. JENNINGS RANDOLPH,
Hon. HOWARD H. BAKER, Jr.,
U.S. Senate,
Washington, D.C.

DEAR SENATORS: I am pleased to provide you with the information you requested in your 10 November 1976 letter concerning Section 404 of the Federal Water Pollution Control Act. As stated in my interim reply to you dated 18 November 1976, I asked the Army Corps of Engineers to report to me on this matter.

You asked for a report on efforts we have made at the administrative level to work out any problems which have arisen as a result of the program. The major effort in this direction has been a complete rewrite of our regulations. I am inclosing a copy (Incl 1) of the Corps' recent first draft of this revision, but ask you to understand that further revisions and coordination within the Administration will be necessary before this draft becomes a final product.

We intend the revised regulations to address many of the deficiencies in our 25 July 1975 interim final regulation, and also to incorporate administratively many of the concepts suggested by various legislative proposals to amend Section 404. These initiatives include clearer definitions and guidance on our jurisdiction under Section 404, streamlining many of our processing procedures, and eliminating the need for individual and general permits for many minor activities through the permitting of these activities by regulation. Based on our experience with the interim regulation, we believe that, when adopted, the new regulation will alleviate many of the concerns and potential problems that have been previously discussed and debated. The cover memorandum on Inclosure 1 explains in details the extent of the changes proposed by the Corps.

We recognize that the draft permit regulation, although simplified, still may be difficult for the general public to understand. The Corps therefore has undertaken to rewrite and update its permit manual, which is basically a layman's guide to the Corps permit program. We anticipate that this manual will be available for public use in the very near future.

There is a need to adopt procedures to lessen impacts of potential overregulation of activities that have minor individual and cumulative environmental impact but which originally required and received individual review. The General Permit is the Corps' major management tool to achieve this lessened impact. As outlined in the Corps' 25 July 1975 interim final regulation, a General Permit goes through essentially the same processing procedure as a regular Department of the Army permit. The processing requires extensive coordination with appropriate Federal, State and local agencies; distribution of public notices; a public comment period and, if necessary, public hearings. All of these stages of public interest review must be accomplished to insure that the integrity of the General Permit concept will not be abused.

During the formative stages of the Corps' General Permit program, it was also necessary for the Corps to refine its policies, procedures and ground rules for General Permits. Instructional guidance was issued to Corps' field elements which, in turn, were required to individually implement this guidance with respect to the types of activities in their region that could be candidates for General Permits. Differences in types and extent of activities and in regional locations have led to differences in processing time, as seen in Item 4 of the Corps report from its District offices (Incl 2).

Although there are still the administrative requirements necessary to process the General Permit, the benefits of the program become apparent when an individual wants to undertake an activity that has already been reviewed and authorized by a General Permit. In most cases, the individual can immediately proceed with his activity without awaiting the processing of a permit application; he must only comply with the conditions of the General Permit. The General Permit procedures also allow the Corps to better utilize its available resources to review those permit activities that have a more significant impact on the environment and the public.

We are now experiencing the first generation of General Permits. As of 28 December 1976, the Corps had issued fifty-nine General Permits, had eighty-one out on public notice, and had forty-four in draft form. These General Permits address activities in such areas as agriculture, ranching, forestry, highway construction, mining, and soil conservation. A summary of General Permits in various stages of processing as of 28 December 1976 is at Inclosure 3.

As another example of our administrative efforts to improve the program, the Corps met with representatives of the forestry industry, environmental groups, the EPA last month to review the impact of the Section 404 program on forestry activities. The Forest Service of the Department of Agriculture arranged this meeting. It resulted in a commitment by the thirteen participants to assist the Corps in developing guidelines for its field offices to follow in processing general permits for forestry activities, and a timetable to achieve this commitment. The Corps has also had contacts with other industry representatives affected by the Section 404 program and is hopeful that these contracts will lead to a work plan similar to that developed with the forestry representatives.

As you know, the Corps began Phase II of a three-phase implementation plan on 1 September 1976, after the President directed the Secretary of the Army to defer Phase II for sixty days. The Corps moved into this expansion of jurisdiction pursuant to its overall policy of reasonableness, with emphasis on the development and use of General Permits. Division Engineers have worked closely with Federal, State, and local agencies in identifying minor activities in Phase II waters which would be candidates for General Permits. The Corps has encountered no major obstacles in implementing Phase II except for a shortage of personnel resources. The Office of Management and Budget has approved an additional 202 people to provide some relief to this problem. Our current plans are to implement Phase III on 1 July 1977 unless legislative changes in direction are forthcoming.

The report on the permit program at Inclosure 2 contains statistics and comments from Corps' District offices. This report provides detailed information in the areas you specified on page 2 of your letter, to include the nature and extent of permit issuances for agriculture, silviculture, ranching, and mining activities.

Statistical variances from District to Distric result from many factors, including the geographical location of the District, the activities prevalent in the District, and the nature and extent of the waterbodies falling under 404 jurisdiction which are within the District boundaries. The Corps is a decentralized organization, with each Division administering its permit program according to the particular needs and types of activities in the area.

Concerning the number of agriculture, silviculture, and ranching activities subject to the Section 404 permit requirement but for which no application has been filed, it must be stressed that the statistics provided by the Corps' District offices are only estimates or even guesses. It would appear that there is reason to suspect that the figures furnished by several Districts may not visualize the same conditions and assumptions. General Permits which will be issued in the near future should significantly lower some of the estimated figures.

The report shows that the Section 404 permits which have been issued for agriculture, silvicuture, ranching, and mining cover a variety of specific activities. However it is too early to draw any conclusive inferences about the impact of Section 404 on the industries and individuals affected by the permit requirements. The Corp is presently developing General Permits as rapidly as possible for activities in the aforementioned areas.

Further to address question 5 on page 2 of your letter the report contains some comments which the Corps' Districts have received from the mining industry.

The time period covered in the report is 1 July 1975 through 1 December 1976. The period 1 October through 1 December 1976 constitutes the beginning of the Corps' implementation of Phase II. During this period the number of Section 404 permits issued has begun to increase; they have not, however, increased to an extent that the Corps cannot administratively handle. Indeed, the totals for Fiscal Year 1976 and 1976 Transition Quarter are far below these which were projected in some early estimates.

To respond to question 4 on page 2 of your letter, the Corps asked the US Army Engineer Waterways Experiment Station (WES), located at Vicksburg, Mississippi, for a report. (Incl 4). The Corps asked WES to respond to this question because WES has been conducting a Dredged Material Re-

search Program (DMRP) since March 1973; the DMRP is a five year $30 million Congressionally authorized program which is now 75% complete. The objectives of the DMRP are to provide definitive information on the environmental impact of dredging and disposal of dredged material and to develop technically satisfactory, environmentally compatible, and economically feasible alternatives for dredging and disposal. The scope of the DMRP includes both freshwater and marine environments. Complete, definitive information on the activities of WES and its DMRP tasks and projects is contained in the report.

Results of the DMRP were used in the development of the Section 404(b) guidelines with EPA. A joint EPA/Corps Committee was also formed to coordinate the individual research efforts of both agencies which will lead to refinement of these guidelines and to the development of final technical and procedural guidance for implementation of Section 404(b). WES, under the auspices of the Office of the Chief of Engineers, also developed interim guidance for implementation on analytical procedures to Section 404(b). This guidance also is discussed at Inclosure 4, with a copy provided as Inclosure 1 to Inclosure 4.

Regarding the capability of the States to assume control of the section 404 program, the Corps contracted with the Standing State Advisory Committee/Interstate Conference on Water Problems (SSAC/ICWP) for a study to determine the scope of State programs similar to or duplicative of Corps' regulations and to determine the interest of the States in accepting delegation of the 404 program. SSAC/ICWP originally was to have completed the study of 15 April 1976. Recently, the contractor informed the Corps that the study would be complete in December 1976 but the Corps has not yet received the study. A copy of the results of the study will be furnished your Committee as soon as it is available.

On 30 June 1976, the Corps did compile a preliminary report based on the responses of the fifty-two States and applicable territories which had responded as of that date. Thirty-four of these indicated their intent, under certain conditions, such as Federal funding, to seek a delegation of Section 404. Six responded that they would not seek delegation, and twelve were undecided.

To examine how many States presently have the necessary capability to assume responsibilities under Section 404, a series of threshold requirements were considered as the minimal that a State would have to meet to qualify for potential delegation. Two threshold tests were developed. Test I dealt with such questions as the extent and scope of the State's program, and how it is implemented. Test II required that, in addition to meeting the requirements of Test I, the States have defined criteria for the placement of dredged or fill material and have defined wetlands for their regulatory program. Of the thirty-four States and territories that would seek delegation, nineteen passed Test I and only six passed Test II. A copy of this interim report is attached as Inclosure 5.

You asked for "a brief description of the general environmental impact of the program." Since the program has focused primarily on Phase I waters (and only recently on Phase II), we can only respond to its environmental impact from that perspective. As a general observation, the program has not resulted in a drastic cessation of water resource development. Some permit applications for activities that would have been performed in environmentally sensitive wetland areas have been denied. No doubt some potential applicants have been discouraged from undertaking the permit process. Most permits, however, have been granted, but have either been modified by the permittee or are subject to specific conditions that were developed during our public interest review and through coordination with interested Federal and State agencies to insure that the activity was performed in an environmentally acceptable manner to fulfill its intended purposes. This review includes an examination of water quality, fish and wildlife values, available alternatives, cumulative impacts, and the extent of beneficial and/or detrimental effects that the proposed discharge will have on the aquatic environment. The Environmental Protection Agency has indicated that it will respond to this question by citing examples of how this regulatory process has worked.

I believe that we have learned a great deal in our experience to date with the implementation of the Section 404 program and have undertaken constructive initiatives, such as the development and use of General Permits, to make the program more manageable administratively. We are committed to carrying out the Section 404 program in a reasonable manner to meet the objectives of restoring and maintaining the chemical, physical and biological integrity of the Nation's waters.

Thank you for your interest. We appreciate the opportunity to provide this information and would be pleased to be further assistance as desired.

Sincerely,

VICTOR V. VEYSEY,
Assistant Secretary of the Army,
(Civil Works).

U.S. ENVIRONMENTAL PROTECTION AGENCY,
Washington, D.C., February 3, 1977.

Hon. JENNINGS RANDOLPH,
Chairman, Committee on Public Works,
Washington, D.C.

DEAR MR. CHAIRMAN: I appreciate the encouraging comments in your letter of November 10, 1976, which requested information on the section 404 program. Our experience since the program began in October, 1972, and in the first eighteen months of implementing the new regulations affirms your assessment that the program is "fundamental to the maintenance of the biological and physical integrity of the Nation's waters."

EPA shares your concern that this valuable program must be made to respond to the administrative problems raised during the hearings last July. The Corps of Engineers and EPA are cooperating to focus their resources to resolve conflicts over potentially harmful discharges of dredged or fill material. Excessive regulation of farming, forestry, highway and mining activities has been avoided. The general permit program is expanding to eliminate the need for individual permits for discharges that have little deleterious effect on waters of the United States. I am confident that the Corps of Engineers and EPA are unified by a common goal to administer an effective, reasonable program.

As Mr. Train observed in his testimony before the Senate Public Works Committee on July 27, 1976, the Federal Water Pollution Control Act mandates that the Agency seek the restoration and maintenance of the chemical, physical and biological integrity of the Nation's waters. I remain convinced that full implementation of the section 404 decisionmaking process is imperative if we are to attain that goal. That process is an essential tool for preventing the unnecessary degradation of water quality. The permit program is our only direct control over discharges of dredged or fill material. Such discharges can irrevocably destroy critical aquatic areas including swamps, marshes, and submerged grass flats that play a valuable role in maintaining the chemical, physical and biological integrity of our water resources. If conserved, these resources can continue to be of value by providing: (1) high-yield production of food for aquatic animals; (2) spawning and nursery areas for commercial and sports fish; (3) removal and recycling of pollutants; (4) recharge of surface and underground water supply; (5) nesting and winter areas for waterfowl; and (6) natural protection from flood and storms. If we pause to contemplate the investment of money and fuel required for man to reproduce these benefits, we should begin to understand those who have cautioned us to conserve the dwindling inventory of swamps, marshes and free flowing streams.

A brief assessment of our response to several problem areas is appropriate before addressing your specific information requests. First, much concern has been expressed over the broad Federal geographical jurisdiction over water. Continuing research and experience in the field underscores the necessity for broad jurisdiction to protect our interrelated and interdependent water resource. Physically locating the edge of many marshes and swamps has created few problems for permit applicants or for our field personnel. EPA has awarded five grants to improve and refine the methodology for establishing jurisdictional lines and to ensure that only aquatic areas are included. The Corps of Engineers is also conducting additional studies on methods for establishing jurisdiction. Second, the Corps of Engineers and EPA have initiated a series of workshops with industry and environmental groups to isolate problems and explore administrative solutions. Our first meeting with the forest products industry was encouraging. While several industry groups continue to oppose the program, they have displayed legitimate concern for moderating the adverse environmental consequences of some of their activities. Third, the statutory structure of the section 404 program deserves credit for requiring the Corps of Engineers and EPA to share responsibility for resolving conflicts between the pressures to alter the aquatic resource and the need to protect beneficial uses. A firm, but realistic, environmental program is emerging. The benefits of encouraging these two agencies to share their resources and institutional experience are already influencing improvements in other program areas as well. Finally, I must commend to you the excellent work of our limited Regional and Headquarters personnel. They have done an exceptional job under severe resource constraints. I am confident that a moderate increase in research, personnel and financial resources would be of substantial benefit to this program.

Of the seven specific areas for which you desire information, I respectfully defer to Secretary Veysey's responses on questions 1 and 2 as those responses will consist primarily of data from field offices of the Corps of Engineers. We are also advised that Secretary Veysey will provide additional information on mining and State participation.

GENERAL PERMITS

While the general permit program is relatively new, several interest groups have actively pursued this form of authorization. Projects for which section 404 general permits are being issued include: shore protection, highway projects, forestry activities, erosion control, minor buried pipeline crossings, State boat ramps, mosquito ditches, bulkheads, fishing camp construction, highway maintenance, culverts and other stream-crossing structures, fishing reefs, summer dams for water conservation, and trenching. All of EPA's Regions have been involved in the general permitting process. Obviously, the general permit program minimizes the personnel resources required for permit processing and substantially reduces the delay to a project operator in initiating a project including discharge of dredged or fill material. The time required for EPA's analysis of a general permit varies from 7 to 10 days to a maximum of about 30 days depending upon the complexity of the issues involved. The general permit program is in an evolutionary stage and the outlook for expansion and im-

provement in the administration of the concept is favorable indeed.

CONTAMINATED MATERIAL

The effects of contaminated dredged material on water resources continues to be of concern to EPA and to the public. EPA and the Corps of Engineers have formed a Joint Executive Research Committee to coordinate research on this and other scientific problems. As reflected in the section 404(b) interim guidelines of September 5, 1975, our comprehension of this problem is somewhat incomplete on the acute, short-term effects, and even more incomplete on the chronic or cumulative long-term effects of contaminated dredged material discharges. Thus, the guidelines provide for a case-by-case selection of analytical methods including the elutriate test, the bulk sediment analysis and appropriate bioassay procedures.

EPA coordinates with other Federal, State and local agencies in the interpretation of test results and the consequent decision on the most acceptable site for disposal of the contaminated material. In the case of severely contaminated material, special consideration is given to those areas with sediments that are chemically similar to that being discharged, areas of low biological productivity, sites in which little or no human activity is anticipated, and the use of confined disposal areas where it is determined that confinement will not accelerate the leaching of toxic substances.

The section 404 administrative process provides the forum for appropriate Federal, State and local agencies to cooperate in full view of the public when reaching decisions on the degree of contamination and the selection of disposal alternatives. The educational process implicit in this public process is indispensable if we expect to respond to the growing apprehension associated with sediments that contain varying quantities of such toxic substances as PCBs, pesticides, cadmium and mercury.

MINING

Mining activities involving the discharge of dredged or fill material in waters of the United States have the potential for seriously degrading water quality. Our experience to date in reviewing this type of activity for the discharge of dredged or fill material through the section 404 program has been limited. Where mining requires road construction, stream diversion or in-stream sediment control impoundments that involve discharges of material into water, individual and general permitting procedures are applicable.

STATE PARTICIPATION

Our Regions have encouraged States to become directly involved in the decision process by taking advantage of the opportunity to certify the acceptability of proposed permits under section 401. Several States with some form of permit program have entered into agreements for joint processing of permits, including joint public notices and joint hearings. Preliminary information, however, indicates that a number of States do not have effective institutions for protecting open water and wetlands from adverse effects of dredged or fill material discharges.

GENERAL ENVIRONMENTAL IMPACT

The general environmental impact of the program varies, of course, with the amount, type and relative contamination of the dredged or fill material discharged. Residential development poses a great threat to the aquatic environment, for example. Vast areas of productive wetlands can be destroyed permanently by such development. Port facilities expansions, highway and bridge crossings of navigable waters, stream channelization, and wetland draining and filling pose particular environmental problems. The most important concerns are those associated with the volume of discharged material and its degree of contamination. Perhaps the most environmentally threatening is the filling of wetlands which causes permanent alteration and loss of this valuable and diminishing resource. Our Region IV office in Atlanta, Georgia, reports that several thousand acres of wetlands have been conserved because of section 404.

All of our Regions report that many projects need not be rejected if they are modified from their original plans to minimize unacceptable effects on the aquatic system. For example, construction of a major residential development was underway at the time of passage of PL 92-500. The system of canals in the first phase of the development was causing water quality problems such as low dissolved oxygen, saltwater stratification and an excess accumulation of organic materials. With the authority of section 404, EPA reviewed proposed plans for the second phase development. The plans provided for construction of a dike parallel to the shoreline at the mean high water line and the filling of approximately 800 acres of wetlands between the dike and the uplands. Upon being advised of the environmental destruction from the deposition of fill into the marshes, the company modified its plan to avoid filling approximately 800 acres of wetlands located primarily above the mean high water line.

Construction of a highway necessitated the bridging of a Phase II stream. To avoid the expense of installing an additional bridge pier, the highway department applied for a section 404 permit to move the stream bed. The project was approved after the department agreed to modifications designed to restore water quality including: the use of boulders, stone, and gravel to form pools and riffles for oxygenating the water and supporting aquatic life, restoration of vegetation along the channelized segment and completion of construction prior to diverting the water from the old stream bed. In another major housing development, the developer proposed to dredge canals and fill several hundred acres of wetlands until section 404 jurisdiction was implemented in marshes above the mean high tide. As a result of several meetings with EPA and other Federal and State agencies, the project was modified to incorporate an experimental "perimeter canal." The canal will be constructed immediately above the wetland vegetation and is designed to ensure "sheet flow" of fresh water to the estuary, biological treatment of runoff from urban development, boating access to the Gulf of Mexico and limited recreational fishing.

Issues remain to be resolved in this program. Personnel constraints within the Agency continue to restrict our efforts associated with this program to less than those efforts that we consider desirable. Despite these constraints, however, I believe firmly in the present program's capability to protect the entire aquatic environment, which is so essential to the needs of this society, and I firmly support the approach of maintaining the existing broad Federal jurisdiction under this program.

Sincerely yours,

JOHN QUARLES,
Acting Administrator.

EXEMPTION FROM THE AIRCRAFT USE TAX AND GASOLINE TAX FOR THE AGRICULTURAL AIRCRAFT OPERATOR

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. ABDNOR. Mr. Speaker, today I am introducing H.R. 5132, a bill that would exempt agricultural aircraft from the aircraft use tax, and would refund the gasoline tax to the agricultural aircraft operator.

Presently, taxes are assessed on airplanes which use federally funded airport facilities. Since agricultural aircraft do not use these facilities, they are being unduly discriminated. My bill will do away with this discrimination.

As a result of the gasoline tax refund, 7 cents per gallon, the agricultural aircraft operator will be able to reduce both his and ultimately the farmer's cost for spraying.

The text of the bill follows:

H.R. 5132

A bill to amend the Internal Revenue Code of 1954 to exempt certain agricultural aircraft from the aircraft use tax, to provide for the refund of the gasoline tax to the agricultural aircraft operator, and other purposes

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That section 4493 of the Internal Revenue Code of 1954 (special rules relating to tax on use of civil aircraft) is amended by adding at the end thereof the following new subsection:

"(c) EXEMPTION OF AIRCRAFT USED IN AGRICULTURAL OPERATIONS.—No tax shall be imposed by section 4491 on the use of any aircraft by a person who holds a certificate as an agricultural aircraft operator under part 137 of title 14 of the Code of Federal Regulations, if such aircraft is equipped for agricultural operation as provided in such part 137 and if such person uses it primarily for such agricultural operation.".

SEC. 2. Section 6420(c)(3) of the Internal Revenue Code of 1954 (defining farming purposes) is amended by adding at the end thereof the following new sentence: "For purposes of this subsection and section 6427 (c), if (i) the use of any liquid as a fuel on a farm for farming purposes is in an aircraft and by an aerial applicator who was the actual ultimate purchaser thereof.

SEC. 3. The amendments made by this Act shall take effect as of July 1, 1977.

SOUTH KOREAN LAWMAKER LEE HONORED AT EMBASSY RECEPTION

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. McCLORY. Mr. Speaker, last evening at the invitation of my friend, Ambassador Pyong-choon Hahm, I was privileged to attend a reception at the Korean Embassy honoring Chul Seung Lee, Chairman of the New Democratic Party and a member of the National Assembly of the Republic of Korea.

Mr. Speaker, this reception was, in my opinion, an occasion for me and other Members of the Congress to express respect and support for the people of South Korea and for the stable and progressive economic and political system which they have established in this critical part of the world.

Mr. Speaker, in my several brief visits to South Korea and to its capital at Seoul, and in my contacts with our American and Korean military forces adjoining and near the Demilitarized Zone, I

sensed a determination coupled with almost unprecedented courage that the South Koreans intend to maintain their independence and their freedom from Communist domination and control.

Mr. Speaker, my observation of the relatively free economy that these courageous and industrious people have established, evokes a sense of pride in our own Nation. We may be proud that our U.S. military forces fought side by side with our South Korean allies in 1952 and 1953 in defending their independence and to encourage the economic, cultural, and social institutions which they have established and which today form such strong rallying points for Korean citizens.

Mr. Speaker, it would be most unwise for us to try to superimpose upon the Korean Government or its people our traditional and individual concepts of what a democratic society should consist. The apparent restrictions and limitations on individual movement, which include the imposition of curfews in some areas, are undoubtedly deemed by those in authority in South Korea to be essential to the preservation of the independence and autonomy of South Korea.

Indeed, the South Koreans seem to have established a kind of internal security which discourages any guerrilla or other armed revolutionary forces, which could, of course, bring the South Korean Government to its knees within a short period. It would seem wise on our part to respect the rights of the Korean people to maintain their own security and to assure their own independence.

Mr. Speaker, some of the charges that have been made recently concerning political contributions to my colleagues and charges of alleged payments made in connection with industrial and military equipment contracts appear to have diverted attention from our overall national policy of respect and support for this friendly and strongly anti-Communist nation.

I know nothing about such political or campaign contributions nor other alleged payments about which the media have issued reports. What I do know is that in my brief contacts with political leaders of South Korea, including those who represent parties in opposition to the party of President Chung Hee Park, and my observations of the Korean people at work, school, and in their places of worship, as well as my observations at the DMZ, I feel that we should continue to maintain a posture of solid and unqualified support for this anti-Communist outpost on the Asian Continent.

Mr. Speaker, I hope that a vast majority of my colleagues, including many of those who may have stayed away from the reception last evening in honor of Chairman Chul Seung Lee of the South Korean New Democratic Party, will agree with these observations and will give their backing to a policy of continued support to the government and people of South Korea to the end that any misunderstanding or miscalculation which might presently exist may be eliminated and that our United States-South Korean ties of friendship may be reaffirmed and strengthened.

UNIONIZATION IN THE MILITARY FORCES

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. MAZZOLI. Mr. Speaker, debate over the question of unionization in the military forces has heated up due to recent reports that aggressive efforts to organize the military forces will begin in the near future.

I have studied the arguments advanced in support of unionizing the military forces. While I am sure the advocates of military unions are sincere and believe this to be a natural, evolutionary, and inevitable progression of labor activity in America, I am convinced military unions would not be in the national interest. It is a move which could weaken our Nation's ability to defend itself.

An effective defense force is dependent on discipline and quick responsiveness. Military service is by its very nature authoritarian—not democratic. And, the military must operate under different rules and regulations than civilian enterprises operate under.

While I do not want to do anything which jeopardizes the defense of this country, I also do not want to deny our Nation's military personnel the constitutional freedoms on which this country was built—the freedom to peacefully assemble and the freedom to petition their Government for a redress of grievances.

Therefore, we who do not favor unionization of the military services must make sure service in the U.S. Armed Forces does not become a form of involuntary servitude or an indenture in which personal freedoms and guarantees are abrogated almost in their entirety.

Adequate and effective grievance procedures must be available to all military personnel and they must receive proper pay, benefits, living conditions, and working conditions, except in times of national emergency.

Mr. Speaker, I am inserting at this point in the RECORD an article on the subject:

COLLECTIVE BARGAINING WITH THE TROOPS?

(By Hobart Rowen)

How about the question of unionizing our Army, Navy and Marine Corps? I can almost hear the reaction of any drill sergeant at Parris Island, but I'm not sure this newspaper would choose to print it.

President Carter and his Secretary of Labor, Ray Marshall, are opposed to unionization of the armed forces, and do not see it as a likelihood any time in the near future.

But Marshall, asked about his views during his confirmation hearings, said that while he's never advocated unionization of the armed forces, he believes the military services would benefit from a better grievance procedure outside the chain of command.

Support for unionization comes from the American Federation of Government Employees, which plans an organizing drive among military personnel. This, in turn, inspired a number of bills in Congress that bar military unions.

The AFGE argues that since the new recruiting "pitch" stresses civilian-type jobs and experience (rather than military or patriotic appeal), the uniformed man or woman ought to have comparable basic rights to join a union.

The fact of the matter—although it's almost unknown except to the people immediately involved—is that, in one key instance, collective action by U.S. military personnel already exists.

Professor Ezra Krendel of the Wharton School at the University of Pennsylvania points out that the Air National Guard "is made up of units in which about 72 per cent of the civilian/military technicians belong to recognized unions." The ANG is about as important a group as one could find anywhere in the armed services. It makes up about three-fourths of the Interceptor force that guards the United States against air attacks.

The ANG personnel, according to Krendel, include part-time reservists and full-time civilian technicians. The technicians—including officers, airmen, instructor pilots, weather forecasters, and administration specialists—belong to at least eight unions.

Thus, the Management and Labor Division of the Army/Air National Guard engages, in effect, in collective bargaining (except on wages) with these civilian unions. According to the Wharton professor, this has been done "with little publicity and no apparent deterioration in military efficiency."

But military leaders are exceedingly wary of extension of the system. Gen. George S. Brown, chairman of the Joint Chiefs of Staff, told the House Armed Services Committee not too long ago: "I think unionization and the operation of the military forces are totally incompatible."

On his recent visit to the Pentagon, President Carter said it was his strong opinion that "it would not be advisable to have the military personnel unionized." He added that he saw no support for the proposition, even among national union leaders.

We're a long way from accepting military unions as they exist in West Germany, Sweden, Norway, Denmark, the Netherlands and Austria. The U.S. Supreme Court has noted that "the different character of the military community and of the military mission requires a different application of (First Amendment) protections. The fundamental necessity for obedience, and the consequent necessity for imposition of discipline, may render permissible within the military that which would be constitutionally impermissible outside it."

In an interview, Marshall said the important question to be settled relates to "good management"—something that both the armed services and civilian pursuits can't benefit from unless there are good grievance procedures.

"If the troops have a problem with their sergeant," says Marshall, "it's pretty hard to go through the chain of command to correct that." The Army could establish a mechanism for grievances through the existing Uniform Code of Military Justice, Marshall said, or provide some special way for handling complaints without causing reprisals.

Professor Krendel thinks that such a trend—taking effect very slowly—is probably inevitable. Without the explicit development of military unions, such an evolutionary change is bound to be hastened by the all-voluntary character of the armed forces.

SHOULD GOVERNMENT EMPLOYEES POLITICK?

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. DERWINSKI. Mr. Speaker, Bert Mills, who is distinguished for his coverage of the Washington scene, comments on the enactment of legislation to compel Government workers to participate in political activities in an article carried in the March 3, edition of the Star Tribune Publications of Cook County, Ill.

His most knowledgable comments are especially timely since there are indications of a politically motivated move to remove the Hatch Act restrictions. The article follows:

MAIN STREET, U.S.A.—SHOULD GOVERNMENT EMPLOYEES POLITICK?

(By Bert Mills)

WASHINGTON, D.C.—Should federal employees have the same rights to engage in political activities as other citizens? Or are government workers in a special situation which makes it desirable that they be as non-political as possible?

This issue is before Congress again, thanks to the AFL–CIO, and most signs point toward enactment this year of legislation which would emasculate a 1939 law. The bill is HR 10, sponsored by Rep. William L. Clay (D-Mo.), who is strategically placed as chairman of the House Subcommittee on Civil Service.

Rep. Clay received an 88 per cent rating by AFL–CIO's political arm last year. He also received thousands of dollars in contributions from labor organizations when he was re-elected from his St. Louis district last year for his fifth term.

The Clay bill was passed overwhelmingly by Congress during the 94th Congress but was killed by the veto of President Gerald Ford. President Jimmy Carter has not endorsed the Clay bill but has gone on record as favoring changes in present law. Of course, AFL–CIO strongly supported Carter in the November election.

The House Post Office and Civil Service committee, of which the Clay subcommittee is a unit, is expected to approve HR 10 in short order, and House passage could come before Easter.

Assuming quick passage of the Clay bill by the House, it will face a new situation in the Senate, which has just eliminated its Post Office and Civil Service committee. This year a new Governmental Affairs committee will handle civil service legislation.

Most Republicans will oppose the Clay bill on the sound theory that most government employees are Democrats, and to free them of restraints against political activity will aid the majority party. But the GOP is not important in this Congress, with the Democrats holding a two-to-one edge plus control of the White House.

One reason why AFL–CIO is so anxious to remove Hatch act restrictions is to organize the civil service. While the Postal Service is dominated by union members, most government employees do not belong to a union. The National Federation of Government Employees has 600,000 members but is a minority of limited influence.

The Clay bill would encourage voluntary political participation by government employees but could lead to abuses. A civil servant aiding the party in power would expect to be rewarded, and probably would be. Conversely, the government worker bold enough to work for the party out of power could expect to be penalized.

It was a good idea back in 1939 to restrict political activities of federal workers. It is still a good idea and the Clay bill ought to be defeated.

ADVICE TO AID

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. BONKER. Mr. Speaker, as the Agency for International Development comes under new management—with the nomination of John Gilligan and others—I have thought it timely and constructive to request some advice from critics of AID's traditional policies.

One of them is a valued acquaintance of mine, Prof. Roy Prosterman of the University of Washington Law School in Seattle. Together with his assistant, Mr. Charles Taylor, he has set forth in a memorandum, which I ask permission to reproduce here, notions of how AID can improve its compliance with congressionally mandated new directions and in general benefit more the poorest of the poor in our world.

The memorandum follows:

FOREIGN AID: WHAT WE WOULD DO

If we were Governor Gilligan, or in the White House, these are the principles by which we would govern our development-aid program, based on our own long experience in field work and in independent, critical evaluation of that program:

1. More resource transfers are needed, and the multilaterals are in general much less effective (and much less answerable to us) than AID; but we could not ask that AID be allowed to administer additional resources until they had gotten themselves more fully "on track" in implementing the New Directions requirements legislated in 1975. To get them "on track", we would do the following:

2. Announce as a minimum principle that the U.S. will not allow a sincere effort of basic self-reform—particularly, the extremely basic but hard-to-decide-on measures to transfer land to the non-owning tillers via land reform—to fail for want of resources in any country ordinarily an object of our aid. There is often a precious, brief moment of time (as in the Philippines in late '72–early '73) when such basic reform is a genuine possibility, and when the availability of resources to carry it through may make all the difference: When a Government has come to that tough decision by itself, and wants our help, we should be ready to move heaven and earth rather than say "no" (as we did to the Philippines, and as we have done to others). This means that reallocation of $100 or $200 million, from within that year's program, or special requests to Congress if needed, should, always, be made under such circumstances: The resources, of course, should be made available only on a "reimbursement" basis, so that, for example, land must have been actually transferred, and its transfer confirmed by random-sample survey or equally assured method, before we reimburse the Government in resources of the previously-agreed-on amount (for example, resources that will allow some ex-landlords to "monetize" their bond compensation in approved productive investments) so that the next round can be carried out, for reimbursement in turn. We should announce this principle, which is an important adjunct to—indeed, which is inseparable from—our avowed support for human rights in the less-developed countries. This paragraph involves, we believe, the minimum possible degree of action in providing help to put in place what is the missing keystone of rural development wherever it is absent, as we have found in our own fieldwork over a nine-year period, and as it is thus expressed at p. 78 of the Second Annual Report of the President on Development Issues (May 1976):

"In most countries rural inequality of income distribution is considerable, largely because of the pattern of land distribution. Research sponsored by AID suggests that redistribution of land, besides improving equity in most cases, can actually increase aggregate domestic savings as well as food output over time. World Bank studies indicate that small farmers, given appropriate price policies, are more efficient in the use of farm resources, than are large farmers. These studies conclude that the single most powerful policy instrument for the combined objectives of rural equity and output growth is land reform."

3. In implementation of the New Directions principles, the total funds available under the Food and Nutrition, Health, and Population categories, should be henceforth allocated approximately according to the following basic formula:

Anywhere from 5% to 50% in support of direct costs (land acquisition and purchase guarantees) of land reform programs, depending on *what* was currently in progress or in immediate prospect around the world.

Of the balance:

20% as non-repayable subsidies to sub-subsistence small owner-operators (those who were already operating under ownership or ownership-like tenure, or who were beneficiaries of land reform programs underway, but who lacked these supportive resources; seed, fertilizer, irrigation improvement.

20% as repayable support to small owner-operators (again, pre-existing,* or pursuant to land reform) who were now producing more than enough for their own food needs and were ready to be connected with markets: that is, to provide true credit for the same purposes as above.

20% as non-repayable, subsidized support to both the above categories: extension services, relevant research, micro-irrigation projects, farm-to-market roads (the last, only for those ready to be connected to market—and truly minimum all-weather roads, not "trunk" routes or highways paved in the Western style). It should be expressly noted here that "rural electrification" is something like eighth or tenth on the list of small farmers' needs in the less-developed countries—an utterly different situation than rural Georgia in the 30's or 40's, for example—and should not be provided via aid funds, but rather should be supplied, in its proper place, through the resources generated in the villages themselves by the successful basic programs which our aid supports.

25% for preventive health and sanitation measures: clean water, environmental sanitation and waste disposal, vaccination of children against basic childhood diseases.

10% for family-planning technology and family planning education, for those ready for it (in particular, those who now had sufficient economic security and sufficiently low infant and child mortality rates to eschew

---

* As in already-egalitarian African communal land tenure.

"insurance births" and be ready for family planning).

5% for reforestation, for research and monitoring, and for special projects.

4. Apart from other, more drastic reorganization possibilities for the bilateral aid program (see our memo of November 1, 1976), our aid should be concentrated on fewer countries and projects—at most, one-third to one-half the present 45 countries and 532 projects over which such aid is, thinly and ineffectively, spread—and should be in 100% grant form (contrary to the recent radio "call-in" statement), where we get maximum leverage to see it used effectively, rather than "loans" which are really 70–80% grants in economic terms (because of the very low interest and long period before principal repayment) but which are carried on the books of the recipient as "loans", thought of as "loans", and which carry greatly-diminished leverage for insuring their wise application.

5. Finally, there should also be effective measures to assert centralized policy making and control, strongly implementing the New Directions legislation out of Washington (lacking, paradoxically, despite the presence of 60% of AID's U.S. personnel in Washington). Mission Directors should be called to a central meeting by the Administrator, where policy lines are clearly laid down—not to the chaotic and diverse "happenings" over which the Assistant Administrators presided, region-by-region, in the past Administration; we are told that such a centralized laying down of policy has not occurred in at least twenty years—and this, if true, goes a long way to explain the incredible diversity of performance among different missions (on this see our memos of March 11, 1976 and March 3, 1977 on "Grading Bureaucratic Compliance").

CAMPAIGN FINANCE REFORM BILL

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. ANDERSON of Illinois. Mr. Speaker, today I am pleased to join with Congressmen UDALL, BURTON, WIRTH, and COHEN, and a bipartisan group of over 120 House cosponsors, in introducing the Campaign Financing Act of 1977, which would provide Federal matching payments for small contributions in congressional general election races. At noon today we held a press conference announcing the introduction of this major campaign finance reform bill, and at this point in the RECORD I include the text of my statement at the press conference:

STATEMENT OF THE HONORABLE JOHN B. ANDERSON PRESS CONFERENCE ON CAMPAIGN FINANCE REFORM

Mo Udall and I have been working together for Federal campaign finance reform since 1971, back when Watergate was nothing more than an imposing structure on the Potomac. After Watergate became an imposing symbol on our national political and governmental processes in 1972–73, our reform efforts gained new impetus and culminated in enactment of the Federal Election Campaign Act Amendments of 1974. That law placed limitations on Federal campaign contributions and spending and provided a Federal financing system for presidential primary and general election campaigns. In the 1976 *Buckley v. Valeo* decision, the Supreme Court struck down the spending limits which were not tied to Federal financing, but upheld the contribution limitations and presidential financing system. The Congress acted last year to bring the law into conformity with the Supreme Court decision. Despite some delays resulting from the Supreme Court decision during the crucial primary period, the new Federal financing system for presidential candidates has proved to be remarkably successful—a "quiet revolution" as Common Cause has put it. We had virtually eliminated the influence of big money contributors on presidential politics.

Unfortunately, we had not been successful in instituting Federal financing for congressional general election races, and this tended to have a "balloon squeezing" effect on congressional races. That is, with special interest contributions completely barred from the Federally financed presidential general election campaign, special interest money was squeezed into congressional races. The Common Cause survey of the 1976 races reveals that $22.6 million was poured into congressional races, double the amount given in 1974 races to congressional candidates. Common Cause has correctly labeled this new special interest bulge on the congressional end of the campaign ballon as "a growth industry."

The bill which we are introducing today is designed to eliminate this special interest pressure on congressional campaigns and candidates by reducing from $5,000 to $2,500 the amount their multi-candidate political committees can contribute to each presidential and congressional race, and by substituting a system of Federal matching payments on the first $100 of each contribution to a congressional general election campaign, up to $50,000. Congressional candidates accepting Federal matching payments would also agree to an overall spending limit of $150,000, and a personal spending limit of $25,000 for House races and $35,000 for Senate races. If an opopnent does not accept Federal financing and exceeds the $150,000 spending limit, the Federally financed candidate would not be bound by the spending limit, though he could still not receive more than $50,000 in Federal matching payments.

I think it's important to emphasize two aspects of this new congressional financing system. First, the spending limit is about 50% higher than it was in the 1974 law to make it more realistic in terms of today's campaign costs and to avoid the "incumbent protection" charge which is often attached to low spending ceilings. Secondly, acceptance of Federal matching payments will also require abiding by personal spending limits. While it might be argued that millionaire candidates will reject Federal financing and continue to finance exorbitant campaigns out of their own pockets, I think a Federally financed opponent who agrees to the $150,000 spending limit will bring considerable pressure to bear on the wealthy candidate to abide by the same limit, whether or not he accepts Federal financing. But even if he doesn't, I think the public will be less inclined to vote for someone who ignores this new Federal standard for campaign spending. In short, with public funds available from the tax check-off for partial funding of campaigns at reasonable spending limits, I think it will be much more difficult for a wealthy candidate to buy himself a seat in Congress. The American public's sense of fair play would be greatly offended.

Finally, I'd like to say a word about our amendments to the presidential portion of the campaign act. Three major criticisms have been leveled against the present system: first, that the spending limit in the general elections is too low; second, that individuals and state and local parties have been barred from contributing to the general election campaigns; and third, that independent and third-party candidates have been discriminated against. Our bill addresses all three of these criticisms by (1) raising the Federal grant from $21.8 million to $25 million; (2) permitting individual contributions of $50 or less up to $5 million; (3) permitting state and local parties to raise and spend up to 2¢ per eligible voter on their presidential candidate; and (4) providing Federal funds for independent and minor party candidates on the first $250 of each contribution up to $15 million once a threshhold of $5,000 in gifts of $250 or less has been raised in each of 20-different states. I think these provisions will correct the deficiencies in the presidential system which have come to light as a result of our 1976 campaign experience.

I hope this Congress will take this next logical step in the campaign finance reform process by eliminating special interest bulges from our campaigns and substituting a system of Federal matching payments for small contributions.

A CONSTITUENT'S LETTER

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. TEAGUE. Mr. Speaker under leave to extend my remarks in the RECORD, I wish to include the text of a letter from one of my constituents which I feel is most representative of the letters I have received in the past several months and generally follows th thinking of the people I represent in the Congress:

BRYAN, TEX.,
March 8, 1977.

HON. OLIN E. TEAGUE,
Congressman, Sixth District of Texas, Washington, D.C.

DEAR TIGER: This letter may be a little late, but I have not wanted to contact you while you were in pain or perhaps down in the dumps. I knew in reason that you were being snowed under with letters and messages and I did not want to add to your difficulties. However today I talked to Mrs. Rideout and she told me you were doing fine responding to surgery and even to therapy and would soon be giving your new foot a workout. That is wonderful and I suspect that your health and general wellbeing may be better than it has been for a long time. You are adding to your stature daily and I only wish we had more men of your calibre in Congress. I certainly wish you continued good luck in your recovery period.

I do not know how active you are in keeping your finger on the public pulse, but I am in a position to keep pretty close tabs on the general situation. For what it is worth I will give you a few of my impressions. A lot of people Democrats and Republicans are scared to death of President Carter. They do not like his selections for some of his key appointments, and they are afraid that so many of the new Congressmen will not want to cross the President, that there will be little or no restrictions on some of his too liberal actions. There is no question but that the people generally are becoming concerned over inflation and rising cost of living. The fact that no one has yet come out with the sound idea that, for recovery we must, economically speaking, do more work for less money and work longer hours and thus abandon the old line of higher wages, shorter hours and less production. Our physical volume of production must increase, cost per unit must decrease. This is a tough one and not many people understand enough economics to see

how such a program can work out in the long run. A lot of people are beginning to realize that Unions force out of the productive process a higher percentage of the returns than their contribution of labor justifies. This is a tough one! Labor's recommended policy is to continue to raise wages and increase unionization through forcing people to join unions. This is simply more of the same that has led us into deeper trouble. When the inevitable happens, people are laid off, the answer is in Government funded work projects. This is reverse economics. It only takes capital away from economically sound productive processes through extra taxes to fund the project or increases our debt and adds to inflation. People who have followed the false ideas touched upon above should not be appointed to key positions in Government.

While I strongly believe that there should be some strong controls on Labor, there is another side of the coin. The largest chunk of unearned increment from our productive process, goes to Corporations and the multinational cartels through monopoly control and the forcing the consumer to pay a controlled and too high a price. This is becoming increasingly known, but there are no practical answers, because politics stands in the way. Thus the consumer, who is all of us pays the bill. Thus there is only a slight chance for a small number of consumers to engage their talents in such a way as to counteract the results of this system. So the future for most of we middle class and lower class consumers is to adjust to a lower standard of living and prepare to pay more and more in taxes to support the system, ad infinitum.

Every once in a while I get the desire to unburden myself to you, and now that you are not going to the office regularly I decided that one of these off the top of my head letters might get your attention and maybe influence the direction of your thinking. I am aware that you know everything that I have alluded to in this letter. I am certain you know a hell of a lot more, but you may not know that you have a lot of your constituents that are thinking along these lines. You have a lot of conditions to consider for your future. You may not return to Congress another time, and this term may present you with an opportunity to strike a real blow for the country that you love and fought for and for the preservation of our constitutional government. I am not sure but that such a procedure would be the best politics that you could play. Even people in your district who actively worked against you in the last election, agreed that you were more honest than most congressmen and that your judgement was good when you had the facts. I believe that in this term in Congress you need to stand up and be counted on the right side of every issue that comes to a vote.

You told me a few years back that you were for Rhodesia and certainly would try to head off any scheme to cause the U.S. to have to buy chrome from USSR. From where I sit this appears to be in the offing. I do not think we should give up our rights to the Panama Canal. I do not want Sol Linowitz to represent my interests in negotiating the Panama Treaty. I am not in favor of letting the crooked opposition steal the election to Congress from your Texas Republican friend Ron Paul. To do anything on this would really put you on the spot because Ron Paul is a Republican, but I think we need him in Congress.

Tiger, I could write a book on matters that I have mentioned here, but you would not have time to read it. I apologize for the length of this letter but you got time to read it now. I am not your political advisor, or your god father, or your critic. I am only a long time friend who loves you and hopes for you the very best in every way. I know you have had a rough time. I would like to see you come back strong and wind up as the most respected and best loved Congressman that ever served his country. You are unique—war record, length of service, performance, etc., etc. I hope I have not hurt your feelings in any way. I have just been thinking about you and in this disorganized sort of way picked this letter out myself.

Very best of regards to you and Freddy and I hope you will be fully recuperated in the near future.

Sincerely,

BASSETT ORR.

WHERE THERE'S NO WILL, THERE'S * * *

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. SYMMS. Mr. Speaker, recently, I read with great interest an article which appeared in the Packer, entitled, "Where There's No Will, There's * * *"

This enlightening article points out the costly administrative tangle of injustice, abuse, and inefficiency that is ever present in our Government's welfare system. Although, Mr. Speaker, I do believe there needs to be a simple and coherent way to help financially desperate citizens. Nevertheless, our current welfare program is unequal and unjust, and it will remain that way until welfare's complexity is sacked in favor of a simple means to allot money to people who can prove that their incomes are below some specific level, and that a job is out of their reach.

Mr. Speaker, no one is against helping people who really need help, but they are tired of paying taxes to support people who are perfectly capable of supporting themselves when jobs are readily available.

The following article is an example of the typical everyday abuse that continues in our Government giveaway program. Maybe if we remove some of the bureaucratic tape that has been blinding our Government, we will see the injustice and take action to prevent further abuse.

Mr. Speaker, I commend the full text of the article to my constituents:

WHERE THERE'S NO WILL, THERE'S . . .

It appears that those Florida growers who were so adamantly opposed to having the state declared a disaster area following the recent freeze were absolutely right, and are now paying (along with taxpayers across the country) for the excessive generosity of the U.S. government.

During the freeze, hard luck stories appeared in newspapers and on television concerning the fact that many migrant and other farm workers in Florida were suddenly out of work. What the government and the press did not realize was that this was strictly a short-term situation. In fact, it was so short-term there was actually a labor shortage immediately following the freeze.

Florida growers saw what was going to happen. The government would come in and place thousands of workers on welfare, not understanding that there was still plenty of produce in the state and many jobs to be had, and not caring about the difficulty of getting many of these people off welfare and back in the fields.

Florida growers told us as early as the United convention during the first week of February they were having trouble finding field workers because of government handouts.

In the Feb. 19 issue of *The Packer*, one of our Florida representatives, James Nolan, reported, "Government handouts being freely dispensed under federal disaster relief operations and its accompanying red tape is hindering Florida's agriculture industry and depriving it of badly needed labor."

Both vegetable and citrus growers complained of the bureaucracy involved in dealing with the situation.

Said one grower: "The workers need only to sign a card to get assistance. The growers have to go through reams of bureaucracy."

A more descriptive—and more disgusting—account of the situation was told in the March 5 issue by another *Packer* Florida representative, Larry Waterfield, who was on the spot in Immokalee last week when a planned protest "work in," or what he termed a "media event" occurred.

The event was called by the United Organization of Migrants, a farm worker organizing group. The purpose was to discredit claims by growers that federal aid money was keeping workers out of the field.

According to Waterfield: "Organizers boasted that 1,000 workers would be on hand for the rally; about 40 showed up. The work-in was supposed to demonstrate that workers were willing to work, but that no jobs are available.

"On cue, the workers and crew leaders shouted, protested and chanted while the cameras clicked away."

Ironically, at the same time, growers were looking for workers. One local citrus grower, who was desperate for workers, resorted to hiring passing tourists who thought it would be a novelty to pick citrus and get paid for the effort.

Our reporter said that on the NBC nightly television news, an Immokalee vegetable grower was shown outside a relief center asking existing workers if they wanted jobs. Most said they were not interested in working.

Charges of fraud in the aid program have been heard from a number of counties, and reporters and other investigators have shown it is a simple matter to get aid money, even without showing proof of employment in agriculture.

One housewife from Belle Glade said she simply walked in, signed up and went away with a government check. She later returned the money, her point having been made.

The farm labor shortage in Florida is one more example of what happens when the government offers more incentive not to work than to work. No wonder there is a 7.5 per cent unemployment rate.

STATEMENT ON PUBLIC FINANCING OF CONGRESSIONAL CAMPAIGNS

HON. TIMOTHY E. WIRTH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. WIRTH. Mr. Speaker, today Representatives UDALL, ANDERSON, BURTON, and I have introduced the Campaign Financing Act of 1977. This act finishes the election reform process that was started over a decade ago when some Members of the House and Senate first proposed public funding of Presidential races. Last year witnessed the first publicly funded Presidential election and, on most accounts, public funding was a success. The bill we are introducing today

will extend public funding, through a mix of private and public contributions, to congressional elections.

This legislation also goes a long way towards eliminating the influence of special-interest money in our electoral process, money that has an undue influence in congressional elections. One simply needs to look at the contributions various political groups have made in the past two congressional elections. The growth of these contributions over the last 2 years has been tremendous. The amount nearly doubled from 1974 to 1976: $12.5 million in 1974 to $22.6 million in 1976. Special interest money that formerly went to Presidential candidates was spread among congressional candidates.

Mr. Speaker, unless we do something, now, I foresee continued growth of special-interest money in congressional races, resulting in ever-escalating campaign budgets. The result could well be the erosion of what little public respect there is for Congress and the electoral process. The Campaign Financing Act contains measures to halt this spending.

A key provision of this act requires that if a candidate accepts matching public funds he/she must adhere to spending limits of $150,000 for House races. According to the Supreme Court, the only way a candidate may be forced to limit his/her expenditures is if he/she accepts public money.

The process by which a candidate becomes eligible for partial public funding and subject to spending limits is as follows: First, the candidate must raise $10,000 in private contributions of $100 or less; $10,000 is a high enough threshold to discourage frivolous and nonserious, publicity-seeking candidates.

Once the threshold limit is reached the candidate is eligible for public matching funds. He/she will receive $1 public money for every $1 raised through contributions up to $100 for every contributor and up to $50,000 overall in public money. The private-public matching applies to general elections only; no public funds can be spent on primary elections.

The candidate is also allowed to contribute $25,000 of his/her own money for House races and $35,000 for Senate races.

Any group contribution will be limited to $2,500 for primary elections and $2,500 for general elections per candidate. The current limit is $5,000 for each election per candidate. This limit, combined with the overall expenditure limit, make up the two most important provisions of this act so far as reducing the influence of special interest money is concerned.

Of course, citizens groups or grassroots movements must be entitled to participate in the electoral process. The $2,500 limit per election is fair and reaches a happy medium between the need to limit special-interest money and and the rights of citizens, and citizen groups to express themselves in the political process.

Mr. Speaker, a few points of this act need special emphasis.

The first and most important is that it is voluntary. A candidate does not have to accept the matching public money and therefore need not be subject to the limits on total campaign spending. So, Mr. Speaker, a candidate has a choice of accepting public funding and overall spending limit, or funding his/her race entirely with private funds and spending as much as he/she chooses.

Therefore, this provision does not penalize a candidate for being a good fundraiser or highly popular. What it does is offer the electorate greater choice of candidates. Limited public funding will break the lock some Members of Congress have on their district by allowing a serious opponent access to funds with which to help mount an effective challenge.

It is a fact that, in most cases, the incumbent has an easier time raising money than a challenger. This bill helps to do away with the incumbent's advantage, placing the incumbent and challenger on more even footing. At the same time, it gives the nonincumbent person of limited personal means or limited exposure a true chance to run for public office.

In the rare case of an election where one candidate is using public funds and the other is not, the one accepting public funds would have to adhere to the overall spending limit—unless his opponent's expenditures exceed the limit. At this point, the candidate accepting public funds would no longer be bound by the overall limit. He/she would not be eligible for more than $50,000 in public funds, but could collect more private contributions, within the existing limitations. This situation would be an exception to the rule, for the proposed limits are surely adequate.

Another important point to note is that the public money would come from a special fund generated by an optional $1 check-off on income tax forms—identical to the existing system for Presidential races. The money will not come from the general treasury.

In the case of lack of funds, the existing funds would be prorated among the candidates. The $10,000 threshold limit and overall spending limit would still apply.

Mr. Speaker, in summary, I would like to underscore a few points.

The essence of this legislation is its provision for partial public financing. This is one-third of the spending limit. Up to two-thirds of a candidate's campaign would be funded through private contributions of $100 or less and special-interest group contributions of $2,500 or less. This will encourage candidates to mount a genuine grass-roots campaign with a broad base of support.

Also, it is a vountary plan. No candidate is forced to accept public money or to adhere to an overall spending limit.

This bill also offers a couple of changes to the existing Presidential funding law. It will increase the spending limit in the general elections from $21 million to $30 million, $25 million being public money and the remaining $5 million being composed of individual contributions of $50 or less.

State and local parties would be able to raise and spend up to 2 cents per voter for their preferred Presidential candidate as compared to the present limit of $1,000 per State and local party.

Also, independent and third-party candidates would be eligible for public funds during the race, and not afterwards, as current law states.

These amendments are designed to iron out the few difficulties that arose during the 1976 Presidential election.

Mr. Speaker, public confidence in our institution has dwindled to an alltime low. The recently adopted code of ethics helped remove the taint of special-interest money from the Halls of Congress. The Campaign Reform Act will help remove it from the election process.

We have the opportunity to make this Congress the most reform-minded and progressive Congress in the history of the United States. Let us not let this opportunity pass. I most strongly urge the speedy passage and adoption of the legislation.

The text follows:

SUMMARY OF PROVISIONS—UDALL/ANDERSON/BURTON/WIRTH CAMPAIGN FINANCING BILL

PRESIDENTIAL CAMPAIGNS

Spending limits in the general election would be increased from the current $21.8 million to $30 million, composed of a grant of $25 million from the check-off fund and up to $5 million in private individual contributions of $50 or less.

State and local parties would be allowed to raise and spend up to 2¢/voter to promote their presidential candidate.

Independent and third-party candidates would be eligible for matching funds during the course of the campaign, rather than after the general election. The eligibility threshold would be the same as in the major-party primaries—$5,000 in gifts of $250 or less in 20 different states.

CONGRESSIONAL CAMPAIGNS

Matching funds from the dollar check-off would be available in the general election to candidates who agree to abide by the spending limit, in accordance with the Supreme Court decision in *Buckley* v. *Valeo*. After meeting a threshold requirement of $10,000 in donations of $100 or less, candidates would receive $1 for each $1 raised, up to a ceiling of $100 for each contributor and $50,000 overall.

The spending limit for candidates who accept matching funds would be $150,000.

Personal spending by candidates accepting matching funds would be limited to $25,000 for House races and $35,000 for Senate races (the same figures as in the 1974 Act).

Special interest contributions to one candidate would be limited to $2,500 in the primary and $2,500 in the general, instead of the current level of $5,000 in each (his provision would apply to House, Senate, and Presidential campaigns).

To reduce potential incentives for "opting out" of the public financing system, whenever a non-publicly-financed candidate spent more than $150,000, his opponents would be freed from the $150,000 spending limit imposed on candidates who accept matching funds. In the more usual situation, where all candidates participate in the public financing system or non-publicly financing candidates do not spend more than $150,000, the spending limits would remain in force.

THE OPEN CONSPIRACY

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. OTTINGER. Mr. Speaker, James Reston's recent piece entitled "Open Conspiracy," which appeared in the

New York Times several days ago, explains the historical significance of the Carter posture on human rights, and relates the President's actions to those of our Founding Fathers and many who followed. I commend Mr. Reston's analysis, and want to bring it to the attention of my distinguished colleagues:

THE OPEN CONSPIRACY

(By James Reston)

WASHINGTON, March 5.—The Russians are sneering at President Carter's defense of human rights, as if it were a dreary Sunday school lesson out of Plains, Ga., but it is much more serious than that.

Mr. Carter, is touching something much deeper in the American character. The Russians should read Mr. Jefferson on the Rights of Man, Mr. Lincoln on the universal meaning of America, Woodrow Wilson and the two Roosevelts on the New Freedom, the New Deal, the Square Deal and the dream of a decent world order. And then perhaps they may understand that Jimmy Carter has merely gone back to the old lessons of a country that doesn't quite believe in its old ideals but believes in believing.

The human rights question, however, won't get very far if it is left to occasional pronouncements by the President, Jody Powell and the spokesmen of the State Department. They have revived a fundamental theme of American life, but they sound a little preachy, and need a different platform to be effective.

The Russians have signed the Charter of the United Nations. It is a legal international treaty. It insists on human rights. They have signed it and proclaim that they keep their promises. They have also signed the Helsinki Agreement on human rights which established international standards of freedom, travel and exchange of information. The question is not whether Moscow will listen to Jimmy Carter's sermons, but whether it will be faithful to the agreements it has signed.

What President Carter has revived, either consciously or unconsciously, is the old biblical notion of the human family, that national boundaries do not forbid concerns for human decency and pity, and that there must be what H. G. Wells once called an "open conspiracy" to pull the world together in a common collective consciousness or awakening toward a different world.

Wells saw the problem more precisely 50 years ago than Carter does today, but Carter has an intuition of the modern dilemma. "I see humanity," Wells wrote, ". . . scattered over the world, dispersed, conflicting, unawakened . . . I see life as an unavoidable waste and curable confusion . . . their disorder of effort, the spectacle of futility . . . all these people reflect and are part of the waste and discontent of my life . . ."

If you talk to Carter, or watch him carefully, you hear echoes of this longing for a rational reorganization of human efforts—not only for reform of the executive and the legislative branches of the Government, but for a revival of America as the spokesman for the ideals of the Western World.

Mr. Carter has some friends and supporters who are trying to help him in this objective. His Ambassador to the United Nations, Andrew Young, is trying to persuade him that he can make more progress for human rights through the United Nations than by denouncing the Russians with statements out of Washington.

Others, like Harlan Cleveland, are arguing that the private sector in the United States can help to establish international principles for the conduct of life within national boundaries. What is needed, Cleveland suggests, is an international standard of the decencies of life. How much food, education, how much population control are necessary to make life bearable and avoid chaos and war?

President Carter senses, but has not really dealt with these larger questions of national and world policy. He has put together a Cabinet of pragmatists, of businessmen and lawyers, who are accustomed to dealing with one problem at a time, but have no real philosophy of where we are and where we are going.

For example, it is not at all clear what the new President thinks about his military budget to contain the Russians, or his appropriations for the underdeveloped countries, or his money for the health, education and welfare of the American people. The relationships between these things are obviously critical.

But he does have a strong conviction about human rights. It is not only political but almost theological with Carter, and when in doubt, the guess here is that he will insist on his moral judgment, even if it gets him into serious trouble with the Soviet Union on the control of military arms. And this is the point that the Russians have obviously missed.

Secretary of State Vance, the new head of the National Security Council, Zbigniew Brzezinski, and even Henry Kissinger before them, have advised Soviet Ambassador Dobrynin not to misjudge Carter's defense of human rights or underestimate its historical significance. Carter could have organized his campaign better through the United Nations, but he is dead serious about these moral imperatives—and if he is challenged by the Soviet Government's chirpy sneers, he will almost certainly get the support of the American people.

Like H. G. Wells, he is really bringing the issue of human rights into the open and into the world. He is inviting an "open" conspiracy," and the guess here is that in the process, though it is dicey, he will have the support of the Congress and the American people.

TRIBUTE TO DR. ERNEST P. WILLENBERG

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1977

Mr. ANDERSON of California. Mr. Speaker, one of the most difficult, yet potentially rewarding areas of education is the teaching of handicapped students. Patience, knowledge, and understanding must be matched with a true dedication in order to help these children lead normal, pruductive lives.

Dr. Ernest P. Willenberg has dedicated his life to special education, and in doing so has become a nationally known expert on education for the handicapped. Born in Adon, Ark., in 1918, Dr. Willenberg was told while still a youth that he would probably spend the rest of his life in a wheelchair. Through hard work and determination, he proved them wrong, and by applying those same qualities through the years became the outstanding leader in the field of special education that he is today.

After working his way through the College of Ozarks in Arkansas, Ernest Willenberg earned his doctorate at the University of Oklahoma. Since coming to California in 1940, he has worked as the head of special education for Bakerfield city schools; as chief of the Bureau of Special Education, California State Department of Education; and director of education, Los Angeles Unified School District. Currently, Dr. Willenberg serves as assistant superintendent of special education for the Los Angeles Unified School District.

Dr. Willenberg has advanced the state of special education in a variety of ways. His leadership and knowledge of the field have been widely recognized, and he has applied his energy and talent to benefit those in need of special education throughout his career.

In 1962, he served on President John F. Kennedy's Panel on Mental Retardation as chairman of the Education Committee. These efforts resulted in significant national recommendations for the retarded which opened up new hopes for their future.

Serving on special assignment for President Kennedy, Dr. Willenberg traveled to Denmark and Sweden to study how mental retardation was treated in those nations, and to bring to the United States those methods which were applied here. For over a decade, he has been a consultant to the U.S. Office of Education for the Handicapped.

In addition, Dr. Willenberg has served as national president of the Council on Administrators of Special Education; and served on the California Governors Committee on Mental Health and on the California Commission on Mental Retardation. As international president of the Council for Exceptional Children, he held what is considered to be the highest professional organization post in the field of special education.

Under Dr. Willenberg's guidance, services to handicapped children in the Los Angeles Unified School District have quadrupled, both in regular and special schools. A new Special Education Center for the Los Angeles Harbor area will be formally dedicated on March 29. This center represents the most comprehensive program offered at a single site within the school district to date, and marks a significant step in the further development of special education under Dr. Willenberg's direction.

Mr. Speaker, Dr. Ernest P. Willenberg's lifelong devotion to the needs of the handicapped has reaped many significant benefits for Los Angeles area residents and the Nation. At this time, I would like to extend my congratulations to him for his many accomplishments, and wish him the best of luck as he continues his efforts in the future. His lovely wife, Ethel and their daughter, Joyce, must be very proud of Dr. Willenberg's outstanding career.

SENATE COMMITTEE MEETINGS SCHEDULED

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated

by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the office of the Senate Daily Digest will prepare such information daily for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Thursday, March 17, may be found in the Daily Digest section of today's RECORD.

The schedule follows:

MEETINGS SCHEDULED

MARCH 18

9:00 a.m.
Agriculture, Nutrition, and Forestry
Subcommittee on Foreign Agricultural Policy
To hold oversight hearing on P.L. 480 programs (overseas food aid).
Human Resources
Labor Subcommittee

HOUSE OF REPRESENTATIVES—*Thursday, March 17, 1977*

The House met at 11 o'clock a.m.

Rabbi Alex Pollack, Congregation Emanu-El, Philadelphia, Pa., offered the following prayer:

Fervently, we seek Thee and we invoke Thy blessing upon all assembled here. Thy faithful servants who have been chosen to speak for the people, stand upon a pedestal of power, of privilege, and of responsibility. Do Thou, O gracious Guardian ever guide their deliberations that their vision and wisdom may strengthen the foundations of this great Republic.

We are grateful for the religious faith of our early settlers that gave them the courage and the strength to endure. They kept alive the spirit of Israel's prophets and proclaimed that all men are created equal in Thy sight, endowed with the imperishable right to life, liberty, and the pursuit of happiness.

May the Biblical ideals of freedom and fraternity, of justice and equality enshrined in our Constitution become the heritage of all the peoples of the Earth.

Grant us Thy richest gift of "shalom"—peace—peace in our own hearts, peace with our fellow man.

We ask it in Thy name, our Father in heaven. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

RABBI ALEX POLLACK

(Mr. EILBERG asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. EILBERG. Mr. Speaker, I am very pleased to have been able to arrange for Rabbi Alex Pollack to deliver today's invocation.

Rabbi Pollack currently fills the pulpit at Congregation Emanu-El in Philadelphia and previously he was spiritual leader at Temple Beth Israel in Lansdale, Pa.

In addition, Rabbi Pollack demonstrates his involvement in community affairs and his concern for his fellow man by serving on the Senatorial Scholarship Committee of Montgomery County, Pa., and as chaplain for Congregation Bet Knesset Shel Kalut at the State Correctional Institution at Graterford, Pa.

Rabbi Pollack is a good and caring person, and I believe strongly that his good works will be of lasting benefit to all those whose lives are touched by them.

ALLEGED KOREAN CIA PAYMENTS TO MEMBERS OF HOUSE

(Mr. PIKE asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. PIKE. Mr. Speaker, 1 week ago today a responsible columnist writing in several responsible newspapers started his column with these words,

Let us now consider the strange origin of the investigation into corruption in the House of Representatives, which—if properly pursued—will lead to the slamming of cell doors behind one out of every ten Congressmen.

These are brutal words and demand more than an embarrassed silence from the Members of this body. In view of the fact that the column made a direct connection between the current investigation into alleged Korean CIA payments to Members of the House and the former House Select Committee on Intelligence, and was specific in its charges, I am pleased that every member of that committee who still serves in the Congress joined with me in a letter to the Attorney General requesting that the charges be investigated and pursued with every resource at his disposal.

The column, by William Safire, as it appeared in the New York Times, and our letter to the Attorney General are submitted for printing in the RECORD:

[From the New York Times, Mar. 10, 1977]

THE BACK CHANNEL

(By William Safire)

SAN FRANCISCO.—Let us now consider the strange origin of the investigation into corruption in the House of Representatives, which—if properly pursued—will lead to the slamming of cell doors behind one out of every ten Congressmen.

In the White House, there was and is more than one channel of intelligence information to the President. The obvious channel is through the Director of Central Intelligence. The other—the back channel—is usually through a member of the National Security Council staff designated by the President to handle the "bureaucratic byproduct" of the collection of foreign intelligence.

This byproduct is usually generated by ELINT, the electronic intelligence operations of the National Security Agency, that part of the Department of Defense that tunes in on all overseas communications, and—we hope—can even detect a computer's order to launch a missile.

The political byproduct is of interest to a President. For example, it enables him to know how foreign governments are evaluating a visit of his Vice President. ELINT tells him what foreign finance ministers are telling their home offices about the negotiating position of our Secretary of the Treasury, enabling the President to give good advice to his representative.

Closer to home, suppose a top White House staffer and a member of the Cabinet attend a dinner, seated at different tables, at an embassy in Washington. After the dinner, the foreign ambassador and his staff often compare notes about the different answers to the same question, giving them a good fix on the political tension within an American administration.

The President is interested in that political assessment, but does not think it is necessary—or thinks it would be an abuse of power—for the Director of Central Intelligence or Secretary of Defense to have it. A close staff aide, beholden to nobody but the President and his National Security adviser, looks over the political byproduct and decides what goes into the Oval Office.

The man who has had more experience than even Laurence Eagleburger in doing that job is William G. Hyland, a highly regarded old pro who was on the N.S.C. staff in the Nixon years, headed State Department intelligence and was Deputy National Security Adviser in the Ford years, and now runs the European "cluster" in Mr. Carter's N.S.C.

In 1974 and early 1975, the byproduct became loaded with information about million-dollar-a-year payoffs to United States Congressmen by the South Korean C.I.A., and was reviewed by the National Security Adviser, then Mr. Kissinger. Control of that kind of information was the reason he fought so hard to retain his N.S.C. "second hat" while Secretary of State. He decided not to transmit most of that information at that time to President Ford.

By mid-1975, however, reporter Seymour Hersh of The New York Times had broken the story of the extensive listening in on

overseas calls, and Otis Pike's House Committee on Intelligence took public testimony from the head of the ELINT operation on Aug. 8, 1975. The Pike committee issued subpoenas for embarrassing information, contempt and perjury were talked about, and Secretary Kissinger (along with Ambassador Richard Helms in Iran) became worried.

In the last week of October 1975 some Congressmen were warned about Administration knowledge of illegal payments handled through the Speaker of the House's office, involving members of the "Board of Education" who ran the House. The implication of the warning was clear: If the Pike committee pushed its investigation or contempt charges further, the targets of that investigation had plenty of ammunition with which to riddle the House.

The Pike committee lost its House leadership support in a hurry, but Mr. Kissinger's "second hat" was taken away on Nov. 3, 1975, and with it his control of the back channel and the byproduct in it.

Those then operating the back channel did their duty and ELINT's byproduct was shown to the President after his Vail vacation. Mr. Ford expressed amazement at the extent of greed and corruption rampant among his old House colleagues and in early 1976 directed that the information be turned over to the Justice Department.

In a few months, a grand jury was impaneled and has been trying to puzzle out the paper trail ever since. In 1977, however, the Democrats took over the Justice Department. Charged last week with trying to deadline the grand jury to death, Attorney General Griffin Bell promised more speed—exactly the opposite of what justice in this complicated case requires.

On Jan. 24, 1977, House Ethics Committee chairman John Flynt wrote Senator Howard Baker asking for more information about the Congressional bribe-taking he spoke about on television. The Senator replied the next day that the Senate Select Committee on Intelligence had begun a staff inquiry into the K.C.I.A–U.S.C.I.A. connection, and would pass along "information collaterally developed."

If Senate Intelligence or House Ethics wants the facts, let them talk to Billy Hyland, or better still, the N.S.A.'s Juanita Moody. "If tough ol' Mrs. Moody starts to spill," one very good source told me, "forty Congressmen go right up the flue."

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 15, 1977.

Hon. GRIFFIN BELL,
Attorney General,
U.S. Department of Justice,
Washington, D.C.

DEAR ATTORNEY GENERAL BELL: On Thursday, March 10, 1977, a column by William Safire entitled "The Back Channel" appeared in The New York Times and presumably other papers around the country. The column began with these words,

"Let us now consider the strange origin of the investigation into corruption in the House of Representatives, which—if properly pursued—will lead to the slamming of cell doors behind one out of every ten Congressmen."

This is the strongest allegation of corruption within the Congress printed by a responsible columnist in a responsible newspaper which we can ever recall. In essence, the column alleges that:

1. There was a channel of communication between the National Security Agency through the National Security Council to the President which bypassed the Director of Central Intelligence.

2. In the years 1974 and 1975, the National Security Council and its then head, Dr. Kissinger, learned that payoffs were being made to U.S. Congressmen by the South Korean C.I.A., but decided not to transmit most of the information to the President of the United States, Gerald Ford.

3. In the Summer and Fall of 1975, this information alleging corruption by Members of the Congress was used to thwart the efforts of a Committee of the House of which we were Members. In essence, the article alleges that the Executive Branch used blackmail against the leadership of the House and the leadership of the House succumbed to that blackmail. The article names two people, William Hyland of the National Security Council staff and Juanita Moody of the National Security Agency, as people who could document these allegations of corruption, blackmail and surrender to blackmail.

We find these allegations so damning to the Congress that we believe they must be investigated and pursued with every resource at your disposal. We feel sure that the ancient argument of "national security" will be raised to thwart or inhibit your investigation. You will be told that the information elicited by the National Security Agency must be kept secret.

We fully agree that the national security is indeed involved. If, in fact, the Chief National Security Adviser to the President has knowledge of criminal acts involving Members of Congress and a foreign government and fails to pass this information on to the President, our national security is indeed affected. If, in fact, the Executive Branch of the government can use blackmail of the type alleged in the article to control the Legislative Branch, the national security is affected. If, in fact, Members of Congress are subject to blackmail because of their relationship with foreign governments, our national security is affected. Therefore, in the name, both of national security and of simple justice to the 90 percent of the Members of Congress who were not alleged to have been involved, we ask that this investigation be pursued vigorously and thoroughly.

Yours very truly,

MORGAN F. MURPHY, JIM JOHNSON, WILLIAM LEHMAN, ROBERT MCCLORY, DAVID C. TREEN, OTIS G. PIKE, LES ASPIN, RONALD V. DELLUMS, ROBERT N. GIAIMO, R. KASTEN, DALE MILFORD.

CONGRESSMAN JOHN BRADEMAS PAYS TRIBUTE TO THREE AMBASSADORS AND DISTRICT OF COLUMBIA POLICE WHO DEALT SO SUCCESSFULLY WITH THE TERRORIST ATTACK

(Mr. BRADEMAS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, I want to pay special tribute to the ambassadors of three nations as well as to the Police Department of the District of Columbia, under Chief Maurice J. Cullinane, who were so successful in resolving the tragedy of the hostages last week here in the Nation's Capital.

The cool, patient, and unwavering vigilance of the police at the three sites where the hostages were held stabilized the situation. It prevented other deaths and woundings and preserved a status quo in which negotiations could take place.

The three ambassadors—Ardeshir Zahedi of Iran, Ashraf Ghorbal of Egypt, and Sahabzada Yaquid-Khan of Pakistan, voluntarily risked their lives to communicate with the Hanafi gunmen. The ambassadors—all of the Islamic faith—were able to persuade the head of the kidnappers that the terrorizing of innocents is inconsistent with the Koran's teachings of mercy and graciousness.

These joint efforts of the police and the ambassadors were responsible for the release of some 134 hostages, many of whom did not expect to live through the ordeal. For that result, the entire Nation is grateful, particularly those who had friends or loved ones among the hostages.

The terrorism and the death and woundings that resulted from it were deplorable. The consequences could have been much worse, however, had it not been for the calmness and competence of the District of Columbia police and the assistance of the three distinguished ambassadors to whom I have referred. We owe them our profound thanks.

COMMISSIONER KUHN'S ACTION DAMAGE TO BASEBALL

(Mr. DOWNEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. DOWNEY. Mr. Speaker, I wish to bring to your attention a rather serious blow to the image of baseball which is a result of Baseball Commissioner Kuhn's shortsighted actions regarding a proposed series of games to be played between the New York Yankees and a team of Cuban all stars in Havana.

As part of our ongoing effort to establish improved relations with the Cuban Government, the State Department recently granted permission to the Yankees for a series with Cuban all stars. However, Commissioner Kuhn apparently intervened and his actions have had the effect of halting plans for the proposed series.

Mr. Kuhn's reason for intervening, according to news reports, dealt with the commissioner's fear that the Yanks might have an inside track to sign Cuban ballplayers. Additionally, Mr. Kuhn may have felt that it would somehow damage this country's prestige if the Yankees were beaten by the Cubans. For that reason Commissioner Kuhn pressed for an American all-star team to play the Cubans. This is unacceptable since the Cuban Government had already extended an invitation to the Yankees.

As a lifelong Yankee fan, I can assure Commissioner Kuhn that the Yankees would represent this country admirably.

I hope the commissioner will reconsider his actions and today I am writing him a letter urging just that. Commissioner Kuhn had needlessly antagonized Congress by his actions. Baseball's political friends in Congress are frankly shocked by the commissioner's head-in-the-sand approach to baseball and to diplomacy. His actions, unfortunately, confirm the public's suspicion that baseball is a business not a sport.

PERMISSION FOR COMMITTEE ON EDUCATION AND LABOR TO FILE A REPORT

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent that the Committee on Education and Labor may have until midnight, Friday, March 18, 1977, to file

its report on H.R. 3712, a bill to amend and extend the Library Services and Construction Act.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

PERMISSION FOR SUBCOMMITTEE ON IMMIGRATION, CITIZENSHIP, AND INTERNATIONAL LAW OF COMMITTEE ON THE JUDICIARY TO SIT TODAY DURING 5-MINUTE RULE

Mr. EILBERG. Mr. Speaker, I ask unanimous consent that the Subcommittee on Immigration, Citizenship, and International Law of the Committee on the Judiciary be permitted to sit today during the 5-minute rule.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

ALLEGED KOREAN CIA PAYMENTS TO MEMBERS OF HOUSE

(Mr. MILFORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MILFORD. Mr. Speaker, I want to associate myself with the remarks of the gentleman from New York (Mr. PIKE). I was one of the members who signed the letter, referred to by Mr. PIKE.

In addition to demanding an investigation of these incidents by the Justice Department, I believe that our own House Committee on Official Standards and Conduct should also investigate this matter.

In his newspaper column, Mr. Safire named the sources that prompted him to make the accusations of bribery and blackmail on the part of Members of the House of Representatives. According to these accusations, not only were Members of this body involved, but also the leadership. These are devastating charges.

I, for one, am tired of indictment and trial by press, wherein the accuser is usually an "unnamed source." This becomes extremely frustrating because one cannot subpena an "unnamed source" before a court of law or a congressional committee.

Mr. Safire seems to be a responsible journalist. In any case, he stated the accusation and named those who can either substantiate the charges or deny them.

Mr. Speaker, it is time to resolve this matter one way or another. If we have Members of this House who have been involved in law violations—whether freshmen or Speaker—they should be promptly brought before the courts and/or the bar of the House. Mr. Safire cited the law violations and named the person who could document the crimes.

I have, today, transmitted a letter to the chairman of the Committee on Official Standards and Conduct demanding that action be taken. I include that letter for the RECORD:

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 17, 1977.

Hon. JOHN J. FLYNT, JR.,
Chairman, Committee on Standards of Official Conduct, U.S. House of Representatives, Rayburn House Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Attached is an article published March 10, 1977 in The New York Times, and a copy of a letter to Attorney General Griffin Bell which is signed by all members of the old Select Committee on Intelligence.

You will note that this article by William Safire clearly charges that some 40 members of Congress, including the House leadership have been involved in crimes and corruption. You will also note that Mr. Safire has named the names of persons who he alleges can testify to and document that crimes and corruption took place.

In view of the fact that Mr. Safire has named names, I demand that your Committee subpoena and question under oath the following persons named by Mr. Safire:

Former Secretary of State Henry Kissinger.

William G. Hyland, formerly a member of the National Security Council staff.

Ms. Juanita Moody of the National Security Agency.

In addition, you should subpoena Mr. Safire, a former member of the White House staff.

Your Committee is conducting an investigation into the activities of the Korean Central Intelligence Agency, specifically allegations of payments by that agency through individuals to various members of Congress.

Here we have a newspaper article, authored by a former member of the White House staff and appearing in a prominent national journal which makes allegations more serious than any I have yet seen in print.

I believe it is incumbent upon you—and I believe you owe it to all of your colleagues in this body—to call these people before your Committee and ask whatever questions are necessary to bring forth the truth of these allegations.

Indeed, in view of the fact that this article has appeared and been widely circulated, I do not see how a proper investigation into the matter can be conducted without hearing from these people.

Sincerely yours,

DALE MILFORD,
Member of Congress.

ALLEGED KOREAN CIA PAYMENTS TO MEMBERS OF HOUSE

(Mr. McCLORY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. McCLORY. Mr. Speaker, as the ranking minority Member on the House Committee on Intelligence that served during the last Congress, I want to join in the communication which all of the Members of our committee have directed to the Attorney General—and to concur in the remarks of my colleague from New York (Mr. PIKE) and my colleague from Texas (Mr. MILFORD).

I might say that the former President, President Ford, according to the article, referred information to the former Attorney General with respect to the allegations that Mr. Safire now says indict Members of Congress. Our communication to the Attorney General at this time urges him to review whatever information he has, and to secure such additional information he may require, and that he should investigate for the purpose not only of identifying those persons that should be formally charged, but for the further reason of exonerating those Members of Congress, 90 percent or more against whom there is no basis for any such allegation or charge whatever.

FROM TREASON TO PATRIOTISM

(Mr. DODD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DODD. Mr. Speaker, in the Irish uprising of 1848, nine men were captured, tried, and convicted of treason against Her Majesty, Queen Victoria. All were sentenced to death. The condemned men were: Patrick Donahue, Charles Duffy, Michael Ireland, Morris Lyene, Thomas McGee, Terrence McManus, Thomas Meagher, John Mitchell, Richard O'Gorman.

Passionate protests from all over the world forced Queen Victoria to commute the death sentences. The men were banished to life to Australia—then equivalent to the Russian Siberia in remoteness if not climate.

Years passed. In 1874 Queen Victoria learned that a Sir Charles Duffy who had been elected Prime Minister of Australia was the same Charles Duffy who had been banished 26 years before. The Queen demanded to know what had become of the other eight convicts. She learned that:

Patrick Donahue became a brigadier general in the U.S. Army.

Morris Lyene became an Attorney General for Australia.

Michael Ireland succeeded Lyene as Attorney General.

Thomas McGee became Minister of Agriculture for Canada.

Terence McManus became a brigadier general in the U.S. Army.

Thomas Francis Meagher was elected Governor of Montana.

John Mitchell rose to become a prominent New York politician and the father of New York's famous mayor, John Purroy Mitchell.

Richard O'Gorman became Governor-General of Newfoundland.

Whether or not you are of Irish ancestry, today, on St. Patrick's Day, we would do well to reflect on the courage and tenacity of the nine Irish convicts and take strength from their experience to deal with the problems that face our own Nation.

LEGISLATIVE PROGRAM

(Mr. RHODES asked and was given permisison to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. RHODES. Mr. Speaker, I take this time for two purposes. The first is to wish the Speaker, the acting Speaker and all the Members of the body a Happy St. Patrick's Day, particularly those who are sons and daughters of the Old Sod, but certainly all the rest of us also.

The second purpose, of course, is to ask the distinguished majority leader if

he is in a position to inform the House as to the program for the balance of the week and for next week.

Mr. WRIGHT. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I shall be glad to yield to the gentleman.

Mr. WRIGHT. I thank the gentleman for his good wishes, and after wishing him the best on this happy day, I would be pleased to answer his inquiry to the best of my ability.

For the remainder of today, the House will be considering H.R. 4088, the NASA authorization. It is an open rule with 1 hour of general debate. Assuming Members observe some reasonable restraint in verbalizing their sentimentality, we might expect to be out by a reasonable hour. That having been done, the business of this week will be concluded, and there would be no need for a Friday session.

For next week, the tentative plan is as follows:

On Monday, the House will meet at noon. There are no bills on the Consent Calendar. There is one bill on the Suspension Calendar, H.R. 3712, Library Services and Construction Act Authorization.

There are three bills reported unanimously by the Ways and Means Committee which will be offered for consideration under unanimous consent. They are:

H.R. 422, duty-free treatment of replacement aircraft engines;

H.R. 1404, Smith College relief;

H.R. 3259, to suspend the import duty on certain horses.

Following that, the House will consider H.R. 4800, the Emergency Unemployment Compensation Extension Act.

That would be under a closed rule, with 2 hours of general debate.

On Tuesday, the House again will meet at noon. There are four bills scheduled on the suspension calendar. Votes on those suspensions will be postponed until the end of all the suspensions. They are:

H.R. 3437, Vocational Education Act technical amendments;

H. Con. Res. 97, harassment of Soviet Jews and other minorities;

H.R. 3976, supplemental military assistance to Portugal; and

H. Con. Res. 142, relating to harp seals.

Following that, the Committee on House Administration will be offering another series of committee funding resolutions, as follows:

H. Res. 280, Banking, Finance and Urban Affairs;

H. Res. 393, Administrative Funds for the House;

H. Res. 298, Agriculture;

H. Res. 189, Rules;

H. Res. 310, Armed Services;

H. Res. 328, Government Operations;

H. Res. 283, Interstate and Foreign Commerce;

H. Res. 382, Aging;

H. Res. 378, Interior and Insular Affairs;

H. Res. 343, Outer Continental Shelf; and

H. Res. 370, Small Business.

On Wednesday, it would be our purpose to ask unanimous consent that the House may meet at noon, in order that we may take up H.R. 4250, equal treatment of craft and industrial workers, subject to a rule being granted.

On Thursday and the balance of the week, the House will meet at 11 o'clock. Three bills are presently contemplated. They are:

H.R. 3965, FAA research and development authorization;

H.R. 4991, National Science Foundation authorization; and

H.R. 5040, State Department supplemental authorization.

The foregoing three bills are subject to rules being granted.

It is planned that the House will adjourn by 3 p.m. on Friday, if there is to be a Friday session, and by 5:30 p.m. on all other days except Wednesday, as is the case until May 15.

Conference reports, of course, may be brought up at any time, and any further program will be announced later.

Mr. RHODES. I thank the gentleman.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule be dispensed with on Wednesday next.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

ADJOURNMENT TO MONDAY, MARCH 21, 1977

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to reconvene at noon on Monday next.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

ADJOURNMENT FROM TUESDAY, MARCH 22, 1977, TO NOON, WEDNESDAY, MARCH 23, 1977

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that when the House adjourns on Tuesday next it adjourn to meet at noon on Wednesday next.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

INTRODUCING JOINT RESOLUTION PROPOSING CONSTITUTIONAL AMENDMENT WITH RESPECT TO RIGHT TO LIFE

(Mr. YOUNG of Missouri asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. YOUNG of Missouri. Mr. Speaker, today I have fulfilled a promise to myself and to my constituents by introducing a joint resolution proposing a constitutional amendment with respect to the right to life. This amendment, like previous human life amendments, would recognize the personhood of every unborn child and guarantee the sanctity of all innocent human life. This amendment, though, strengthens previous resolutions by requiring physical evidence to verify a life threat to the mother before medical procedures can be applied.

Last year, according to family planning statistics, 1 million abortions were performed. I sincerely believe that the preservation of even one human life would make all our efforts worthwhile.

Mr. Speaker, I invite all my colleagues to cosponsor this resolution and I ask unanimous consent that all members may have 5 legislative days in which to extend their remarks on the subject of this joint resolution.

GENERAL LEAVE

Mr. YOUNG of Missouri. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of the joint resolution proposing a constitutional amendment with respect to the right to life, which I am introducing today.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

TO ASSIST THE PEOPLE OF ROMANIA

Mr. ZABLOCKI. Mr. Speaker, I ask unanimous consent that the Committee on International Relations be discharged from further consideration of the Senate concurrent resolution (S. Con. Res 12) to assist the people of Romania, and ask for its immediate consideration in the House.

The Clerk read the title of the Senate concurrent resolution.

The SPEAKER pro tempore (Mr. BRADEMAS). Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The Clerk read the Senate concurrent resolution, as follows:

S. CON. RES. 12

Whereas Romania has suffered a disastrous earthquake which resulted in a significant loss of life, much human suffering, enormous physical destruction, and major economic disruption; and

Whereas it is in the tradition of the United States to provide humanitarian assistance to the victims of such disasters: Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), That the United States should do all that is possible to assist the people of Romania in their hour of need following the terrible natural disaster which has just afflicted them; and should join with other nations and international organizations and with public and private organizations for that purpose; and that the people of the

United States express their deepest sympathy to the victims and to their bereaved families.

The SPEAKER pro tempore. The Chair recognizes the gentleman from Wisconsin (Mr. ZABLOCKI).

Mr. ZABLOCKI. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, Senate Concurrent Resolution 12 was agreed to in the other body on March 14, 1977, and sent to the House. The resolution was subsequently referred to the Committee on International Relations on March 15. This morning, the committee considered the resolution in open session, and by voice vote, ordered the resolution favorably reported.

Romania was struck with a major earthquake disaster on March 4, 1977. The full extent of the loss of life and damage is still unclear but apparently close to 1,500 people were killed and thousands more injured. Thousands of buildings were destroyed.

Senate Concurrent Resolution 12 is a simple expression of sympathy by the Congress toward the Romanian people. As a concurrent resolution, it does not have the effect of law.

I understand that the executive branch is now in the process of assessing the amount of damage done in Romania. The President has already sent a message of sympathy to the Romanians and about $560,000 worth of emergency disaster relief. This concurrent resolution is not intended to in any way pressure the executive branch in its decision on any eventual further aid to Romania, but rather merely as an expression of sympathy from the Congress to the People of Romania.

Mr. Speaker, I urge the adoption of this resolution.

Mr. ROSTENKOWSKI. Mr. Speaker, will the gentleman yield?

Mr. ZABLOCKI. I yield to the gentleman from Illinois.

Mr. ROSTENKOWSKI. Mr. Speaker, I had already drafted and was prepared to introduce my own concurrent resolution to express the sympathy of the House of Representatives to the people of Romania for the disastrous earthquake which has resulted in so much human suffering. I applaud this expeditious action of the International Relations Committee which now makes my personal effort unnecessary.

We have all seen the vivid photographs and read the various press accounts of this terrible earthquake—the greatest disaster in the history of Romania. My private conversations with representatives of our State Department and with officials of the Romanian Embassy strongly indicate that this tragedy is, in fact, much worse than originally believed. The official report of over 1,500 dead and 3,000 hospitalized deals almost entirely with the urban area around Bucharest. It grieves me to say that the final national figures, which may take months to determine, will most certainly be much higher. Recently, there have been several amazing stories in the press concerning citizens of Bucharest being found alive after spending several days under tons of wreckage. On Tuesday, the official news agency Agerpres reported that Sorin Crainic, a young man trapped for 11 days without food or water, was pulled from the rubble of the 10-story continental apartment house in which about a dozen artists and writers were killed on March 4. It will probably be weeks before we know just how many were actually killed.

Mr. Speaker, I again applaud the swift action of the committee and urge the House to follow suit by quickly agreeing to this timely and compassionate resolution.

Mr. WHALEN. Mr. Speaker, today the Senate has forwarded to us a concurrent resolution expressing our deepest sympathies to the people of Romania who are suffering from the effects of the devastating earthquake of March 4 and resolving that the United States should do all that is possible, together with other nations, international organizations, and private groups to ease the suffering in Romania.

According to official reports, approximately 4,000 buildings in Bucharest were destroyed and another 12,000 seriously damaged and no longer habitable. In Romanian towns and villages another 100,000 dwellings were damaged. Many historical and religious buildings and educational institutions were demolished. In fact, the overall material damage by the earthquake totals more than $1 billion.

In Bucharest alone, 1,391 persons are known to have been killed and 7,576 injured. The national total is 1,541 dead 11,275 injured. Some of Romania's most outstanding artists and writers are among those killed.

Many thousands more have been left homeless and bereaved by the loss of loved ones.

Assistance is coming from many sources. The United States has provided medical supplies, a team of structural engineers, and seismologists to help analyze the effects of the earthquake and the possibility of additional major tremors. Other countries and international organizations are taking steps to alleviate the effects of the earthquake as well.

Mr. Speaker, I urge unanimous passage of the resolution originated in the Senate and reported today by the House International Relations Committee.

Mr. BINGHAM. Mr. Speaker, we are painfully aware of the crippling earthquake that struck Romania over a week ago, and of the substantial damage it caused to that country's economy and citizenry. This earthquake came on the heels of massive floods in Romania in 1975, which followed severe droughts in 1974. I visited Romania in 1976 and saw firsthand the sacrifices the Romanians have made to overcome the difficulties caused by these natural disasters and to get on with the development of their country. It greatly saddens me to think of the inestimable damage now done to the buildings and factories critical to the continuing development of Romania, and also to the numerous public buildings including churches and synagogues. The country may suffer over $1 billion in economic losses.

And that is only the material side of this most recent Romanian disaster. Unofficial estimates place the number of people killed at over 1,387, with over 10,000 injured. Living conditions are grim and many families are homeless.

Aid from a number of countries including the United States, and also from international organizations, has poured into Romania. However, the most impressive help has come from the Romanians themselves. Immediately after the earthquake Romanian work teams were organized round the clock to clear debris and rescue people trapped in collapsed buildings. Paul Hoffman reported in the New York Times that Bucharest's Jewish kosher restaurants have been providing warm meals daily, the recipients of these meals including many non-Jews. Efforts like these by the Romanians have provided at least a semblance of order in even the most severely damaged areas. Romanians are demonstrating their resolve to carry on in the presence of hardship.

Mr. Speaker, at this point let me express my sympathy for the people of Romania, especially for those who have lost family and homes. But at the same time let me voice my profound admiration for the strong character and resilience of the Romanians. Countries which work hard to help themselves in times of emergency are especially deserving of aid from the world community. I would like, therefore, to express my willingness to introduce legislation to provide disaster assistance to Romania if that proves necessary when a precise assessment of damage and need is compiled by the State Department.

I realize that the United States and Romania may have political differences from time to time but these differences need not interfere with the friendship between our peoples. And aid in the form of disaster assistance seems to me only an expression and strengthening of these ties of friendship.

In the meantime, I am glad to support Senate Concurrent Resolution 12 which expresses condolences to the Romanian people for losses they have suffered as a result of the earthquake and urge that all possible assistance be rendered.

GENERAL LEAVE

Mr. ZABLOCKI. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of the Senate concurrent resolution presently under consideration.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The Senate concurrent resolution was concurred in.

A motion to reconsider was laid on the table.

PROVIDING FOR CONSIDERATION OF H.R. 4088, AUTHORIZING APPROPRIATIONS TO THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

Mr. DODD. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 405 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 405

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4088) to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Science and Technology, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Science and Technology now printed in the bill as an original bill for the purpose of amendment, and all points of order against said substitute for failure to comply with clause 7, rule XVI, are hereby waived. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the Committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto without intervening motion except one motion to recommit with or without instructions.

The SPEAKER pro tempore. The gentleman from Connecticut (Mr. DODD) is recognized for 1 hour.

Mr. DODD. Mr. Speaker, I yield 30 minutes to the distinguished gentleman from California (Mr. DEL CLAWSON) for the purposes of debate only, pending which I yield myself such time as I may consume.

Mr. DEL CLAWSON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 405 provides an open rule with 1 hour of general debate for the consideration of H.R. 4088, the National Aeronautics and Space Administration Authorization Act. In order to expedite the amending process, the rule provides that the committee substitute will be in order as an original bill for the purpose of amendment. In addition, the rule provides a waiver of clause 7, rule XVI, which is the germaneness rule. The waiver is necessary because the committee substitute contains material not germane to the original bill. The rule also provides for one motion to recommit with or without instructions.

H.R. 4088 authorizes a total of $4.05 billion for the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management for fiscal year 1978.

Mr. Speaker, during the Rules Committee hearings on this bill this past Tuesday, it was brought to our attention that there exists a loophole in the Budget Act. H.R. 4088 originally authorized funds for fiscal year 1978 and therefore, met the May 15 reporting deadline according to the Budget Act. However, the problem arose when the Science and Technology Committee adopted a committee amendment in the nature of a substitute which authorized funds for fiscal year 1977 as well as fiscal year 1978. The committee was advised that the committee substitute was not germane to the original bill and therefore, a germaneness waiver was required. However, the committee was also told that no Budget Act waiver was necessary since the May 15 reporting requirement applies only to bills and resolutions, but not to amendments. In this case, the new 1977 authorization in the committee amendment did not meet the May 15 reporting requirement but since it was an amendment, a Budget Act waiver was not required.

There is obviously a potential problem because this loophole can be used to avoid the May 15 reporting deadline, without obtaining a waiver of the Budget Act. Since this has now been brought to the attenton of the House, I am confident that this matter will soon be corrected before any abuses occur.

Mr. Speaker, I suggest we adopt the rule and proceed with the consideration of the legislation.

Mr. DODD. Mr. Speaker, I have no further requests for time, and I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. WYDLER. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The Speaker pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 389, nays 0, not voting 43, as follows:

Mr. Dingell with Mr. Tsongas.

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERMISSION FOR SELECT COMMITTEE ON ASSASSINATIONS TO MEET TODAY DURING 5-MINUTE RULE

Mr. STOKES. Mr. Speaker, I ask unanimous consent that the Select Committee on Assassinations may be permitted to sit today during the 5-minute rule.

The SPEAKER pro tempore. (Mr. BRADEMAS). Is there objection to the request of the gentleman from Ohio?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, could the gentleman tell us whether this is just for the purpose of hearing witnesses?

Mr. STOKES. The select committee is meeting in executive session and is receiving briefing on sensitive materials relating to the investigation.

Mr. ROUSSELOT. But it is primarily to hear witnesses. The gentleman is not planning to take any definitive action of which we should be aware. He is listening to certain witnesses.

Mr. STOKES. There will be no specific action taken with references to witnesses.

Mr. ROUSSELOT. I thank the gentleman.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

PERMISSION FOR COMMITTEE ON SCIENCE AND TECHNOLOGY TO HAVE UNTIL MIDNIGHT FRIDAY, MARCH 18, 1977, TO FILE REPORT TO ACCOMPANY H.R. 3965

Mr. FUQUA. Mr. Speaker, I ask unanimous consent that the Committee on Science and Technology may have until midnight Friday, March 18, 1977, to file a legislative report to accompany H.R. 3965, to authorize research, development and demonstration projects relating to aviation, and for other purposes.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

GENERAL LEAVE

Mr. FUQUA. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and to include extraneous material on the bill H.R. 4088, on which the rule has just been granted.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

AUTHORIZING APPROPRIATIONS TO THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

Mr. FUQUA. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4088) to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Florida (Mr. FUQUA).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 4088, with Mr. MCKAY in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Florida (Mr. FUQUA) will be recognized for 30 minutes, and the gentleman from Kansas (Mr. WINN) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Florida (Mr. FUQUA).

Mr. FUQUA. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the budget of the National Aeronautics and Space Administration—NASA—is today 30 percent less than in its peak funding year—1965. The added effect of the erosion of inflation on buying power is well known. Out of the past 10 years, NASA has had a declining budget in 5 of these years. The budget for fiscal year 1978, which we are recommending today, is a modest increase over last year's of 9.7 percent which will only hold the line on the buying power of NASA.

Even under these circumstances, NASA has been able to propose sound programs for the remainder of this decade. It is a program which will continue to bring a high return on investment and direct benefits to the American people and the people of the world.

The vision and leadership of the gentleman from Texas (Mr. TEAGUE), chairman of the Committee on Science and Technology continues to give strength and direction to our national space program. It's worth noting today that the gentleman's contribution to bring the benefit of the space program to the American public are second to none.

As chairman of the Subcommittee on Space Science and Applications, I want to recognize today the diligent and thoughtful efforts of all Members of the subcommittee in developing the bill before us today. Each Member on both sides of the aisle has made a significant contribution. Particularly, I recognize the contributions of the gentleman from Kansas (Mr. WINN), the ranking minority member of the subcommittee, who, at considerable personal sacrifice, spent the long hours necessary to review the NASA programs in depth. His knowledge and personal insight into these complex programs continue to be of immeasurable help in establishing a sound bill and strong NASA program.

An identical bill (H.R. 5032) to that under consideration today was filed with a number of cosponsors on both sides of the aisle from the membership of the Committee on Science and Technology. Again I commend all the members of the committee who have so diligently worked on bringing this bill to the floor.

My remarks will primarily be directed to the actions taken by your Committee on Science and Technology as a result of the recommendation of the Subcommittee on Space Science and Applications, which it is my privilege to chair. The gentleman from Texas (Mr. MILFORD) distinguished chairman of the Subcommittee on Transportation, Aviation, and Weather will cover those areas of aviation contained within H.R. 4088.

The committee as a whole recommends 14 changes to funding line items, one new section and two new subsections not included in the original bill. A net increase in research and development, and research and program management; and

a small reduction in construction of facilities is proposed. A net overall increase of $19.04 million more than the President's budget submission is recommended. The actions taken by the committee and the program contained in the budget as submitted have the effect of:

First, increasing by $39,500,000 certain programs while decreasing by $20,460,000 other areas of effort;

Second, initiating a Space Telescope and Lunar Polar Orbiter program.

Third, placing emphasis on planning for industrialization of space;

Fourth, strengthening the university and NASA research and technology base effort;

Fifth, placing more emphasis on weather and climate and advanced propulsion research;

Sixth, recognizing the major contribution that NASA can make to the solution of our national energy problems by augmenting solar satellite power studies and general technology development; and

Seventh, providing 16 areas of comment—committee views—for emphasis or improvement through which the committee would seek to insure a strong national space program.

For the benefit of my colleagues, I am including in the RECORD a table which summarizes the budget actions of the committee for fiscal year 1978.

I urge adoption of the bill as recommended by your committee.

Mr. Chairman, the Subcommittee on Space Science and Applications held a total of 22 hearings in September 1976, and January and February 1977, in Washington, D.C., at NASA centers, and key industrial contractors to review the NASA fiscal year 1976–77 budget performance and the fiscal year 1978 budget request. Testimony was also taken from representatives of NASA, the U.S. Air Force, the European Space Agency, and members of the industrial and scientific community on NASA related programs. The aeronautical programs of NASA were covered separately by the Subcommittee on Transportation, Aviation, and Weather.

For use of the Members some of the financial indicators of the NASA fiscal year 1976–77 programs are included.

NASA's operating plan for fiscal year 1977 is equal to the amount appropriated to NASA—$3.69 billion—plus $27 million reprogramed from 1975 funds realized from savings on the Apollo-Soyuz test project, and $31,78 million supplemental appropriation made to meet October 1976 civil service pay increases.

The significant adjustments made to the operating budget for fiscal year 1977 were:

Transfer of $30 million to Space Shuttle to facilitate timely completion of current test objectives,

Transfer of $0.5 million to physics and astronomy and $0.8 million to lunar and planetary exploration for needed supporting efforts,

Transfer of $0.2 million to the technology utilization program,

Earmarking of $0.2 million within the applications program for studies of Earth resources operational systems,

Earmarking of $3.5 million for identification and verification of energy technologies, and $2.5 million for solar satellite power systems studies.

These actions were consistent with positions adopted by your committee. Offsetting internal budget adjustments were made to accommodate these changes.

Unobligated balances for fiscal year 1976, transition quarter, and first quarter of fiscal year 1977 are following normal patterns. Carryover operational funds will amount to no more than several weeks and are consistent with good financial discipline.

Inflation continues to erode the NASA budget; however, the fiscal year 1977 to fiscal year 1978 budget increase approximates the rate of inflation in the last year without increasing the NASA purchasing power. Based on a fiscal year 1973 actual NASA budget of $3.4 billion, a budget of $4.9 billion would be required to maintain the fiscal year 1973 NASA purchasing power—based on the GNP inflator.

NASA's estimate of the total development costs for 15 major programs shows growth in three: the High Energy Astronomy Observatory—HEAO, Viking, and Landsat–C. The Landsat–C increase represents inclusion of sensor development previously carried as a separate item, while HEAO and Viking reflect inflation effects.

The fiscal year 1978 NASA budget request to Congress—$4.035 billion—represents $18.9 million reduction in the NASA research and development request to the Office of Management and Budget—OMB.

Significant reductions and deferrals include:

Reduction in solar power satellite technology studies;

Deferral of Lunar Polar Orbiter program;

Deferral of space industrialization definition studies;

Reduction in advanced programs activity; and

Deferral of solar electric propulsion stage studies.

Budget amendments subsequent to the original submission restored $10 million for Viking follow-on mission studies and $5 million for Landsat–4 backup spacecraft effort.

Total NASA Center requests to NASA Headquarters for research and development was $195 million more than the budget request to Congress. Key among items not recommended to OMB—total $76.1 million—for fiscal year 1978 were:

The High Energy Astronomy Observatory—HEAO–C compatability with the Space Shuttle;

A HEAO–D program;

Elements of the materials processing payload development program; and

Buildup of research and technology supporting effort.

Your committee recommends 13 changes to budget line items in space related areas. I am including a table of those changes in the RECORD for the benefit of the Members. The total net dollar change to the NASA request—exclusive of aeronautical research and development—is $13.54 million which is comprised of $60.9 million of increases and $47.36 million of decreases. These recommended changes are as follows:

Space flight operations: $5 million increase for space industrializations studies; $2 million decrease in operational capabilities development based on projected economies in upper stage procurement.

Expendable launch vehicles: $7 million decrease in support activities associated with conventional launch vehicle procurement and launch.

Physics and astronomy: $5 million increase in supporting research and technology directed to the university fundamental research effort.

Lunar and planetary exploration: $7 million increase for initiation of the lunar polar orbiter program; $5 million decrease in studies for Mars follow-on programs; $1 million increase in supporting research and technology efforts.

Space applications: $5 million increase in weather and climatic research; $26.9 million transferred to earth resources operational systems line item—Landsat–D.

Earth resources operational systems: $26.9 million transferred from space application in recognition of the need for an operational systems line item and the near operational nature of Landsat–D.

Space research and technology: $4 million increase in research and technology base with $2 million specifically earmarked for advanced propulsion research.

Energy technology applications: $5 million increase for technology studies for solar satellite power.

Tracking and data acquisition: $3 million decrease based on expected economics of operation.

Technology utilization: $1 million increase for augmentation of dissemination activities and a cost-benefits analysis of the program.

Construction of facilities: $0.86 million deferral of immersion tank at the Johnson Space Center; $2.60 million deferral of chemical waste disposal facilities, Michoud assembly facilities; $6 million rescission of prior authorization for launch complex-39, Kennedy Space Center—Space Shuttle facilities.

Research and program management: $1 million increase to provide increased travel funds for program-related activities.

H.R. 4088—COMMITTEE ON SCIENCE AND TECHNOLOGY, FISCAL YEAR 1978 NASA AUTHORIZATION: COMMITTEE RECOMMENDATIONS

[In thousands of dollars]

Sub-line: Line item	Fiscal year 1977 House authorization	Fiscal year NASA request	Committee action	Remarks
1(a)(1): Space Shuttle	$1,200,100	$1,349,200	Same	
1(a)(2): Space flight operations	198,200	267,800	270,800	+5M space industrialization studies. —2M decrease, upper stages.
1(a)(3): Expendable launch vehicles	151,400	136,500	129,500	—7M decrease in supporting activities.
1(a)(4): Physics and astronomy	169,800	224,200	229 200	+5M supporting research and technology.
1(a)(5): Lunar and planetary exploration	193,100	158,200	161,200	+7M initiate development of Lunar Polar Orbiter. +1M augment supporting research and technology. —5M decrease Maru Follow-on Definition.
1(a)(6): Life sciences	22,125	33,300	Same	
1(a)(7): Space applications	185,700	233,800	211,900	—26.9M transfer to Earth resource operational systems. +5M augment efforts in weather and climate.
1(a)(8): Earth resources operation system	13,500	----------	26,900	+26.9 transfer of Landsat-D from space application.
1(a)(9): Aero, research and development	192,100	231,000	236,500	+5.5M increase R. & T. base and add agricultural A/C.
1(a)(10): Space research and technology	83,600	97,700	101,700	+4M Research and technology base (+2M adv. prop. tech)
1(a)(11): Energy technology applications	8,500	4,500	9,500	+5M satellite solar power studies.
1(a)(12): Tracking and data acquisition	254,000	281,700	278,700	—3M general reduction.
1(a)(13): Technology utilization	8,400	8,100	9,100	+1M increase to cover inflation and cost benefits study.
Subtotal, research and development	2,768,525	3,026,000	3,047,500	
1(b)(1): Dryden Flight Research Center, central hydraulic system		420	Same	
1(b)(2): Goddard Space Flight Center, technical processing facilities		3,100	Same	
1(b)(3): Jet propulsion laboratory, modification for neismic protection		2,830	Same	
1(b)(4): Johnson Space Center, modification in central heating and cooling plant		2,540	Same	
1(b)(5): Kennedy Space Center, utility control system		2,130	Same	
1(b)(6): Langley Research Center, main heating plant		790	Same	
1(b)(7): Largo-Unitary plan wind tunnel		980	Same	
1(b)(8): Lewis Research Center, modification of central chilled water system		860	Same	
1(b)(9): National Space Technology Laboratories, modification utility control system		620	Same	
1(b)(10): Largo aeronautical facilities				
1(b)(10)(A): Langley Research Center, National transonic facility		23,500	Same	
1(b)(10)(B): Ames Research Center, 40-by-80 subsonic wind tunnel		13,500	Same	
1(b)(11): Rehabilitation and modification of 64-meter antenna components (various locations).		1,750	Same	
1(b)(12): Space Shuttle facilities (various locations)		65,740	62,280	—.86M immersion tank at JSC. —2.6M mods at Michoud.
1(b)(13): Kennedy Space Center, Shuttle payload facility		6,410	Same	
1(b)(14): Rehabilitation and modification of facilities (various locations)		18,900	Same	
1(b)(15): Minor new construction and addition		5,950	Same	
1(b)(16): Facility planning and design		11,700	Same	
Subtotal, construction of facilities	117,000	161,800	158,340	
1(c): Research and program management	810,455	846,989	847,989	+1 increase for travel.

The committee reviewed the bill before you today section by section. In the space related areas, sectional changes in language are proposed which differ from the previous bill enacted:

A new subparagraph (i) paragraph 1 (b) to rescind prior year—fiscal year 1977—authorization for launch complex 39 construction of facilities in the amount of $6 million no longer required with the authorization recommended in the current bill.

A change in language to section 6 which provides continuing authority to NASA for procurement of lease services for a tracking and data relay satellite as proposed by the administration.

A new section 7 which would authorize to be appropriated $95 million for Space Shuttle fiscal year 1977 such sums as may be supplementally appropriated to augment the research, development, test and evaluation phase, and production phase of the Space Shuttle Orbiter program while remaining within the total NASA program cost commitments.

In addition to the budget changes noted, your committee is recommending a number of committee views. These views encompass a number of significant issues of emphasis and policy. These are incorporated into the legislative report accompanying the bill.

The remainder of this report provides in somewhat more detail an analysis of actions recommended and a statement of views recommended by your subcommittee.

SPACE SHUTTLE

NASA requested $1,349,200,000, for Space Shuttle for fiscal year 1978. Your committee reviewed the progress of the Space Shuttle program and found it to be within cost and on schedule. Therefore, the committee recommends no increase in the fiscal year 1978 request for Space Shuttle. However, the committee observes that a highly complex program with a demanding schedule such as the Shuttle could effectively use increased funding for both the design, development, test and evaluation phase and initial Shuttle Orbiter production phase of the program while remaining within the NASA total cost commitments. So that such authority might be available, your committee has added a new section 7 to the bill authorizing an increase not to exceed $95,000,000 for Space Shuttle in fiscal year 1977 bringing the total authorized to $1,383,100,000 for fiscal year 1977 in the event that additional appropriated funds become available.

SPACE FLIGHT OPERATIONS

NASA requested $267,800,000 for space flight operations in fiscal year 1978. Within this line item your committee increased advanced programs $5,000,000 and reduced Space Transportation System operations capability development $2,000,000 resulting in a total recommended authorization of $270,800,000 for space flight operations for fiscal year 1978. NASA requested in submissions to OMB a budget containing studies programs for space industrialization. All funds for this effort were deleted from the fiscal year 1978 budget requests. It has been the position of the committee that all reasonable steps should be taken to gain the full potential of practical space application at the earliest possible time. Studies are required to demonstrate the need for and value of space industrialization in order to address the long-range goals and objectives of the U.S. civilian space program. Continuation of these studies in fiscal year 1978 will provide definitive cost estimates to guide in the determination as to proceeding in subsequent years with industrialization of space.

Recent events indicate that private industry can develop upper stages without Government-funded development. Therefore, the committee reduced space transportation system operations capability development by $2,000,000 in recognition that economies can be realized.

EXPENDABLE LAUNCH VEHICLES

NASA requested $136,500,000 for the expendable launch vehicle program in fiscal year 1978. Within this line item the committee decreased supporting activities by $7,000,000. The committee notes that NASA has made efforts toward consolidating all launch activities in the Office of Space Flight and because of the maturity of the program the committee recognizes the ability to achieve greater economies in this area. Therefore, the committee recommends that a total of $129,500,000 be authorized for the expendable launch vehicle program in fiscal year 1978.

PHYSICS AND ASTRONOMY

NASA requested $224,200,000 for physics and astronomy programs in fiscal year 1978. Within this line item the committee increased supporting research and technology programs by $5,000,000 resulting in a total recommended authorization of $229,200,000 for physics and

astronomy for fiscal year 1978. The committee reviewed the fiscal year 1978 request of $16,800,000 for supporting research and technology and compared the funding history of this line item with previous years. The supporting research and technology budget has been almost constant for a number of years, resulting in a decline of the technology base in the university community and a net decrease in the amount of research that can be accomplished. The efforts supported by these funds enhance the scientific and technological return from flight projects and help assure the continued viability of future research in physics and astronomy. Therefore, the Committee recommends a total authorization of $21,800,000 for supporting research and technology for fiscal year 1978, an increase of $5,000,000 to the NASA request to be used for augmenting the supporting research and technology base in the university community.

LUNAR AND PLANETARY EXPLORATION

NASA requested $158,200,000 for lunar and planetary exploration in fiscal year 1978. Within this line item the committee increased supporting research and technology programs by $1,000,000 and added $7,000,000 for initiation of development of the Lunar Polar Orbiter and reduced the Mars follow-on mission definition by $5,000,000 resulting in a total recommended authorization of $161,200,000 for lunar and planetary exploration in fiscal year 1978.

Supporting research and technology. NASA requested $13,000,000 for lunar and planetary supporting research and technology programs in fiscal year 1978. The committee recommends an increase of $1,000,000 to augment the planned level of activities and to offset the effects of inflation for a total authorization of $14,000,000.

Lunar Polar Orbiter, NASA requested funds for the Lunar Polar Orbiter from the Office of Management and Budget. These funds were deleted from the NASA budget submission to Congress. The investigation of any solar-system object can be divided into three categories: reconnaissance, exploration, and intensive study. It is apparent that the reconnaissance mode of study of the inner solar system is completed and that the general technology for a new generation of exploration studies exists. The most attractive way to learn about the Moon and Moon-like planets at this stage in exploration is by a sequence of missions in which a geochemical/geophysical polar orbiter is placed around each body. For the Moon, geochemical and geophysical orbital mapping are needed to develop a global view, integrated with the sample data. Therefore, the committee recommends an addition of $7,000,000 to initiate development of the Lunar Polar Orbiter mission to study lunar composition, gravity magnetism, heat flow, and imagery. The committee further notes that the design of the Lunar Polar Orbiter spacecraft and experiments should accommodate future mission to the Moon-like planets.

Mars follow-on mission definition. NASA requested $15,000,000 for definition studies of a Mars follow-on mission. The committee fully supports a logical and productive next step to the highly successful Viking mission but believes that the definition of this mission can be accomplished with less funding. Therefore, the committee recommends a decrease of $5,000,000 resulting in a total authorization of $10,000,000 for Mars follow-on definition studies.

SPACE APPLICATIONS

NASA requested $233,800,000 for space applications in fiscal year 1978. Within this line item the committee transferred $26,900,000 for the Landsat-D program to a new line item entitled "Earth Resources Operational Systems" and increased weather and climate observation and forecasting by $5,000,000 resulting in a total recommended authorization for fiscal year 1978 of $211,900,000 for space applications.

Funds for weather and climate observation and forecasting declined from fiscal year 1976 to fiscal year 1977. A further reduction was proposed for fiscal year 1978. Coupled with the effects of inflation this decline was assessed by the committee as having an unfavorable effect on maintenance of an adequate weather and climate research and development effort. Therefore, the increase of $5,000,000 was provided to maintain a reasonably constant level in program effort for fiscal year 1978.

EARTH RESOURCES OPERATIONAL SYSTEMS

The committee has added a new line item entitled "Earth Resources Operational Systems" to the fiscal year 1978 NASA authorization bill and has transferred to the line item the funding requested under space applications for Landsat-D. Landsat-D has been proposed as a new initiative to advance the technology and techniques for Earth resources remote sensing by utilizing the capabilities of the second generation experimental multispectral scanner, the thematic mapper, currently under development. The project will also test a total end-to-end data acquisition, processing, dissemination ,and analysis system by bringing the data to the users in a timely fashion—5 to 7 days—on a routine basis.

The committee believes that the outstanding success of Landsat 1 and 2, the expected results of Landsat-C, and the goals of this project justify moving forward to an operational remote sensing system to assure various users timely and accurate land use data, crop forecasting, and betetr management of our Nation's resources.

The insertion of this new line item should not be interpreted as an inhibition to continuing research and development activity for the improvement of this Nation's remote sensing technology and capability as embodied in such programs as thematic mapper, heat capacity mapping mission, and other application and demonstration activity. Therefore, the committee recommends $26,900,000 for Earth resources operational systems for fiscal year 1978.

SPACE RESEARCH AND TECHNOLOGY

NASA requested $97,700,000 for space research and technology programs in fiscal year 1978. Within this line item the committee increased the research and technology base $4,000,000 to offset inflation and to augment advanced propulsion technology resulting in a total recommended authorization of $101,700,000 for space research and technology programs.

NASA requested $65,900,000 for research and technology base activities in fiscal year 1978. The committee increased this amount $4,000,000 for the total authorization of $69,900,000 for research and technology base programs including $2,000,000 for advanced propulsion technology. The increase for advanced propulsion concepts is based on a belief that a major advance in propulsion is necessary to augment chemical propulsion capability to realize a number of longer term space program opportunities. The $2,000,000 for advanced propulsion technology should be directed toward an expanded program of fundamental research and exploratory development in new propulsion concepts including gaseous nuclear engines, nuclear electric propulsion, atomic and metallic hydrogen, and laser propulsion and excluding "solar sailing" concepts.

ENERGY TECHNOLOGY APPLICATIONS

NASA requested $4,500,000 for energy technology applications activities in fiscal year 1978. Within the line item, the committee increased energy system satellite solar power systems by $5,000,000 resulting in a total recommended authorization of $9,500,000 for energy technology applications in fiscal year 1978. NASA requested $1,000,000 for energy systems/satellite solar power system studies in fiscal year 1978. The committee increased this amount $5,000,000 for a total authorization of $6,000,000 to significantly broaden the system definition effort and to initiate a comprehensive environmental impact and benefit analysis. The committee carefully reviewed the merits of this program and believes that solar satellite systems concepts offer an exciting and challenging possibility for meeting future energy needs.

TRACKING AND DATA ACQUISITION

The committee decreased the tracking and data acquisition program budget request of $281,700,000 for fiscal year 1978 by $3,000,000 as a result of a thorough review of anticipated workload of the total tracking systems.

The committee commends the Office of Tracking and Data Acquisition for their continued excellent performance while recognizing their ability to achieve greater economies in this area. Therefore, the committee recommends that a total of $278,700,000 be authorized for the fiscal year 1978 for the tracking and data acquisition program.

TECHNOLOGY UTILIZATION

NASA has requested $8,100,000 for fiscal year 1978 for activities in technology utilization area which is identical to the fiscal year 1977 request. The committee observes that this is a relatively small investment to guarantee a high return on the research and development dollars invested in the NASA mainline programs. Consequently, the committee increased by $1,000,000 the technology

utilization program to offset the effect of inflation and provide latitude to continue to strengthen the program. Therefore, the committee recommends $9,100,000 for technology utilization for fiscal year 1978. To assure that the technology utilization effort is evaluated, the committee requests that within the increase of $1,000,000 NASA conduct a cost-benefits analysis of the program and report the results of that effort to the committee not later than December 31, 1977.

CONSTRUCTION OF FACILITIES

NASA has submitted a request for $161,800,000 for design, construction, rehabilitation, and modification of facilities in support of program and associated activities. The construction of facilities by program office is:

Space flight	$72,150,000
Space applications	3,100,000
Aeronautical research and technology	37,980,000
Tracking and data acquisition	1,750,000
Center operations	10,190,000
NASA Comptroller	36,630,000
Total	161,800,000

That portion of the facilities associated with space applications is $123,400,000; aeronautical facilities is $38,400,000.

Major increases were for the space shuttle program which totals $65,740,000 to increase launch capability to 40 missions per year, and to support manufacturing of the external tank at Michoud assembly facility.

The committee has reviewed the NASA request and has determined that it is in the best interest of the program to delete the crew training facilities at the Johnson Space Center because existing facilities appear sufficient and more economical to accomplishing the training mission. The amount deleted is $860,000.

The committee has also reviewed the chemical waste facility proposed for the Michoud assembly plant and has concluded that additional design and bench scale testing is necessary to further evaluate the technological process and in order to determine the total estimated cost with a higher degree of certainty. The amount deferred is $2,600,000.

In a review of the facilities for Launch Complex No. 39, it has been noted that $6,000,000 of the prior year authorization—fiscal year 1977—had not been appropriated. NASA, in its current request, had included this unappropriated amount. The committee therefore, recommends rescission of $6,000,000 of the fiscal year 1977 authorization, but is authorizing the full amount requested by NASA for fiscal year 1978.

The amount of $6,500,000 of the fiscal year 1976 authorization for the 40-by-80-foot subsonic wind tunnel at the Ames Research Center has not been appropriated. NASA requested the full amount and the committee recommends the amount requested. However, the committee recommends rescinding $6,500,000 of the fiscal year 1976 authorization.

JOHNSON SPACE CENTER

NASA submitted a request of $860,000 for construction of crew training facilities, principally a water immersion tank, to be constructed at the Johnson Space Center to support the shuttle program. The committee recognizes the need for proper crew training in a weightless environment. However, NASA has not substantiated this facility on the basis of an 8-year life cycle cost. Facilities already exist at the Marshall Space Flight Center and the committee is concerned about the added cost incurred in operating two facilities. Since the cost of operation and maintenance outweigh the cost of initial construction and since existing facilities are available, the committee recommends that $860,000 be deferred and no line item for this facility be included in the bill.

MICHOUD MANUFACTURING FACILITY

NASA requested $18,610,000 for modification of manufacturing and final assembly facilities for External Tanks, Michoud Assembly Facility. Within this line item NASA has requested $2,600,000 for the construction of a chemical waste treatment facility. The committee strongly supports facilities which contribute to maintaining a clean and healthy environment. The waste products emminating from the manufacture of the external tank for the shuttle program are highly toxic.

Presently, NASA uses deep injection well waste disposal which has proved to be satisfactory. The proposed chemical waste treatment facility is to improve waste disposal and conserve water. The committee notes that the proposed chemical waste treatment facility has not been designed and while a preliminary engineering report has been prepared, that report mentions the need for bench scale experiments to support design. The committee believes that the complexity of the facility requires the satisfactory completion of bench scale experiments and completion of final design in order to better evaluate the performance risks and total costs before start of construction. The committee therefore recommends that the $2,600,000 for chemical waste treatment facilities be deferred bringing the total recommended for modification of manufacturing and final assembly facilities for External Tanks, Michoud Assembly Facility to $16,010,000 for fiscal year 1978.

RESEARCH AND PROGRAM MANAGEMENT

The research and program management authorization provides for the civil service staff necessary for the in-house research and development, and the manpower to plan and manage the R. & D. program. It also provides for the operation, maintenance, and administrative support of the NASA headquarters and field centers.

The amount recommended for fiscal year 1978 is $847,989,000 which is essentially level with the amount for fiscal year 1977—exclusive of Federal pay raises. This was achieved in spite of substantial across-the-board increases in the cost of utilities, support contractor labor rates, and travel.

The number of permanent civil service end-of-year positions was reduced by 79, to 23,737. Of the total R. & P.M. amount, 76.6 percent is intended to cover the costs of compensation of these people.

The remaining funds cover travel rental of real property, custodial services, security, maintenance, utilities, communications, business computer support, printing, and supplies. In many cases, the funds actually go to local contractors who perform the work.

RESEARCH AND PROGRAM MANAGEMENT

NASA requested $846,989,000 for civil staff needed to perform in-house research and to manage the R. & D. programs, and other instiutional effort such as utilities, travel, maintenance, operation of facilities, technical and administrative support in fiscal year 1978.

The committee notes with approval the effort that NASA made in holding estimated research and program management costs at essentially the fiscal year 1977 level—except for Federal pay increases. This was achieved despite substantial increases in labor and utility rates, and in the costs of travel.

The committee finds that in the majority of cases the economy measures instituted by NASA have been absorbed without significant impact to the research and development mission. The exception is travel. This budget category has been increasingly constrained in recent years to the point where the amount requested for fiscal year 1978 is inadequate, especially in the area of professional travel. The committee believes that the climate for innovation, and therefore the future viability of NASA as a research institution, will be diminished by further reductions in travel. Accordingly, the committee, to restore travel approximately to the fiscal year 1977 level, added $1,000,000 to the amount for research and program management, for a total authorization of $847,989,000 for fiscal year 1978.

I would now like to address the space applications program.

The objective of the space applications program is to conduct research and development activities that demonstrate and transfer the applications of space-related technology, systems and other capabilities which can be effectively applied and used for down-to-Earth practical benefits. These R. & D. activites are grouped in the following general areas: Earth resources detection and monitoring, Earth dynamics monitoring and forecasting, ocean condition monitoring and forecasting, environmental quality monitoring, weather and climate observation and forecasting, materials processing in space, space communications, and applications explorer missions.

In each of these areas, programs are being conducted and planned to contribute to the solution of pressing national, as well as international, problems and needs.

Earth resources detection and monitoring.—The effective utilization of the world's finite natural resources requires that their extent and accessibility be surveyed, that their changes be monitored and that systems for wisely managing their exploration be developed. In the Earth resources survey area, two objectives have been established: First to develop the capabilities for remotely sensing the Earth's resources from aircraft and spacecraft in order to perform com-

prehensive global surveys; and second, to apply the results to agriculture, water management, mineral and petroleum exploration, land use assessment, and improving the quality of world maps. Achieving these objectives will provide an information base that can be used in the management of the world's resources.

Significant activities are underway in the applications systems verification and transfer—ASVT—and Landsat-C projects. The ASVT activities are designed to demonstrate to the user community that remotely obtained information—from satellites and aircraft—provides new capabilities that may efficiently supplement and/or complement existing data gathering systems. The most significant demonstration taking place is the large area crop inventory experiment—LACIE—an experiment using Landsat data to determine wheat production over the North American continent with extension to the entire world. Landsat-C, the third Earth resources technology satellite, is being prepared for launch in early fiscal year 1978; it will continue to gather multispectral data on Earth resources after Landsats 1 and 2 cease to operate.

The thematic mapper to be flown to Landsat-D will provide a significant improvement in the quality and usefulness of remotely sensed multispectral imagery due to its higher resolving power and additional spectral coverage. These improvements in data quality will enhance the utility of remote sensing for mineral and petroleum exploration, expand the application of crop inventory techniques to small-field agricultural areas worldwide, and significantly increase the number and precision of land and water inventory applications in the United States.

Earth dynamics monitoring and forecasting.—This program's efforts are directed toward observing the physical character and dynamic motions of the Earth. This information will lead to an improvement in our knowledge of the Earth's gravity and magnetic field factors which are important for resource assessment; improvement of geodetic surveying and control techniques and the monitoring of local topographic changes; and improvement of our knowledge of earthquake mechanisms. Continuing efforts will be focused on validation of the various plate motion measurement techniques. The motions of these large solid plates—tectonic plates—which make up the surface of the Earth are one of the causes of large earthquakes. The magnetic field satellite—Magsat—and applications explorer, will provide information needed to allow the U.S. Geological Survey to update maps of the Earth's magnetic field, to develop models of the global magnetic field, and to enhance our knowledge of the geologic structure of the Earth. Studies based on Magsat data are expected to provide useful information for location of natural resources such as coal, oil, and minerals.

Ocean condition monitoring and forecasting.—The monitoring and forecasting of sea state conditions, current systems and ocean circulation patterns have important implications for improving operations and costs associated with ship routing, offshore activities, fishing, and for improved weather forecasting. The program objectives will be achieved through the development of space platforms and related research as part of a concerted NASA/user effort to develop a global monitoring and forecasting capability for the oceans. Data on the sea surface topography are currently being acquired with the geodynamic experimental ocean satellite—GEOS-3—launched in 1975.

Seasat-A will be the first satellite having the extensive capability for observing and monitoring ocean conditions; upon its launch in mid-1978, Seasat is expected to demonstrate and validate the use of ocean data for achieving operating economies in the marine environment.

Environmental quality monitoring.—The pollution monitoring program has as its objective the development and demonstration of systems capable of identifying and measuring pollutants in the air and water on global and regional scales. A major focus of attention is upper atmospheric pollution; in this particular area, efforts are concentrated on: First, determining the present composition of the atmosphere for use as a baseline against which the long-term trends of atmospheric pollutants can be measured; second, monitoring changes in the composition from established patterns with respect to time and place; and third, atmospheric constituents and their behavior into atmospheric circulation-related environmental quality models.

Two spacecraft currently under development will provide a significant amount of new data on atmospheric and water pollution. The first of these, Nimbug-G, is scheduled for a 1978 launch. The second, the stratospheric aerosol and gas experiment, and applications explorer mission, will be launched in 1979.

Weather and climate observation and forecasting.—Reliable short- and long-term weather forecasts can mean savings of life, property, and money. The weather and climate program is directed toward the application of satellite data to problems in detection, prediction, and early warning of severe storms and the improvements of our capability for mid-range—1-14 days—and long-range—climatic—weather prediction. The atmospheric processes associated with these phenomena, that is, severe storms and daily weather and climate, require different approaches and satellite systems to provide data to achieve better forecasts.

The major activities will include: First continued emphasis on research and technology; second, severe storm research; third, the prototype development of third generation NOAA operational weather satellite—TIROS-N; fourth, planning for the first international global atmospheric research program experiment to be conducted in 1978-79; and fifth, definition and development of experiments and payloads to be flown on early Shuttle/Spacelab missions.

Materials processing in space.—The objective of this program is to exploit the unique characteristics of the space environment to prepare and process materials in ways that are not possible or economically practical on Earth. The eventual benefits of the program are expected to include new knowledge of materials and technology improvements. These will be directly applicable to industrial and biomedical processes on the ground, as well as to the production of unique new products produced in space. Space processing studies, investigations, and analysis of potential applications of space processing will be continued, and will include synthesis of space experiment results to identify potentials that are not predictable from ground data alone. Space results are now available from the experiments performed on the Apollo Soyuz test project and the initial two space processing applications rockets—SPAR—missions. The SPAR project offers a continuing opportunity to investigate materials processes in space prior to the Shuttle era. The preliminary design of Space Processing Shuttle payloads was initiated in fiscal year 1977 in preparation for beginning the full scale payload development in fiscal year 1978. These Shuttle payloads will provide for systematic materials research and development in the early years of Shuttle operations so as to make practical applications possible in the later 1980's.

Space communications.—From the inception of the space age, NASA has engaged in a vigorous research and development effort that has clearly demonstrated the viability of communications satellite systems. The current NASA effort is directed toward developing and and providing expert advice and consultation on communications satellites to various Government departments and agencies. The highly successful series of applications technology satellites—ATS-1, 3, 5, 6—and the cooperative United States-Canadian satellite—CAS-C—will continue to be used by various domestic and international experimenters to demonstrate innovative application of communications satellites. A significant effort will be undertaken to provide technical consultation and support to U.S. agencies, including NASA, participating in the 1979 World Administrative Radio Conference—WARC—the first of its kind since 1959. NASA involvement is important to assure frequency assignments for all types of satellites.

Based on NASA experiments and systems studies, the Interagency Committee on Search and Rescue—comprised of members from the Departments of Commerce, Defense, and Transportation, the Federal Communications Commission, and NASA—plus observers from the Aircraft Owners and Pilots Association and the National Association for Search and Rescue, has studied the application of space technology to aid search and rescue operations and has recommended that demonstration of a satellite-aided search and rescue system be implemented. The proposed search and rescue satellite system is a cooperative United States-Canadian program, which will employ sensitive receivers and

high gain antennas to be carried on operational polar-orbiting meteorological spacecraft to demonstrate the feasibility of obtaining a significant increase in the capability to detect and locate the distress signals carried by general aviation aircraft and certain marine vessels. Preliminary calculations indicate that such a satellite can position-fix these signals to an accuracy of about 15–20 kilometers.

Applications explorer missions.—The applications explorer mission—AEM—program was established to develop relatively low cost. Scout-launched spacecraft tailored to specific areas of research and orbital requirements. This program has the following missions under development: First, the heat capacity mapping mission—AEM–A—which will obtain temperature data on identifiable characteristics of various materials to develop heat capacity maps of rock types; the data obtained will have applications in mineral-potential assessments and for studies of soil moisture, mapping of thermal effluents, measurement of plant canopy temperature, and for the mapping of snow coverage; second, the stratospheric aerosol and gas experiment—AEM–B—which will help develop measurement techniques for the detection and mapping of stratospheric aerosols and ozone by observing the attenuation of the solar radiation through the Earth's atmosphere; and third, the magnetic field satellite—Magsat—AEM–C, which will map the magnitude and direction of the Earth's global magnetic field with improved accuracy. Magsat data are needed to refine magnetic field models and charts, to update current magnetic field data for applicable exploration of natural resources and to enhance our knowledge of the geologic structure of the Earth.

PLANETARY EXPLORATION

I would now like to turn my attention to lunar and planetary exploration. We can look with great satisfaction at the recent accomplishments of Viking. Other significant planetary exploration programs are underway. The Mariner Jupiter/Saturn spacecraft will be launched later this year and the Pioneer Venus orbiter and atmospheric probes will be launched in 1978.

Pioneer-Venus is a two-spacecraft project scheduled to be launched in May and August of 1978. One spacecraft is an orbiter and the other contains probes which will be injected into the Venus atmosphere. This two-spacecraft project will collect data on Venus which will have profound significance with respect to one of the objectives of the NASA planetary program; namely, that of "determining the dynamic processes that shape Earth's environment by investigation of other bodies of the solar system."

Also included in this bill are moneys to initiate the Lunar Polar Orbiter, the Jupiter Orbiter and Probe, and definition of a Mars follow-on mission.

The Lunar Polar Orbiter will provide, with a single mission, the first global survey of the surface composition and internal structure of another planet. This information will be widely useful because scientists now believe that the terrestrial bodies—Earth, Moon, Mars, Venus, and some satellites of the outer planets—evolved by means of a series of common processes. Thus data from one planet can tell us something about all. The Earth and Moon are the extreme examples of these planets. The Earth is the largest, the Moon the smallest. The Earth is rich in water and atmospheric gases while the Moon is poor. Better knowledge of both these contrasting bodies should help us understand why they are so different.

Photographs of the Moon make it appear to be a very simple body, but our explorations have proved that it is actually complex. With the data available from past missions, which come only from the near side and from a band about the equator, we know that the lunar crust is thicker on the side nearer the Earth; that the western half of the Moon is richer in iron and radioactive elements than the eastern; and that some areas have rich concentrations of titanium. We do not know why these differences exist. Now it has been predicted that deposits of frozen volatiles—such as water—might exist near the permanently shadowed lunar poles. The Lunar Polar Orbiter will provide global chemical maps from which we can determine the extent of these deposits.

Global measurement of physical properties—gravity, magnetism, and flow of heat from the interior—will give us a better picture of the lunar interior.

In the near term, the scientific data returned from the Lunar Polar Orbiter will be an immediate impetus to our study of comparative planetology. Because the Moon has changed very little in the past 2 billion years, it gives us a window on the first billion-and-a-half years of evolution of the inner solar system. Because the lunar surface has never been eroded by water or wind, it preserves the character of a solid body in a way not possilbe on the weathered Earth. It could give us insights into the formation of the Earth's crust, the mechanisms that create planetary magnetic fields, and the life cycle of a planet's molten core.

In the more distant future, the survey conducted by the Lunar Polar Orbiter will provide an excellent basis for planning. Confirmation of the existence and mapping of the distribution of resources on the Moon will help us to work toward developing means of utilizing them. The discovery of resources in space is almost essential to the eventual manned occupation of a space station or lunar base.

Technologically, the Lunar Polar Orbiter is ready. It does not require any new developments. It is planned to be based upon one of several commercially available spacecraft. A science payload has been tentatively selected. Techniques for analysis of the data were developed during Apollo. The accuracy of these analyses were confirmed by comparison with the ground truth of lunar samples. Launch is either on a Delta or on Shuttle.

JUPITER ORBITER/PROBE

The next logical step in our exploration of the outer planets is an orbiter and probe mission to Jupiter. This Jupiter orbiter/probe—JOP—mission is a new start request this year.

The Jovian atmosphere is of intense interest to atmospheric scientists. Its physical properties and composition, which are not well understood, are of basic importance to understanding the processes by which the planets formed. The entry probe carried by JOP will directly measure the composition, density, pressure, temperature, and energy flux as a function of depth in the Jovian atmosphere. Light scattering by clouds will be detected, and Jovian storms and lightning caused by electrostatic charging of droplets and ice particles may be observable by the probe instruments.

The gigantic hurricanes in the Jovian atmosphere—such as the Great Red Spot—last much longer than those on Earth, but we do not yet understand the dynamics of these storms, nor how the atmosphere transports heat radially and latitudinally away from the Jovian interior. Continual photographic coverage from orbit is essential to understanding these phenomena, in the same way that meteorological satellites are needed to understand the time variations in the Earth's atmosphere.

Studies of the Jovian satellites are also a major objective of the JOP mission. The Jovian system is in many ways an analogy of the Sun and planetary system.

The Galilean satellites, with their partially ice-covered surfaces, are an entirely new class of planetary objects as far as photogeologic investigation is concerned. We can expect to see evidence of processes unique to low temperatures and ice materials—for example, ice-water volcanoes; scientists will be able to study in a completely new context geological processes familiar on the Earth and the terrestrial planets.

A third major thrust of JOP science is an investigation of the Jovian magnetosphere. This vast region of plasma surrounding Jupiter is dominated by the strong magnetic field of the planet. Understanding Jupiter's magnetic field may help to elucidate not only the magnetic field of the Earth, but also the nature of pulsars, and similar electromagnetic phenomena observed elsewhere in the galaxy.

Dynamic processes similar to the geomagnetic storms we have on Earth are also expected to occur on Jupiter, with time scales of the order of several weeks. The Orbiter spacecraft will be placed in a highly elliptical orbit that will pass through the Jovian magnetotail, a region where particles may be accelerated to energies of hundreds of millions of volts. It is not known how plasma escapes the Jovian magnetosphere, and the longitudinal coverage possible with the JOP mission should resolve this basic issue.

The JOP mission will be launched in December 1981 by the Shuttle/interim upper stage.

There is a reasonable likelihood that the Federal Republic of Germany will provide the orbit capture propulsion system for JOP. Discussions with the West German Government have been going on

for the past year, and a draft memorandum of understanding is currently being prepared.

This extremely rewarding mission has been enthusiastically supported by every science advisory group that has examined it. The 1981–82 Jupiter launch window provides the best launch opportunity in a 7-year period, and the availability of the Shuttle/IUS will provide an adequate weight margin that will allow us to return to a maximum of science data at a reasonable cost. Therefore, I am urging my colleagues to support the Jupiter orbiter/probe mission as the next logical and appropriate step in our exploration of the outer solar system.

The Viking results, along with a wealth of information, have presented many unanswered questions that await a follow-on Mars mission for solution. Studies are being conducted and scientific advice sought to define the specific nature of the follow-on mission. Present indications are that the mission should include: First, orbiter instruments to conduct a global resources survey of the planet; second, instruments which directly address the chemistry/biology ambiguity issues raised by Viking; third, a surface rover to address the local diversity of the Mars surface; and, fourth, means for implanting on Mars an instrument network in areas inaccessible to a rover. Such a mission has been strongly endorsed by the Space Science Board. Advanced development will be initiated to bring the instruments and technology to the appropriate readiness state for the 1984 Mars opportunity.

The highly successful Viking mission was ambitious, and the follow-on mission to answer the questions raised by Viking must be similarly ambitious in nature. NASA, the OMB, and the Congress must address the issue of continuing an aggressive program of Mars study while proceeding with a broad-based exploration program to unlock the secrets of the other planets and the interplanetary environments.

A number of studies of possible Viking follow-on missions, ranging from polar orbiters to Mars surface sample return, have been performed over the past several years. However, a specific programatic recommendation was not possible until the Viking results were received. Studies are currently underway to define the Viking follow-on mission which accomplishes the proper scientific objectives, can be developed for the 1984 launch opportunity, and can be performed for an appropriate level of resource expenditure.

A fiscal year 1979 proposal will be considered for this mission. The development of the vital orbiter and lander science instruments, as well as the technological advances necessary for their deployment, require fiscal year 1978 funding at this time.

I urge passage of H.R. 4088.

Mr. WINN. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I would like to express my unqualified support of H.R. 4088, the fiscal year 1978 National Aeronautics and Space Administration authorization.

I would also at this time like to express my thanks to the chairman of the subcommittee, the gentleman from Florida (Mr. FUQUA), for furnishing the leadership and the cooperation that was needed to get out this bill and for doing an early and a very thorough job. The gentleman from Florida has been, as most of the Members know, serving as the acting chairman of the full Committee on Science and Technology, and he has also done an outstanding job in his leadership of the Subcommittee on Space Science and Applications.

Mr. Chairman, this authorization represents an increase of less than 10 percent above the fiscal year 1977 authorization. This increase is truly a conservative budget increase which is in line with the current inflation rates.

Included within the NASA program are four new starts:

First. Space Telescope;

Second. Jupiter Orbiter;

Third. Landsat–D; and

Fourth. Lunar Polar Orbiter.

These programs will provide invaluable data to maintain a sound and growing knowledge base. The Space Telescope for example will answer several basic questions in regard to the universe which will undoubtedly have a long-range impact on our understanding of energy. The Landsat–D program represents one of the many advantages that have been reaped from space technology. The program was newly categorized by the committee as an "Earth resources operational system" and will provide remote sensing capability for predicting crop yields, soil moisture content, and crop disease. The other new programs provide equally as important benefits.

Another program, which is not a new start, but is of paramount importance is the Space Shuttle. This program represents over one-third of the NASA research and development budget. An extensive effort was made by the committee to thoroughly evaluate the cost and schedule status of this program. This evaluation was conducted by committee field hearings at all major facilities involved. At this time the program is on schedule and no insurmountable problems are anticipated. This does not mean that it is going to be an easy task to continue on schedule. All of the developmental problems anticipated are typical of the problems encountered during previous development programs such as Apollo. Close monitoring of this program will be required to guarantee successful accomplishment and implementation of our first space transportation system, the Space Shuttle.

I would also like to comment on the space application program with specific emphasis on weather and climate observation and forecasting. Quantum advances have been made in our technology; however, our society is still at the mercy of Mother Nature. Each year vast sums of money and hundreds of lives are lost due to weather-induced disasters. These may come in the form of tornadoes, hurricanes, or floods. As a consequence, it is extremely important to apply this new space technology to developing methods for understanding and anticipating such disastrous weather phenomena to minimize its impact. The weather research program continues to do so.

In closing, I would like to say that I am pleased with the NASA budget and operation. One of the most valuable resources that this country possesses it its technology. It is imperative that we continue to encourage its growth and application to the pending societal problems.

Mr. FUQUA. Mr. Chairman, I yield such time as he may consume to the gentleman from Alabama (Mr. FLIPPO).

Mr. GOLDWATER. Mr. Chairman, will the gentleman yield?

Mr. FLIPPO. I yield to the gentleman from California.

Mr. GOLDWATER. Mr. Chairman, I would like to join my colleagues in support of H.R. 4088, the National Aeronautics and Space Administration authorization bill. I am in agreement that the NASA budget is a cost-effective budget. In fact, NASA should be complimented for maintaining their funding requirements for overhead or institutional cost. In light of the soaring energy cost this is truly remarkable and reflects the management expertise within NASA.

Another commendable aspect of the NASA management is their responsiveness and "can-do" attitude toward technical requests. The cooperative efforts between ERDA and NASA in solution of the national energy problems reveal the versatility and importance of the NASA technology base. Two program examples of this joint effort are the wind turbogenerator development program and the Solar Power Satellite.

Another program which is of special significance to me is the agricultural aircraft development program. It is no secret that this world is facing a food shortage problem, and this Nation can play a dominant role in its solution. The utilization of aircraft for dispensing fertilizers, seeds, herbicides and pesticides has long been recognized as the only viable method in many geographic locations. However, the existing aeronautical technology has not been applied to the design and development of an entire dispensing system. Consequently, the efficiency of these systems is far below what is practically possible. For a relatively small investment of research dollars the potential exists to greatly improve the aircraft dispensing system and impact the world food crisis.

I would like to reemphasize my support of the NASA authorization. This investment of less than 1 percent of the total Federal budget is an investment we cannot afford to neglect.

Mr. FLIPPO. Mr. Chairman, I fully support the recommendations of the Committee on Science and Technology upon which I have the pleasure to serve and recommend passage of H.R. 4088 which authorizes appropriations to NASA for fiscal year 1978. I would like to congratulate Mr. FUQUA, chairman of the Subcommittee on Space Science and Applications, and Mr. WINN, the rank-

ing minority member, for their efforts and the fine work they have done.

I would first like to focus my remarks on the Space Telescope which is proposed as a new start for fiscal year 1978.

The United States has a long record of excellence in astronomy. The fruits of private enterprise in the past were often turned to the general good, by far-sighted businessmen, who donated considerable sums of money to establish astronomical observatories. The most outstanding example is the Mount Palomar telescope. These private businessmen felt that astronomy was so important to man's intellectual progress that they gave their dollars to build telescopes. The telescopes needed to continue this progress are now far too expensive to expect private philanthropy to play a significant role—the Federal Government must provide the funding if the progress is to continue.

The progress that is taking place in astronomy today is nothing short of astounding. The mind reels, in reading of a star that is as massive as the Sun, but no bigger than the Earth—and it turns on and off completely, 30 times a second. I cannot believe that fundamental, incredible discoveries of this type will not in due course act to change our lives in significant ways. In hearing about black holes, I feel the way people must have felt 150 years ago when they heard about electricity experiments—it is astonishing; I do not really see what use it is, but let's back it—anything so amazing must change our future in some way. They were right, and I think we will be right if we support current astronomy vigorously. The astronomers seem to be united in their view that Space Telescope is the overdue next step. They have responded to our very need to restrict spending, by cutting down the size of the Space Telescope. They say it is now the minimum needed to do the job.

The Space Telescope will be a national observatory in orbit around the Earth for 10 to 15 years. It will be placed in orbit, using the Space Shuttle, in 1983. The Space Telescope, by being outside the Earth's atmosphere, will enable astronomers to see images that are 10 times smaller than with ground-based telescopes. Additionally, the color-range over which we can see or photograph the universe will be increased by a factor of more than 1,000.

I am convinced that this is the best defined science program in NASA history. Since 1965 nearly 12 years of definition effort has been expended from initial concepts study through phase B definition studies by two optical telescope assembly contractors and three spacecraft contractors. During this 12 years of feasibility, technology, and definition study NASA has invested approximately $39,000,000 of its own funds. More than 25 major astronomical centers worldwide in the United States, Canada, and Europe have been involved in the science definition of this program.

I would like to address the question of "Why now?" which can legitimately be asked of any new science program. I would first point to the investments already made and the increased capabilities which will result. If the Space Telescope is delayed, the expert teams of scientists and engineers will turn to other areas. Therefore, any restart in future years would require retraining and duplication. Another significant point is the memorandum of understanding between the European Space Agency and NASA, whereby the European Space Agency has committed to spend 80 million accounting units—approximately $88 million—for their participation in the Space Telescope program. I think you would agree that this is a significant commitment which would presumably be lost if the program were delayed.

The Space Telescope is the logical and economical successor to the previous NASA program of short-lived individual space astronomy experiments. The availability of the Space Shuttle will enable NASA to maintain and update a single observatory in space for a period of many years at a fraction of the cost of sending up a series of duplicate spacecraft. There comes a time in the evolution of a scientific discipline when the individual experimenter cannot afford or manage the facilities necessary to make significant advances. As an analogy, high energy and particle physics have already gone through that evolution. The day of the one-man cyclotron is largely over and has been replaced by the advent of the large facility, for example, the Fermilab.

Space astronomy is now at that crossroad with the Space Telescope being the equivalent of the Fermilab. The reality of this big science is that it can create more opportunities for individual investigators than does an agglomeration of many small projects. NASA expects a minimum of 100 astronomers per year to use the Space Telescope and that over its lifetime of 10–15 years a major fraction of the world's astronomers will use the Space Telescope.

Finally, history has shown astronomy as a science that is at the cutting edge of new technology. The Space Telescope will certainly tell us much more about the early stages of our universe and the formation of the galaxies. One powerful hint which we have already is the existence of quasars. Quasars are the most distant and most energetic objects known in the universe. No one knows for sure how quasars manage to produce such great amounts of energy. It is conceivable that an understanding of the way quasars produce energy could lead to improved laws of physics or even some practical applications. As an historical example, we recall that the inspiration for this country's controlled thermonuclear fusion program came from the realization, by astronomers and physicists working in pure research, that the sun shines on the basis of hydrogen fusion.

An additional potential application of the Space Telescope is a better understanding of weather and climate. This will be the first telescope that will be able to study the meterology and the atmosphere of other planets. Just as if somehow, sometimes it is easier to understand your own children if you can look at how your friend's children are behaving; then it may also be easier to understand the Earth's weather if we have a chance to look frequently at the weather of other planets.

I believe, and hope you will agree, that the Space Telescope is of much national and international importance. I urge my colleagues to support the Space Telescope with the passage of this bill.

Finally, I would like to make some remarks concerning the solar satellite power system concepts.

Various alternative energy sources have been proposed in the last few years in response to the energy crisis. The recognition that no one of these energy sources will, by itself, meet all future power needs, together with the large uncertainties inherent in the achievement of full potential for each source, has led to what might appear the most daring proposal so far: large-scale solar-energy conversion in space with a satellite solar powered station located in synchronous orbit around Earth.

First proposed by Dr. Peter Glaser of Arthur D. Little, Inc., in 1968, the satellite power system—SPS—could use one or more of several methods to convert solar energy to electricity. This electricity would be fed to microwave generators incorporated in a transmitting antenna in the satellite, and the antenna would direct a microwave beam to a receiving antenna on Earth. There the microwave energy would be reconverted safely and efficiently to electricity and fed into conventional power-transmission networks. Technical and economic feasibility studies of such systems already indicate that they may provide an economically viable, and environmentally and socially acceptable, option for power generation on a scale substantial enough to meet a significant portion of future energy demands.

The Aeronautics and Space Engineering Board of the National Research Council of the Assembly of Engineering was given a presentation on SPS in September 1976. They stated in a recent letter to Dr. Fletcher:

> As you may recall, the board's first response to the SPS concept was not very enthusiastic (March 1975). It looked to many of us like science fiction or a rather desperate attempt to find uses for space technology. The estimated costs seemed orders of magnitude greater than the benefits. Since that time, the concept has been developed by NASA and others, and the board now feels that despite the very great technical and economic difficulties of such a program, the limited research proposed by NASA is worthwhile.

The board further stated:

> A large part of the basic technological development effort, e.g., microwave power transmission, solar cell development, automated construction, efficient DC to RF transformation, is also important for alternate power generation and transmission.

Dr. Lovelace, Deputy NASA Administrator, in recent remarks to the American Institute of Aeronautics and Astronautics, stated:

> The last example of a space applications area surrounded by unresolved policy issues is perhaps the most controversial, the furthest off in the future, and yet the most sig-

nificant for societal survival. It is the large-scale exploitation of solar radiation for generating terrestrially consumed electrical power. Here the clientele is clear; All America uses electricity delivered through public or private utilities. Here the promise is clear: A new nonpolluting, environmentally acceptable, virtually inexhaustible energy source.

He also stated:

The next decade holds a thousand policy challenges in the area of space applications, but the decisions on whether to exploit the sun for electrical power may dominate them all.

Of the many uses for energy, the largest by far is for the production of electrical power. While projections vary, it is reasonable to expect that the U.S. electrical power demand will triple before the year 2000. Unfortunately, there is no single, obvious energy source to supply this demand. Thus, it appears prudent for us to investigate the potential benefits of a number of candidate approaches for increasing the energy available to our country.

A satellite power system which changes the Sun's energy to electricity in orbit and sends it to Earth for use has been suggested. It has been estimated that as much as 25 percent of the additional U.S. power needs in the first part of the 21st century could be supplied by such systems.

NASA has only scratched the surface in its work to date to completely explore the system concept, but we do know that, as yet, no insurmountable problems have been identified, and it appears that the cost of power from such a system could well be competitive with other candidate energy sources for the future such as the breeder reactor and fusion. We also know that the solar energy available in space is approximately six times as great as that available on the surface of the Earth; that the Sun is an inexhaustible energy source; and that power generated in this manner will not pollute the air we breathe. Additionally, this concept could supply great quantities of power for future industrial activities in space and for sale to power hungry foreign nations. On the other hand, we know that development of such a system will be a very costly undertaking. Therefore, we must look, and look hard, before we leap.

The NASA/ERDA plan is to do just that—to examine the concept in detail to obtain a better understanding of the problems to be resolved, to determine the amount of risk which will be involved and to estimate the resource requirements which will be necessary to develop the system. Then, and only then, will we have adequate facts to make an enlightened decision concerning the potential worth of the system in comparison to other candidate concepts.

ERDA and NASA have developed a plan to pursue this promising concept in a practicable and sensible manner. The plan would allow the generation of information by 1980, from which a rational decision can be made regarding the future direction of the SPS program as a national commitment. How much does the Nation dare risk, in terms of money for investigation of alternative systems, or in terms of foreclosing options that may, in hindsight, have been the most preferable? Could this be done with less cost and risk in the future? Probably, but within the next few years we will be forced to make energy option decisions that, whether good or bad, may well be irreversible. I think that Congress would be remiss not to approve this program and provide the rather modest funding to develop the knowledge required to intelligently make those national decisions.

NASA has been and should continue to work with ERDA in the effort. However, funding for the work has been provided in the NASA budget since that is where the capability resides to obtain the facts we need.

Mr. FUQUA. Mr. Chairman, I yield 3 minutes to the gentleman from New York (Mr. DOWNEY).

Mr. DOWNEY. Mr. Chairman, I rise in support of the national aeronautics authorization bill, H.R. 4088. This bill provides for a balanced and progressive space program and deserves the support of the Members.

As a nation we have accomplished a great deal in acquiring our present abilities to explore and exploit our space environment. We can walk upon the Moon, perform geological exploration, and return samples. We can send spacecraft to the planets to investigate our worldly beginning and send other spacecraft beyond the pull of our solar system to worlds yet unknown. Closer to home, we can place satellites into orbit around the Earth to improve our daily living, satellites which we are increasingly relying upon for communications links throughout the world and for vital information on our environment and resources.

Beyond these accomplishments, Mr. Chairman, I look to further exploration and exploitation of space to meet the challenges we face as a people today as well as in the future. We know the Sun delivers vast amounts of energy to the fringes of our atmosphere, energy which is vitally needed on Earth. We know that the space environment with its low gravity and high vacuum has unique properties for processing materials. We also know that Earth orbit provides a bird's-eye view of essentially all points on the Earth surface, a feature which has the potential of tying all points on the globe together. We are only starting to determine what this all means to us.

In this regard I would like to stress the importance of advanced planning. We must capitalize upon our present abilities and not fail to pursue mind-expanding endeavors which hold great promise. We always want to be certain that the imagination and capabilities of the best minds in this country are being challenged and directed to meet the needs of the future.

I believe that the future program planning in NASA is of extreme importance and well directed. The effort that NASA pursues under the advanced programs area of the budget is one of the most important elements of the budget. It is the "seed corn" from which will grow new programs and new accomplishments in space.

The essentially unlimited potential of space can best be utilized by a vigorous, dedicated and concentrated effort for the benefit and welfare of all. With the advent of the Space Shuttle era a wide variety of mission options are available to the Nation as Earth orbit will become a flight away. Adequate funding for NASA's advanced programs is essential, therefore, to utilize this new space transportation system and assure that our Nation continues to pioneer new paths in space development.

Among the new and revolutionary concepts for future space systems being studied within NASA are large space structures. Giant satellites may someday harness the energy of the Sun and beam the electric power to Earth to be used in our homes thus overcoming much of our dependence on fossil fuels like coal and oil. Other giant satellites may operate with wrist-watch radios that will allow you and me to communicate on a national or global basis as easy as we use a telephone, but without the fixed installations. Services provided by such systems could also include instant electronic mail or global television at the twist of your TV dial.

It may be only a few years from now when demonstration satellite systems can be delivered from Earth by Shuttle which will be the precursors of these large structures. I support these as well as other NASA advanced studies in order to help us put into focus many imposing factors which involve technical, economic, social, environmental and international considerations.

Mr. Chairman, let me compliment the gentleman from Florida (Mr. FUQUA) and the committee staff for the fine work that they have done.

I am somewhat concerned, Mr. Chairman, and I wonder if I might possibly just ask a question with respect to something on page 18. I am not intimately familiar with the technology for the advanced supersonic transport.

How much do we include in our budget on that, or do we include anything?

Mr. FUQUA. Mr. Chairman, let me defer to the gentleman from Texas (Mr. MILFORD), chairman of the subcommittee, to answer that question. That is under his jurisdiction.

Mr. MILFORD. Mr. Chairman, I thank the gentleman for yielding.

There are no added funds. This is a part of NASA's basic work. The Agency does technology development work in all types of aeronautical realms. This is to insure that this country does not get behind our foreign competitors and also to advance our own technology development.

Mr. DOWNEY. I know there has been some concern and also some controversy over this particular item.

I know that the House in 1971 made clear that they were not interested in developing an American supersonic transport.

Is this a departure from that mandate 6 years ago or is this something entirely different?

Mr. MILFORD. No, this in no way either mandates or even implies the development of an SST. This is a technology study, in the same manner that

we study advanced concepts in all fields of aeronautics.

Mr. DOWNEY. It is therefore conceivable that the people doing this study might not recommend the development of an SST or are they likely to ask to develop one that is different, let us say, from the Concorde?

Mr. MILFORD. First of all, what we are talking about here has nothing whatsoever to do with the Concorde or any present SST aircraft because present SST aircraft are a disaster insofar as being either economically viable, fuel-efficient, or environmentally compatible. These are technology studies, theoretical studies. What they would recommend would depend on what the studies themselves reveal. We have no intention here of doing what the gentleman suggests. We have no intention to build any airplane. We have foreign competitors that are working in this field, therefore, we cannot allow our own aeronautical industries to be jeopardized by permitting competitors to get ahead of us.

Mr. DOWNEY. I am not debating that point. My concern is whether or not there is any money in the budget for that. The gentleman has indicated that there is no money in the budget for that.

Mr. MILFORD. No, this is the normal work of NASA.

Mr. SEIBERLING. Mr. Chairman, will the gentleman yield?

Mr. DOWNEY. I yield to the gentleman from Ohio.

Mr. SEIBERLING. However, the committee report does indicate that the committee requests an administrator to prepare an overall program with the goal of achieving technology readiness for such an aircraft by the early 1980's

So what it does in effect, it seems to me, is say that if we pass this bill with this report and nothing more that we are saying that there shall be an official goal to achieve the technology on the basis of which we can build an SST. That sounds like we are planning to build an SST.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. FUQUA. I yield 1 additional minute to the gentleman from New York (Mr. DOWNEY).

Mr. DOWNEY. Mr. Chairman, I would ask the gentleman from Florida (Mr. FUQUA) if it would be possible that the committee would indulge us for an additional 2 minutes; would that cause any problem?

Mr. FUQUA. I yield an additional minute to the gentleman from New York.

Mr. DOWNEY. I thank the gentleman.

Mr. SEIBERLING. Mr. Chairman, will the gentleman continue to yield?

Mr. DOWNEY. I yield to the gentleman from Ohio.

Mr. SEIBERLING. Mr. Chairman, to continue what I was saying, I would like to ask the gentleman from Texas (Mr. MILFORD) if that is not the clear implication.

Mr. MILFORD. Let me reply to the gentleman from Ohio that the words in the report are "technology readiness." That does not mean the production of hardware or anything like that. If the gentleman from Ohio will continue to read that portion of the report, he will see that there are actually five different categories that are to be studied such as the environmental impacts from the operation of a fleet of supersonic transports, the approaches for developing financing. These are all technological phases.

Mr. SEIBERLING. Mr. Chairman, if the gentleman will still continue to yield, I will ask the gentleman from Texas where the money is going to come from for NASA to do this, for instance, to run and construct the wind tunnels, that will certainly be very expensive.

Mr. MILFORD. That is already what NASA is doing.

Mr. SEIBERLING. They are working on an SST?

Mr. MILFORD. No; they are working on the technological development in all phases of aviation.

Mr. SEIBERLING. It seems to me we ought to confront the issue head on. The Congress made a basic policy decision 6 years ago that we were not going into the SST construction. So if we are going to go into any further kind of SST study, then we ought to put in an authorization and appropriation and give the Congress an opportunity to pass upon that instead of doing it through the back door.

Mr. GOLDWATER. Mr. Chairman, will the gentleman yield?

Mr. DOWNEY. I yield to the gentleman from California.

Mr. GOLDWATER. Mr. Chairman, I would like to remind the gentleman that this involves research of a technical nature into supersonics and into supersonic flights and that this is certainly nothing new to NASA because it has been proceeding on this program for many years and is primarily directed toward answering any questions required for the military application. But Congress clearly spoke when it concluded the SST program. All we want is for NASA to advance the state of the art in case in the future that Congress wants to reexamine the question once again so that it will have the answers. In the past we canceled this because we did not have the answers. We need to have this information so that we can legislate more intelligently.

Mr. SEIBERLING. Then let us refer this to the Congress to appropriate the money to make the study.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. WINN. Mr. Chairman, I yield such time as he may consume to the distinguished gentleman from New York (Mr. WYDLER).

Mr. WYDLER. Mr. Chairman, first I wish to compliment the acting chairman of the committee, the gentleman from Florida, Mr. FUQUA, upon the manner in which he has conducted the hearings, and the markup sessions in the committee and also the gentleman from Kansas, Mr. WINN, for the way he has managed this bill on behalf of the minority. Mr. Chairman, I rise in support of H.R. 4088, the fiscal year 1978 authorization bill for the National Aeronautics and Space Administration—NASA.

Mr. Chairman, the authorization levels in H.R. 4088 will permit the NASA programs in space, aeronautics, and applied technology to continue making steady progress. Throughout its history NASA has proven itself to be a conscientious, performance-minded agency. It has set goals, established programs to meet those goals, and then proceeded to implement the programs and achieve their objective.

A decade ago NASA designed and carried out our successful manned lunar program. Today NASA is pursuing a broader range of space and aeronautical objectives. The reusable Space Shuttle has begun its preliminary test flights and they have been remarkably successful. All indications are that its success will match that of our manned lunar program. Other space programs include satellite missions for lunar and planetary investigation as well as Earth oriented applications such as environmental monitoring and weather and agricultural forecasting.

I have been gratified by NASA's increased attention to adapting its programs and applications to provide a more direct benefit to the public in general. While lunar and planetary exploration fulfill legitimate scientific objectives, they do not result in any immediate contribution to our everyday problems. Earth-oriented satellite programs in climatic and environmental monitoring are giving us the data necessary to identify potential environmental problem areas early and allow us to take corrective action sooner than otherwise possible. This is true both for pollution-type situations and agricultural productivity. Agricultural monitoring allows us to make better crop estimates and to identify crop disease and blight at an early stage. The "bottom-line" benefit to the public is seen in the price of a loaf of bread and the favorable balance of payments we derive from agricultural exports.

Beyond space applications NASA is pursuing a strong aeronautical R. & D. program. Its program is designed to establish the technical foundation from which the next generation of U.S. aircraft will emerge. The goal is to develop the technology for more fuel-efficient, quieter, and less polluting aircraft than currently in use. To accomplish these objectives NASA is investigating advanced propulsion systems, improved materials, and better navigation and guidance equipment. It is important to maintain the U.S. position of superiority in aviation not only to serve better our own future needs but also to maintain our impressive level of aviation exports. The latter means more jobs for Americans and a good international balance of payments.

Mr. Chairman, H.R. 4088 authorizes $4.05 billion for fiscal year 1978 for NASA. This amount represents a 9.7-percent increase over fiscal year 1977. This increase is essentially the level of growth recommended by both Presidents Ford and Carter. The readjustments which the committee made resulted in less than a one-half-percent increase over the Presidential request. In light of NASA's im-

pressive track record of performance I am reasonably confident that the increase over last year's level will be spent productively.

Mr. Chairman, I urge my colleagues to join me in supporting H.R. 4088.

Mr. WINN. Mr. Chairman, at this time I yield 3 minutes to the gentleman from Arizona (Mr. RUDD).

Mr. RUDD. Mr. Chairman, I would like to join my colleagues from Kansas and Florida in their support of the NASA authorization bill (H.R. 4088).

This budget should be viewed as an investment—as opposed to just spending money on space. This is true because these investments will grow or multiply to create more economic benefit in the future than was invested in the present.

This does not imply that there are no short-term benefits. On the contrary, the Space Shuttle program alone has approximately 50,000 people in 47 States directly employed—with an even larger number of people indirectly employed through contractors and subcontractors.

NASA programs are highly labor intensive—with an estimated 85 percent of all NASA expenditures going into employment primarily in the private sector of our economy.

The important aspect to keep in mind, though, is that this innovative work tends to create new and unheard of industries—which results in even more jobs.

More importantly from a fiscal viewpoint in terms of Government spending, NASA should be commended for the management of its budget.

NASA has done something that is most unusual in Federal agencies—where the mark of success seems to be how much they can increase their annual budget.

NASA has held its request for institutional or overhead funds to a level that is essentially identical to last year. This was achieved in spite of substantial increases in the cost of utilities, support, contractor labor rates, and travel.

The so-called research and program management authorization of $847,989,000 covers the compensation of NASA's 23,737 in-house civil service personnel—along with all the housekeeping costs at each of the 10 NASA field centers.

These include such things as utilities, travel, maintenance, printing, and supplies.

I know that each of us can relate to the inflation that has occurred in these areas. That is why we can all appreciate and applaud the effort that NASA has made in holding the line on such costs. Other Federal agencies would do well to follow NASA's lead in this regard.

Mr. Chairman, I am happy to support this NASA program and to urge its approval by the full House.

Mr. FUQUA. Mr. Chairman, I yield 2 minutes to the gentleman from California (Mr. LLOYD).

Mr. LLOYD of California. Mr. Chairman, I rise in support of H.R. 4088 authorizing appropriations for the National Aeronautics and Space Administration for fiscal year 1978.

I would like to call your attention to the excellent work now underway at several research centers of the National Aeronautics and Space Administration, NASA, in the field of general aviation aircraft operations. Scientists, engineers, and research pilots are hard at work on developing advanced technology which will find application in noise abatement, exhaust emissions minimization, reduction of airport congestion, and improved and safer operations in the airport or terminal area. I am sure you realize that many of the same problems which confront the operators of large airline jet aircraft are, although to a lesser degree in some cases, common to aircraft of the general aviation fleet.

We will be much closer to realizing significant noise abatement and exhaust emission reduction benefits next year when NASA commences component testing and assembly of the quiet, clean general aviation turbofan—QCGAT—experimental engines. These experimental engines are in the size and thrust range of those powering the business jet airplanes. Application of technology from this program will greatly benefit our long-suffering airport neighbors.

In the area of flight operations research, I have seen results of NASA research which monitored general aviation aircraft near and in the traffic pattern at several congested and noncontrol tower airports. The results show an amazing lack of adherence to consistent "highways in the sky" and many pilots flying, indeed, as if the sky was theirs and theirs alone.

To bring some semblance of order to this situation, NASA is applying advanced avionics technology to development of a feasibility model of an automatic pilot advisory service—APAS—unit, as unattended, automatic traffic monitor and information broadcasting device which can be set up at an unattended or uncontrolled airport. Approaching an airport with APAS, you would be tracked by low-power radar and be provided automatic airport traffic advisory information over your airplane's radio. Demonstration of the APAS feasibility model in the near future should be a forceful stimulus to consideration of providing APAS units at busy controlled general aviation airports.

I am sure you appreciate that the collective cost of advanced avionics systems—radios, navigation systems, weather radars, transponders, et cetera—represents a significant part of the general aviation purchase price. To encourage the incorporation by general aviation operators of advanced avionic systems which would provide significant safety and operational efficiency benefits, NASA is in the process of showing the avionics industry how low-cost technology can evolve systems of superior performance with no cost increase over the avionics of today. In one example, the NASA Langley Research Center is evaluating a low-cost differential Omega navigation system, which, because of the low frequency at which Omega operates ($\approx$10–13KH$_z$), provides navigation coverage in areas which are not, and in some cases cannot be, covered by the U.S. network of very high frequency ($\approx$108–118MH$_z$) VOR groundbased navigation aids.

In another program, at NASA's Ames Research Center, advanced and low-cost avionics technology is being applied to feasibility models of an airborne receiver which will make it possible for the general aviation and small community user to take advantage of the Microwave Landing System, MLS, a precision landing approach capability which will appear in a few years to replace the instrument landing system, ILS, of the decade of the 1940's.

I have only touched on a few examples of NASA's general aviation technology effort, such as time will permit. The future will without doubt bring the realization of benefits many times the nominal cost of NASA's outstanding general aviation aeronautical research.

Mr. Chairman, I think the point that we ought to make is that this is an excellent bill. I congratulate my chairman for bringing forth a bill that is reasonable and that does not have a lot of fat. I would remind the gentleman from Ohio that in no way is there any game being played to bring forth an SST. I think the will of the Congress was clearly indicated in the past, and there is no intention of doing this. I would tell the gentleman that I personally was involved in supersonic tests as far back as 1946 at Ames Aeronautical Laboratory, and that supersonic tests have been ongoing. These programs have produced such developments as the supercritical wing, the scissors-type wing, and we ought not in any way to debilitate our research in fear that we are going to "develop" an SST by some back-door method. I can assure the Members that that is not the intent whatsoever in this bill.

Mr. SEIBERLING. Mr. Chairman, will the gentleman yield?

Mr. LLOYD of California. I yield to the gentleman from Ohio.

Mr. SEIBERLING. Mr. Chairman, I thank the gentleman for yielding.

I simply would like to say that in 1971 when the Congress decided to end the funding of the SST after spending $1 billion on it, we came to three basic conclusions: One, that it was a threat to the environment because of the danger of damage to the ozone; two, that it was economically unsound; three, that it was the most wasteful possible form of transportation yet devised from a fuel standpoint. Everything that has happened since then, including the Concorde and the energy crisis and the crisis over the ozone has increased, has doubled in spades, so why do we even bother to study the SST?

Mr. LLOYD of California. I do not know that it has doubled in spades. Certainly I do not disagree with the conclusions. I may not agree in totality. But the answer is that this in no way will bring an SST into being. I can assure the gentleman from Ohio it was never the intention whatsoever, nor is it at the present moment, and I personally will work to see to it that does not occur.

Mr. SEIBERLING. I must say that does make me feel a little better.

Mr. FUQUA. Mr. Chairman, I yield 1 minute to the gentleman from Colorado (Mr. WIRTH).

Mr. WIRTH. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I rise in support of the National Aeronautics and Space Admin-

istration authorization bill, H.R. 4088, and I strongly urge my colleagues to join me in voting its passage. I have the privilege to serve as a member of the Subcommittee on Space Science and Applications which has jurisdiction over the nonaeronautical NASA activities and I can, therefore, personally attest to the amount of effort that went into the preparation of this bill for your consideration today. I would like also to compliment the distinguished chairman of the subcommittee, Mr. DON FUQUA, of Florida, and the capable ranking minority member, Mr. LARRY WINN of Kansas, for their exemplary leadership during the many weeks of intensive hearings.

This is a reasonable budget, not elaborate in its moneys for NASA, but one I feel that NASA can endure under the constrained economic conditions we are facing today. There are no frills nor fat in this budget, only moneys for essential ongoing programs and a few new starts.

We can take pride in the many accomplishments of the NASA space program, not only in the spectacularly successful Apollo lunar landing program of the last decade and subsequent manned space program but also the many achievements of the diverse automated space programs and the recent accomplishments of Viking on our sister planet Mars.

I would like to make some general observations about the budget and space science. The budget submitted this year will, if approved, reinvigorate the NASA space science program. It will establish that the United States intends to maintain world leadership in space science, exploration, and technology. The new start proposal for the Space Telescope, conceived about 15 years ago, is guaranteed to open up new vistas in astronomy, providing insight into physical processes beyond our current comprehension and giving humanity a more profound perspective of its place and relative significance in the cosmos. The Jupiter Orbiter and Probe will enable us to continue the exploration of the solar system, efficiently utilizing and maintaing a national capability built up and nurtured over the past 15 years. The lunar Polar Orbiter is the next logical step in the exploration of the moonlike planets—Earth, Moon, Mars, Venus. The scientific data returned from the Lunar Polar Orbiter will be an immediate impetus to our study of comparative planetology.

On a third front, NASA is initiating development of Spacelab payloads beyond Spacelab 2 in a mode designed to optimize the utility of the Space Shuttle to the scientist.

The conduct of space science is more than simply "doing science"; it is truly exploration, a conscious search for the unknown. I view it as having four major components: Knowledge; vision; national prestige and purpose; and technology, resources and applications.

Space exploration provides a focus for the innovative energies of Americans whose short history is marked by the recognition of frontiers and the drive to conquer those frontiers. Space is undoubtedly the greatest remaining frontier in terms of both its vastness and its potential for as yet unconceived discoveries. The United States has the capability to penetrate that frontier and has been doing so in a rather steady way. It is necessary to maintain that thrust in a visible way which clearly sets the direction, or purpose, toward which we are striving.

Technological advancement is a recognized key to progress but one must ask, what drives technology or more basically, makes it possible? To a large degree, basic science provides the foundation for technology. The drivers on the science are the so-called science requirements. The scientist, in a quest to discover and understand, continually pushes technology to enable him to see smaller objects, to see further into the universe, and to detect smaller amounts of chemicals. The technology, and often the instrumentation, thus developed inevitably find their way into areas of use not conceived of in the initial application.

For example, a mass spectrometer developed to detect miniscule amounts of lead in lunar soil is now used to determine the location of lead in individual human blood cells in an attempt to understand lead poisoning. Similarly, science provides the basis for applications. There is no way to solve aerosol and ozone problems, to understand climate changes, or to comprehend the meaning of magnetic or gravity maps without a firm basis of physics and chemistry, and an appreciation of the vagaries of nature, much of which derive from the space science program.

The supply of terrestrial natural resources is of increased concern as we deplete surface deposits. Much as the natural resources of Antarctica are now openly discussed in terms of economic potential, whereas 50 years ago they were not known to exist; we can now conceive of utilizing the Moon's tremendous titanium deposits—unknown 15 years ago—or of mining an almost pure iron-nickel asteroid whose orbit crosses that of Earth. About 20 new Earth-orbit-crossing asteroids have been discovered in a systematic search over the past couple of years as compared to only 4 previously found at random. We now expect to find close to 1,000.

The acquisition of knowledge is the third major point. All too often we dismiss this concept with the phrase "knowledge for the sake of knowledge." I believe that it is time to accept the responsibility to acquire knowledge because it satisfies a basic human need to determine what is "out there," how does it work, who are we, where did we come from and where are we going? These are important questions for mankind to struggle with and we are encouraged in such inquisitiveness by our culture, and no less by our Government, through far-reaching programs of and stress on education. The quest for knowledge ties to my last point—vision. Vision, I will define for our purpose as the perception of a challenge to be met and of knowledge to be gained, wrapped up in a conviction that we possess the will and the means to pursue those goals and capped off by a firm belief that in so doing humanity is well served. Space science is part of the world of the visionary.

On a practical front, we must face the question of why now. There is no doomsday argument that holds water—rather it is a matter of not turning back on endeavors and directions initiated deccades ago, of efficiently utilizing a science and engineering community established for good reason, and responding to new opportunities occasioned by technological advancement. To turn our backs now could be the regret of the 1980's.

Our effort in the area of physics and astronomy represents a coordinated program using the unique characteristics of space vehicles to probe fundamental questions concerning the structure and history of our universe, and man's place in it. The human environment we are concerned with is the Earth's atmosphere, the solar radiation and particles which impinge on the Earth, and the galactic system of which our Sun and its planets are a part. We are also concerned with the history of our galaxy of stars: its nature, its place in the expanding universe, and the origin and ultimate fate of our universe, including our own galaxy, our Sun, and ourselves.

To a considerable degree, many of the questions we are trying to answer in our physics and astronomy program can be rephrased as a single question: where, when, and how, did the elements of which we ourselves are composed originate?

The scientific community has told us that the Space Telescope represents the next logical step in astronomy. Since ground-based telescopes are approaching their limit in performance, the long-lived—more than a decade—Space Telescope, which scientists feel is the logical successor to the previous NASA program of short-lived astronomy experiments, is the science community's top priority in optical astronomy. NASA has been studying the Space Telescope concept to some degree for nearly 12 years, leading to what is probably the best-defined program, at this stage, that NASA has ever proposed to undertake. Considering this fact, the program could probably never be carried off as efficiently as now. The design is in hand, and the technology is available.

There are a number of logical and economical reasons to go forward with the Space Telescope this year.

First, large numbers of U.S. and foreign astronomers have participated in Space Telescope feasibility and design studies over the past 5 years. If Space Telescope were delayed now, NASA's expert teams would be dissolved, and the individual scientists would turn to other areas of research. A restart would mean retraining and duplication of scientific studies.

Second, many industrial firms have invested heavily of their own internal research and development funds, to provide our Nation with the best possible preliminary design. A delay would dissolve their teams: Could we persuade these companies to do it again?

Third, as a result of congressional initiatives, the European Space Agency—ESA—has been interested in Space Telescope. In October 1976, ESA voted to spend the equivalent of 93 million fiscal year 1978 dollars, as part of their partici-

pation in Space Telescope. In the event of delay, these funds would presumably be redirected to more exclusively European projects.

The time to undertake the Space Telescope is now. I am impressed with the way NASA does what it says it is going to do. The Viking landings have opened literally a new world. It is a fascinating world, but there is also the world of the universe itself waiting to be opened up. I look up at the stars and I can see that world, but the scientists tell me that my eyes see only a fraction of what is there; that Space Telescope, being above Earth's atmosphere, and having instruments that are sensitive to kinds of light that the eye does not see, will reveal a whole new universe to us. I do not believe that things that are not visible to the eye are not important. If the Earth we inhabit is in an environment that we have not been aware of, I want to find out what that environment is, and as quickly as possible. This Earth of ours is precious, and the space program has shown us how isolated life is in the universe. I am told that Space Telecope will provide us for the first time with an extensive ability to take ultraviolet pictures of processes occurring in the universe around us. Ultraviolet light is higher energy light than visible light—the bit of the Sun's ultraviolet light that gets down to Earth is what burns the skin. Space Telescope's ultraviolet pictures will show more energetic processes in space than we can see with the eye. Also, since the Space Telescope will be above the Earth's atmosphere, and its blurring effect—we can expect much sharper photographs from Space Telescope than from the ground. This has got to be important just because these astronomical things are so far away—to get any detail in your picture it must be as sharp as possible. We have reached the limit from the ground.

I believe, therefore, that it is a matter of real practical importance that we get Space Telescope built and launched—starting right now.

Mr. Chairman, the Space Telescope is but one of several very important projects that this bill authorizes. I would urge my colleagues to join me in voting for this measure.

Mr. Chairman, I have a couple of brief questions, if I may, of the chairman of the subcommittee relating to the major new start in this authorization, which is the space telescope. The first question I would ask is: Could the gentleman describe for the Committee the priority which NASA has placed on the space telescope?

Mr. FUQUA. According to NASA the space telescope is their No. 1 priority item for the year. They have been after this for some time and this year it was approved by the Office of Management and Budget. It is of the highest priority not only to the NASA program but also to the academic community.

Mr. WIRTH. I thank the gentleman.

My next question is: Is it not true that this President and the previous administration have included this in both the budgets?

Mr. FUQUA. The gentleman is absolutely correct. It has been included in the budget of both former President Ford and President Carter.

Mr. WIRTH. I thank the gentleman for his answers to those questions.

Mr. WINN. Mr. Chairman, I yield such time as he may consume to the gentleman from Florida (Mr. FREY).

Mr. FREY. Mr. Chairman, I would like to pay special tribute to the gentleman from Texas (Mr. TEAGUE) who over the years has given this committee special leadership, and to the gentleman from Florida (Mr. FUQUA) and to the gentleman from Kansas (Mr. WINN), who have worked hard on this bill.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. FREY. I yield to the gentleman from California for a question.

Mr. ROUSSELOT. Mr. Chairman, I thank my colleague for yielding. Many of us are indeed grateful for the strong leadership of Chairman TEAGUE.

I recall that last year we had some discussion on the floor, and as I remember also in the 1976 committee report, on some of the programs under Earth resources operations and systems relating to resource surveillance in our country from various satellites. We call them Landsat–1 and Landsat–2, and these satellites do surveillance work relating to agricultural produce, weather conditions, and so forth. Could the gentleman comment as to how that program is proceeding and the value that we might expect from any new satellites that we launch?

Mr. FREY. I would be delighted to. We have basically conducted experiments on Landsat–1 and Landsat–2 and the Skylab program. Landsat–1 and Landsat–2 are now both operational. These satellites gave us the ability to predict the wheat crop several months before the Agriculture Department did last year, within about a 10-percent range. We are in the process of launching this summer the Landsat–C, which is the final generation of the Landsat programs. We also have money for the Landsat–D, which has a thematic mapper, a device that will allow us greater precision and enable us to predict the crops within 1 or 2 percent.

Satellites can be used and are being used to foresee flooding or the lack of water. We are working on experiments in agriculture where we have young tree decline in citrus trees. If it works we can see young tree decline by satellite way before you can identify by any other means. There is no cure for this. The only thing we can do is to pull out the young trees. This is just an example of helping us on Earth.

Mr. ROUSSELOT. I appreciate my colleague's explanation of the value and the various end products of these satellites under the Landsat program. It is important that people in this country have a full appreciation of the immediate and future value of the programs.

Let me review for my colleagues some important items about Landsat–C from last year's report of this committee:

The Landsat–C Earth Resources Technology Satellite is the first operational satellite system dealing with earth resources data for all potential private and institutional users. Landsat–C is a technical improvement over the two predecessor satellites (Landsat 1 and 2) and offers the framework for the implementation of an earth resources operational system.

The objective of the Landsat–C Earth Resources Technology Satellite project is to continue the development of technology which will significantly contribute to more efficient management of earth resources. It accomplishes this objective by providing large area repetitive images in discrete color bands, which can be analyzed by computer and photointerpretation techniques to provide a better understanding of terrestrial conditions than is presently possible. Landsat–C will continue and build on the technology developed by Landsat–1 and –2. Landsat–C will carry an improved Multispectral Scanner (MSS), which will incorporate a new spectral band in the thermal region to more effectively classify terrestrial phenomena which are characterized by temperature changes. This additional capability will be used to improve our ability to classify and measure agricultural crops in the preharvest stage and will also improve Landsat's capability to monitor dynamic changes in many other vital areas such as water pollution, geology, hydrology, and oceanography. The television camera system, called the Return Beam Vidicon, will incorporate a twofold improvement in resolution (80 to 40 meters) over what was flown on Landsat–1 and–2. This capability will permit the identification of smaller agricultural fields and should assist in improving cartography in poorly mapped areas of the world.

I know the gentleman from Florida (Mr. FREY) has been one of those interested in this Landsat–C program, since many of the launches have occurred in the gentleman's area of Florida. The reason it seems timely to discuss Landsat–C because in my Subcommittee of Census and Statistics in the Post Office and Civil Service we have been conducting hearings on the value of various kinds of surveys done in the agricultural field. I think it is important that there be better exchange of information among some of these operating Earth Resources System programs that the gentleman from Florida has mentioned and the other current statistical gathering agencies. As the gentleman from Florida has already pointed out the current Landsat satellite system was able to provide reliable data relating to the Kansas wheat crop several months well in advance of actual weather conditions. It is our hope that those from the farming communities of this country will take time to look at the Science and Technology Committee reports, both this years and last years. The various Landsat programs provide a value that they can utilize now and in the near future. This is no longer "Star Trek" of the distant future.

Our colleague, the gentleman from South Dakota (Mr. PRESSLER) was testifying today before the Subcommittee on Census and Statistics was explaining how the production of statistics through the Census Bureau is delayed rather substantially by the time they get the end result. Yet our colleague knew himself that the satellites now in place or to be in place will be able to give us a better projections and monitoring readings of crops and field production.

I am very appreciative of my colleague's comments on this. I hope that

the whole House can be aware of the tremendous value of the Landsat programs that are included in this authorization.

Now, did my colleague tell me that our new space shuttle program will be able to service these type satellites that are either in orbit now or are soon to be?

Mr. FREY. Mr. Chairman, that is one of the benefits of the space shuttle, to save the cost of satellite replacement and expendable launch costs. We estimate a savings of about $1 billion a year. The Shuttle will be able to take vehicles up and place them in space. If there is something wrong, they can bring them back and fix them and replace it with a part.

Mr. ROUSSELOT. Mr. Chairman, if the gentleman will yield further, I want to thank my colleague for his comments on the importance of the Space Shuttle program and his explanation of the direct benefits the program will soon provide.

Mr. Chairman, I, too, wish to pay a compliment to the chairman of this committee and activist, our good Congressman, the gentleman from Texas (Mr. TEAGUE). The gentleman (Mr. TEAGUE) was present in Palmdale, Calif., last year when the Space Shuttle was rolled out for the world to see. The gentleman from Florida (Mr. FUQUA), and the ranking member on our side of this subcommittee, the gentleman from Kansas (Mr. WINN) were also on hand for this Orbiter 101 rollout. We all felt there was a very great deal of importance to the roll-out of that vehicle. Many people truly realized that this new Orbiter will have a tremendous number of spinoff benefits for the whole country that maybe are not seen, perceived or realized at this time; will soon be acknowledged and felt as tremendous technological advancements on a widespread basis.

I am pleased that more of the news media are beginning to pay closer attention to the good results in these space programs. Although it may appear that the costs are substantial, the Space Shuttle will provide tremendous savings in what they can ultimately give to this whole program of satellite surveillance.

Mr. FREY. I agree with the gentleman, and thank him for his remarks. I would point out that in the area of weather, as a result of the space program it has been estimated that over 50,000 lives have been saved as a result of advance weather warning. I do not know how much value we can put on a human life, but it certainly must be the highest priority.

We are looking forward to solar power stations down the line. We are looking forward to manufacturing in space. The process of developing blood, which costs $50 per ounce on Earth, can cost 25 cents in space. I think it is a tremendously productive period we are looking at.

I would move to one other thing, since the gentleman has brought it up. It has been my feeling and that of the entire committee that in the energy area, NASA is not being properly used. The people, the technology, the facilities are a national asset, and I think have been poorly used by ERDA or whoever is running the entire energy area. We are not getting our money's worth.

Mr. ROUSSELOT. I thank the gentleman for yielding to me.

Mrs. SPELLMAN. Mr. Chairman, will the gentleman yield?

Mr. FREY. I yield to the gentlewoman from Maryland.

Mrs. SPELLMAN. Mr. Chairman, I want to take a moment to say how happy I will be to join my colleagues on the other side of the aisle in the sentiments they have been expressing. I think all too few people in the United States recognize the enormous spinoffs we get from the NASA programs. There are people who sit on this very floor of the House who wear pacemakers, and that is one of the spinoffs from the space program. There are advantages that we have today that are just too numerous to go into at this point, but I was very much enjoying the colloquy because it is an attempt to call to the attention of the American people the really great service that is being done for the people by the NASA programs.

Mr. FREY. I thank the gentlewoman.

As she well knows, one of the most important export items we have, one of the very few in which we have a balance of trade, is in high technology. A great deal of the basic research has gone through NASA. Unfortunately, it has been slowing down to the extent that today we do not have as much airplane exports. Other countries are taking over in that area, and in communications, because we are losing the leadership.

I think when a nation loses its science and technology, it starts to die as a nation. I do not want to see this happen.

Mrs. SPELLMAN. I wonder if I might take just a moment to commend the committee chairman, TIGER TEAGUE, for whom we all have not only the greatest of respect, but affection and love.

Mr. FREY. I thank the gentlewoman.

Mr. Chairman, I would like to express my support for H.R. 4088, the fiscal year 1978 National Aeronautics and Space Administration—NASA—authorization. The funding provided for NASA is probably one of the wisest decisions possible if we as a nation expect to see a continued growth in our technology. This technical capability has opened entirely new horizons in space. With the advent of the space transportation system, which includes the Space Shuttle, this Nation will be able to place payloads in Earth orbit for approximately $160 per pound as compared with $600 per pound for expendable launch vehicles. This system makes space utilization for communications systems, Earth resources monitoring, and solar power stations not only economically feasible but routinely applicable.

This budget is truly a conservative budget. In 1965 the NASA budget was $5.3 billion with the employment at 33,200 people. In 1976 the budget had shrunk to $3.5 billion with an employment of 24,039. It is about time that we recognize the technical capabilities and facilities that exist at NASA and apply these national assets to the solution of the energy crisis. More positive steps need to be taken by ERDA to actively solicit NASA cooperation. This Nation has made a tremendous investment in space exploration but as indicated by the manpower and budget history it is not being utilized. To capitalize on that investment the technology must be used.

In closing I would like to express my compliments to NASA for their efforts in the past year. I also would like to say that the time has come for us to make the same enthusiastic comment to resolving our energy problems that was made to landing on the Moon. The technical capability is available—let us use it.

Mr. DORNAN. Mr. Chairman, will the gentleman yield?

Mr. FREY. I yield to the gentleman from California.

Mr. DORNAN. Mr. Chairman, I represent the aerospace capital of the world, the 27th District of California, where so much of the shuttle technology comes from.

Mr. Chairman I have listened to the debate on the National Aeronautics and Space Administration authorization with great interest. As the Representative of one of the centers of the aerospace industry in this country, I have long been aware of value of the Space Shuttle. The Space Shuttle is not just another "military boondoggle" as some of its opponents have called it. There are real and lasting civilian benefits to be gained from its operation.

So that my colleagues may be better apprised of "down-to-earth" benefits of this amazing vehicle, I would like to list a few of them now:

COMMUNICATIONS

Communications satellites have made intercontinental television possible, and are reducing the costs of transocean telephone calls. The costs will decrease again when the reusable Shuttle takes new and improved satellites into Earth orbit.

PETROLEUM RESOURCES

Photos of the Earth taken from space have led to discoveries of oil and natural gas on three continents. The improved satellites emplaced by Space Shuttle can locate new sources of fossil fuels.

MINERAL RESOURCES

A copper deposit estimated to be worth $10 billion was discovered in northern Nevada as a result of Skylab pictures. The advanced satellites emplaced by Shuttle are expected to make many other valuable mineral discoveries.

POLLUTION

A pollution-mapping satellite can cover the entire continental United States in about 500 photographs. Cameras carried in high-altitude airplanes would need about 500,000. It is possible to monitor from space in a few days what would take years by air.

AGRICULTURE

Sensor systems in space can help the world solve its food problems. The sensors can identify crops in each field, tell the vigor of the crops, the probable yield, the identity of plant diseases or insect infestation, and provide vital inventories of food for mankind.

TIMBER

Shuttle-launched satellites can help conserve our forest resources by discovering fires, by detecting tree disease and infestations of pests, and by providing accurate inventories of our timber lands.

SCIENTIFIC STUDIES

Shuttle is capable of taking into earth orbit completely equipped scientific laboratories and as many as six passengers. In the weightless environment of space, scientists can perform many tasks that cannot be accomplished against earth's gravitational pull.

FISHING INDUSTRY

By mapping the ocean surface temperature, earth resources satellites will help oceanographers understand current patterns. This, in turn, will enable fishing experts to predict the movements of schools of fish.

Mr. FUQUA. Mr. Chairman, I yield such time as he may consume to the gentleman from Texas (Mr. GAMMAGE).

Mr. GAMMAGE. Mr. Chairman, I represent the other aerospace capital of the world.

Mr. Chairman, I rise in support of H.R. 4088 authorizing appropriations for the National Aeronautics and Space Administration for fiscal year 1978. I would like to congratulate Mr. FUQUA, chairman, Subcommittee on Space Science and Applications and Mr. WINN, the ranking minority member for the leadership they have provided during hearings on this bill.

It is fitting to note that we as a nation have grown to a position of technological preeminence that is the envy of the world. Clearly, the pioneering characterized by our space program is a demonstration of how we attained this position.

Looking toward our Nation's future, it is apparent that we cannot rest if we are to maintain our leadership in this field. Many foreign countries recognize the importance of maintaining a healthy climate for technological innovation and have taken positive steps to encourage the innovative process. Today, we have before us a bill, H.R. 4088, the national aeronautics and space administration fiscal year 1978 authorization which, I believe, is important if we are to continue to reap the benefits that the space program and its generation of new technology has given us in the past.

We must remember that the pursuit of space goals generates innovations in virtually all fields of science and technology and helps stimulate progress in areas not even remotely connected to the original programs. Economists have estimated that these secondary benefits will return $7 billion to the economy in a 14- to 20-year period—about twice the authorization we are considering today. Similarly, each new dollar invested annually on space research will return $23 over the next 10 years.

I want to focus my attention on our future space program including space industrialization and space solar power and the advanced programs studies leading to realization of goals in this area.

The effort that NASA pursues under the advanced programs area of the budget is one of the most important elements of the budget. It is the "seed corn" from which we will grow new programs and new accomplishments in space.

The Apollo, the Skylab, the Apollo-Soyuz, and the Shuttle all emerged from this critical study effort.

Today, new and revolutionary concepts for future space systems are being studied. These vary from giant communications satellites which operate with wristwatch radios that will allow you and I to communicate on a national or global basis as easy as we use a telephone—but without the great fixed installations. Or the possibility of having instant electronic mail or global television at the twist of your TV dial.

On an even larger basis, there is the potential for giant satellites that harness the energy of the sun and beam the electrical power to Earth to be used in our homes, thus overcoming much of our dependence on fossil fuels like coal and oil.

These new concepts—and many more, depend on the use of large structures built and fabricated on orbit by men and women flying in the Space Shuttle.

A whole new era of national growth will come about when we learn to exploit these capabilities and begin to industrialize space.

Again, your committee feels very strongly that much effort is needed in generating the new concepts. We need these new bold approaches to bring forth new products, new industries—new national strength and security.

Industrialization of space involves the use of space flight for commercial and social purposes; that is, the use of space to produce saleable/profitable products or services which companies and citizens are willing to pay for. Other basic uses of space, of course, include scientific research and exploration, typified by the Voyager and Apollo programs and national security. Weather, communications and earth resources satellites have already demonstrated many economic and social benefits achieved by the use of space.

The successful industrialization of space will require the development of Space Platforms—manned facilities to be placed in low earth orbit and periodically serviced by the Space Shuttle. The Space Platform would permit the assembly, erection and placement of permanent large facilities in orbit such as antennas for low-cost public service communications. Such antennas are capable of a wide range of new services, for example, electronic mail, wrist radio communications, search and rescue, and inventory control of items to be tracked nationwide. Commercial processing of valuable materials and pharmaceuticals would also be supported by a Space Platform. The feasibility of large systems for translating solar energy to electrical energy for use on Earth would be investigated.

Mr. Chairman, I wish to express my support for continuing our assessment of the satellite solar power system concept. This intriguing concept appears to have promise for helping meet our Nation's long-term energy needs.

There is in our country a growing understanding of the need to conserve our depletable energy resources and to take measures to protect the environment. In addition, there is a growing awareness of the potential of solar energy to provide nondepletable, environmentally clean energy for use on earth. This Nation has initiated a major effort to advance the technology and demonstrate the use of solar energy as an inexhaustible and clean energy resource.

As part of this effort, the Congress included funds to NASA in fiscal year 1976 for study of the Satellite Solar Power Station concept. In this concept, an earth orbiting power station would collect and convert solar energy in space and transmit this energy to earth by means of microwaves. Congressional support for evaluation of this concept has continued until the present, with recent direction for a joint program by NASA and ERDA.

It is my understanding that NASA and ERDA studies of satellite power systems to date have disclosed no barriers to technical feasibility and have indicated that the concept may be competitive in cost with earth-based power systems in the 1995 time frame and beyond.

The satellite solar power station therefore continues to stand as a potentially major long-term energy option for providing baseload solar energy essentially twenty-four hours a day.

Deeper investigation of the concept therefore appears to be altogether appropriate. In a joint planning effort, NASA and ERDA have identified five major subprogram elements requiring more in-depth investigation, as follows:

a. Definition of a System Concept;

b. Environmental Factors;

c. Comparative Evaluation with Earth-based alternatives;

d. Impacts and Benefits; and

e. Space Related Technology.

Funding of these studies would provide the basis for a decision in mid-1980 whether to continue the program.

I urge my colleagues to join with me in support of these studies. Their implementation would permit a detailed assessment of the potential of this candidate major energy option, and would use more fully the national technological resources developed in the space program.

Mr. Chairman, I urge full support for funding of the proposed satellite solar power system studies.

Mr. FUQUA. Mr. Chairman, I yield such time as he may consume to the gentleman from Kentucky (Mr. BRECKINRIDGE).

Mr. BRECKINRIDGE. Mr. Chairman, I rise today to support a program whose fate is now before the Senate Labor, Health, Education, and Welfare Subcommittee of the Senate Appropriation Committee considering the fiscal year 1977 supplemental appropriations for the National Institute of Education. Included in the NIE $70 million supplemental request is a program called the Appalachian education satellite program—AESP.

This program utilizes current satellite technology to aid rural communities

in improving their educational systems. In simple terms, it brings educational opportunities to the people of Appalachia, rather than forcing them to go hundreds of miles to a university or college and to spend additional funds to receive this educational training. The program has represented a strong cooperative effort among Federal, State, and local agencies and citizens since 1974. Over 15 communities, incorporating local input and suggestions as to needs, have been involved during the first phase of the AES program. Over 1,000 rural educators were able to take credit courses that many of them could not otherwise attend, thereby accelerating the quality of education throughout Appalachia. In addition, over 400 small businessmen took part in the needs assessment.

The second phase of the AES program would expand the reach from 15 communities to over 60 rural communities receiving the AESP, and would seek greater course offerings and a larger variety of audiences. The projected new programs would continue to serve educators, but are also planned to aid the business community, industry, health occupations, government workers, and vocational training.

Mr. Chairman, the $70 million fiscal year 1977 supplemental appropriations request for NIE, as passed by the House Appropriations Committee, is presently being considered by the Senate Appropiations Committee. The $70 million figure does not afford sufficient funding for the Appalachian education satellite program beyond June of 1977. This important program to the citizens of rural Appalachia must not be allowed to die. I have urged the members of the Senate Appropriations Committee to amend the supplemental appropriations bill to provide for at least $3.5 million to permit this valuable program to continue and grow.

It is important to point out, Mr. Chairman, that this invaluable program receives support not only from my home district, but broad local support in the rural communities throughout Appalachia. The Congress should also be aware that the improved technology and educational opportunities developed for these proposed 60 rural communities, can best be put to use throughout this Nation in a variety of subject areas. It is readily apparent what such a program could do in the western reaches of America, where distances are so great and the population so relatively sparsely settled, as well as abroad in emerging nations.

We all share the concern of how best to serve the educational needs of our rural and urban citizens. Local interest and support have been demonstrated in this program to show this concern—all the 15 receiving sites of these satellite programs have raised matching local dollars for Federal dollars; in fact, the program is scheduled to become self-supporting by 1981, if the program is continued as proposed. We must not let this local determination and support perish.

Mr. Chairman, may I conclude my remarks by including part of a letter I received from Dr. Lewis W. Cochran, vice president for academic affairs at the University of Kentucky, wherein he outlines the importance of this program and the need for Congress to include a specific $3.5 million for the Appalachian education satellite program to insure adequate funding to continue this laudable and critically important project. Dr. Cochran's remarks follow:

As you are aware, unless an adequate funding level for this fiscal year is received a succesful and significant educational communication project will be seriously affected. Therefore, my purpose in writing this letter is to express my support of the program by reviewing its importance to the State of Kentucky and the Appalachian Region.

In my opinion, the AESP has demonstrated a tremendous potential for the design and implementation of a region-wide, community-based program of educational services for Appalachia. Historically, its dispersed population and rugged terrain have hampered the delivery of quality education services to isolated areas by conventional means. This problem was compounded by the need to coordinate efforts of many diverse organizations toward the same end. The key factor in the success of AESP has been its organizational structure, which has succeeded in facilitating cooperation at local state, regional, and national levels. In fact, the Appalachian Regional Commission, NASA, DHEW, the University of Kentucky and the Regional Education Service Agencies have developed a very productive working relationship. This close cooperation allows AESP programming to be based upon locally identified needs, while utilizing the strengths and resources of the various organizations involved.

AESP has developed an operational plan to serve a broad range of continuing education needs identified in five general areas; education, medical and health services, human resources and services, business and industry, and government. A review of existing courseware will continue throughout the life of AESP to identify programs which can be adapted to meet these needs; new program development is planned where program priorities remain.

A major thrust of the operational plan concerns the expansion of AESP's delivery system from 15 receiving sites in eight states to 60 receiving sites in the 13 Appalachian states. NIE has already provided the additional antennae required to complete the expansion and new sites have been selected. New and existing sites will be located so they can feed into cable systems (when they exist) so citizens can participate in the continuing education activities in their homes. This will increase the number of participants and make it possible to have local classroom sites in schools, hospitals, community colleges, community centers, and other local institutions. This system will provide services not presently available to citizens in a large number of sparsely populated communities and will supplement and enhance services currently provided by ETV, cable and telephone communications. In addition, this expansion will increase the cost-effectiveness of satellite delivery.

AESP exemplifies a most effective way to utilize existing institutions and technology with high-powered public and commercial satellites. This approach is basic: develop programs and services that are needed, in some cases vital, to our communities, then fit the technology to delivering these services.

The advantages inherent in the technology, however, are obvious. We are moving into an era of life-long learning and much of the physical relocation required to travel to university centers for extended periods of training can be eliminated as communications satellite technology improves and we learn how to use the technology effectively. In a short period of time, satellites have changed the pattern and pace of communications by providing reliable high-quality and cost-effective telephone, television, and data transmission services. Dr. Wernher von Braun and other scientists and engineers refer to the 1980–2000 time period as the age of the communication satellite.

The University of Kentucky is committed to a continuing education and public service program to serve the State of Kentucky and Appalachia. Participation in the development of AESP provides the institution with additional opportunities to reach that goal.

Your support in securing funds for the continuation of AESP will be appreciated.

Sincerely,

LEWIS W. COCHRAN,
Vice President, Academic Affairs.

Mr. FUQUA. Mr. Chairman, I yield 3 minutes to the gentleman from Kansas (Mr. GLICKMAN, a new member of the committee.

Mr. GLICKMAN. Mr. Chairman, I rise in support of H.R. 4088 authorizing appropriations for the National Aeronautics and Space Administration for fiscal year 1978.

The role of general aviation in the production of food and fiber probably provides a broad based benefit to the general public. Over the years the aerial application of seeds, fertilizers and pesticides has become a vital part of our agricultural system. The 7,000-plus fleet of aircraft apply over a billion dollars worth of chemicals to some 250 million acres each year. Mounting pressure for higher, more efficient food production foretells of continued growth in this very vital area. This is in spite of very real limits on the capability for accurate delivery and precise placement of chemicals with current aircraft and dispersal equipment.

The development of new technology to improve both the accuracy and efficiency of the aerial application of agricultural chemicals holds the promise of significant benefits, not only to the aircraft users and manufacturers, but to the farmer and the consumer as well. Increased precision of the application can result in an overall reduction in the volume of chemicals used with the attendant lower cost. Reduction of chemical drift outside the intended field reduces the adverse environmental impact and the potential for damage to adjacent crops.

Greater aircraft efficiency in terms of payloads, ferry speed, turning performance and short-field operation can lower the cost of aerial application even further.

NASA's efforts to provide technical improvements in each of these problem areas, properly coupled with supporting activities in the Department of Agriculture and the Environmental Protection Agency, should be aggressively pursued. The original proposal by NASA to allocate $1 million to this effort in fiscal year 1978 permits a slow buildup of in-house activity. It, however, does not provide for the level of industry and university involvement that is absolutely

vital to the rapid application of technology developments.

The subcommittee's action in amending the NASA request to provide $2.5 million in fiscal year 1978 provides for both a more aggressive in-house effort by NASA and the resources to undertake joint activities with manufacturers and universities from the outset of the technology program. I believe it is exceedingly important that NASA, industry, and the universities work together from the outset to develop the needed technology, and the proposed NASA budget addition will provide for this joint activity.

I would like to talk a little bit about the debate of the supersonic transport because I think it is an important one. If the Members will read the report clearly, it is obvious the moneys are not going to be spent for the procurement or construction of any airplane. However, they are going to be spent for research.

Old technology is past as a result of time. The old technology which started to produce the old SST could not solve problems such as environmental problems, economic problems, social problems. But new technology may be able to solve them. They also may be able to solve the problems that the airline industry is going to face when this generation of aircraft, the 727's, the 1011's, and the 747's, are old and have to be replaced. Maybe we will never go with the SST. Maybe we will go with a modified SST. Maybe we will find a way to solve the energy problems. But the point is, if we do not go ahead with the technology of it, we will never find out. And is not that what made this country what it is today, that we can look into the future?

It strikes me that it is very short-range thinking to take the results of the old SST, which, granted, were environmentally bad and economically bad, and jump the gun and say that is what is going to happen to this SST. It does not make any sense. We have been the greatest leaders in the world in aviation production. We have provided the world with the unique technology in aviation because we, the Americans, have taken the lead to produce technology in aviation. It looks to me that this is a good place to continue that technology. As the gentleman from California (Mr. ROUSSELOT) and the gentlewoman from Maryland (Mrs. SPELLMAN) talked about, it is a fantastic field anyway. I think it is extremely shortsighted of this body to vote to take those funds out of here.

Mr. WINN. Mr. Chairman, I yield 3 minutes to the gentleman from New Jersey (Mr. HOLLENBECK).

Mr. HOLLENBECK. Mr. Chairman, I would like to express my support of the fiscal year 1978 National Aeronautics and Space Administration authorization bill, H.R. 4088. Extensive evaluations have been conducted to verify that the budget is a reasonable representation of the national technology needs. One program within the NASA budget that is being funded as a new start is the Space Telescope. This program has received the highest priority possible from the entire scientific community.

Science has evolved in many areas to the point where individual facilities capable of making significant advances can no longer be handled by individual investigators or institutions. Astronomy is an example of such an area. Since large telescopes are required to study distant astronomical objects, modern-day astronomers have tended to pool the use of large instruments rather than distributing funding so that each could have his own much-less-capable instrument. In this way, one large telescope, such as those of the Hale and Kitt Peak Observatories, can enable at least 100 astronomers each year to pursue astronomical research at the forefront of science, as opposed to astronomers being able to conduct only the most routine observational research on a number of smaller, less capable instruments. It was for this reason that two decades ago the astronomers told the National Science Foundation that they would prefer single large national observatories for optical and radio astronomy to which all astronomers would have access to an equivalent amount of money invested in a number of facilities. Astronomers are now telling NASA the same thing. The Space Telescope which should operate for more than a decade is the large observatory which by being above the veiling effects of the atmosphere will represent a very large step in capability above ground-based observatories and will allow large numbers of astronomers from all over the world to work truly on the forefront of science. Its importance to astronomers the world over is evident from the European Space Agency's commitment of significant funding—more than $90 million—for participation in the program.

Throughout history, astronomy has been the basic forerunner of technology. Studies using the greatly broadened capabilities of the Space Telescope over ground-based telescopes is bound to lead to many new technological advancements. We should take steps as early as possible to provide the astronomers of the world with this opportunity to unlock additional secrets of the universe which will undoubtedly lead to technologies which, as in the past, will be important to man's continued comfortable existence on Earth.

Mr. FUQUA. Mr. Chairman, I yield 5 minutes to the gentleman from New York (Mr. WEISS).

Mr. WEISS. Mr. Chairman, I thank the gentleman for yielding this time to me.

Mr. Chairman, the gentleman from Ohio (Mr. SEIBERLING), the gentleman from Arizona (Mr. UDALL), and I are going to propose an amendment to prohibit the expenditure of any of the moneys that are incorporated in this authorization for the development of the SST or the AST, as it is called in the report, until it is specifically authorized by an act of Congress. My concern over what is happening here with the SST is twofold.

No. 1, I am opposed to NASA's doing this at all. No. 2, I am opposed to including an item which went through 10 years of the most controversial, heated kind of debate in this House under the leadership of some of its most prominent Members who are still here. The gentleman from Arizona (Mr. RHODES), the gentleman from Wisconsin (Mr. REUSS), and the gentleman from Illinois (Mr. YATES), among others, led the fight when the House voted to terminate the SST program. It is wrong, I think, to have that item now come back to us, not in the body of the bill, not in a specific authorization, but included in a report, and if none of the Members read the report, we would never know that in fact this NASA authorization is including money for the AST.

I must tell the Members, Mr. Chairman, that although the indication has been that this is not going to cost any money, as I read section 1 of this bill, it provides in paragraph (9) for aeronautical research and technology, $236,500,000. I assume that some of that money is going to be used in order to develop the AST.

I read the charge in the report as to what they are expected to do. They are told in the first place that this is not just theoretical. I am quoting here from the committee report:

> The Committee, in its report, "The Future of Aviation," recommended that it is in the national interest for the United States to build an environmentally acceptable, economically viable, advanced supersonic transport.

Then they say that the committee requests that there be an overall program plan under NASA. They are told to consider "economic analysis covering investment/return aspects of development implementation." What is the role of NASA in that?

They are told to consider "societal benefits of supersonic transportation, including trade and communications." What business does NASA have doing that?

They are told to consider "societal, including environmental impacts from the operation of a fleet of supersonic transports." They are also told to consider "approaches for development financing."

It seems to me, Mr. Chairman, that NASA is being given just too much leeway in this situation for a program on which this Congress has turned thumbs down. It seems to me that if we really value our sense of integrity, what we should do is to take this issue and meet it head on and then decide whether in fact we want to reverse the prior position of the House.

Mr. Chairman, I have a few questions to ask, and since the subcommittee chairman, the gentleman from Florida (Mr. FUQUA), has been so gracious in yielding me time, I wonder if he would allow me to ask him this question:

Could the gentleman tell us whether in fact my conclusion that the financing will come out of the section labeled paragraph (9) is accurate?

Mr. FUQUA. Mr. Chairman, if the gentleman will yield, I will say to the gentleman that that is correct.

Let me further say that in 1971, when that vote came to the floor of this House, I was one of those Members who voted in the majority against the construction of the SST. I have very serious reservations about this, but, as the gentleman mentioned, we did say, "economically viable" and "environmentally acceptable."

Mr. Chairman, I might ask the gentleman, is he opposed to that?

Mr. WEISS. Well, I would not be opposed to having horses fly either, but I do know that they cannot.

Mr. FUQUA. We will not know unless we try to find out.

Mr. WEISS. We have tried to find out, and as the gentleman from Kansas (Mr. GLICKMAN) has said, in this particular framework, the Concorde does not work and yet there are people who tell us to this day it is acceptable because they are fighting in New York about allowing the French and the English to bring in the Concorde. There is serious question as to whether the Concorde is environmentally acceptable and whether it is technically proficient or economically viable.

Therefore, there is no universal agreement on it.

May I ask the gentleman, how much of that $239 million is intended to be used for this bill which has been imposed upon us in the report?

Mr. FUQUA. There is about, I think, $15 million being earmarked for advanced transportation systems. This would come under the AST.

Mr. WEISS. Could the chairman tell us whether, in fact, in the course of the hearings in subcommittee there were witnesses who were asked to come in or who did come in to testify in opposition to the AST?

The CHAIRMAN. The time of the gentleman from New York (Mr. WEISS) has expired.

Mr. FUQUA. Mr. Chairman, I yield 1 additional minute to the gentleman from New York.

Mr. WEISS. I thank the gentleman for yielding.

Mr. FUQUA. Mr. Chairman, I would defer to the gentleman from Texas (Mr. MILFORD), the chairman of the subcommittee which considered that legislation.

Mr. MILFORD. I thank the gentleman for yielding.

The Chair was using the gavel at the time the gentleman asked the question, and I could not hear it.

Mr. WEISS. My question was as to whether there were witnesses in opposition to the SST at the hearings.

Mr. MILFORD. Is the gentleman talking about the future-of-aviation hearings or the authorization hearings?

Mr. WEISS. Any of the hearings.

Mr. MILFORD. No, we had no opposition. We are not involved in building an SST, and there was no reason for it.

Mr. WEISS. In taking up this matter, did the subcommittee have any witnesses to testify against starting a research or development program on the SST?

Mr. MILFORD. We had no hearings on such a thing.

We are dealing here with technology development and study. We are not building SST's.

Mr. WEISS. Are there not certain disagreements in areas of technology that could be pursued?

Mr. MILFORD. None that I am aware of.

Mr. WEISS. Mr. Chairman, I thank the gentleman.

Mr. WINN. Mr. Chairman, I yield 1 additional minute to the gentleman from Florida (Mr. FREY).

Mr. FREY. Mr. Chairman, could the gentleman from Texas (Mr. MILFORD) enlighten me?

It is my understanding that what the committee contemplated was new technology such as new wing technology, new engine technology and efficiency, new flight controls, new kinds of light materials that may be used for all kinds of aircraft. The gentleman from New York's approach reminds me of the argument supposedly made in the late 1800's. Everything we know already has been discovered, so let us do away with the Patent Office.

Is my understanding of the committee action correct?

Mr. MILFORD. Yes, that is correct.

I think many Members misunderstand this matter. We cannot separate what is advanced technology for future aircraft from what is improved technology for present airplanes. The same materials that would be developed for a better next-generation subsonic aircraft might also be used in supersonic or they might be used in washing machines.

One simply cannot separate out in a technology development program what might be used in an AST from what might be used in a present-day aircraft.

Mr. WINN. Mr. Chairman, I yield 1 minute to the gentleman from California (Mr. LAGOMARSINO).

Mr. LAGOMARSINO. Mr. Chairman, I rise in support of H.R. 4088, the NASA authorization bill. There are few Government programs which have resulted in a better return in both scientific knowledge and dollar value than the U.S. space program. In the past 15 years, we have witnessed quantum advances in weather prediction, resource management, medicine, communications, and other fields of direct benefit to the people of the United States and the world—all as a result of NASA programs.

Today, we have an opportunity to continue reaping the benefits of our original investment in space—at a greatly reduced cost. The Space Shuttle which is the major component of this bill, represents the "payoff" phase of our near space program, in terms of both practical science and economics. The Shuttle will be the DC-3 of our space program—cheap, reusable, and efficient. With the Shuttle, we will be able to service, repair, or replace satellites in orbit, resulting in lower initial payload costs and longer usable life. The Shuttle will provide routine and dependable access to near space for scientific, defense, and commercial purposes. In fact, Shuttle cargo space is already being offered on a commercial sale basis both here and abroad.

Nor are the benefits restricted to space alone. The entire authorization in this bill, Mr. Chairman, is only $4 billion, or about the same amount as this body recently agreed to spend on local public works projects to combat unemployment this year. What better way to insure a continued strong base of technology and scientific skills than through a program such as this?

History shows us that the nations on the frontier of exploration and commercial development are the nations which succeed. By maintaining and improving our leading role in the development of near space, we are insuring our future success as a nation, while reaping enormous human benefits for ourselves and mankind.

Mr. Chairman, I urge an aye vote on H.R. 4088.

Mr. FUQUA. Mr. Chairman, I yield 2 minutes to the gentleman from New York (Mr. SCHEUER), a member of the committee.

Ms. HOLTZMAN. Mr. Chairman, will the gentleman yield?

Mr. SCHEUER. I yield to the gentlewoman from New York.

Ms. HOLTZMAN. Mr. Chairman, I rise in opposition to the proposal in this bill to provide funds for research and development of a supersonic transport, the SST.

I think the proposal is unwise in general and also comes at the wrong time.

At the present time the Secretary of Transportation is conducting research on flights into Dulles Airport of the Concorde. We should not embark on any new SST research until we review the results of this study.

Furthermore, embarking on SST research at this time will have a harmful impact on America's relations with France and Great Britain. We have restricted flights of the Concorde into our country on the basis that we had to determine if it violated our noise and environmental laws. France and Great Britain have always suspected that these restrictions were prompted by a protectionist impulse and that we were trying to restrict their SST in order to build our own. Our country, however, has assured France and Britain that this is not the case.

This bill, however, gives credence to the suspicions that America has not acted in good faith, undermines our credibility abroad, and is unwise and dangerous.

Mr. SCHEUER. Mr. Chairman, I was one of those in earlier years who voted against development of the SST. I am as strong an opponent of the entrance of the SST into our airports as any Member of this House inasmuch as I represent the Kennedy Airport and all the surrounding communities which have been so devastated by airport noise.

Mr. Chairman, the reason I opposed its development in the past and the reason

I oppose permission for the SST to land now is that we have not solved the environmental problems; we have not solved the noise pollution problem; we have not solved the ozone problem; and we have not solved the fuel efficiency problem.

Mr. Chairman, those were the reasons we voted against it some years ago, not because this House ever expressed itself, in principle, against the dramatic advance in aviation technology and against travel comfort and convenience SST potentially represents, but because we had not solved the problems that would make this aircraft acceptable to our Nation and to the communities around airports which are a real and continuing party in interest, in every aspect of aviation development, and whose legitimate concerns must not and will not, so long as I am a Member of this body—be ignored or swept under the rug.

Mr. Chairman, I am absolutely determined to keep the SST out of my community in Queens and to keep it out of this country, and I oppose the development of an SST in this country until we have developed an environmentally acceptable, economically viable, and fuel-efficient craft.

But I think it is a far step to say that we should not even begin to do the planning for an environmentally acceptable, fuel efficient and an economically viable aircraft, which would represent no noise or pollution hazard, which would not threaten the health, sanity, convenience, and serenity of the hundreds of thousands of people I represent in the dozen or more communities surrounding Kennedy Airport, and which would constitute a major advance in aviation progress. At what point in the progress of transportation do we say that everything stops now, because horses cannot fly?

I hope the suggested amendment will be defeated.

Mr. UDALL. Mr. Chairman, at times like this, I get a strong feeling of deja vu, of history repeating itself, of fighting the same old battles over and over again. I recall a day 6 years ago when we supposedly dealt the coup de grace to the SST.

But it seems that old turkeys never die—they just continue to fly and fly. With a new name comes the promise of new life.

In the midst of continuing controversy over landing rights for the Concorde, still unanswered questions about their environmental impact on land, air, and population, vigorous efforts to cut back on expensive flying and floating dinosaurs like the B–1 bomber and huge nuclear carriers, with all these issues still unresolved, I am stunned at yet another effort to revive this dead bird.

And I am especially stunned at the method that some of the SST's diehard supporters are using to bring it up. As many of my colleagues will recall, that vote 6 years ago was the first test of a revolutionary new system in this body known as open voting, and under the full glare of public scrutiny this House rescinded funds for the SST. Yet, despite the fact that we now vote openly and on the record, this effort to provide funds once again is being presented through the back door, buried in innocuous language about studies and long-range planning and future programs.

If we want to support an SST program then it should be presented with full public debate in a straightforward manner. It should not be a unilateral decision by a single committee slipped in an authorization bill without hearings on its merits and defects. Let us face it head on if we truly believe this country needs and wants SST's or AST's or whatever they are to be called.

I urge my colleagues to support our amendment to delete funds for the proposed NASA study and bury this misquoted project once and for all.

Mr. WOLFF. Mr. Chairman, as my colleague from New York (Mr. WEISS) has pointed out, the committee report accompanying this NASA authorizations bill (H.R. 4088) requires NASA to prepare an "overall program plan" which has as its goal "achieving technology readiness" for an advanced supersonic transport by the early 1980's.

My colleague objects to this effort by calling forth the ghost of the American SST and the demon which is Concorde.

Mr. Chairman, my colleagues know that I have long been opposed to the imperfect and unacceptable technology of which Concorde is the epitome. I remain steadfast in my opposition.

Yet I am not opposed to any supersonic transport, and would note that the committee report requires the NASA plan to carefully analyze such crucial factors as economics, societal benefits such as trade and communications, societal impact—particularly the environmental hazards—as well as financing and the extent of Federal Government participation in the aircraft's development. Such factors clearly have never been previously explored, and had such factors been considered prior to development, we never would have spent billions on an American SST, nor would we be menaced by the Concorde.

I would like to take this opportunity to put my colleagues on notice that should this NASA study, which is to be completed by September 1977, be in any way incomplete or faulty, then I will be in the forefront of the opposition once again, to protect the health and welfare of our citizens. But if an advanced supersonic transport can be developed that is "environmentally acceptable—and—economically viable," then I am not prepared to reject the notion that this would be in our national interest.

Mr. TEAGUE. Mr. Chairman, we may easily overlook the fact that each and every dollar of our space program is spent in the universities, industry, and Government technical centers to pay for the people and materials necessary to utilize and explore space. In the triumphs of landing men on the Moon and more recently examining the surface of Mars, it is easily overlooked that a less spectacular revolution in the use of space technology has made our world a better place.

Dollars spent in our space program are estimated by economists to return $7 dollars for each dollar spent over a 10-year period. Such a return on our public investment occurs for two reasons; we derive a direct benefit from the space programs undertaken, plus the additional benefit of adding new technology to our industrial sector. Conservative estimates show that from only four sectors of space technology our Nation has derived more than our total investment in the space program since its inception in 1958.

All of these considerations lead me to one conclusion; namely, that our space program is a continuing essential part of our economy. A casual look at our balance of payments over the decade from 1965 to 1975 shows that the aerospace industry has had a net positive balance throughout that period. The only other major positive balance, and single largest, is agriculture. The majority of this positive balance of payments in aerospace has been in the aircraft sector, with the portion of spaceflight related activity slowly growing. Domestically, the infusion of space technology into our economy has continued to make our industry more efficient while encouraging the development of new industry.

This then leads to the conclusion that if we are able to maintain our edge in new technology with the ever increasing world competition, we should and must support those initiatives which foster the new technologies. Our space program is a leader in these new technologies. It deserves our continuing strong Federal support. For example, the vast majority of worldwide business communications is handled by commercial communications satellites. Only a decade ago such worldwide communications were limited to radio and underwater cables. Not only have satellites opened a whole new era of unprecedented telephone/teletype and television international and domestic communications, but the quality of these instant communications has multiplied. A similar occurrence can be expected in Earth resources survey. A series of satellites called Landsat have provided an experimental systems so that crop, forest, watershed, demographic, and geologic information can be obtained on a recurring basis. Our understanding of crop and forest health and water management have been demonstrated to be improved by Landsat information. Receiving stations in the United States and other countries have successfully utilized this information. Over the next several years, I believe that the Landsat system will evolve into a commercial enterprise in many respects paralleling commercial satellite communications.

Space technology also has opened new horizons for space industrialization. Making products in space requires that two conditions be met, namely, that the product be superior to what can be made on Earth or can only be made in space and, second, that the product be profitable or essential to meeting our critical needs. The successful completion of Apollo, Skylab, and the Apollo-Soyuz test project amply demonstrated that products that cannot be fully duplicated on the ground can be made experimentally in space. Skylab further demonstrated that a large structure can be repaired or modified in space by men working in a

space environment. What was a necessity to make Skylab workable can be converted to a virtue in assembling large structures in space in the future. The opportunity exists, as the availability of a low cost transportation approaches—Space Shuttle—to routinely fly to and return from Earth orbit and to build large complex structures in space. By being able to place large complex structures in space, the option to provide worldwide personal services at extremely low cost becomes practical. Personal communications and security, package tracing, location and hazard warning to millions on a worldwide basis will be expanded from relatively limited systems of today to highly accurate, personal services. Here the parallel is the already existing weather and navigation satellites which have been so successful. The new generation of satellites which will become large structures in space again can multiply and expand our direct and essential personal services here on Earth.

Finally it seems to point out that space technology provides for an important contribution to the solution of our needs for an inexhaustable supply of energy. Currently, the technology of solar satellite power is being investigated to determine if it is feasible to generate power in Earth orbit using the Sun's energy and beam it to Earth. The concept at its current stage of development looks extremely attractive. The bill before us today encourages the examination of this technology.

In discussing the space program today, I have tried to place the bill before us in the context of national need and opportunity. If our Nation is to benefit from the full potential of our space program, it requires the will of this body in support of the NASA programs. Therefore, I urge the support of every Member for H.R. 4088 to provide authorization of appropriations to the National Aeronautics and Space Administration for fiscal year 1978.

Mr. WINN. Mr. Chairman, I have no further requests for time.

Mr. FUQUA. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. Pursuant to the rule, the Clerk will read the committee amendment in the nature of a substitute recommended by the Committee on Science and Technology, now printed in the reported bill as an original bill for the purpose of amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby authorized to be appropriated to the National Aeronautics and Space Administration:

(a) For "Research and development," for the following programs:

(1) Space shuttle, $1,349,200,000;

(2) Space flight operations, $270,800,000;

(3) Expendable launch vehicles, $129,500,000;

(4) Physics and astronomy, $229,200,000;

(5) Lunar and planetary exploration, $161,200,000;

(6) Life sciences, $33,300,000;

(7) Space applications, $211,900,000;

(8) Earth resources operational systems, $26,900,000;

(9) Aeronautical research and technology, $236,500,000;

(10) Space research and technology, $101,700,000;

(11) Energy technology applications, $9,500,000;

(12) Tracking and data acquisition, $278,700,000; and

(13) Technology utilization, $9,100,000.

(b) For "Construction of facilities," including land acquisition, as follows:

(1) Construction of central hydraulic system, Hugh L. Dryden Flight Research Center, $420,000;

(2) Construction of additional technical processing facilities, Goddard Space Flight Center, $3,100,000;

(3) Modifications to various buildings for seismic protection, Jet Propulsion Laboratory, $2,830,000;

(4) Modification of chillers in central heating and cooling plant, Lyndon B. Johnson Space Center, $2,540,000;

(5) Modifications for utility control system, John F. Kennedy Space Center, $2,130,000;

(6) Rehabilitation of main heating plant, Langley Research Center, $790,000;

(7) Rehabilitation of unitary plan wind tunnel, Langley Research Center, $980,000;

(8) Modification of central chilled water system, Lewis Research Center, $860,000;

(9) Modifications for utility control system, National Space Technology Laboratories, $620,000;

(10) Large aeronautical facilities.

(A) Construction of national transonic facility, Langley Research Center, $23,500,000;

(B) Modification of 40- by 80-foot subsonic wind tunnel, Ames Research Center, $13,500,000;

(11) Various locations: rehabilitation and modification of 64-meter antenna components, $1,750,000;

(12) Space Shuttle facilities at various locations as follows:

(A) Modifications to launch complex 39, John F. Kennedy Space Center, $40,700,000;

(B) Modifications for solid rocket booster processing facilities, John F. Kennedy Space Center, $1,730,000;

(C) Rehabilitation of barge channels, John F. Kennedy Space Center, $2,090,000;

(D) Modification of manufacturing and final assembly facilities for external tanks, Michoud Assembly Facility, $16,010,000;

(E) Rehabilitation and modification of shuttle facilities, at various locations; $1,750,000;

(13) Space Shuttle payload facility: modifications and addition for shuttle payload vertical processing, John F. Kennedy Space Center, $6,410,000;

(14) Rehabilitation and modification of facilities at various locations, not in excess of $500,000 per project, $18,900,000;

(15) Minor construction of new facilities and additions to existing facilities at various locations, not in excess of $250,000 per project, $5,950,000;

(16) Facility planning and design not otherwise provided for, $11,780,000.

(c) For "Research and program management", $847,989,000, and such additional or supplemental amounts as may be necessary for increases in salary, pay, retirement, or other employee benefits authorized by law.

(d) Notwithstanding the provisions of subsection 1(g), appropriations for "Research and development" may be used (1) for any items of a capital nature (other than acquisition of land) which may be required at locations other than installations of the Administration for the performance of research and development contracts, and (2) for grants to nonprofit institutions of higher education, or to nonprofit organizations whose primary purpose is the conduct of scientific research, for purchase or construction of additional research facilities; and title to such facilities shall be vested in the United States unless the Administrator determines that the national program of aeronautical and space activities will best be served by vesting title in any such grantee institution or organization. Each such grant shall be made under such conditions as the Administrator shall determine to be required to insure that the United States will receive therefrom benefit adequate to justify the making of that grant. None of the funds appropriated for "Research and development" pursuant to this Act may be used in accordance with this subsection for the construction of any major facility, the estimated cost of which, including collateral equipment, exceeds $250,000, unless the Administrator or his designee has notified the Speaker of the House of Representatives and the President of the Senate and the Committee on Science and Technology of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate of the nature, location, and estimated cost of such facility.

(e) When so specified in an appropriation Act, (1) any amount appropriated for "Research and development" or for "Construction of facilities" may remain available without fiscal year limitation, and (2) maintenance and operation of facilities, and support services contracts may be entered into under the "Research and program management" appropriation for periods not in excess of twelve months beginning at any time during the fiscal year.

(f) Appropriations made pursuant to subsection 1(c) may be used, but not to exceed $35,000, for scientific consultations or extraordinary expenses upon the approval or authority of the Administrator and his determination shall be final and conclusive upon the accounting officers of the Government.

(g) Of the funds appropriated pursuant to subsections 1(a) and 1(c), not in excess of $25,000 for each project, including collateral equipment, may be used for construction of new facilities and additions to existing facilities, and not in excess of $50,000 for each project, including collateral equipment, may be used for rehabilitation or modification of facilities: *Provided,* That of the funds appropriated pursuant to subsection 1(a), not in excess of $250,000 for each project, including collateral equipment, may be used for any of the foregoing for unforeseen programmatic needs.

(h) The authorization for appropriation to the National Aeronautics and Space Administration of $6,500,000, which amount represents that part of the authorization provided for in section 1(b)(4) of the National Aeronautics and Space Administration Authorization Act, 1976, for which appropriations have not been made, shall expire on the date of the enactment of this Act.

(i) The authorization for appropriation to the National Aeronautics and Space Administration of $6,000,000, which amount represents that part of the authorization provided for in section 1(b)(14)(B) of the National Aeronautics and Space Administration Authorization Act, 1977, for which appropriations have not been made, shall expire on the date of the enactment of this Act.

SEC. 2. Authorization is hereby granted whereby any of the amounts prescribed in paragraphs (1) through (15), inclusive, of subsection 1(b)—

(1) in the discretion of the Administrator or his designee, may be varied upward 10 per centum, or

(2) following a report by the Administrator or his designee to the Committee on Science and Technology of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate

on the circumstances of such action, may be varied upward 25 per centum.
to meet unusual cost variations, but the total cost of all work authorized under such paragraphs shall not exceed the total of the amounts specified in such paragraphs.

SEC. 3. Not to exceed one-half of 1 per centum of the funds appropriated pursuant to subsection 1(a) hereof may be transferred to the "Construction of facilities" appropriation, and, when so transferred, together with $10,000,000 of the funds appropriated pursuant to subsection 1(b) hereof (other than funds appropriated pursuant to paragraph (16) of such subsection) shall be available for expenditure to construct, expand, or modify laboratories and other installations at any location (including locations specified in subsection 1(b)), if (1) the Administrator determines such action to be necessary because of changes in the national program of aeronautical and space activities or new scientific or engineering developments, and (2) he determines that deferral of such action until the enactment of the next authorization Act would be inconsistent with the interest of the Nation in aeronautical and space activities. The funds so made available may be expended to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment. No portion of such sums may be obligated for expenditure or expended to construct, expand, or modify laboratories and their installations unless (A) a period of thirty days has passed after the Administrator or his designee has transmitted to the Speaker of the House of Representatives and to the President of the Senate and to the Committee on Science and Technology of the House of Representatives and to the Committee on Commerce, Science, and Transportation of the Senate a written report containing a full and complete statement concerning (1) the nature of such construction, expansion, or modification, (2) the cost thereof including the cost of any real estate action pertaining thereto, and (3) the reason why such construction, expansion, or modification is necessary in the national interest, or (B) each such committee before the expiration of such period has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

SEC. 4. Notwithstanding any other provision of this Act—

(1) no amount appropriated pursuant to this Act may be used for any program deleted by the Congress from requests as originally made to either the House Committee on Science and Technology or the Senate Committee on Commerce, Science, and Transportation.

(2) no amount appropriated pursuant to this Act may be used for any program in excess of the amount actually authorized for that particular program by sections 1(a) and 1(c), and

(3) no amount appropriated pursuant to this Act may be used for any program which has not been presented to or requested of either such committee.
unless (A) a period of thirty days has passed after the receipt by the Speaker of the House of Representatives and the President of the Senate and each such committee of notice given by the Administrator or his designee containing a full and complete statement of the action proposed to be taken and the facts and circumstances relied upon in support of such proposed action, or (B) each such committee before the expiration of such period has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

SEC. 5. It is the sense of the Congress that it is in the national interest that consideration be given to geographical distribution of Federal research funds whenever feasible, and that the National Aeronautics and Space Administration should explore ways and means of distributing its research and development funds whenever feasible.

SEC. 6. The National Aeronautics and Space Administration is authorized, when so provided in an appropriation Act, to enter into and to maintain a contract for tracking and data relay satellite services. Such services shall be furnished to the National Aeronautics and Space Administration in accordance with applicable authorization and appropriations Acts. The Government shall incur no costs under such contract prior to the furnishing of such services except that the contract may provide for the payment for contingent liability of the Government which may accrue in the event the Government should decide for its convenience to terminate the contract before the end of the period of the contract. Facilities which may be required in the performance of the contract may be constructed on Government-owned lands if there is included in the contract a provision under which the Government may acquire title to the facilities, under terms and conditions agreed upon in the contract, upon termination of the contract.

The Administrator shall in January of each year report to the Committee on Science and Technology and the Committee on Appropriations of the House of Representatives and the Committee on Commerce, Science, and Transportation and the Committee on Appropriations of the Senate the projected aggregate contingent liability of the Government under termination provisions of any contract authorized in this section through the next fiscal year. The authority of the National Aeronautics and Space Administration to enter into and to maintain the contract authorized hereunder shall remain in effect unless repealed by legislation hereafter enacted by the Congress.

SEC. 7. Paragraph (1) of subsection 1(a) of the National Aeronautics and Space Administration Authorization Act, 1977 (Public Law 94-307), is amended by striking out "$1,288,100,000" and inserting in lieu thereof "$1,383,100,000".

SEC. 8. This Act may be cited as the "National Aeronautics and Space Administration Authorization Act, 1978".

Mr. FUQUA (during the reading). Mr. Chairman, I ask unanimous consent that the committee amendment in the nature of a substitute be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

AMENDMENT OFFERED BY MR. GARY A. MYERS

Mr. GARY A. MYERS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GARY A. MYERS: On page 21 after line 24 add the following new section:

"SEC. 7. (a) Each officer or employee of the Administrator who—

"(1) performs any function or duty under this Act; and

"(2) has any known financial interest in any person who applies for or receives financial assistance under this Act;

"Shall, beginning on February 1, 1978, annually file with the Administrator a written statement concerning all such interests held by such officer or employee during the preceding calendar year. Such statement shall be available to the public.

"(b) The Administrator shall—

"(1) act within ninety days after the date of enactment of this Act—

"(A) to define the term 'known financial interest' for purposes of subsection (a) of this section; and

"(B) to establish the methods by which the requirement to file written statements specified in subsection (a) of this section will be monitored and enforced, including appropriate provision for the filing by such officers and employees of such statements and the review by the Administrator of such statements; and

"(2) report to the Congress on June 1 of each calendar year with respect to such disclosures and the actions taken in regard thereto during the preceding calendar year.

"(c) In the rules prescribed in subsection (b) of this section, the Administrator may identify specific positions of a nonpolicymaking nature within the Administration and provide that officers or employees occupying such positions shall be exempt from the requirements of this section.

"(d) Any officer or employee who is subject to, and knowingly violates, this section, shall be fined not more than $2,500 or imprisoned not more than one year, or both."

Renumber the following sections.

Mr. GARY A. MYERS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. GARY A. MYERS. Mr. Chairman, this amendment is the same amendment which former Congressman Hechler from West Virginia and I offered in the last session to a number of authorizing bills. It is simply an amendment which would require the agency to promulgate regulations in which financial conflicts of interest would be disclosed.

It does not prohibit the ability for anyone in the policymaking positions to have any particular financial holdings or limit them in an amount in any way. The only changes that this amendment would require would be that an administrator must set up a system to have those individuals who are involved in a meaningful way in authorizing grants to provide for public disclosure of any possible conflicts of financial interest.

This amendment does not go nearly as far as the traditional concepts of financial disclosure that are included in more comprehensive bills but I think it goes far enough so that those of us who are concerned about the possibility of financial conflicts having a detrimental effect upon the negotiation of the contracts could be satisfied—have some assurance that the issue is being considered.

I do not believe this would be a cumbersome burden on the agency. The fact of the matter is I believe it would be a benefit to the agency and to the administrator to know that he has an awareness of these possible conflicts readily available and thus perhaps prevent future embarrassment of disclosure of some particular type of conflicts.

At this time I would also like to apologize to the committee and subcommittee chairmen for not having offered this in the committee. It was not my intention to simply bring it to the floor. I was unprepared to offer it at the time it came

through the full committee, and as a member of the Committee on Science and Technology I am not offering it to have a crippling effect on this bill. I did ask for some time to speak in support of this bill during general debate and as time ran out, I told the gentleman from Kansas (Mr. WINN) I would take my time during the offering of amendments. Now that I have time, I would like to offer my strong support for the bill. I think the NASA program has given us a continuous train of benefits, particularly in the area of high technology. I believe that many benefits are yet to come are unpredictable at this point, and that we shall be reaping those benefits far into the future.

With that, Mr. Chairman, I yield back the remainder of my time.

The CHAIRMAN. Does anyone wish to speak on the amendment? If not, the question is on the amendment offered by the gentleman from Pennsylvania (Mr. GARY A. MYERS).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. WEISS

Mr. WEISS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WEISS: Page 16, after line 19, insert the following new subsection (and redesignate the succeeding subsections accordingly):

(h) no part of any funds available to the Administrator may be used for the preparation of an overall program plan relating to technology for Advanced Supersonic Transports, or for any other study, analysis, planning, research, or development relating to such transports unless such plan is specifically authorized by an Act of Congress enacted after the date of this act.

Mr. WEISS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. WEISS. Mr. Chairman, this amendment, which the Members will find on page 7808 of yesterday's CONGRESSIONAL RECORD does not for all time and forever prohibit any of the work that is supposed to be done under the reports provision on the SST's or ASST's. It says, however, that no such work, study, analysis, planning, research, or development be undertaken unless such plan is specifically authorized by an act of Congress enacted after the date of this act.

What the amendment proposes, Mr. Chairman, is that if in fact we feel strongly about this issue, we set it forth clearly in advance, call all the witnesses pro and con, and have a full-scale hearing on it.

Mr. Chairman, on the basis of the debate it is now apparent, although it was not at the outset of the debate, that there are some $15 million in this particular authorization that are scheduled to be used for the research and development of the ASST. For us to be doing that without any specific mention of the amount or the ASST in the authorization, I think is wrong for this Congress to do. No matter what we in this body may think about how expeditious we want to be, or how thorough we have been, as far as the rest of the American people are concerned, when we do work in this fashion, where we do not really allow for full exposition of the issues before us, I think that does leave ourselves justifiably open to criticism.

Mr. Chairman, the people who opposed the SST 10 years ago did so after a 10-year fight which began almost the same way as this fight is starting. In 1964 the gentleman from Wisconsin (Mr. REUSS) got up to object to an $11 million authorization that was included in a NASA authorization, with exactly the same arguments as we heard here today. Before we were finished, there was $1 billion spent on that ill-fated SST program. Then Congress said let us terminate it. What I am suggesting is that we make the determination as to whether to proceed or not before we spend $1 billion and not after.

Mr. Chairman, I yield back the remainder of my time.

Mr. MILFORD. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, let me set the record straight. The report of the Committee on Science and Technology requests NASA to determine what new technologies will be added to solve the environmental and economic problems of the supersonic travel. It is only a study. No additional funds are involved. We are not even suggesting that NASA proceed with the development of the new technology which may be required. We are only asking that it be identified. Above all, and I want to stress this, there is certainly no commitment, implied or otherwise, to building an SST.

I know that most Members of this body recognize the need for NASA to be constantly involved in expanding our fundamental knowledge of aeronautical technology. This is the only way we can continue to lead the world in the field of aviation. And, of course, that leadership is very important to all of us here. It means billions of dollars each year in positive balance of trade from the sale of commercial aircraft. And it means millions of jobs for Americans.

The ongoing program of basic research in advanced supersonic technology is one of many such programs at NASA to increase the pool of knowledge in all flight regimes. It is, and has always been, a low level program. But it is vitally necessary so that our options for the future remain open. We cannot afford to completely abandon this field to the Europeans. Some day there will be acceptable advanced supersonic airplanes carrying people around the world in one-third the time it now takes. I want to make sure that those planes are American-built airplanes. But we must first solve the problems of the current SST. To do that, we must continue the basic research that NASA is doing.

AMENDMENT OFFERED BY MR. WYDLER AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. WEISS

Mr. WYDLER. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mr. WYDLER as a substitute for the amendment offered by Mr. WEISS: Page 16, after line 19, insert the following new subsection (and redesignate the succeeding subsections accordingly):

(h) no part of any funds available to the Administrator may be used for design or procurement of a prototype supersonic transport aircraft.

Mr. WYDLER. Mr. Chairman, I share my colleague's concern that the United States may be moved to embark on the development of a supersonic transport, be it described as SST or AST. The record shows that I was among those who voted to terminate the U.S. supersonic transport program in 1971. I have not changed my views in the slightest.

However, I have followed closely the developing aeronautical technology which is beginning to show some potential for resolving the environmental and energy problems attendant to the first generation SST.

The study of new aeronautical technology which was requested by the committee rather than proposed by NASA, is designed to provide Congress with a comprehensive view of the availability of technology specifically to help us resolve these issues.

The next quantum jump in areonautical propulsion in the high speed flight regime is variable or dual-cycle engine. The concept is not new but involves severe design problems. Basically, the dual cycle would be configured as a low or medium bypass ratio turbofan in takeoff and landing and low altitude flight regime. In high altitude cruise, it would be configured as a straight turbojet. Of course, there are a number of other technologies in the airframe and materials areas which would each contribute to improvements in all areas of performance including subsonic noise, fuel economy and atmospheric emissions.

A major breakthrough in noise suppression technology has already occurred in the dual cycle engine investigation. This is the coannular jet nozzle which has potential for providing a remarkable—on the order of 8 to 12 decibels—noise reduction while not degrading performance.

As a member of the Committee on Science and Technology since coming to Congress in 1963, I have worked for the development of technology to alleviate human problems and to provide a better way of life. I am not at all sure an environmentally acceptable and fuel conservative supersonic transport can ever be built. The purpose of this program is to try to determine as soon as possible whether in the foreseeable future, the United States should pursue this high technology transportation form. There is significant new research and technology base which was not available to SST designers in 1971.

This program does not commit either the Congress or the administration to build or even to support an SST prototype. As everyone can see, the request is accompanied by unprecedented—for aviation programs—requirements for environmental considerations including consultation and cooperative planning

with all levels of government and community organizations.

There is no intent to repeat the errors of the past which resulted in the waste of hundreds of millions of dollars on the U.S. SST program and an even greater amount on the Concorde. By embarking on such a thorough review of technology including not only traditional cost analyses but full environmental and energy conservation requirements, we will be in a better position to determine whether the United States should maintain its leadership in world aviation through high speed flight.

You may be assured that so long as I serve on the Committee on Science and Technology there will be a strong voice for the environment. Indeed, though my colleagues on the committee fully agreed to the requirements for environmental and energy requirements, I am indebted to Mr. WEISS, who has with this proposed amendment, forcefully reminded all of us of these requirements. Obviously, if they cannot be met, the aircraft will not be proposed.

Mr. WEISS. Mr. Chairman, will the gentleman yield?

Mr. WYDLER. I yield to the gentleman from New York (Mr. WEISS).

Mr. WEISS. Mr. Chairman, under the gentleman's substitute amendment, would it still be within the power of NASA to address: "(1) Economic analysis covering investment/return aspects of development implementation?"

Mr. WYDLER. Yes, it is required under the language of the report that NASA consult with many agencies of the Federal Government besides itself, and one of those which I wrote into that particular section was the Environmental Protection Agency.

Mr. WEISS. Is it yes or no?

Mr. WYDLER. That is an agency which I know is only interested in protecting the environment. But when we get a report from NASA we would like it to be a meaningful report which would contain all the aspects of the problem so we can consider them together. One of those aspects certainly is the economic aspect of the aircraft. Another is the environmental aspect of the program.

In this way, the Congress will have something meaningful to look at, something we can understand.

Mr. WEISS. Mr. Chairman, under the gentleman's substitute would NASA still be mandated to study and address the societal benefits of the supersonic transport?

Mr. WYDLER. Yes, but they would again, under the language of that report, they would have to consult with people that might be affected adversely by the takeoff and landing of the aircraft. Something that has never been done by NASA in its development programs.

I want to say to the gentleman I appreciate the gentleman bringing forth this amendment. It has given us a lot of discussion on the floor today. It is going to be helpful and I think it will make clear that the imposition of an SST of any kind, on anybody is not going to happen; but it also should be made immensely clear to the people of our Nation that we do not intend in our country to bring progress, in the aircraft industry, to an end. That is exactly what the gentleman's amendment would have the effect of doing.

Mr. WEISS. Mr. Chairman, will the gentleman yield further?

Mr. WYDLER. I yield to the gentleman.

Mr. WEISS. Is it not a fact that what we are talking about here is a civilian supersonic transport development?

Mr. WYDLER. Yes; of course, we are talking about supersonic development in the sense it is an advanced aircraft over the one we have today.

The CHAIRMAN. The time of the gentleman from New York has expired.

(By unanimous consent, and at the request of Mr. MILFORD, Mr. WYDLER was allowed to proceed for 1 additional minute.)

Mr. MILFORD. Mr. Chairman, will the gentleman yield?

Mr. WYDLER. I yield to the gentleman from Texas.

Mr. MILFORD. Mr. Chairman, first, a quick reply to the gentleman's last question. It is not necessarily limited to civil transport. It is technology that may be used by the military or for any use. It is technological development. It is certainly to be used just as much by the military.

The second point is that I think the gentleman has made a very wise compromise in this substitute amendment and I support the gentleman.

Mr. WYDLER. Mr. Chairman, I thank the gentleman from Texas.

Mr. OTTINGER. Mr. Chairman, I move to strike the requisite number of words, and I rise in strong support of the amendment of my good friend and colleague, the gentleman from New York (Mr. WEISS), and in opposition to the substitute amendment proposed by my good friend and colleague, the gentleman from New York (Mr. WYDLER).

I think that the Wydler amendment leaves intact what is the essential thrust of the provision in the NASA bill here, that is, that the proposal that NASA should attempt to achieve "technology readiness" for an "advanced supersonic transport" by the early 1980's. This arouses some suspicion in my mind that within 5 years, in the early 1980's, Congress will again be asked to finance an American SST.

If NASA does such program planning, I can easily foresee a subsequent request for sufficient funding to build a prototype—half a billion dollars, perhaps—and the fact that the substitute by the gentleman from New York (Mr. WYDLER) says we will not be authorized to do that now is very little assurance. Then we will have to think about building a small fleet of prototypes, just to see if more than one can work. Then we will invite development by the private sector. The private sector will find it difficult to raise sufficient capital, as it has in the past, and will come back to the Congress for more support.

The effort of the gentleman from New York (Mr. WEISS) to bring some sanity in this matter deserves the support of all the Members.

Even with the name change, from SST to AST, we are still talking about the same old airplane and the same old problems. "A rose by any other name is still as sweet" or, in this case, smelly.

Furthermore, if we fail to pass the Weiss amendment, there is no question but that the British and French will say, "aha." Our suspicions are justified; the United States just opposes our Concorde to give them time to develop their own SST. It will cause us great international embarrassment.

Mr. Chairman, I urge my colleagues to support the Weiss amendment and defeat the Wydler substitute amendment.

Mr. GOLDWATER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would rise in support of the amendment by the gentleman from New York (Mr. WYDLER), and oppose the amendment of the gentleman from New York (Mr. WEISS). The approach of the gentleman from New York reminds me of the Broadway play, "Stop the World, I Want To Get Off."

As long as man in this country is free, we are not going to stop his penchant or desire to solve problems.

Whether it be solely in transportation or in energy, or anything else, it is the intuitive nature of man's experience in a free society to meet headon those problems which he encounters, and come up with solutions. I am a supporter of supersonic flight, and I predict one day, Mr. Chairman, mankind will be flying completely safely and totally environmentally acceptably on supersonic aircraft, if not, in fact, on hypersonic aircraft.

Perhaps, in retrospect, the action of Congress in stopping the building of a supersonic aircraft was a wise decision in order to analyze the environmental, social and economic impact of modern technology. I have said the same thing concerning computer technology, which is advancing very rapidly. Every once in a while, we need to pause and examine what machines are doing to man.

I would suggest to the Members that this is precisely what we are doing with this approach to supersonic flight; that is, examining the impact upon mankind, upon our environment and the world in which we live. We cannot continue to keep our heads in the sand and say no to man, that he cannot solve these problems. This is an effort to answer questions that were raised several years ago, and that is all it is.

The acceptance of the amendment offered by our friend from New York (Mr. WYDLER) would do precisely what the gentleman is asking for, but at the same time would not stop man's quest for knowledge, and with that knowledge, with those facts, then we can make a decision, an informed, intelligent decision. Please, do not prevent us from doing that.

When we think of aeronautics, we have to be very proud of America. In 1903, a strange craft lifted off the sands of Kitty Hawk. It did not fly very far, but it was a machine built by Americans. In 1927, Charles Lindbergh crossed the ocean in an American-built airplane and revolutionized the whole age of flight. In 1969, an equally strange craft landed

upon the moon, and Neil Armstrong set foot upon another planet—an American craft, manned by Americans.

If we stop man's quest for knowledge by acceptance of this amendment, we are going to stop America's pre-eminence, contribution and greatness in aviation. If that be the majority's desire, then by all means, "Stop the world, so we can get off."

Mr. WEISS. Mr. Chairman, will the gentleman yield for a question?

Mr. GOLDWATER. I certainly would.

Mr. WEISS. Would the gentleman agree that even if this expenditure is only $15 million, a figure which has now been conceded, that before we start down that path there ought to have been at least some witnesses heard on the wisdom, or lack of it, to proceed with this effort?

Mr. GOLDWATER. I would remind the gentleman—and I recognize this is his first year—that members have held hearings for the last 6 years, including this year, taking testimony pro and con on supersonic and hypersonic flight. The record is replete with testimony.

Mr. WEISS. In this committee?

Mr. GOLDWATER. In this committee.

The CHAIRMAN. The time of the gentleman from California has expired.

(On request of Mr. WEISS and by unanimous consent Mr. GOLDWATER was allowed to proceed for 2 additional minutes.)

Mr. WEISS. If the gentleman will yield further, did the gentleman hear the statement by the chairman of the subcommittee that, in fact, there was no testimony at all on this issue and this subject?

Mr. GOLDWATER. I am not speaking for the chairman of the subcommittee. The gentleman asked me a question, and I said the record is full of testimony on this particular question.

Mr. MILFORD. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the gentleman from Texas.

Mr. MILFORD. I would like to respond to the question posed by the gentleman from New York as to whether or not in these hearings we had had opponents to the SST.

I would further say to the gentleman from New York that we spent an entire year last year with numerous hearings and inputs from almost 100 experts and that those hearings are readily available for him to read. They are called "The Future of Aviation."

Mr. WEISS. Mr. Chairman, if the gentleman will yield, did any of those witnesses oppose the technology or this proposal to study the technology?

Mr. GOLDWATER. To my knowledge, I believe there is a good record, pro and con, that has been built up over the years. I do not have the record in front of me, so I cannot answer the gentleman's question specifically.

Ms. HOLTZMAN. Mr. Chairman, I rise in opposition to the Wydler amendment and in support of Mr. WEISS' substitute. I will try to be very brief about this subject because there has been substantial debate already.

I think that it is extremely ill-advised for the committee to have presented a bill to the Congress which attempts, through the committee report, to overrule a specific statutory prohibition that the Congress imposed on the development of the SST. The committee action was also ill-advised because at this very time the Secretary of Transportation is undertaking a study to determine whether the Concorde, which has been flying into Dulles Airport, is environmentally, economically, and commercially viable. That report will have to be presented to the American public and to the Congress. Thus, the study provided by this bill is redundant.

Another thing that disturbs me is that this effort on the SST is going to create serious foreign policy repercussions for the United States.

We have argued to the French and to the British that the restrictions we have placed on the Concorde are not motivated by a protectionist interest, a desire to build our own SST. Yet in this bill we turn around and say that we really are funding our own SST. As a result, I think we will see headlines abroad saying that the United States is not acting in good faith.

Mr. WYDLER. Mr. Chairman, will the gentlewoman yield?

Ms. HOLTZMAN. I yield to the gentleman from New York (Mr. WYDLER).

Mr. WYDLER. I thank the gentlewoman for yielding.

Let me assure the gentlewoman that the test and the noise recording that is going on at Dulles Airport is totally unrelated to what we are discussing here today. That is totally complete. We are getting the noise readings of the Concorde SST. We are not talking here about the Concorde SST. We are talking here about some different airplane. We have to get that in our minds before we discuss this any further. What we are talking about is an airplane that would be different from the Concorde SST, would not make the noise that the Concorde SST makes, would not have the environmentally bad effects that the Concorde SST has. We are talking about a good airplane and not about a bad one.

Ms. HOLTZMAN. Mr. Chairman, I appreciate the gentleman's assurance, but there is nothing in the committee language which says that. If we do not adopt Mr. WEISS' amendment, we will open ourselves up for serious criticism abroad.

Mr. FISHER. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the Weiss amendment.

Very briefly, Mr. Chairman, one has the feeling that the clock has been turned back and we are plowing ground that was well plowed and worked over several years back.

I would like to point out to my colleagues on the other side who extol the virtues of free exploration of the skies and freedom to work out new technology that would benefit the country that there is nothing in the Weiss amendment that would prevent the great private enterprise system of this country from working on the problem of supersonic aircraft, from developing this technology, from placing the investment, and from going ahead. What we are talking about here is at first a Federal Government subsidy for planning or for a study. The subsidy would be in a modest amount, but it would probably lead on to very massive Federal subsidies if the reading from the planning study proved at all favorable. In that event, we would go right down the same road that the British and French Governments have gone, I think much to their regret.

Mr. WYDLER. Mr. Chairman, will the gentleman yield?

Mr. FISHER. Yes, I yield to the gentleman from New York.

Mr. WYDLER. Mr. Chairman, I just wish to point out to the gentleman that NASA is, of course, our National Aeronautics and Space Administration, and it has as its function, as given to it by the Congress of the United States, the obligation to develop technology for the future of aviation. Certainly it is doing that job, and it has been doing it for probably 50 years in our country under its present organization and under previous organizations. It has always done it in this way.

Those things that are developed which are useful to the aviation community have been adopted and used by the aviation community. That is why we are the preeminent country in the world in the aviation industry. For God's sake, let us not give that up.

Mr. FISHER. Mr. Chairman, we have also saved ourselves a bootful by not going down this SST route several years ago.

I would very much like to encourage private enterprise in this matter. If the private companies see a good product in sight here, they should proceed to develop it, and if they do, God bless them. But I do not think it would be wise to set the Federal Government on this course.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. FISHER. I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, I would just like to reemphasize the point made by the gentlewoman from New York (Ms. HOLTZMAN). It is a point that my friend, the gentleman from New York (Mr. WYDLER), did not seem to understand. That is that the British and the French are saying that we are preventing their test flights into New York solely because we want to be first in developing a better airplane and take over preeminence from them.

There is no question about it, if we embark on this program, they will say, "See, we told you so. It isn't the noise that bothers you at all. You want to come in and capture this market."

So regardless of whether the arguments of the gentleman from New York (Mr. WYDLER) are correct concerning our own scientific technology moving forward, I believe this is very ill-timed.

Mr. FISHER. Mr. Chairman, I will conclude by saying that for once we should give the free enterprise system full rein in this field to develop an SST if it wants to and if it can.

Mr. BROWN of California. Mr. Chair-

man, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I stand here with some timidity in opposing the amendment offered by the gentleman from New York (Mr. WEISS) because I have not been here during most of the debate and I hesitate to take a chance on saying things that have been said probably several times over. However, the arguments that I have heard during the brief time I have been here do not seem to me to carry a great deal of weight.

I admire the initiative of the private enterprise system as much as any Member of the House, and yet beyond the shadow of a doubt the value of the partnership role of government in the development of advanced aircraft has been fully demonstrated in this country. We must have a role for government research and development on behalf of the industry as a means of furthering the technological advancement of this country.

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I would be happy to yield to the gentleman from Florida.

Mr. FUQUA. Mr. Chairman, the gentleman said that he is opposed to the amendment. Does the gentleman mean the Weiss amendment or the Wydler substitute?

Mr. BROWN of California. I am opposed to the Weiss amendment.

Mr. FUQUA. Mr. Chairman, I appreciate the gentleman's response.

Mr. BROWN of California. Mr. Chairman, I recognize the very sincere motivation of those who are concerned about the environmental impact of the supersonic aircraft. I personally opposed the supersonic transport years ago when it was before the House. I have voted to restrict the Concorde, and yet I think the purpose of the Weiss amendment in seeking to restrict the further study of the possibility of developing environmentally sound supersonic aircraft for this country is extremely unwise. We do not want to get ourselves in the position of opposing all research and development and all technological progress.

I have a nostalgia about the ways of the past and would probably like to get along without any aircraft.

I am a supporter, as a matter of fact, the initiator of a resolution calling for a return to lighter-than-aircraft and sailing ships, but I want the best possible technology for lighter-than-aircraft, just as I want the best possible technology for supersonic aircraft, because, in my opinion, it is inevitable that this country at some point will need to bridge the gap between subsonic aircraft and space travel, which means supersonic development.

Mr. Chairman, the whole purpose of the provision in the committee report aimed in this direction is to give us the opportunity to pursue that preliminary work; and I am sure that this has been thoroughly spelled out in our prior debate here. It seems to me that the reaction of my environmental friends, whom I deeply respect and admire, in seeking to prevent this program is an overreaction to a step which I think will benefit this country.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. WYDLER) as a substitute for the amendment offered by the gentleman from New York (Mr. WEISS).

The question was taken; and on a division (demanded by Mr. WEISS) there were—ayes 65, noes 10.

Mr. WEISS. Mr. Chairman, I demand a recorded vote, and pending that, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present.

The Chair announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to rule XXIII, clause 2, further proceedings under the call shall be considered as vacated.

The Committee will resume its business.

The pending business is the demand for a recorded vote made by the gentleman from New York (Mr. WEISS).

A recorded vote was refused.

So the amendment offered as a substitute for the amendment was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. WEISS), as amended.

The amendment, as amended, was agreed to.

Mr. GARY A. MYERS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I am not going to take the 5 minutes. I briefly wanted to discuss an amendment which I had intended to offer but which I will not. It was in the RECORD of yesterday. This amendment deals with the provision whereby an agency will be required to revise its point system on hiring with respect to those people who benefit under the President's pardon, Presidential Proclamation 4483. I will bring this issue up at a later time rather than on this bill. I am still vitally interested in making sure that those people who did not violate their System be protected in hiring by agencies.

Mr. Chairman, the exact wording of the amendment I had intended to propose is:

Page 21, after line 24, insert the following:

SEC. 7. Notwithstanding any other provision of law, in making appointments to positions within the National Aeronautics and Space Administration which involve any activity with respect to which funds are authorized to be appropriated under this Act—

(1) in the case of any position within the competitive service, the examination rating of any individual who is granted a pardon by Presidential Proclamation 4483 shall be considered to be 5 points below that to which such individual would otherwise be entitled, and

(2) in the case of any position within the excepted service, only individuals who were not granted such a pardon shall be considered unless there are no such individuals who are qualified and available for such position.

Page 22, line 1, strike out "SEC. 7" and insert "SEC. 8".

Page 22, line 6, strike out "SEC. 8" and insert "SEC. 9".

Mr. Chairman, I yield back the balance of my time.

Mr. RUDD. Mr. Chairman, I wholeheartedly support the amendment that Congressman GARY A. MYERS proposed—and I am sure that the vast majority of the American public will support this effort to show our appreciation to the thousands of Vietnam veterans who served with honor during a trying period of our recent history.

Mr. Chairman, this is an eminently reasonable proposal. As I am sure my colleagues know, NASA is involved in research and construction work that is highly labor intensive.

Approximately 85 percent of all NASA spending goes into labor, employment, and predominantly in the private sector.

By the end of the current fiscal year, NASA will have total primary employment of 122,000 people—with 300,000 jobs directly dependent on NASA programs through contractors and subcontractors.

By the end of fiscal year 1978, NASA will have total primary employment of 131,000—with an estimated 325,000 jobs in the private sector dependent on NASA programs.

As I understand the gentleman's proposal, it would require that all U.S. veterans who serve honorably under the Military Selective Service Act receive preference in consideration for the 10,000 or more primary job openings on NASA programs.

This is entirely consistent with civil service policies and regulations, and should receive overwhelming support in the Congress.

I hope that everyone here will view this as an opportunity to enhance job performance on NASA construction and research sites by giving employment preference to veterans who have already shown their devotion to public service in our Armed Forces.

I support the gentleman from Pennsylvania's proposal.

The CHAIRMAN. The question is on the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker pro tempore (Mr. WRIGHT) having assumed the chair, Mr. MCKAY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 4088) to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and pro-

gram management, and for other purposes, pursuant to House Resolution 405, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER pro tempore. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the committee amendment in the nature of a substitute adopted in the Committee of the Whole? If not, the question is on the amendment.

The amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. RAILSBACK

Mr. RAILSBACK. Mr. Speaker, I offer a motion to recommit.

The SPEAKER pro tempore. Is the gentleman opposed to the bill?

Mr. RAILSBACK. I am, Mr. Speaker.

The SPEAKER pro tempore. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. RAILSBACK moves to recommit the bill H.R. 4088 to the Committee on Science and Technology.

The SPEAKER pro tempore. Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER pro tempore. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER pro tempore. The question is on the passage of the bill.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. ROUSSELOT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 338, nays 44, not voting 50, as follows:

[Roll No. 83]

The Clerk announced the following pairs:

Mr. Annunzio with Mr. Rahall.
Mr. Fary with Mr. Stump.
Mr. Boland with Mr. Russo.
Mr. Florio with Mr. Richmond.
Mr. Staggers with Mr. Gonzalez.
Mr. Jones of Tennessee with Mr. Carney.
Ms. Oakar with Mr. Cavanaugh.
Mr. Giaimo with Mr. Martin.
Mr. Mitchell of Maryland with Mr. Barnard.
Mr. Biaggi with Mr. Clay.
Mr. Roncalio with Mr. Davis.
Mr. O'Brien with Mr. Dickinson.
Mr. Hyde with Mr. Wiggins.
Mr. Gilman with Mr. Hall.
Mr. Zeferetti with Mr. Dingell.
Mr. McKinney with Mr. Meeds.
Mr. Marriott with Mr. McCloskey.
Mr. Early with Mr. Vanik.
Mr. Koch with Mr. Montgomery.
Mr. Flood with Mr. Stark.
Mr. Ginn with Mr. Tonry.
Mr. Teague with Mr. Roe.
Mr. Corcoran of Illinois with Mr. Neal.

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERMISSION FOR COMMITTEE ON HOUSE ADMINISTRATION TO HAVE UNTIL MIDNIGHT FRIDAY, MARCH 18, 1977, TO FILE CERTAIN FUNDING REPORTS

Mr. DENT. Mr. Speaker, I ask unanimous consent that the Committee on House Administration may have until midnight Friday night, March 18, 1977, to file certain funding reports.

The SPEAKER pro tempore (Mr. WEISS). Is there objection to the request of the gentleman from Pennsylvania?

Mr. CONABLE. Mr. Speaker, reserving the right to object, what does the gentleman mean by "certain funding reports"?

Mr. DENT. Mr. Speaker, if the gentleman will yield, these are funding reports relating to the funding of House committees.

Mr. HYDE. Mr. Speaker, reserving the right to object, I could not hear the request of the gentleman from Pennsylvania.

Mr. DENT. Mr. Speaker, if the gentleman will yield, I will repeat the request.

This is a normal request made at all times when we have to have reports lay over after a day's session. I am asking unanimous consent that the Committee on House Administration have until midnight Friday night to file reports on certain funding resolutions. These relate to the funding of House committees.

Mr. CONABLE. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

Mr. HYDE. Further reserving the right to object, Mr. Speaker, was there clearance with the minority side with respect to this request?

Mr. DENT. If the gentleman will yield, this has always been done in this manner as long as I have been here.

Mr. HYDE. This is a routine matter?

Mr. DENT. Very routine. I just came from the committee.

Mr. HYDE. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

Mr. BAUMAN. Mr. Speaker, reserving the right to object, if the request includes the House resolution whose number is, I believe, 393, dealing with certain administrative costs of the House, I would object.

Mr. DENT. Mr. Speaker, I did not hear the gentleman. Would he please let me know what he wants to know.

Mr. BAUMAN. If the request the gentleman is making includes House Resolution 393, I would object.

Mr. DENT. No; that is not contained in this group. These are regular, ordinary filings of the Committee on House Administration.

Mr. BAUMAN. Mr. Speaker, I withdraw the reservation of objection, with the assurance that that resolution is not included in the group.

Mr. DENT. It is not included.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

CLARIFICATION OF ACTIVITIES OF CUBA

(Mr. YOUNG of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. YOUNG of Florida. Mr. Speaker, we really need some clarification on some activities of Cuba and on our own relationship with Cuba. Tomorrow, March 18, 1977, the ban on U.S. travel to Cuba will be lifted. This is the first step in what has been described as a U.S. rapprochement with Cuba in areas which include the bilateral antihijacking pact, fishing rights within the 200-mile limit, the current trade embargo, and an exchange of diplomatic personnel between the two countries.

In February, the President was quoted as saying that—

> If I can be convinced that Cuba wants to remove their aggravating influence from other countries in this hemisphere, will not participate in violence in nations across the ocean, will recommit the former relationship that existed in Cuba towards human rights, then I would be willing to move toward normalizing relationships with Cuba as well.

All indications are that Cuba has not yet met any of those stated requirements. There have been multiple press reports regarding the close relationship between Fidel Castro and the Government of Panama, indicating that Castro has had a strong influence in Panama's efforts to negotiate a new canal treaty which would relinquish U.S. ownership and control of the Panama Canal; 16,000 troops of Cuban military have been reported in Angola; and in Uganda, Castro's name has been frequently linked with Idi Amin. Just yesterday unnamed State Department officials quoted by UPI reporter Jim Anderson stated that "there is good reason to believe Cubans are leading African rebel forces in Zaire," even though U.S. intelligence says it has no "hard evidence" of that. The U.S. officials quoted by Anderson declined to be identified for publication, but cited Zaire as one indication Havana shows no sign of meeting the President's key conditions for resuming full-scale U.S.-Cuban diplomatic relations.

Secretary of State Cyrus Vance, in a Washington Post article by Don Oberdorfer on March 5th said that he proposed that the United States and Cuba "enter into discussions without preconditions" and that in his remarks in February, the President "did not intend to insist on the withdrawal of Cuban troops from Angola prior to the start of Washington-Havana talks."

I submit to my colleagues that this administration, officially and unofficially, appears to be somewhat unclear about our present and future relationship with this Communist-influenced country that is located less than 100 miles from my home State of Florida. The United States position regarding Cuba needs some clarification. If the President's promise to level with the American people about his plans for our Foreign policy, is to be meaningful, a good starting place would be in the naming of one State Department spokesman who would make us all clearly aware of Cuban's involvement in Panama, Africa, and any other areas of the world in which they may be influential.

Personally, I am opposed to any hasty steps to "relax" our status with Cuba until we are all agreed on exactly where Cuba stands in its military and diplomatic relationships with the United States and other nations of the world.

SUSPENSION OF CUSTOMS DUTIES ON BINOCULARS AND TELESCOPES

(Mr. MIKVA asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MIKVA. Mr. Speaker, today I am introducing a bill which suspends tariffs on the importation of certain binoculars and telescopes. I have my doubts about the advisability of introducing trade legislation on an individual product basis because putting these matters before the Congress can subject them to the most difficult political pressures. But I think that this case is an exception because there is no rational basis for maintaining a protectionist 20 percent ad valorem tariff on products which the United States either no longer produces or only assembles from imported prisms in small amounts. Retaining this tariff results only in higher prices for the American consumer.

It is also noteworthy that this 20 percent rate is excessive in any event. Even though cameras are essentially optical instruments composed of the same type of lenses as binoculars and telescopes, the ad valorem duty is much less. For example, there is a 7.5 percent ad valorem duty on 35mm cameras valued at over $10.

According to the Department of Commerce, there is no known commercial production in the United States of the kind of prisms used in these binoculars and telescopes which are presently being imported from Japan, the United Kingdom, West Germany, and other countries. However, there is some evidence that there may be some U.S. assembling of binoculars from parts which are imported. Domestic commercial production of general consumer-use telescopes and binoculars ceased some years ago because domestic products were targeted for those relatively few consumers who seek expensive, highest quality, outstanding performance optical instruments. As a result, the small number of consumers could not support a viable domestic industry.

In recent years, telescopes and binoculars have become popular consumer items, especially for spectator sports and leisure-time activities. Improved technology and production methods have resulted in moderately priced instruments that are within the purchasing range of a wide element of the American population.

The current tariff of 20 percent ad valorem was reduced some years ago from the 30 percent ad valorem rate following the so-called Kennedy round of multilateral trade negotiations. The 30 percent ad valorem rate dates back to the period when technical difficulties in producing quality optical instruments supposedly required the American industry to be protected in the national interest. The current 20 percent ad valorem duties remaining after the Kennedy Round appear to reflect the continuing belief that the domestic industry requires protestion when, in fact, there is no longer any commercial production in this country.

The temporary elimination of all tariffs on foreign-made binoculars and telescopes proposed by this bill would continue until December 31, 1978. By that time, hopefully the tariff-reducing negotiations in Geneva will have been completed, and the President may determine that the temporary duty-free status for binoculars and telescopes should be made permanent.

Until that time, however, I urge the suspension of these duties because there is no economic, trade, or political reason for maintaining this protectionist 20 percent ad valorem rate when no competitive comparable production exists in the United States and when its elimination would do no injury to any American worker, industry, or community. On the other hand, its eliminaton can mean substantially lower prices for the American consumer of these products.

ADMINISTRATION KNOWS HOW TO SPEND, BUT CAN IT TAX?

(Mr. ARCHER asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ARCHER. Mr. Speaker, we have witnessed an impressive display of Executive largesse in the past month. The new administration has been in the enjoyable position of proposing legislation which promises billions of dollars worth of benefits, through tax reductions and other devices. It has had the pleasure of seeking to spend; it has not experienced the pain of trying to tax.

But the bullet-biting decisions cannot be postponed indefinitely, as the looming social security financial crisis illustrates so clearly. The two major trust funds, used to pay benefits to more than 30 million people every month, are going dry.

Actuaries estimate that the larger fund, which pays benefits to 20.6 millllion retired workers and their dependents, plus 4.6 million survivors of beneficiaries, will run out of money to meet benefit demands in 7 years. The smaller fund, which makes payments to 7.4 million disabled workers and their dependents, will be exhausted just 2 years from now.

I assume that the administration does not want to let these funds run out. But it has yet not made a preventive move, and time is not on its side. In order to get enough money into the system before the trust fund roof falls in, action must be taken very soon.

Other and more difficult problems involving the social security system also require action. To mention just a few: the benefit windfall made possible by a flaw in the automatic benefit provision; the withdrawal of State and local government units; a number of sex discrimination provisions, many of which are now being tested in the courts; and a complex series of troubles within the disability insurance program. Eventually, the administration will have to face these issues, too.

As of now, the Social Security Subcommittee of the Committee on Ways and Means is merely standing by, waiting for the administration to drop the first shoe. The subcommittee majority seems to feel it would be foolish to develop answers to these pressing problems, only to encounter at some point down the legislative road, the diametric opposition of its own administration. I can understand that feeling, and can sympathize with my colleagues.

But all of us know that we simply cannot wait much longer. The tough decisions on social security must be made, and if the administration continues to procrastinate, the Congress simply must take the initiative.

AMENDMENTS TO AGE DISCRIMINATION ACT OF 1967 INTRODUCED

(Mr. WEISS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. WEISS. Mr. Speaker, as you know this week is recognized throughout the country as "Employ the Older Worker Week." It is interesting to note that this great country which has endured so much pain to insure that its citizens which have opportunities which are protected by law currently denies to those Americans who are 65 years of age and older protection under the Age Discrimination Act of 1967. Because of a loophole in this act, some have whimsically referred to it as "The Slightly Older Workers Act."

Today, Mr. Waxman and I are introducing two amenmdents to the Age Discrimination Act of 1967 which we believe will close the loopholes which have enabled thousands of older workers to lose their jobs.

The first amendment makes unlawful those senority systems and employee benefit plans which require the retirement of workers at a specific age. The act currently allows such involuntary retirement if it results from a bona fide pension plan. Currently several law suits are pending before the courts on the issue of what constitutes bona fide. Our amendment clearly spells out that a pension plan which mandates an age limit for retirement is illegal.

The second amendment reflects the intention of the Congress when it passed the Age Discrimination in Employment Act in 1967 and when it amended the legislation in 1974; it eliminates arbitrary age limits imposed on employment. This amendment insures that Americans who are 40 and older are protected; it does not retain the upper limit of 65.

Mr. Speaker, we believe that these two amendments will strengthen the Age Discrimination in Employment Act of 1967 in such a way that it will provide American workers with real protection against employment discrimination based on age. It is only fitting that in this week which honors the older worker we take action to meet the mandate of the Age Discrimination in Employment Act.

FURTHER MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 2647) entitled "An act to amend the Small Business Act and the Small Business Investment Act of 1958 to increase loan limitations and to increase surety bond authorizations."

COST BASIS CARRYOVER PROVISIONS OF THE TAX REFORM ACT OF 1976

The SPEAKER pro tempore (Mr. WRIGHT). Under a previous order of the House, the gentleman from New York (Mr. CONABLE) is recognized for 60 minutes.

Mr. CONABLE. Mr. Speaker, I reserved this time for a discussion of the cost basis carryover provisions of the Tax Reform Act of 1976. It will be recalled by some of my colleagues that I was exercised about this portion of the Tax Reform Act at the time it came back from conference with the Senate, and I led a fight against it on the floor of the House. One hundred eighty-one of my colleagues, including the few who listened to arguments, voted with me to strip this measure from the provision. It became law, nonetheless. The Tax Reform Act of 1976 had in it many advantageous provisions, and this was not one of them.

The cost basis carryover provisions, I think, will cause a great deal of hardship, and I wish to call to the attention of my colleagues a provision which I have filed repealing this portion of the act. I hope I will receive considerable cosponsorship of this measure, and I hope my colleagues will join me before this has become the cause celebre I think it may become as the lawyers and bankers back home try to administer the estates of decedents who are ensnared in one way or another in this provision.

The cost basis carryover provision was not adopted in simple form. There was considerable opposition to it because it would result in a pyramiding of capital gains taxes on top of estate taxes. Because of the emotional environment in which we considered the Tax Reform Act, the sponsors of this particular provision felt that it was necessary to strip out all appreciation up until January 1, 1977. In short, they decided to accept the principle of a cost basis carryover and to phase it in after that period.

This resulted in a complex formula for linear apportionment of the value of all assets of an estate hereafter as of January 1, 1977, for which no market quotations are available. Any estate asset which is acquired after January 1, 1977, will be subject to the ordinary cost basis carryover provision, but there will be an apportionment to that date of all assets of decedents acquired before that period.

Mr. Speaker, this is not only going to be a complex device in the administration of estates but it is going to result, I think, in some detriment to our capital system in this country. For instance, in many ways it tends to increase the lockin of capital which we have come to associate with the tax on capital gains.

For instance, in the past under previous law we have had the tendency to be locked into assets which had appreciated substantially in value. Forgiveness of capital gains at death encouraged people to hold appreciated assets until they died so there would be a reevaluation under prior law of the cost basis of that asset in the hands of heirs.

We have eliminated this provision, with the result now that a low-cost basis will be carried over to the heirs as well, despite valuation for estate taxes including the full current value. This means that a low-cost basis of an asset effects not only the person who originally bought it but succeeding generations, with the result that, as I said on the floor of the House at the time this measure came up, the IBM stock of the future will become a family heirloom, something which nobody gains consequences of sale following appreciation from one generation to another.

I have, Mr. Speaker, an example of how this lockin will work, how it will add to the taxes of decedents substantially, and I would like to request that this par-

ticular provision be set out in the RECORD at this point.

Mr. Speaker, I insert that material here:

A husband owned a small grocery store and a home. After his death, his wife decided to sell both and move into an apartnment. Due to the carryover basis provision, she must pay a capital gains tax of $7,190 on both the grocery store and home property. The carryover basis provision also causes the minimum tax provisions to come into play, so that she must pay an additional $2,250 tax on the excluded part of capital gains. If there were no carryover basis provision, she would not have to pay these additional taxes.

Faced with the prospect of paying a combined total of almost $9,500 in taxes, the wife decides not to sell either property.

Others in a similar situation may also decide not to sell property they otherwise would; the carryover basis could thus have significant "lock-in" effect, causing economic dislocations.

	Basis [1]	Fair market value 1988
Property:		
Home	$25,000	$45,000
Grocery store	35,000	65,000
Personal and household effects	2,000	6,000
Automobile	3,000	2,000
Insurance		12,000
Total	65,000	130,000

[1] Under Tax Reform Act of 1976.

Assume husband dies in 1987 with adjusted gross estate of $120,000 and that he takes advantage of the marital deduction.

Assume surviving widow, age 60, sells grocery store and home in 1988 for $110,000 and moves into an apartment.

Assume she has other income for 1988 equal to the exemption and allowable deductions.

Tax on husband's estate under pre-1977 or current law	$0
Income tax paid by widow without carryover basis provision	0
Income tax paid by widow with carryover basis provision:	
Tax on capital gains	7,190
Minimum tax	2,250
Total increase in taxes attributable to carryover basis provision	9,440

Mr. Speaker, there are some other issues that have to be dealt with in talking about cost-basis carryover. For instance, it has been called to my attention by some lawyers in my district that very serious problems of valuation are going to result with respect to any estate which includes a considerable collection of any sort; for instance, a stamp collection, a coin collection, or a collection of antiques.

These collections are made up of a lot of individual assets. In many cases, the cost basis of them is obscured in the past; and any executor is going to have to report, in connection with an estate tax proceeding of any sort, substantially accurate records of, in some cases, thousands of capital transactions affecting that collection.

The American College of Probate Counsel has written indicating that this is a very serious problem and that not only postage stamps, coins, and antiques, but art objects or a collection of almost anything, if it is involved in a substantial estate, will be difficult to deal with.

Many of these items, Mr. Speaker, have been collected over long periods of time and result from countless small purchases.

In this case I am afraid that there is likely to be widespread fraud. There also, of course, is a record-keeping problem of major dimensions. Honest collectors and their executors will be confounded by the provisions of this law.

Mr. Speaker, suppose a decedent possessed a $50,000 stamp collection at death, which included several thousand separate stamps obtained by the decedent at various times throughout his life. The executor would be required to determine the dates of acquisition of each of the individual items in order to compute their fair market value on those dates so as to satisfy the provisions of the law. In a few minutes, we will get into the penalties that are involved if he does not do this.

The cost of such an effort in just gathering this information could be grossly disproportionate to the value of the collection and could greatly increase the cost of the administration of an estate.

A sampling of a lot of coin dealers indicates that the serious collector could easily obtain 1,000 coins in a month. If one assumes the keeping of a complete set of records, then the provisions and the fresh-start rule of this law still require the executor to make many thousands of separate computations to meet the requirement that the coin collector comply with the law.

This is so because the act provides that all property other than securities upon which market quotations are available, is to be valued as of December 31, 1976. The rule fixes the basis by assuming that appreciation which has occurred between the acquisition and death, occurred at a uniform rate over the entire period the property was held by the decedent. Thus each item will require a separate computation under the rule to establish the cost basis as of January 1, 1977. They are going to use a linear apportionment process to do that, so you have got to show the difference between the value on the date of death, even now, 3 months after this law went into effect and the value on January 1, 1977. You arrive at that by going through this linear apportionment process, and each item will require a separate computation under the rule to establish the basis of the value of the property in the hands of the beneficiaries.

The provisions of the Tax Reform Act of 1976 require executors to furnish information regarding the basis of the value of the property acquired from the decedent to the Internal Revenue Service and to the beneficiaries.

Executors are subject to penalties of $100 for each instance in which they fail to provide this information. The maximum penalty that can be imposed is a $5,000 penalty. This is going to put great pressure on those who have to administer estates to come up with records from which a cost basis can be computed. I think that in itself is going to be a substantial incitement to fraud and will create very serious problems.

Mr. JOHNSON of Colorado. Mr. Speaker, will the gentleman yield?

Mr. CONABLE. I am happy to yield to the gentleman from Colorado.

Mr. JOHNSON of Colorado. Mr. Speaker, I thank the gentleman for yielding and I want to congratulate the gentleman for bringing this to the attention of the House. I am convinced the gentleman is correct, having been engaged in the practice of law myself for some years and having done some estate work, I am convinced that the public, at least, is not aware of the impact of the legislation that we passed last year. I am convinced that people are not yet aware of what is going to be required when somebody has a farm, for instance, and a number of children are the beneficiaries, and that farm has to be liquidated, and the income tax paid in addition to the estate tax.

The same applies for homes or any other kind of property that has to be liquidated for one reason or another. When the public at large realizes the impact of the tax that is levied on not just the rich, but on the average American family that accumulates a house or some property during the course of their lives, they are going to view such a procedure at extreme arm's length.

I think the gentleman from New York is certainly farsighted, and the gentleman will be thanked by a wide number of people for attempting to draw attention to this particular point which is one of the errors we made last year.

Mr. CONABLE. I do not believe that thanks really are in order. This condition will attract plenty of attention to this problem as soon as people start to comply with the new law. As of right now most decedents' estates in the process of administration are those of people who died before January 1, 1977 and are not subject to the provisions of this law, but I think that from here on we will hear a rising chorus of outrage because of the complexities we have inflicted on the estates of those of modest means but who have had the experience of owning property during their lifetimes, property that has appreciated in value.

Mr. JOHNSON of Colorado. Mr. Speaker, if the gentleman will yield further, let me say that I agree with the gentleman from New York. I have already heard from some lawyers in my district and in the State of Colorado with whom I have had contact before and whom I know to be competent and capable practitioners.

We are not talking about people who deal with the wealthy people, we are talking about the average lawyers who deal with the average citizens in this country. They are already bringing to my attention the magnitude of the error we made.

Mr. CONABLE. Let me say that we are not only talking about lawyers and accountants here, although they will be confronted by this law, we are also talking about those who are involved in the estates and their problem is going to be greatly increased through extended delays. There will be considerable complication for those whose parents or other

relatives have died leaving estates that require administration. The problem is going to be vested ultimately in the beneficiary and not in the lawyer or the accountant.

Mr. JOHNSON of Colorado. The gentleman is exactly correct. What we have voted in the name of tax reform is placing a burden on the back of the average citizen, which I hope will be removed.

I thank the gentleman for yielding.

Mr. BUTLER. Mr. Speaker, will the gentleman yield?

Mr. CONABLE. I yield to the distinguished lawyer, the gentleman from Virginia (Mr. BUTLER).

Mr. BUTLER. I thank the gentleman for yielding.

I want to report to the gentleman that the experience that he anticipates with reference to the reaction to this legislation is already developing in my area in our State, and it is quite apparent that the rsponse is coming a good deal faster than we anticipated when we objected to this provision originally. But I want to congratulate the gentleman and associate myself with his remarks and express by appreciation for his bringing this to the attention of the House.

I also want to express dsappointment that those of the gentleman's committee who had the infinite wisdom to present this legislation are not here to suggest some virtues that may remain in it. I think their absence indicates that they are beginning to see the errors of their ways. I hope we will soon be able to rescind this legislation.

Mr. CONABLE. I am not sure their absence means that, but I am sure their attention will be focused on this issue as the year wears on.

I should like to go back to the reporting requirements, Mr. Speaker, because there have been some more refined issues relating to these reporting requirements that need to be discussed. As presently written, they require the executor to furnish the type of information that I have been mentioning, even where the carryover basis presently does not exceed $60,000 of total value. As many Members will remember, the act provides a minimum step-up in basis to $60,000. That is, if the estate does not amount to that, they do not get that step-up. This provision was intended to eliminate small estates from the application of the carryover basis rules. Since there was no requirement under prior law that basis information be furnished the Internal Revenue Service or the beneficiary of an estate, and all property took on a stepped-up basis as of the date of death, the American College of Probate Counsel is of the view that the reporting requirement should be eliminated for the estates where the step-up will occur under present law. This would eliminate apparently unnecessary new administrative burden and expense placed on small estates.

Some people have said we cannot really afford to repeal this now, this inequitable and complicated provision, because it would have a major revenue impact. The revenue pickup under the carryover basis provisions of the Tax Reform Act of 1976 are comparatively modest because of the restatement of all bases to January 1, 1977. There will be, in most cases, modest appreciation of assets between January 1, 1977, and the end of this fiscal year, or the end of the next fiscal year, so the amount of actual money that will be raised by this law is small despite these terrible, complicated reporting requirements. For instance, for fiscal year 1977 there would be less than 5 million revenue loss if we were to repeal this provision right now. As a matter of fact, for fiscal year 1978 the revenue loss would be still less than $5 million as estimated. In 1979 the revenue loss would go to $36 million; in 1980, to $93 million; in 1981, to $162 million.

These figures indicate that very little revenue is involved. When compared to the complexity that we are loading on the backs of the American taxpayers and the beneficiaries of those estates that will be administered during this period of time, it is obvious that we are going to have slight offsetting benefit to the Treasury.

Also, think of the pyramiding of tax resulting from cost basis carryover.

Frequently farms or small business estates are illiquid. This is the reason we went into estate tax reform last year in the first place. An executor is forced to dispose of appreciated assets to help liquidate estate tax burdens and, when such a sale occurs capital gains taxes may result. For instance, if we have a taxable estate under the new law and that estate is largely illiquid, the money to be raised for estate taxes has to come from a sale of the assets. Any degree of appreciation then results in an additional capital gains tax. Thus, the carryover basis provision substantially increased the total tax liability of the estate in short and particularly so if a portion of the estate has to be liquidated.

This problem will have its harshest effects in the case of farms and small businesses which will be passing from one generation to another if the business is to continue or the farm is to remain in family control.

I think the problem even goes beyond that, Mr. Speaker. It is a fairly standard family situation where a decedent leaves several children, and those of my colleagues who practice law are familiar with the forms that are used in wills which go something like this:

All the rest, residue, and remainder of my estate, both real and personal, and wheresoever situate I give, devise, and bequeath in equal shares to my children to be theirs absolutely.

Now, the division of estates is going to be greatly complicated by the existence of this cost basis carryover rule because in the division of the estate those administering the estate are going to have to consider not only what the current value of the assets may be if they are distributed in kind but are going to have to consider also the cost basis since the after-tax value of such assets distributed in kind may be substantially less than the before-tax value. There is going to be a temptation on the part of a property owner in the drawing of his will to leave low-cost basis assets to his less affluent children and high-cost basis assets to his more affluent children since the possible liquidation of those assets will carry capital gains consequences which will then be loaded in on top of the income tax bracket in which the beneficiary may happen to be as a result of his or her ordinary income.

This suggests another aspect of the Tax Reform Act which I think needs some consideration by my colleagues. We greatly tightened the tax on capital gains in the 1976 Tax Reform Act by increasing the minimum tax. We went to a 15-percent minimum tax rule and as my colleagues know the minimum tax is a very thinly veiled additional tax on capital gains.

With respect to individuals the minimum tax raises 85 percent of its revenue from taxing the previously untaxed portions of long-term capital gains. Now, in this case then not only did we put a capital gains tax on decedents but also we made sure that the capital gains tax is going to be bigger than it was before. It will be particularly so with respect to large transactions, and the kinds of transactions which will follow the liquidation of an estate fall into that category.

The pyramiding of taxes in short is going to be horrendous with respect to many estates considerably less than $1 million in size and the estate tax rates will be very much compounded by the pyramiding of capital gains on top of it.

I do not know if there will be substantial interest in this measure as of right now, Mr. Speaker. I did want to bring it up and talk about it at this time because I suspect as the year wears on more and more people are going to be coming to my colleagues and saying, "What have you done to us in putting a cost basis carryover provision and all these reporting requirements on top of an already complex estate tax law?"

Since the consequences fiscally are extremely modest if we wish to repeal this measure, I think we should repeal it before we cause a lot of hardship to a lot of people. I am personally convinced that most estates hereafter, if parents are involved, are going to have a substantial incentive to liquidate all assets of the estate in order to achieve substantial parity between the children because of the problem of the varying tax bases of the capital assets that might otherwise be transmitted to the children.

In that process the pyramiding of capital gains tax on top of estate tax will result in an almost confiscatory rate.

I have great hopes that my colleagues as they become more aware of the very serious problems we have created in this small part of the Tax Reform Act of 1976 will join in cosponsorship of a bill, H.R. 1563, which I have filed to bring about a complete repeal of this section and to go back to the prior law revaluing all cost bases as to the date of death; thus, much simplifying the administration of estates in relation to what we have now wrought.

Mr. BURLESON of Texas. Mr. Speaker, with passage of the Tax Reform Act of 1976, Congress has for the first time in over 30 years, significantly altered our gift and estate tax laws. I am personally

very proud to have been a part of the effort to change those laws. It was especially gratifying to know that small- and medium-sized estates were finally offered some relief from their heavy tax burdens. The gift and estate tax revisions will allow many family farmers and businessmen to hold their farms and businesses together for continued operation by heirs.

It is very unfortunate that much of the good accomplished by the gift and estate tax revisions will be offset by the carryover basis proven which was also contained in the Tax Reform Act of 1976. Under the law prior to passage of the 1976 Tax Act no tax was imposed on the unrealized appreciation of assets held by individuals at their death. When beneficiaries inherited appreciated property, their basis for calculating capital gains was stepped up to the fair market value of the property at the time of the inheritance. However, under the rules imposed by the Tax Reform Act of 1976, heirs must use—carryover—the decedent's basis when calculating capital gains. The immediate impact of this change was blunted by the further provision that no appreciation occurring before December 31, 1976, would be taxed in this manner.

Despite the limited near term impact of this provision, it is clear that future generations will eventually bear the full burden of this change in the taxation of appreciated properties. If the inflationary trend of the past few years continues, heirs of farmland or other appreciated properties who, subsequently, sell their property at a gain, may very well be faced with paying more capital gains taxes than the estate taxes paid at the time they inherited the property. The same family farms and businesses we were attempting to help by alleviating some of their estate tax liabilities are going to be facing potentially very large capital gains taxes.

Confronted with the higher capital gains liability, most heirs are likely to be forced to hold or lock-in investments. Although I sought changes in our tax laws to eliminate the impact of inheritance taxes because they caused the breakup of family estates, I do not think it is advisable to have tax laws which force the lock-in of investments.

In addition, since the regular estate tax is imposed on the entire value of the property transferred at death, I see no justification for the imposition of a second tax on the unrealized appreciation at any time.

I have introduced H.R. 2674, a bill identical to Mr. CONABLE's, to repeal the carryover basis provision of the Tax Reform Act of 1976. I hope my colleagues will join in support of this legislation, or that you will sponsor legislation of your own to repeal this unnecessary and troublesome provision.

My compliments to Mr. CONABLE for arranging to bring this before the Congress and to show the very serious defects in this section. I am hopeful that at an early date we can have hearings in our Ways and Means Committee which will result in the repeal of this section.

Mr. ABDNOR. Mr. Speaker, I am pleased to join in the highly constructive and most necessary effort by the distinguished ranking minority member of the Committee on Ways and Means, Mr. CONABLE, to bring some order to the difficulties created for many people through enactment of the complex Tax Reform Act of 1976.

Certainly this law amply demonstrates that the road to reform is not only one filled with hazards along the way but that the destination does not always turn out to be the one originally desired.

A case in point is the part of the act which involves estate taxes. Unfortunately, that result which we now have—and which places some new burdens on taxpayers and will not achieve the objective sought—was forecast when the committee enacted the present language dcaling with inheritances and rejected proposals contained in bills in the 95th Congress such as mine (H.R. 6178) and similar ones which enjoyed wide sponsorship.

The legislation on which I am joining as a cosponsor offered by Mr. CONABLE, is the most direct and effective way to deal with problems caused by the provision which requires that all heirs, after January 1, 1977, are required to value inherited property as of the date of purchase by the decedent or its value as of December 31, 1976. The previous law provided that property was valued as of the date of death and if the property was later sold, the capital gains taxes were based on this value.

The legislation introduced today would repeal the cost-basis carryover requirement.

I join with our distinguished colleague from New York in believing this measure provides the best answer to the new law which will; First, complicate the duties of administrators and executors of estates by making it difficult to distribute fairly in kind assets of differing cost basis; second, require a whole new mass of records to be passed from one generation to the next; third, produce litigation with the Government over the value of the property and delay the distribution of assets; and fourth, cause difficulty in family control of the small farm or closely held business.

Mr. Speaker, before this new law even took effect, I started to hear from constituents who early recognized that the 1976 act did not—as most of us hoped—achieve the removal of the harsh inequities of the outmoded etsate tax provisions. Attorneys, tax advisers, and others who work in this area expressed concern over the complicated recordkeeping requirements. And they further warned that instead of preserving and strengthening family-owned farms and businesses the new law would eventually make it impossible for ever-growing numbers of heirs to retain these family enterprises.

One of the concerns expressed over the new law came recently in a letter to all members of the South Dakota congressional delegation from Frank D. Brost, an attorney at Presho, S. Dak.

His observations came following a seminar which he attended in Denver, Colo., sponsored by the Practicing Law Institute. Mr. Brost said the lecturers were "some of the foremost authorities" on estate planning in the American legal profession. And what do these authorities have to say about the carryover section?

Listen to this from Mr. Brost:

> It was the feeling of the Lecturers and most in attendance that this particular section is a terrible bag of worms. It puts record keeping on asset acquisition as an absolute must for years upon years.

And I think Mr. Brost's own assessment is likewise worth repeating. He adds:

> I feel it (the carryover) puts an impossible burden upon the people . . . when the actual contents of this amendment become known to the people, they will become outraged . . . I firmly believe that this law is so complicated and administratively unworkable that it will lead to mass disregard and disobedience.

Mr. Speaker, a prediction of "mass disregard and disobedience" by the people to a law passed by Congress tells us more about Congress than it does the people. And what it tells us about Congress is that once again a terrible blunder under the guise of reform has been perpetrated upon the American people.

We can do something about that blunder and that step is to repeal this cost-basis carryover requirement. Under the leadership of the ranking minority member of the Committee on Ways and Means, I am confident we will do so.

Mr. Speaker, I include in the RECORD at this point, the text of the letter from Mr. Brost:

PRESHO, S. DAK.,
March 7, 1977.

Senator GEORGE MCGOVERN,
Senator JAMES ABOUREZK,
Congressman JAMES ABDNOR,
Congressman LARRY PRESSLER,
Washington, D C.

GENTLEMEN: I feel compelled to write to each of you through this joint letter regarding the Tax Reform Act of 1976. I have just returned from Denver where I attended a three day Seminar sponsored by the Practicing Law Institute. The Seminar dealt with the Fundamental Concepts of Estate Planning, with particular emphasis on the 1976 Tax Reform Act changes. The Lecturers were some of the foremost authorities on the subject in the American Legal Profession.

Included in the Tax Reform Act is the Carry-over Basis Section which I am sure you are all familiar with. It was the feeling of the Lecturers and most in attendance that this particular section is a terrible bag of worms. It puts record keeping on asset acquisition as an absolute must for years upon years. I feel it puts an impossible burden upon the people.

I firmly believe that when the actual contents of this amendment becomes known to the people, they will become outraged. I firmly believe that if we cannot delete the carry-over basis section from the amendment that we would be far better off with the old law. I firmly believe that this law is so complicated and administratively unworkable that it will lead to mass disregard and disobedience.

If the United States Treasury cannot withstand the loss of income due to the increased exemptions and/or credits, I feel we should reduce the exemption or increase the rates. I would urge each of you to familiarize yourselves in depth with the aspect of the Act and hopefully support or sponsor an amend-

ment deleting the carry-over basis section from the Act.

Mr. Tom Foy, and Mr. Jack Costello, both of Rapid City, and Mr. Jack Morgan of Mitchell, all very qualified and able attorneys, were in attendance and could give you more indepth thoughts regarding this matter.

Very respectfully,

FRANK D. BROST.

Mrs. SMITH of Nebraska. Mr. Speaker, I welcome this opportunity to urge an improvement in the method for calculating capital gains taxes in inherited property that is sold. Under the present law, generations of inheritors will be locked into holding inherited property to avoid exorbitant capital gains taxes, The present law also complicates estate planning and administration, and will undoubtedly cause a great deal of litigation.

Prior to the Tax Act of 1976, the value of inherited property was "stepped up" or increased to its fair market value at the time the owner died. This provided each generation with a clean slate. Each generation was taxed only on the appreciation which occurred while they owned the property, not for the capital gains of the previous owner. Thus, if inherited property was sold immediately after the death of the previous owner, there would be no capital gains taxes.

The 1967 act, however, changed the way such property was valued, making the basis for taxation on property currently held its value on December 31, 1976, or the purchase price for property acquired after that date. This inhibits the sale of inherited property, because the new owner must pay tax on any appreciation that may have occurred, due to inflation or other reasons, since the time the previous owner purchased the property. If many years or generations intervene between the initial purchase of the property and the inheritance, it is obvious that the capital gains tax burden could be outrageously excessive. This inequity discriminates most harshly against small businessmen and farmers who characteristically pass appreciated land assets on to their family.

I have introduced H.R. 1733, which will return capital gains evaluation to the equitable method used prior to the 1976 law. I have received great support for this initiative, as is indicated by the 18 other Representatives who have cosponsored this legislation. Therefore, I respectfully urge the Ways and Means Committee to correct the 1976 mistake by granting each generation a fresh start for capital gains on inherited property.

List of cosponsors for H.R. 1733: Mr. MOORHEAD of California, Mr. BROWN of Ohio, Mr. HAGEDORN, Mr. KEMP, Mr. SEBELIUS, Mr. DERWINSKI, Mr. BURGENER, Mr. KINDNESS, Mr. FRENZEL, Mr. QUIE, Mr. TRIBLE, Mr. TREEN, Mr. BUTLER, Mr. SANTINI, Mr. SYMMS, Mr. WALKER, Mr. TRAXLER, and Mr. GRASSLEY.

Mr. FRENZEL. Mr. Speaker, I applaud my distinguished colleague from New York for bringing before us today the issue of the potentially disastrous carryover basis provisions contained in the estate tax section of the Tax Reform Act of 1976. I would like to add several remarks to the colloquy on this issue and to urge my colleagues to support the repeal of the carryover basis provision.

Last year, I joined several of my colleagues in warning that many of the long overdue and beneficial estate tax reforms contained in the Tax Reform Act may be totally wiped out by the carryover basis provision. There is no way we can justify giving additional benefits through increased estate tax exemptions, only to take them away later through capital gains taxes. Furthermore, those people for whom we were primarily trying to provide relief, namely the heirs of modest estates such as farms and closely held businesses, will probably be most harshly affected by the new capital gains tax.

The glaring inequities, administrative nightmares, and potentially disastrous lock-in of capital resulting from the new carryover basis provision are already becoming evident. The formula for determining the basis of each asset in an estate is so complicated that even the most experienced lawyers are having great difficulty in understanding, let alone applying, it. To make matters worse, since very few regulations have been issued covering these provisions, many questions must go unanswered and many estates left in limbo. Each asset in an estate must be evaluated separately, with the basis of marketable securities determined by their value on December 31, 1976, and every other asset according to the specified valuation formula. Since this formula is based on the number of days an asset has been held, the figures which must be used in calculations are ridiculously complicated and change every day. In many cases, four separate bases may have to be kept simultaneously: the income tax basis, the fair market value at the time of death—or the alternate value 6 months later—the special farm valuation, if applicable, and the valuation upon distribution of the asset.

The administration of the new carryover basis is already a nightmare. Lawyers, estate administrators, and owners of estates are faced with tremendous problems due to the extensive and up-to-date recordkeeping and reporting requirements, and the numerous adjustments which must be made for State inheritance taxes and Federal estate taxes. Many hours will have to be spent by lawyers just redoing existing wills and filing the numerous new reports with Treasury and the heirs of the estates. The cost of this revision process alone is estimated to be about $2 billion, all of which must be borne by individual taxpayers. Delays in the administration of estates and the number of litigation cases will undoubtedly begin to skyrocket, costing individuals thousands of dollars, and lawyers and administrators thousands of hours of work.

The responsibilities and liabilities of estate executors are also greatly increased, because they must evaluate each asset's current value and its basis. After trying to balance all of the assets, based upon these calculations, they must decide first, which assets to allocate to the $10,000 personal property exemption or the marital deduction, and second, how to most fairly distribute the various assets among all the heirs. This process will not only require considerable time and, therefore, increase the cost of administering an estate, but it may open the executors up to possible lawsuits. The executor may also be subject to a $100 to $5,000 fine for failing to report information regarding the carryover basis valuation of an estate to the Treasury, and a $50 to $2,500 fine for failing to report such information to the heirs of the estate.

At present, we have seen very few regulations relating to these new provisions in the estate tax laws, and I doubt that they will be forthcoming in the near future. Who knows, it may take even longer to issue these regulations than it has to issue regulations on ERISA. One thing we do know is that the new carryover basis provisions are going to affect everyone, regardless of whether any estate tax is due or not. For example, even if a $100,000 estate may be exempt from paying any tax, the estate executor is still required to go back through the records to determine and report the basis of all the estate's property and assets which were acquired during the decedent's lifetime. In addition, even though an estate may be too small to have to pay estate taxes, the beneficiaries of that estate—often widows of modest means, small farmers, or owners of a small family business—will be required to pay a considerable capital gains tax if some of the property or assets must be sold in order to raise necessary cash. The worst aspect, however, is that this tax will have to be paid immediately and in full. Instead of having the option of a deferred payout system as with the estate tax.

Mr. Speaker, provision in the Code which have been beneficial to the transfer of small, closely held businesses, may also be adversely affected by the carryover basis. Under prior law, if a person wanted to pass a closely held business on to one of his children while still retaining an interest in the company, he could convert his share to preferred stock. This would mean that the value of the stock would be set and a certain dividend would be paid each year.

Should this stock have become part of his estate, it could be sold back into the company treasury at the preferred stock rate to generate sufficient cash to cover the administrative and estate tax costs. No appreciation in the value of the preferred stock would have occurred and been passed on to an heir, because of the stepped-up basis provision. However, with the new carryover basis, the added value of the stock will be treated as ordinary income when it is redeemed. Thus, once again the carryover basis is working against the preservation of small businesses and estates, just the people we were trying to help.

If we are sincerely trying to provide relief from the burden of estate taxes, particularly for modest estates, and also trying to simplify the estate tax system, we should eliminate the carryover basis provision. For small estates which do not have to pay any estate tax, it is simply a short, few year deferral of taking away the initial benefits from the estate tax exemption through capital gains taxes. For larger estates, the carryover basis is

basically a form of double taxation, because not only would estate taxes be assessed, but capital gains taxes would also be assessed when the inherited assets were sold. This is a far cry from sound tax policy, let alone tax reform.

Not only is the carryover basis poor tax policy, but it is also poor economic policy. One of our most acute economic problems today is the slow pace of capital spending, which is essential to sustained economic growth. The carryover basis provision will tend to freeze assets within estates because heirs would not be able to afford to sell them. This, of course, will stifle the free movement of capital and prevent the necessary flow of capital to the priority needs of the marketplace. Further, as time goes on, the liquidity problem will continue to worsen, so that we will eventually be faced with nothing more than a collection of locked-in heirlooms and a severely depleted capital market. As Prof. A. James Casner of Harvard Law School stated in his testimony before the Ways and Means Committee last session:

I think most economists agree that that is probably the worst solution of all to continue the lock-in with the carryover basis.

I have strongly supported the positive efforts to reform our outdated estate and gift tax structure. However, I fear we have negated many of these beneficial reforms with the carryover basis provision, which slaps a new capital gains tax on American individuals and families. If we are serious about preserving family farms and small businesses, and about providing meaningful estate tax relief, the best thing we can do is to repeal the carryover basis provision contained in the Tax Reform Act.

GENERAL LEAVE

Mr. CONABLE. Mr. Speaker, I ask unanimous consent that all Members may have 5 days in which to revise and extend their remarks on the subject of my special order today.

The SPEAKER pro tempore (Mr. WEISS). Is there objection to the request of the gentleman from New York?

There was no objection.

NATIONAL COMMUNICATIONS POLICY

The SPEAKER pro tempore (Mr. WEISS). Under a previous order of the House, the gentleman from Minnesota, (Mr. QUIE) is recognized for 5 minutes.

Mr. QUIE. Mr. Speaker, the independent telephone companies in Minnesota have contacted me urging that the Congress hold hearings on the Consumer Communications Reform Act for the ultimate purpose of restating the intent of Congress in the Communications Act of 1934. At that time, Congress enunciated as one of the goals of national policy the development of a communications system to provide good service at reasonable cost throughout the country.

I am writing the chairman of the Communications Subcommittee urging that hearings be scheduled on this issue as soon as possible and am submitting the text of my letter and the resolution adopted by the Minnesota Telephone Association on this matter for the public record.

The material follows:

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 15, 1977.

Hon. LIONEL VAN DEERLIN,
Communications Subcommittee, Committee on Interstate and Foreign Commerce, Rayburn House Office Building, Washington, D.C.

DEAR VAN: Enclosed is Resolution No. 1 adopted by the Minnesota Telephone Association. This Association consists of 101 telephone companies in Minnesota. The Resolution urges hearings on legislation reaffirming the intent of the Communications Act of 1934 that there should be a nationwide high quality, low cost telecommunications service available to all persons in the United States.

A number of bills have been introduced ranging from the Consumer Communications Reform Act to resolutions supporting FCC actions leading to competition in certain areas of the telecommunications field.

As a Representative from a Congressional District which is comprised of many rural and suburban communities, I am vitally interested in maintaining a national policy which will assure the best possible telephone service to all of these communities at the most reasonable cost. The availability of telephone service throughout the United States and its reliability attest to the fact that U.S. policy has been effective.

In recent years, FCC decisions appear to be changing U.S. policy in the telecommunications field. I believe this whole matter should be reviewed by your Subcommittee to develop reliable data so the Congress can mandate the policy which will continue to provide consumers with the best possible telephone service at the most reasonable cost. I respectfully request that hearings on this matter be scheduled at the earliest possible moment.

With every good wish, I am
Sincerely yours,

ALBERT H. QUIE,
Member of Congress.

RESOLUTION NO. 1

Whereas, the Congress of the United States, by the passage of the Communications Act of 1934, determined that there should be a nationwide high-quality, low-cost telecommunications service available to all, and

Whereas, the telecommunications industry of Minnesota and the United States has been eminently successful in providing such service over these many years, and

Whereas, changes in both technology and subscriber requirements have produced problems which were not envisioned at the time of the passage of the 1934 Act, and

Whereas, the essential point of the proposed Consumer Communications Reform Act is to reaffirm the original intent of Congress in passing the 1934 legislation, and to apply that policy goal to the problems which have emerged in recent years;

Now, therefore, be it

Resolved, That the Minnesota Telephone Association, in convention assembled in Minneapolis, Minnesota, does hereby endorse and support the concept and purpose of the Consumer Communications Reform Act, as introduced by the members of the Minnesota Congressional Delegation during the 94th Congress; and be it further

Resolved, That the members of the Minnescta Telephone Association respectfully request that the Minnesota Congressional Delegation continue their efforts to bring about meaningful hearings on this subject by reintroducing such legislation during the 95th Congress; and be it further

Resolved, That the members of the Minnesota Telephone Association do hereby express their gratitude to the Minnesota Congressional Delegation for their support in providing the best telecommunications possible for the people of Minnesota and the United States.

KGB SEIZES ANATOLY SCHARANSKY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. BURKE), is recogized for 5 minutes.

Mr. BURKE of Florida. Mr. Speaker, I rise to call the attention of the U.S. House of Representatives to the seizure by the Soviet security police—the KGB—of Anatoly Scharansky on March 15, 1977. This move represents yet another attempt by Soviet authorities to challenge President Carter's outspoken support of dissidents in the Soviet Union and throughout Eastern Europe.

Mr. Speaker, Anatoly Scharansky is well-known and highly respected throughout the world by his coreligionists. He is one of the leading spokesmen for Soviet Jews seeking their legitimate rights to emigrate to Israel. At the time of his arrest he was one of a group of Jewish leaders monitoring Soviet compliance with the human-rights aspects of the 1975 Helsinki accords. During the past year this group has been the focal point of dissident activity and the arrest of Anatoly Scharansky signals that Soviet authorities have finally decided to break it up.

Mr. Scharansky has been the target of systematic harrassment by officials of the Soviet Government for some time. Ever since filing his application for permission to emigrate to Israel in 1973, he has been subject to increasing pressures. However, on March 4, 1977 his situation gravely worsened when Izvestia published an infamous letter accusing Mr. Scharansky and other prominent Soviet Jews, along with two American diplomats, of lending themselves to espionage and treasonous activities against the Soviet state. Since that time he has been under extensive KGB pressure until March 15 when he was arrested by Soviet authorities. While these charges are false and without foundation, there can be no doubt that they are serious insofar as treason is a capital crime in the Soviet Union.

Mr. Speaker, Anatoly Scharansky is the fourth human-rights activist taken into custody in the past 6 weeks in what is beginning to emerge as the most concerted crackdown on dissidents in recent years. However, he is the first person picked up who has been publicly accused of treason. This is a major step by Soviet authorities and it shows the extent to which they are prepared to go to suppress dissident activity.

Mr. Speaker, I am gravely concerned about the plight of Mr. Scharansky. His detention constitutes a serious violation of the Helsinki agreement. We here in the United States would be false to our own political values and traditions if we were to stand silent in the face of this kind of political oppression. For in the long hard march of mankind, America has been fortunate to occupy a special

place in history. We have traditionally stood against the forces of tyranny, injustice, and vice. And we have been honored to offer the world a shining symbol of human freedom. Let us continue that tradition and let out with one voice a cry of protest against this most recent example of tyranny against the spirit of man. In conscience, we can do no less.

CONNECTICUT BANK & TRUST HELPS URBAN CENTERS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. COTTER) is recognized for 10 minutes.

Mr. COTTER. Mr. Speaker, my colleagues should know about the efforts of the Connecticut Bank & Trust Co. to encourage its employees to move into the State's three major urban centers: Hartford, New Haven, and Bridgeport.

These cities, like cities everywhere in the Northeast, are suffering from declining population and tax base. Under CBT's program, employees who want to buy homes in one of the three cities can obtain a special mortgage discount.

The bank has set up a $3 million fund to finance the program. I believe their efforts are significant because they give us an outstanding example of what private enterprise can do for our cities.

Mr. Speaker, I would like to insert the following into the RECORD:

[From the Wall Street Journal, Jan. 27, 1977]

BANK IN HARTFORD, CONN., LURES EMPLOYES TO CITY

HARTFORD, CONN.—Connecticut Bank & Trust Co. has begun a mortgage-discount program to lure its employes to buy homes within the Hartford city limits.

Under the program, employes are offered mortgages at interest rates one percentage point below the prevailing market rates. The bank has established a $3 million fund for the mortgages.

The bank said that in most cases the mortgage limit is held to $40,000. Employes also are offered down payment loans of up to $5,000.

The bank said about 1,600 employes at its Hartford offices live outside the city and another 280 live in Hartford. The Hartford residents are able to remortgage their homes at the lower rates.

As part of its efforts to encourage employes to live in the city, the fund "will be engaged in activities to make presentations on the advantages of city living," the bank said.

[From the CBT Intercom, Jan. 18, 1977]

NEW HOME OWNERSHIP PROGRAM GIVES CBT EMPLOYEES INCENTIVE TO LIVE IN HARTFORD

CBT today announced a Hartford Home Ownership Program for its employees. This program will give CBT employees an opportunity to purchase good homes in Hartford at special mortgage rates. Additionally, it will also help preserve Hartford's established neighborhoods. This program will be comparable to similar programs established for the Asylum Hill area by two local insurance companies, and will include home ownership counseling, favorable down payment financing and favorable mortgage rates.

CBT will establish a $3,000,000 loan fund for the purpose of offering mortgages at a favorable rate, one percent below market, to its employees. Normally, mortgages will not exceed $40,000, but exceptions may be made with special approval from the senior lending officer in charge of mortgage lending. No individual will be allowed to purchase more than one house under this program, and all houses must be owner-occupied residential buildings not exceeding four units.

Under this program, CBT will also offer down payment loans to qualified employees in an amount up to $5,000, with a maturity not to exceed ten years. A CBT loan officer will be appointed to review the credit eligibility of any employee applying for down payment loans. They will be secured by a second mortgage and can be serviced by payroll deductions.

The Connecticut Housing Investment Fund, Inc. (CHIP) will be engaged to make presentations on the advantages of city living.

Commenting on the home ownership program, CBT Chairman James F. English, Jr., said, "We are delighted to make this Hartford Home Ownership Program available to our employees. We are a part of this city and are committed, as concerned corporate citizens, to help preserve and upgrade its neighborhoods.

"We hope that our program will encourage CBT employees who already live in Hartford, as well as those who live in the suburbs, to purchase homes in our city."

The Home Ownership program will be explained to employees in specific detail during the next several months.

[From the CBA Intercom, Feb. 15, 1977]

HOME OWNERSHIP PROGRAM EXPANDED TO NEW HAVEN AND BRIDGEPORT

CBT today announced expansion of its Home Ownership Program for employees to the cities of New Haven and Bridgeport. The program, initiated last month in Hartford, is designed to help preserve residential neighborhoods in the state's major urban centers and encourage CBT employees to live in the cities, close to their jobs. The home ownership program includes home ownership counseling, favorable down payment financing and favorable mortgage rates.

The expansion of the program, which has received enthusiastic response since its introduction in Hartford last month, is aimed at encouraging CBT employees who already live in New Haven and Bridgeport, as well as those who live in the suburbs, to purchase homes in these two cities.

CBT will establish a $2,000,000 loan fund for the New Haven program and $1,000,000 for Bridgeport's for the purpose of offering mortgages at a favorable rate, one percent below market, to its employees. Normally, mortgages will not exceed $40,000, but exceptions may be made with special approval from the senior lending officer in charge of mortgage lending. No individual will be allowed to purchase more than one house under this program, and all houses must be owner-occupied residential buildings not exceeding four units.

Under the program, CBT will also offer down payment loans to qualified employees in an amount up to $5,000 with a maturity not to exceed ten years. A CBT loan officer will review the credit eligibility of any employee applying for down payment loans. They will be secured by a second mortgage and can be serviced by payroll deductions.

There are an estimated 200 CBT empoyees in the Greater New Haven area and approximately 50 in Greater Bridgeport.

The home ownership program is not restricted to any one area of the cities, but applies city-wide in the three communities.

Assistant Vice President Ernest R. Screen has been appointed loan officer for the Hartford program. Assistant Vice President Antonio M. Camacho will serve as loan officer for the Bridgeport plan, and Assistant Vice President Joseph Werner will act as loan officer for New Haven.

Orientation sessions for CBT employees interested in the home ownership program will begin within thirty days. The Connecticut Housing Investment Fund, Inc. (CHIF) has been engaged to make presentations to CBT employees on the advantags of city living for the Hartford and New Haven segments of the program.

Intercom will report further developments on the CBT Home ownership program in next month's edition.

HOUSE JOINT RESOLUTION 333, THE BALTO-SLAVIC AMERICANS BILL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ROSTENKOWSI) is recognized for 15 minutes.

Mr. ROSTENKOWSKI. Mr. Speaker, today I am introducing what I believe to be the solution to the widespread, recurring, and persistently enduring problem of prima facie anti-Balto-Slavic discrimination—an issue which should be attacked with the utmost tenacity.

Before detailing my resolution to this problem, I first wish to briefly outline the full extent of anti-Balto-Slavic discrimination and governmental lack of response to date.

Two indepth studies by the National Center for Urban Ethnic Affairs and the Michigan Ethnic Heritage Studies Center reviewed hundreds of Chicago and Detroit-based corporations to determine the ethnic complexion of the listed directors and officers. It should be especially noted that both studies concluded that there existed a serious absence of persons of Polish descent in decisionmaking positions. The U.S. Department of Labor in its guidelines on discrimination states that Slavic Americans continue to be excluded from executive, middle management, and other job levels because of discrimination based on national origin.

It further appears that affirmative action programs designed to serve groups suffering from discrimination do not include Polish and other Balto-Slavic Americans. As a result of insufficient data collected on the actual number of Poles presently residing in the United States, affirmative action programs often ignore Polish Americans in the misguided belief that they are numerically insignificant. In fact, however, based on verifiable data compiled by Slavic organizations, there are approximately 15 million Poles and 35 million Balto-Slavics presently residing in this country.

The Census Bureau has been responsible for a major undercount of Polish and other Balto-Slavic Americans. The Bureau counts all generations of ethnic groups which are classified as minorities. Yet Slavic Americans are split into two categories: "Polish foreign stock"—foreign born or one parent foreign born; and "white"—a residual category which absorbs all other Balto-Slavic Americans. Many members of the Polish American community—all grandchildren of Polish immigrants, for example—are not counted as Polish but are absorbed into the "white" category. This has led to a serious undercount of the Balto-Slavic American community, with the result that millions of dollars in Government community programs and thousands of

dollars in scholarships and other cultural benefits have been lost.

Again, more is at stake than statistical accuracy. Allocation formulas for many Federal aid programs are pegged to population breakdowns, and "lost" people mean lost money: millions of dollars a year to central cities and other areas heavily populated with disadvantaged ethnic groups.

It is well-established that statistical profiles of group characteristics are used by the courts to award various entitlements. If group characteristics are beginning to determine official government action in a pervasive and total way, then precise accounting of group profiles is essential.

For these reasons the procedures of the Census Bureau must come under close scrutiny. The Bureau must sharpen questions aimed at eliciting accurate information on ethnic heritage.

The Census Bureau has the capacity to obtain an accurate appraisal of the cultural backgrounds of the American people. Science, public understanding, and policy planning require an accurate profile of the American heritage. Today's heightened sensitivity to racial and ethnic identities, coupled with the increasing importance of population breakdowns in dispensing Federal funds through revenue-sharing and other programs makes this a matter of dominant concern.

Thus there appears to be a clearly identifiable problem which must be dealt with on a national scale. It is clear that a sufficient data base on Balto-Slavic Americans is retrievable. My resolution seeks to remedy the inadequacy of our present collection system.

Section 1 of my resolution instructs the Departments of Labor and Commerce to improve and expand the methods of compiling accurate demographic knowledge on Balto-Slavic Americans and insure an effective data base upon which affirmative action programs can be instituted.

Such a new data collection system must be devised to gather the necessary information concerning ethnic group employment. The data thus collected would determine if a particular ethnic group is being underutilized. If it is established that underutilization is occurring, affirmative action programs should be employed to bring Balto-Slavic Americans into the labor force in numbers that would reasonably conform to their statistical availability. This will further help assure that affirmative action programs will be more effective.

Section 2 requires the statistical data on Balto-Slavic Americans to be published regularly by various Federal departments.

Section 3 instructs the Director of the Office of Management and Budget to develop a Government-wide collection program for data on Balto-Slavic Americans.

Section 4 directs the Department of Commerce to work closely with other Federal agencies and population study groups for developing credible estimates of Balto-Slavic Americans for future census-taking operations.

Section 5 insures that the Census Bureau will establish Slavic language questionnaires and other appropriate methods to obtain a more accurate count of Balto-Slavic Americans.

Section 6 requires the Department of Commerce to implement an affirmative action program within the Bureau of the Census for Balto-Slavic Americans and requires it to report the progress of the program to Congress within 1 year.

It is high time that Congress responds to the problems of Balto-Slavic Americans. President Carter has already promised to conduct a full-scale investigation of the anti-Balto-Slavic discrimination problem. Let us join him in his pledge and take the necessary first steps toward ending this discrimination.

RESOLUTION "APPLAUDING THE COURAGEOUS EFFORTS OF WOMEN'S PEACE MOVEMENT TO END TRAGIC SECTARIAN VIOLENCE IN NORTHERN IRELAND"

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from New Jersey (Mrs. MEYNER) is recognized for 5 minutes.

Mrs. MEYNER. Mr. Speaker, I am today reintroducing my resolution "applauding the courageous efforts of the Women's Peace Movement to end the tragic sectarian violence in Northern Ireland" along with three cosponsors.

It is my belief that the Women's Peace Movement constitutes a beacon of hope for peace in that war-torn country. It represents a grassroots effort by residents of Northern Ireland to solve their problems by peaceful dialog instead of terrorist violence.

Under the leadership of Betty Williams and Mairead Corrigan, the Peace Movement has organized impressive demonstrations in Northern Ireland and London despite acts and threats of violence by extremists on both sides. I believe it is fitting and proper that we express our support for these friends of peace as we celebrate St. Patrick's Day. They represent the hope that there will be future St. Patrick's Days when all of Ireland will be at peace, and that will be something really worth celebrating.

STATEMENT OF CONGRESSMAN ROBERT CORNELL TO ACCOMPANY INTRODUCTION OF BILL TO MAKE ELECTION DAY A NATIONAL HOLIDAY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. CORNELL) is recognized for 5 minutes.

Mr. CORNELL. Mr. Speaker, in recent years much has been done to reduce and eliminate barriers to voting, such as simplifying registration procedures, ending questionable restrictions, and reducing residency requirements. Today I am proposing legislation which would deal with another probable disincentive to voting and would encourage greater participation on the part of our citizens: making election day a national holiday. The voter turnout in the United States has always been a subject of considerable embarrassment to us since we are consistently lower than Western European democracies as well as Japan and Israel.

Because I consider the participation by as many of our electorate as possible a highly desirable goal, the designation of election day as a national holiday—and not just a legal holiday—will enable persons who have had difficulty in casting their vote because of limited polling hours, irregular work shifts, commuting distances, et cetera, to exercise this great democratic privilege.

Every vote is important. We have only to look at several closely decided races for this body in the last election to realize that every vote makes a difference. In Presidential elections, the highest turnout of the last five contests was 63 percent in 1960, and the lowest was last year's 54 percent. Indeed, every Presidential election since 1960 has shown a decline in turnout from the previous election. The percentage of potential voters participating in congressional elections in non-Presidential years is even more disheartening. In 1974 only 40 percent of the voting age population voted in congressional election. Even in the best year for congressional races in recent times the voter response was only 58 percent.

If we compare these U.S. percentages with the Western European countries, we find France with the low of 79 percent, and Italy with the high of 93 percent in 1972 election. Austria had 92.4 percent in 1971, and West Germany had 91 percent in 1972. All of these countries require election day to be either on Sunday or legal holidays. Belgium, 91.5 percent in 1971, has a compulsory participation law for elections which are also held on Sundays. Israel holds its election on a special public holiday, and the turnout was 81 percent in 1969. Japan does not have a specific law designating election day, but 11 out of the last 17 elections have taken place on Sunday. In the 1968 election, 68.9 percent of the eligible Japanese voted in a Sunday election, while in 1959, only 58.7 percent turned out on a Tuesday.

It is my belief, Mr. Speaker, that we in the United States have become complacent about our voting habits, and have taken this precious privilege too much for granted. Every effort must be made to get a much greater participation in our electoral process. I am hopeful that this legislation will serve that end.

PRESIDENT CARTER AND HUMAN RIGHTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. HARRINGTON) is recognized for 5 minutes.

Mr. HARRINGTON. Mr. Speaker, in politics, changes are generally evolutionary—a concept understood to imply both that change is slow and that its effects are difficult to discern until much time has past. But the recent change in national administration has brought a new focus to our foreign policy more swiftly than the normal evolutionary process. That change involves a new approach to the issue of the moral content of foreign policy, and its particular expression through concern with human rights.

Under President Carter's personal guidance, the U.S. Government has once again asserted its moral force on behalf of the individual rights and human freedoms we profess as a nation to represent. The President's human rights positions have been taken without singling out either cold war "enemies" or traditional allies alone—both groups have been treated alike. Both have felt the sting of America's public statements. That is as it should be.

For those of us in the Congress, accustomed to pushing a recalcitrant administration into even admitting the existence of torture in Chile, or even providing an explanation for why arms should continue to be sold to a military dictator, the change is dramatic. The Ford administration grudgingly and quietly released six human rights statements over the New Year's holiday weekend.

The Carter administration followed its announcement of military aid reductions for Uruguay, Argentina, and Ethiopia with public reports on 82 countries, finding fault where fault was to be found. While some may quarrel with particular findings—such as whether our security interests indeed justify the level of military aid given to South Korea, for example—Carter's actions are important because they recognize the validity of concern for human rights. It incorporates that principle into our foreign policy, and makes the political situation in foreign countries a factor in determining the full range of our relations.

Freed from the burden of justifying repressive policies of our allies, just because they are our allies, the Carter approach allows the full expression of America's values on the international scene. Rather than just professing adherence to certain basic human freedoms, we have begun to practice it. We have put the world on notice that we mean what we say.

The detrimental impact of the new policy has already come under increasing debate and criticism. For example, Brazil's cancellation of its military aid contract has been cited as one danger of a human rights-oriented policy. This analysis overlooks the very essence of the new approach: Previous policy neglecting human rights concerns was just as surely a signal to allies and other nations. By selectively ignoring political repression abroad, we encouraged the practice. Against every angry response from a nation like Brazil under the new policy, we must weigh the hundreds of foreign dissidents who suffered as a result of the old.

Beyond that, we must also weigh the loss to our national sense of self inflicted by the old policy on human rights. A State Department survey team, traveling to five American cities during 1976, was struck by the overwhelming longing of Americans for a moral dimension to foreign policy. They found that Americans feel that our international role should be governed by the same principles by which we seek to govern ourselves. The new approach serves that end, and the resulting upsurge in public confidence in Government is the concrete expression of how the United States has gained from a shift in policy.

One sidelight to the new emphasis on human rights has not been given sufficient attention, and that is President Carter's decision to lift the travel ban for American citizens wishing to visit Cuba, Vietnam, North Korea, and Cambodia. The Helsinki Accord, which President Carter has rightly sought to enforce in his dealings with the Soviet Union, calls for the free movement of citizens. By removing the unilateral ban on U.S. travel to these countries, the President has alerted the world that the United States does not intend to act with hypocrisy in human rights issues. By seeking to assure our own compliance with international rights standards, the President has strengthened the moral base from which he speaks.

To ask whether this country will "lose" or "gain" by emphasizing human rights is to play the Kissinger game of diplomacy without morality. The real issue, for those of us who have long advocated honesty in foreign policy, is whether the United States acts in accordance with its professed beliefs, whether we act as the model democracy which we consider ourselves. The Carter approach answers with a rousing "yes" on all accounts, and I applaud it.

LEGISLATION TO REPEAL IRS REVENUE RULING 76–453

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oklahoma (Mr. JONES) is recognized for 5 minutes.

Mr. JONES of Oklahoma. Mr. Speaker, I am today introducing a bill that would stop the implementation of IRS ruling 76–453, a ruling that would prove to be disastrous to untold numbers of Americans who travel from their homes to temporary job locations. I use the word "untold" for a particular reason, for the Internal Revenue Service itself has been unable to provide even a "ball park estimate" of the numbers of Americans affected by this proposed rule.

Quite simply put, this rule makes any expense incurred in traveling between a taxpayer's residence and place of work, even though temporary, nondeductible expense for purposes of taxation. The ruling was scheduled to go into effect on December 31, 1976. Because of a storm of controversy, the IRS postponed the effective date of the ruling to July 1, 1977. Despite the delay, the implementation of this regulation hangs over the heads of countless citizens—salesmen, construction workers, taxi cab drivers, lawyers, accountants, many types of Government employees, and even IRS agents. For this reason, it is imperative that Congress exercise its oversight function and call a halt to this madness.

By way of background, let me state that I do not oppose the nondeductibility of travel expenses from a taxpayer's home to a regular, permanent place of business. It is the extraordinary travel—a construction worker that goes straight to a temporary job site instead of to the contractor's office; an accountant that conducts an audit at a client's place of business before reporting to the office; a park ranger that checks the rainfall gage before going to the ranger station—these are examples of such reasonable, deductible travel expenses that ruling 76–453 would reach, and wrongly so.

The imposition of this rule is wrong for several reasons. First, it is a drastic break with prior precedence, precipitated by a Tax Court decision in the Turner case (56 T.C. 27 (1971)). The court in the Turner case ruled that commuting is commuting, whether it is temporary or not. But the court did not reach this decision in a vacuum. Rather it was the unwillingness and timidity of the IRS to come to grips with their rulemaking function in this complicated area that forced the issue. That the court reached the wrong decision in Turner is the combined fault of the IRS and the Congress that is charged with the oversight function of the Service.

Second, the ruling is wrong because of the vast administrative problems it will cause. As I have stated, even the IRS does not know how many individuals the ruling will affect. What is clear is this: a substantial portion of the 3.3 million construction trades workers in the United States, along with the 866,000 accountants, the 164,000 cab drivers, and the 396,000 attorneys will be affected by this ruling. And this is just the tip of the iceberg, as countless other groups and professions often fall into the category reached by ruling 76–453.

In the case of construction workers alone, almost all work agreements contain payment for expenses inccurred in travel as part of the collective bargaining agreement. There are over 10,000 separate collective bargaining agreements in existance at this moment, and you can rest assured that every one of these will be candidates for renegotiation if ruling 76–453 goes into effect July 1, 1977. And despite all the dislocation the ruling will cause, the IRS still cannot come up with a figure for the amount of revenue that might be generated by the ruling. I have always been a foe of increased paperwork and information required by the Government of the private citizen. If there was ever a ruling designed to complicate the lives of employer and employee alike, ruling 76–453 is it.

Lastly, the ruling is wrong because it will cause an unbelievable waste of energy and time on the part of citizens who will drive to the office, only to turn around and drive to the place they should have gone to in the first place. This enforced charade will produce more wasted gasoline, more traffic jams, and more contempt for the Internal Revenue Service and government in general.

My bill would halt implementation of ruling 76–453. It would prevent the IRS from running to the courts to get another Turner-type decision handed down. It would force the IRS to quit shirking its responsibilities and provide reasonable rules and guidance in the areas of travel and commuting costs.

I urge the support of my colleagues in this legislation and would welcome any cosponsors.

CAMPAIGN FINANCE LEGISLATION

The SPEAKER pro tempore. Under a previous order of the House, the gentle-

man from New York (Mr. McHUGH) is recognized for 10 minutes.

Mr. McHUGH. Mr. Speaker, yesterday Mr. MAGUIRE and I introduced legislation that would provide for partial public financing of congressional primary and general elections. At the same time, Congressmen UDALL, ANDERSON, BURTON, and WIRTH introduced legislation dealing with the same issue. In addition, Senators CLARK, KENNEDY, CRANSTON, MATHIAS, and SCHWEIKER have introduced a campaign financing measure in the Senate.

As a convenience to Members of the House of Representatives and the Senate, I would like to insert into the RECORD a chart that summarizes major differences in these three bills.

I am also inserting into the RECORD a chart that details more fully estimated candidate spending limits applicable under the legislation that Mr. MAGUIRE and I introduced.

EXHIBIT I.—*Summary of major differences in campaign financing bills*

KENNEDY-CLARK

Coverage: Senate only.

Scope: Primaries and General Elections (Senate).

Spending Limit:

15¢×VAP or $225,000, whichever is greater, for Senate primaries.

20¢×VAP or $300,000, whichever is greater, for Senate general elections.

Add-Ons: Allowed.

Waiver of Limit Allowed: Yes.[1]

Threshold for Treasury matching:

5% of spending limitation or $50,000, whichever is less, in Senate primaries (in contributions of $100,000 or less).

See footnote 2 for general elections.

Maximum Treasury Match: 50% of spending limit in Senate primaries and 62.5% of spending limit in Senate general elections.

Estimated Cost to Treasury:[3]

$50.7 million for Senate primaries and general elections.

Not applicable to House.

UDALL-ANDERSON

Coverage: House only.

Scope: General Elections only (House).

Spending Limit:

No primary limit.

$150,000 for House general elections.

Add-Ons: Allowed.

Waiver of Limit Allowed: Yes[1].

Threshold for Treasury matching: $10,000 (in contributions of $100 or less) in House general elections.

Maximum Treasury Match: 33.3% of spending limit in House general elections.

Estimated Cost of Treasury[3]*:*

Not applicable to Senate.

$37.6 million for House general elections.

M'HUGH-MAGUIRE

Coverage: Senate and House.

Scope: Primaries and General Elections (House and Senate).

Spending Limit:

8¢ x VAP or $80,000, whichever is greater, for Senate primaries.

12¢ x VAP or $80,000, whichever is greater, for Senate general elections.

$80,000 for House primaries.

$80,000 for House general elections.

Add-Ons: Allowed.

Waiver of Limit Allowed: Yes[1].

Threshold for Treasury matching:

$7,500 (in contributions of $100 or less) in House primaries and House general elections (threshold need be met only once).

2¢ x VAP but not less than $7,500 in contributions of $100 or less in Senate primaries and general elections (threshold need be met only once).

Maximum Treasury Match: 50% of spending limit in House and Senate primaries general elections.

Estimated Cost to Treasury[3]*:*

$25.4 million for Senate primaries and general elections.

$30.1 million for House general elections.

$37.6 million for House primaries.

FOOTNOTES

[1] Each bill would allow spending limits to be waived, and a candidate accepting public funds to continue accepting them, if his opponent did not accept public funds and exceeded the spending limit. *Under Kennedy-Clark a candidate using public financing could continue to receive matching funds beyond the spending limit.*

[2] Major party candidates in Senate general elections would automatically be entitled to 25% of their spending limit, and the Treasury would match up to 62.5% of the spending limit. Minor party candidates would have to raise $250,000 or 25% of their spending limit, whichever is less, in contributions of $1,000 or less from individuals and/or $5,000 or less from political committees to be eligible for Treasury matching, *but only contributions of $100 or less would be eligible for Treasury matching.* Independent candidates would be treated as either major party or minor party candidates depending upon their showing in a previous election.

[3] Cost estimates are directly comparable, and are based upon assumptions outlined in detail in the fact sheet explaining the McHugh-Maguire bill. While it is not argued that the assumptions used are the only ones that could be used, application of other assumptions would not yield results that would change the basic relationship detailed above.

EXHIBIT II

ESTIMATED CANDIDATE SPENDING LIMITS

State	Estimated voting age population [1]	Primary limit [2]	Additional spending for fundraising [3]	Total primary spending limit	General election limit [4]	Additional spending for fundraising [3]	Additional party spending [5]	Total general election spending limit
U.S. SENATE

[1] Bureau of the Census VAP figures for 1976 election.
[2] Basic primary spending limit is 8 cents multiplied by VAP, or $80,000, whichever is greater. This figure is tied to the Consumer Price Index after the 1978 elections.
[3] Additional spending allowed for fundraising in primary and general election is 20 percent of the basic spending limitation.
[4] Basic general election spending limit is 12 cents multiplied by VAP, or $80,000, whichever is greater. This figure is tied to the Consumer Price Index after the 1978 elections.
[5] In the general election only, national or State parties can spend, on behalf of each party nominee, an amount equal to 2 cents multiplied by VAP, or $20,000, whichever is greater.
[6] This figure is tied to the Consumer Price Index after 1978 elections.
[7] In the general election only, National or State parties can spend, on behalf of each party nominee, an amount equal to $10,000.

QUESTIONS RAISED ABOUT PURPOSE AND EFFECT OF H.R. 4250, TO PROVIDE EQUAL TREATMENT FOR CRAFT AND INDUSTRIAL WORKERS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. THOMPSON) is recognized for 15 minutes.

Mr. THOMPSON. Mr. Speaker, many questions have been raised about the purpose and effect of H.R. 4250, the bill to provide equal treatment for craft and industrial workers. Some of these questions have been raised in good faith and some to raise groundless fears. Ten of the most commonly asked questions are set forth here with my answers to those questions:

1. Secondary boycotts.

Q. Does H.R. 4250 legalize secondary boycotts?

A. No. H.R. 4250 does not alter the law one whit as it affects the true or traditional secondary boycott, i.e., when the "secondary" employer is an innocent neutral enmeshed against his will in a labor dispute over which he has no control; the employer, described by the late Senator Taft, as "not in cahoots with" the employer primarily at odds with the striking union.

It is the premise of H.R. 4250 that there is no "secondary boycott" when construction workers strike in protest when a general contractor subcontracts part of his total job obligation to a non-union employer, and thereby undermines union wage scales. Such a strike is "primary," not "secondary."

A "primary boycott" exists when employees go on strike over working conditions at the work site, and post a picket line around the work site. This is traditional, and lawful, primary picketing even though it may have "secondary" impact upon suppliers or customers whose employees refuse to cross the picketline.

In contrast, a "secondary boycott" occurs when the striking employees leave the scene of the dispute to pressure innocent third parties who have no control over the strike issues.

Thus, not a single proponent of the Taft-Hartley Bill's prohibition on secondary boycotts talked about common situs picketing on construction jobs—presumably because no one in Congress thought that a strike by construction workers at the site of construction was anything other than a traditional, lawful, primary strike.

2. Picketing to protest the use of non-union contractors on a construction site.

Q. Suppose a contractor brings onto a job a subcontractor who employs non-union labor. Would H.R. 4250 permit the building trades council to picket the job as unfair?

A. Yes. These are the facts of the Denver Building Trades case. Section 8(b)(4) of the Taft-Hartley amendments made it an unfair labor practice for a union to force "any person" to cease doing business "with any other person." Read literally, this would prohibit any strike where a picket line turns away any supplier or customer. Obviously this was not the intent of Congress. The purpose was to protect the "innocent neutral." Yet in the 1949 Denver case, the Labor Board ignored Congressional intent and held that it was a violation of Section 8(b)(4) for a union to picket the contractor when he brought a non-union subcontractor onto the job site. The Supreme Court affirmed this decision in 1951, primarily because of the "expertise" of the Labor Board.

It generally has been recognized ever since that the decision is unsound and does not reflect the realities in the building and construction industry where the contractor and subcontractor are related allies in a common venture, neither is "innocent," neither "unconcerned" in the labor disputes of the other. It is the purpose of H.R. 4250 to reverse this decision, its spirit and its progeny.

H.R. 4250 permits a union to strike or picket at a construction site against "any of several employers" in the construction industry, when they are "jointly engaged" on a common site as "joint venturers or in the relationship of contractors and subcontractors."

3. The analogy to workers employed in manufacturing.

Q. Would the enactment of H.R. 4250 give workers in the construction industry "special treatment"?

A. No, in 1961 the Supreme Court held in the G. E. Reserve Gate case (*Local 761, International Union of Electrical Workers v. Labor Board*, 366 U.S. 677) that it was lawful for striking employees of a manufacturing concern to picket the gates used exclusively by employees of contractors and subcontractors if the work tasks performed by the independent legal entities "aid the employer's everyday operations" and are not "unrelated to the normal operations of the employer."

Like the work of many contractors employed for special tasks by manufacturing industries the work of the subcontractor employed in construction is also "related" to the "normal operations" of the contractor who employs him.

Rather than giving "special favors," H.R. 4250 simply puts the construction worker on par with the worker in the apparel industry and in manufacturing.

4. Picketing to protest the employment of minority workers.

Q. Does H.R. 4250 authorize a union to picket to force a subcontractor off the job site because he employs blacks, women, or other minority workers?

A. No. H.R. 4250 expressly provides that it is not lawful for a union to picket any job "to remove or exclude from a common construction site any individual employed by the person on the ground of sex, race, creed, color, or national origin."

5. Picketing directed at industrial workers who are employed at a plant adjacent to a construction site.

Q. Suppose United States Steel decided to add a new building to its Gary plant, hired a general contractor to do the job, and a dispute, thereafter, arises at the construction site. Would H.R. 4250 permit the construction workers to picket entrance gates reserved for U.S. Steel's industrial employees and for employees making deliveries to or pickups from the plant?

A. No. H.R. 4250 states that when a separate entrance gate is reserved for individuals regularly employed at an industrial facility or for individuals making deliveries to or receiving shipments from that facility, such a gate is not part of the construction site. Therefore, this separate gate would be insulated from activities pertaining to a dispute involving the construction site.

6. Picketing to protest the use of industrial workers to install manufactured equipment on the construction site.

Q. Suppose Westinghouse, General Electric or some other employer is engaged by the contractor to install some specialized equipment as part of the construction project, and the company utilizes its regular employees for this installation. Would H.R. 4250 permit the building trades unions to picket to secure this work for themselves?

A. No. H.R. 4250 expressly provides that the picketing by the trades unions is not lawful if "directed at a person who is not engaged primarily in the construction industry who, through individuals regularly employed by that person and represented by a labor organization, is installing or servicing products produced by that person, or is doing construction work at a facility owned by that person."

7. Picketing at site "B" when the labor dispute involves conditions at site "A."

Q. Many contractors are engaged simultaneously in several construction projects. If

the building trades unions have a dispute with Contractor X at construction site "A", would H.R. 4250 permit the unions to picket the same Contractor X at construction site "B" at which there is no dispute?

A. No. H.R. 4250 permits strikes or picketing "at the site of construction" against any of several employers in the construction industry who are jointly engaged in such construction, but only when there is a lawful labor dispute "relating to the wages, hours, or other working conditions of employees employed at such site." (emphasis supplied)

8. Picketing against one of several prime contractors required under State law.

Q. Eight states have laws requiring that political subdivisions put out four separate bids on public construction jobs: (1) for general construction, (2) for heating, ventilating and air conditioning, (3) for plumbing work, and (4) for electrical work. Each of these contracts must be let to the lowest responsible bidder in each category. Would H.R. 4250 permit a union in dispute with one of these contractors to picket the other contractors?

A. No. H.R. 4250 specifically provides "where a State law requires separate bids and directs awards to persons for construction, the various persons awarded contracts in accordance with such applicable State law shall not be considered joint ventures or in the relationship of contractors and subcontractors with each other or with the State or local authority awarding such contracts at the common construction site."

9. Picketing for the purpose of recognition.

Q. In 1959 Congress added Section 8(b)(7) to the law regulating organizational and recognition picketing. Will H.R. 4250 permit building and construction unions to engage in conduct which would violate Section 8(b)(7)?

A. No. Such picketing would be "otherwise unlawful under the Act," and therefore would not be permitted by H.R. 4250.

10. Picketing in breach of contract.

Q. Opponents of H.R. 4250 suggest that its enactment would result in strikes in breach of contract. Is there any truth to these allegations?

A. No. It is unlawful under H.R. 4250 to strike "in violation of an existing collective-bargaining contract."

DEVELOPMENTS IN ZAIRE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Washington (Mr. BONKER) is recognized for 5 minutes.

Mr. BONKER. Mr. Speaker, the developing confrontation on the Zaire-Angola border should not be overdramatized, but it must be admitted that it holds out the sobering prospect of again involving the United States in an internal African conflict.

The details at this time are hazy enough to caution against a precipitous response that might serve only as a provocation or begin a momentum of American involvement that would be hard to reverse. It does seem to be the case that an invasion has been launched from Angola into Zaire. It is entirely unconfirmed, however, that Cubans are participating or even Angolans themselves. In fact, recent reporting indicates that the military action has been conducted by Zairean rebels who happen now to be based in Angola. These are remnants of the historic Katanganese cessionist movement of Moise Tshombe, chased from the Congo over 10 years ago. They have not abandoned their claim, and news of the recent invasion was immediately cheered by the Paris-based National Front for the Liberation of the Congo. This is a particularly plausible explanation for recent events since the towns Zaire alleges to have been attacked—Kapanga, Dilolo, and Kisengi—are all part of Katanga or what is now called Shaba Province. This would not be the first time that Katangan elements have invaved Zaire, nor would it be the last.

On the other hand it seems likely that this rag-tag revanchisme is condoned if not underwritten by the Angolan Government. MPLA owes the Katanganese gendarmes something of a debt for their assistance during the Angolan conflict of 1975 and may also see them as a vehicle to avenge Zaire's support of the FNLA. It is a marriage of convenience more than ideology, but no doubt Zaire finds it just as troublesome. Although Angola and Zaire took some diffident steps in the last year to a reconcilation, relations have seemed to be heating up again in the last 2 or 3 months. Angola has accused Zaire of continuing to harbor Holden Roberto, whose guerrillas it charged recently with killing 43 Angolan villagers. Furthermore, Angola is piqued by Zaire's continued support for the Front for the Liberation of Cabinda, the oil-rich enclave MPLA controls north of Angola.

It requires only due skepticism to note that, to judge from press accounts, the solitary source of the rumors of Cuban involvement is Zaire's Azap News Agency, and at that it has referred ambiguously only to "mercenaries" which can, of course, mean Katanganese as much as Cubans. Belgians and missionaries on the scene have not so maintained. But President Mobutu would be only too glad to have American support for his government, whether it were fighting a foreign invader or a civil war; and presumably he knows that the specter of the former sells better in Washington. Well—it should—but only if that is really the case.

At least the administration's action has been aboveboard, though it is not clear how widely and deeply Congress was consulted; and the $2 million being provided in medical supplies, combat rations, backpacks, communications equipment, and the like are not sophisticated offensive weapons. Finally, the airlift is largely an accelerated delivery of goods already approved by Congress in the $30.5 million fiscal year 1977 military aid package.

But even if the amounts seem nominal now, the classic danger in these cases is that, before we know it, a commitment can become openended. The more we invest our money and prestige in a cause, the more stake we give ourselves in it, and the more investment we are tempted to make to recoup the original one.

Meantime, plummeting copper prices and general mismanagement have put Zaire's economy in perilous straits; and its political situation, depending more on military power than on popular support, is in the long run tenuous. Supporting narrowly based regimes—as we did in Portugal, Greece, and Vietnam—can be good policy one day but bad policy the next. In the case of Zaire, even though "our boy" is still in power, it is not evident what influence we have achieved for all the hundreds of millions of dollars in economic and military aid we have poured in. President Mobutu is not known for his ringing support of America's policies and principles.

Moreover, his human rights trangressions, as recently documented by the State Department, ought to establish a presumption against aid unless an overriding security interest can be demonstrated. I am not arguing that one can or cannot be demonstrated, but simply at this critical juncture a case must be laid out clearly before Congress.

Maybe it can be argued that our aid at least has the effect of promoting stability and preventing what might be the worse alternative: Chaos, bloodbaths, and inroads by Angola, Cuba or some unworthy internal dissident faction. But that is second guessing. At the moment, we find ourselves in the embarrassing position of propping up a regime of corruption and repression which actually may be guilty of waging the same aggression against Angola that it charges is being waged against itself. If the situation is serious, Congress may be called upon for substantial and increasing amounts of military aid. There is a self-fulfilling aspect to such a policy: At some point, Angola may construe our action as a provocation requiring its counter-action. The conflict would widen.

The balance sheet is that we must tread carefully. Congress is faced with a dilemma, choosing the lesser of two evils; either supporting a repressive and corrupt dictator, or taking tacit responsibility for the chaos and power struggle that might well ensue if he falls. There are millions of people and great wealth involved, not to mention what Secretary Kissinger would have emphasized, the global atmosphere and superpower relations. A new President is under great pressure to regard such a situation as a test of American and personal resolve. Congress must do its best to lend perspective, and that requires close and hard scrutiny of the situation, whichever way our decision goes.

Mr. Speaker, last July I tried to call attention to the ominous situation in Zaire, and the critical need for more information and concern in Congress. I include the statement made at that time in the RECORD at this point:

THE UNITED STATES AND ZAIRE

Mr. BONKER. Mr. Speaker, it is fashionable these days for Congressmen to call for being "consulted" by the administration on matters of foreign policy rather than simply being "informed." Yet even consultation may not be adequate. After all, it does not necessarily assure Congressmen enough objective information—and analysis—that their decisions can be entirely informed and independent.

Let me cite the all too typical example of our consideration in the House International Relations Committee, several months ago, of the administration's fiscal year 1976 request for FMS credit to Zaire. This particular request happened to be a sudden and several-fold increase over last year's level. In the context of Angola, this naturally raised eyebrows. Yet the administration's official justi-

fication of it—submitted last November as part of the congressional presentation documents—amounted only to a superficial two paragraphs to the effect that the program for Zaire was necessary because it was necessary. There was no mention of widespread reports that some of our money might be finding its way, however indirectly, into the service of the FNLA, with whom President Mobutu of Zaire had by tradition, and especially of late, a close relationship.

In any case, one would have thought the administration had the burden of proof to justify aid to Zaire on its own merits. After all, President Mobutu is a notorious spendthrift, an autocrat, and not least an undependable friend. He would not seem to be promoting our Nation's highest ideals of freedom and dignity. Yet at the same time that President Ford was denying Federal aid to New York City, he was recommending a bailout of a much more insolvent irresponsible, and unstrategic Zaire. I wrote to Secretary Kissinger for a more elaborate justification than we had yet received. Only after a month did I get a reply signed by the Assistant Secretary for Congressional Relations—and I am given to understand actually prepared entirely at the desk level. It was not very detailed, and it shed little more light.

My point is not that we should not be supporting President Mobutu, but that Congress simply did not have the information and balanced judgments to make an educated decision about it.

To see better what is involved by way of this example, I think it is worth going into some detail.

There may be legitimate reasons for supporting President Mobutu's regime. As distasteful as some of us may find it, and others that our Government is subsidizing, the fact is that for good or ill the United States has over the years become entangled in a web of relationships. A precipitous renunciation of these might just cause chaos. Even liberals can agree that Zaire is relatively better off now than was the Congo on its immediate post-independence period. Nevertheless, the market economy has disintegrated since the Belgian days, copper prices have plummeted, inflation runs annually at over 30 percent, and the Government swings from one eccentric economic policy to another.

Regrettably, President Mobutu has systematically ridden the military, from which leadership tends to be drawn, of anyone with vision of a sense of social justice who might challenge him. Though one would not want our country to be seen endorsing that, and might prefer neutrality, a sudden withdrawal of aid would be interpreted as a very negative action and lose whatever good comes of our relationship without a guarantee of anything better. Zaire could be plunged into chaos, provoking outside interventions and yet another Angolanization. Rebels, after all, are said to be operating in the eastern regions, and possibly in Kisangani province; Congo-Brazzaville is said to be receiving stepped-up Soviet supplies; the MPLA is alleged to be itching to subvert Mobutu, and leftover Kataganese secessionists to help.

Maybe these are legitimate threats and justifications for our program of arms sales—and maybe not. But I have consulted distinguished experts outside the Government, and they are not so sure. It is not clear, for example, how strong the rebels are, or frankly whether they are to be feared as much as Mobutu; whether the MPLA or Congo-Brazzaville is any more threatening to Zaire than Zaire is to them; whether more arms would sooner promote a balance of power or an arms race in the region, a question that is of course classic in these cases; whether Mobutu would not simply use our weapons for more internal repressions or military adventurism—such as an invasion of oil-rich Cabinda he has been said for some time to be fantasizing—whether our transaction would somehow end up only lining pockets; and whether, above all, our arms are not meant as replenishment for Zaire's own aid already transferred or "loaned" or otherwise used on Angola. These questions are still all up in the air, and yet Zaire is but one obscure entry in the total program for security assistance.

ONE HUNDRED AND FORTY-TWO MEMBERS OF HOUSE OF REPRESENTATIVES PETITION CARTER TO IMPOSE TARIFF-RATE QUOTAS ON SHOE IMPORTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. BURKE is recognized for 5 minutes.

Mr. BURKE of Massachusetts. Mr. Speaker, 142 Members of the House of Representatives have sent a letter to President Jimmy Carter today urging his affirmative action on import relief to the domestic shoe industry.

I would like to place in the RECORD a copy of this letter and the names of the Members who have signed it:

ONE HUNDRED AND FORTY-TWO MEMBERS OF THE HOUSE OF REPRESENTATIVES PETITION CARTER TO IMPOSE TARIFF-RATE QUOTAS ON SHOE IMPORTS

Congressman James A. Burke (D-Milton, Massachusetts) announced today that a letter signed by 142 Members of the House of Representatives, representing 32 States and the Commonwealth of Puerto Rico, has been sent to President Jimmy Carter urging him to accept the U.S. International Trade Commission's recommendations on relief to the domestic shoe industry.

Burke noted that the entire Massachusetts delegation, including Speaker Thomas P. O'Neill, Jr. signed the letter to the President as well as 15 Members of the House Ways and Means Committee which has legislative jurisdiction over international trade issues.

The text of the letter follows:

MARCH 17, 1977.

THE PRESIDENT,
The White House,
Washington, D.C.

MY DEAR MR. PRESIDENT: You now face a decision on import relief for the nonrubber footwear industry. Your decision will have impact upon a quarter of a million workers in shoe and allied industries and upon hundreds of communities throughout our Nation. As Representatives in Congress of these individuals and communities, and as Members of Congress concerned about the disturbing economic conditions in a major American industry, we wish to stress the vital importance of your pending decision.

As you know, the U.S. International Trade Commission, for the second time within a year, has determined that the domestic nonrubber footwear industry is being seriously injured by imports and recommends that you impose tariff-rate quotas to relieve the injury. The facts amassed by the ITC in its investigation demonstrate the perilous economic conditions which have prevailed in the American shoe industry in recent years. The viability of a major national consumer product industry is now in your hands.

We appreciate that this decision has implications for our trade policy, and we share your concern with the necessity of maintaining vigorous international trade and openness of markets between the United States and its trading partners. However, when an entire national industry is gravely threatened by a rising tide of imports, we must be certain that our trade policy is consistent with our national public policy to reduce unemployment in our country. Trade adjustment assistance has proved to be an inadequate remedy in the shoe industry case. The situation now demands effective and affirmative action by you.

In a decade, the number of American shoe plants has dropped from over 1,000 to 650—many in one-factory towns. Unemployment among shoe workers is now almost 50% higher than the national average. You have stated that reducing unemployment is a priority of your Administration; providing import relief for this industry is the single most important step you can take to prevent more layoffs of workers in our shoe factories.

It should be noted, furthermore, that the ITC decision does not attempt to eliminate imported, low-cost shoes now desired by many consumers. In fact, from the Far East alone, over 100 million pairs would enter with no more restrictions than currently exist. These shoes will still be available and the American footwear industry, which already produces 187 million shoes under $6, can be expected to respond to any increase in retail orders for low-cost shoes.

Mr. President, in the past several years, the economic plight of the American footwear industry has so drastically worsened that we now fact a crisis situation. At stake is the possible demise of a vital industry in our Nation unless strong and affirmative import relief is quickly implemented. We join these American companies and their unions in urging your immediate action to provide effective import relief.

THE PLIGHT OF MINORITY TRUCK DRIVERS

(Mr. MITCHELL of Maryland asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MITCHELL of Maryland. Mr. Speaker, I am continuously disturbed and troubled about the plight of minority truckers and the apparent insensitivity of Congress and the Interstate Commerce Commission to the obstacles that restrict entry of minority truckers into the industry. Minority truckers throughout the country write to me expressing their anger and frustration from being prohibited from pursuing opportunities in commercial transportation.

It seems to me that this Congress and the ICC owe a moral and public responsibility to minority truckers throughout America, but thus far, the Congress and the ICC have breached that responsibility.

I was very pleased, however, to note a recent directive from the Department of the Army, Headquarters, Military Traffic Management Command, Washington, D.C., written by Maj. Gen. H. R. Del Mar concerning increasing the opportunities for minority business participation, in DOD's personal property movement and storage program.

This is the kind of commitment that is needed from all agencies and departments of the Federal Government, in order for minority businesses to achieve economic parity in America.

The article follows:

DEPARTMENT OF THE ARMY,
Washington, D.C., February 8, 1977.

Subject: Application of Minority Business Enterprise Program to Transportation Services Related to the Department of Defense Personnel Property Movement and Storage Program.

To: All personal property shipping offices.

1. Executive Order 11625, October 1971, emphasizes that the opportunity for full participation by minority firms in the national economy is essential, and requires Federal agencies to foster and promote minority business enterprises. The Principal Deputy Assistant Secretary of Defense (Installations and Logistics) prescribed broad policy guidance extending this minority business program to Department of Defense (DOD) transportation activities on 2 August 1976. The policy provided that steps should be taken, within legal and regulatory constraints, to seek means to increase the opportunities for such minority business participation.

2. The DOD Personal Property Movement and Storage Program appears to be a viable candidate for the implementation of these policies. Initial review indicates that minority business participation is minimal in this program which resulted in the payment of more than five hundred million dollars to commercial carriers and warehousemen last year.

3. In accordance with existing law, a carrier must possess appropriate authority from a Federal or State regulatory body in order to transport DOD-sponsored shipments. Obtaining such authority is the first, and perhaps most difficult step, a businessman must accomplish in order to be an approved carrier participating in DOD traffic. There are apparently a number of minority-owned household goods agents in just this situation. They have the equipment, facilities, experience, know-how, and desire, but often do not have regulatory authority. Without authority it is impossible for these minority businesses to expand and grow. In order to obtain authority, businesses must normally prove a need for "public convenience and necessity" to regulatory authorities. This proof requires supporting testimony from transportation "users", which may include elements of the DOD.

4. Participation by elements of the DOD in support of carrier's applications for operating authority is limited to four specific examples by DOD Instruction 4500.17. These instances are:

a. There is no commercial carrier authorized to render the service required by the DOD.

b. The services of authorized commercial carriers are inadequate to fulfill the needs of the DOD.

c. Appreciably greater economy, frequency or speed of service to the DOD will result.

d. The discontinuance or abandonment of an operating authority or carrier service would be detrimental to the DOD or the proposed inauguration or expansion of an operating authority or service would be beneficial to the DOD.

5. More detailed guidance is provided in Chapter 105 of the Military Traffic Management Regulation, AR 55-355/NAVSUPINST 4600.70/AFM 75-2/MCOP 4600.14A/DSAR 4500.03). The provisions of that chapter assign responsibility to local transporation officers to make continuing evaluations as to the adequacy of available services by all modes of commercial transportation. When that service is considered inadequate, the facts are to be reported to the Commander, Military Traffic Management Command. Procedures are also established for those situations when requests are made by carriers for support of applications for new or additional operating authority.

6. Participation by DOD personnel in support of applications for authority must be in strict conformance to existing directives and procedures. This does not preclude support of carriers when warranted. Therefore, in the spirit of the policy prescribed by DOD, support should be rendered to minority businessmen in those instances where such capability is required.

H. R. DEL MAR,
Major General, USA, Commanding.

TIME TO ACT ON OIL SPILL LEGISLATION, CONGRESSMAN JOHN BRADEMAS SAYS

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, in the next few days President Carter is expected to recommend to Congress legislation to deal with the problem of control of oil spills. His action comes none too soon. We have all watched with growing outrage and despair the increasing number of ocean oil spills that degrade the environment, waste the precious and irreplaceable resources of crude oil and endanger the lives of the men who transport this cargo.

There is probably no way to prevent such spills completely. However, Congress can and should enact strong new laws requiring the construction of safer, better equipped tankers in which to transport oil.

Our distinguished colleague, Congressman GERRY E. STUDDS of Massachusetts, whose district has been touched by the disaster of an oil spill, has given the matter considerable thought and attention. He has published his conclusions in the March 1977 issue of Trial magazine, which is published by the Association of Trial Lawyers of America.

Mr. Speaker, Congressman STUDDS makes a hard, effective case for the enactment of tougher oil spill liability laws. He points out:

> Tanker owners . . . would think twice about operating with third-rate crews and equipment if they knew in advance they would be forced to pay the high costs of any spill.

Congressman STUDDS outlines legislation now under consideration by the 95th Congress. Whether or not others accept the specific provisions of that bill, all Members certainly are aware of the waste and tragedy of oil spills and of the increasing pressure for legislation. Mr. Speaker, I include the full text of Congressman STUDDS' thoughtful article, "Oil and Water," so that all Members may have the opportunity to read it.

The article follows:

OIL AND WATER

(By Representative GERRY E. STUDDS)

On December 15, 1976, the largest oil spill in the history of the United States began 27 miles off Nantucket Island when the Liberian tanker *Argo Merchant* grounded itself on Nantucket Shoals. After several days of typical Nantucket winter weather, the vessel broke up and spewed oil in a slick which grew to cover some 12,000 square miles of the Northwest Atlantic.

In succeeding weeks, the disaster off Massachusetts was followed by a series of smaller tanker spills, explosions, and groundings, and by the complete disappearance of the Panamanian tanker *Grand Zenith*, a vessel carrying even more oil than the *Argo Merchant*.

These grim events have drawn widespread attention to a host of issues related to oil transportation. Who is and who should be liable for oil spills? Why do we allow unsafe foreign flag vessels to enter our ports? Why is our oil spill cleanup equipment so inadequate?

In this article, I plan to discuss primarily the issue of liability for oil spills. This choice of emphasis is not meant to downplay the importance of improving tanker construction and operating safety standards, or the need to develop as rapidly as possible some far more effective oil spill cleanup and containment equipment. It should be clear from the *Argo Merchant* spill, for example, that while we may have splendid equipment for cleaning up a spill on Walden Pond in good weather, we have nothing for spills in turbulent offshore areas such as Georges Bank.

NEEDED: OIL SPILL LIABILITY LAWS

Effective oil spill liability laws are urgently needed. The US Government has already spent close to $2 million as a result of the *Argo Merchant* spill, but the Coast Guard has no authority to investigate the incident, and no other manner in which to obtain compensation for its expenses. If great damage has been caused to fishing resources or to Georges Bank—the richest fishing area in the world—we will have no way to recover.

By setting high standards of liability for those transporting oil within 200 miles of our shore and by requiring such vessel owners to post a bond equal to their liability in advance of coming into our waters, a strong oil spill liability law would create an important incentive for the prevention of oil spills. Tanker owners such as those of the *Argo Merchant* would think twice about operating with third-rate crews and equipment if they knew in advance they would be forced to pay the high costs of any spill which might occur.

Any comprehensive oil spill liability law should also guarantee that those damaged by a spill will have access to a prompt and equitable mechanism for obtaining compensation for the injuries which they suffer. This is a matter of particular importance to commercial fishermen, and for persons employed in those tourist-related industries which are most vulnerable to the threat of massive economic damage from an oil spill.

In analyzing the form which oil spill liability legislation should take, it is important to look beyond the emotion of the moment to examine our over-all petroleum production and transportation system, to understand the environmental and economic problems posed by oil operations, and to consider our past and current attempts to come to grips with these problems.

Oil pollution on a large scale can result from incidents involving tankers, as with the *Argo Merchant*, or from offshore oil production facilities, as was the case with the Santa Barbara blow-out of 1967. Deepwater ports, which should become operable in the fairly near future, also pose a potential threat.

The best estimates are that we dump from five to ten million tons of petroleum into the world's waterways every year. About 46% of this is from ocean shipping and related operations. Only about 2% to 3% is from offshore drilling. This figure may increase however, as the search for oil drives industry's efforts into more and more new coastal areas.

Scientists do not agree on the cumulative effect of oil pollution on marine life. The seriousness of a particular oil spill depends on the type of oil involved, weather conditions, the ability of the Coast Guard or industry to clean it up, and—most important—on the location of the spill. If the *Argo Merchant* had come aground in the summer, ocean currents and prevailing winds might well have carried the oil into huge fish spawning grounds, enormously productive estuarine areas near shore, and perhaps onto the incalculably valuable beaches of Nantucket itself. The economic and environmental damage from such a spill would have been staggering. One study has estimated the cost of a worst case spill on the east coast at $2.8 billion.

LIABILITY

At present, international, federal, and state oil spill liability laws are a maze of duplicative and contradictory statutes, with gaps in liability so wide you could drive a Liberian tanker through them, even without a functioning gyrocompass.

To date, international activity with respect to oil liability has been centered within the Intergovernmental Maritime Consultative Organization (IMCO), an agency which was born in the same year, 1948, as the Liberian maritime shipping industry.

In response to the huge spill of oil following the grounding in 1967 of the tanker *Torrey Canyon*, IMCO moved in 1969 to suggest worldwide oil spill liability standards. These were set for tanker owners at the lesser of $160/ton or $16.8 million. Two years later, a supplemental "Fund Convention" was proposed, designed to create a cargo-owner financed fund of $36 million to meet the costs of incidents in excess of the limits of liability under the '69 Convention. In response to tanker industry pressure, however, this latter convention would also have further reduced liability limits for most vessels to the lower limit of $120 a ton or $10 million.

The first nation to ratify each of these conventions was Liberia, a country which, incidentally, has as many American citizens as Liberians in its delegation at IMCO. The Liability Convention became effective, without US participation, in the summer of 1975, but the Fund Convention is not yet in effect.

Essentially, the two IMCO conventions would pre-empt domestic oil spill liability laws, and would freeze into law for all time some extremely low limits of liability for all of the world's oil tankers. There is little wonder that these pacts were strongly supported by the Ford Administration and by the oil industry, as well as by tanker fleet owners and by many segments of the international insurance community.

The principal difference in the 94th Congress between the Ford Administration oil spill bill and a bill on the same subject which I had proposed, was whether or not the International Conventions should be ratified. I argued against ratification because the conventions would have failed to create a strong oil spill prevention incentive, and they would have stopped us in the future from taking strong steps to protect our shores and marine resources from oil pollution. After months of wrangling in committee, it became clear that Congress would not accept the conventions, and the Administration agreed to drop them and support a compromise bill. Approved by the House Merchant Marine and Fisheries Committee in September 1976, this bill has been re-introduced, in somewhat stronger form, this year.

The proposed legislation for this year would establish a $300 per ton limit on liability for vessels, with no over-all ceiling. The oil industry is strongly interested in placing a ceiling on liability so that large new supertankers would face a reduced standard. Last year's committee bill, for example, has an over-all ceiling of $30 million, which would have meant that a 200,000 ton ship would have the same liability as a vessel only half as large.

The new bill would require vessel owners to obtain federal certificates of responsibility demonstrating their ability—through insurance or through other means—to meet the costs of an oil spill up to their limit of liability. This provision would apply to both domestic and foreign flag tankers.

More than 95% of our imported petroleum comes in on foreign flag tankers, much of it from so-called "flag of convenience" nations, including Liberia and Panama. The fleets of these nations do have some of the newest and safest ships afloat, but they also have too many rust buckets of the *Argo Merchant* variety. That particular vessel had been involved in some 18 previous safety violations and small oil spill incidents. Despite some occasional claims to the contrary, the safety record of flag of convenience ships is abominable. In 1973, for example, 22.8% of the world's tanker tonnage was flag of convenience, and 50.8% of the marine casualties were from these nations. It is critical that the United States assert its authority over all vessels—of whatever flag—which come into our ports.

The proposed bill would also establish liability limits for deepwater ports and for offshore oil production, storage, and transportation facilities.

THE FUND

Past experience has demonstrated the need to improve the procedures by which those damaged by an oil spill are compensated. Most oil spill damage cases in the past have been settled out of court, apparently due to the reluctance of most damaged parties to take on Exxon, Shell, et al. in court. They have, instead, elected to settle for partial payments of their claims.

The new proposed bill would allow oil spill damage claimants an alternative. While preserving the old options, a damaged party could seek to recover his claim from a specially created government fund. If the claimant's request were to be judged valid and the claim paid, the fund would then move against the spiller to recover the claim.

This fund would be financed, up to $200 million, by a three cents per barrel fee on imported and offshore oil (a sum equal to 1/14 cent per gallon), and would be administered by the Secretary of Transportation. In addition to acting as an intermediary when necesary between claimants and spillers, the fund would be available to provide compensation in those cases where the source of a spill is not known, and in the rare event when the liabilty limit of a particular spiller has been exceeded.

DAMAGES

In the past, common and maritime law have done little to protect victims of oil pollution damage. Maxine Lipeles described the situation as follows:

"Although an owner of a fouled resort or a fisherman with soiled gear may theoretically proceed under the tort principles of negligence, trespass, nuisance, or unseaworthiness, none of those principles offer damage victims a reliable means of recouping their losses. Except when the courts invoke the doctrine of res ipsa loquitur, a claimant alleging negligence faces the difficult tasks of proving that the spiller failed to take care and that such failure caused the particular damage. A suit based upon trespass must demonstrate that the spiller's negligence, deliberation, or intent produced damage arising from direct contact with oil. Nuisance actions succeed only if a claimant suffers losses unique in kind, not in degree, from the general public. In a 1973 nuisance case arising from the *Tamano* spill in Maine, the court awarded damages to commercial fishermen and clam diggers but denied compensation to motel owners and restauranteurs. In 1972, a federal court ruled that unseaworthiness would not establish liability for oil pollution claims. In addition to the formidable burdens of proof imposed upon claimants seeking to establish a spiller's liability, tort recovery is generally limited—except in trespass suits—to physical damages. Economic and consequential losses are usually not compensable." ("Oil: Study of Pollution Insurance Liability Laws." Environmental Policy Institute, 1976.)

The proposed legislation would alter this by specifically including loss of profits or impairment of earning capacity in the list of compensable damages. Also included for various classes of claimants are cleanup costs, the value of injured or destroyed real and personal property, injury to natural resources, and loss of tax revenue for up to one year.

OTHER FUNDS

The new bill would apply to all of the potential sources of oil spills into the marine environment. As a result, its enactment would enable us to reduce the scope of an already small oil spill fund set up under the Federal

Water Pollution Control Act, allow us to completely eliminate separate similar funds authorized by the Deepwater Port and the Trans-Alaska Pipeline Act, and eliminate the need for a fund to handle spills from offshore oil drilling activities, as is currently proposed in amendments to the Outer Continental Shelf Lands Act.

The need for a strong oil spill liability bill is very clear. It is equally clear that our efforts will be opposed—either openly or rather quietly—from several different directions. The oil and tanker industries give lip service support to this type of bill, but their view of fair, specific provisions is a great deal different from that of many members of Congress. The argument will be made that high liability means high insurance, which means, in turn, high oil prices.

Evidence indicates that oil pollution insurance costs are not a significant part of the overall operating costs of most oil production and transportation companies. A strong argument could be made, in any case, that the expense should be where the risk is. If the liability burden is not placed on the tanker owner, or the oil producer, it will continue to rest squarely where it does now—on the taxpayer.

Others will argue that the United States should not take unilateral action with regard to oil spill liability or tanker safety. Oil pollution is a world-wide problem; the maritime industry is a world-wide business. These problems must, some say, be dealt with at the international level. I can understand this argument, as can many others, but I do not believe that it should be accepted in this case.

I do not believe that flag of convenience nations, particularly Liberia, are—or should be treated as—sovereign, independent, and responsible states insofar as their tanker policies are concerned. IMCO delegates from these states are primarily US oil company and world tanker industry people wearing different hats, and their negotiating positions continually reflect this.

If the US is going to make any serious effort to reduce the threat of tanker pollution in our waters it must act on its own. International standards mean lowest common denominator standards, oil industry supported standards, standards over which we will not be able to maintain control.

We must act to prevent tragedies such as that of the *Argo Merchant* from occurring again. Certainly accidents will happen no matter what we do, but we should be satisfied that we have done all we could to prevent them.

When a spill occurs from an apparently unsafe vessel, following an obviously wrong course, using navigational equipment which did not work, whose weather charts were for the wrong month, and whose crew was allegedly incompetent, we are not doing enough. All of this was true with the *Argo Merchant* and it seems recently that this type of incident is the rule rather than the exception.

Congress must change the rules now, while the memory of tanker spill headlines is still firmly imprinted on its mind.

THE ELDERLY AT WORK

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, this week has been designated by Presidential proclamation as "National Employ the Older Worker Week." During this time activities are planned around the country to encourage employment opportunities for older workers.

No nation can hope to achieve its full potential if some of its most experienced and productive citizens are forced to the sidelines. We can only benefit from the skills, wisdom, and experience of this country's elderly. Indeed, we must create a more favorable climate for the employment of mature workers.

Mr. Speaker, a recent issue of the New York Times Magazine carried an article by Harvey D. Shapiro on the employment of older people which I insert at this point in the RECORD:

DO NOT GO GENTLY . . .

(By Harvey D. Shapiro)

It just doesn't make any sense to me," Mike Shapiro says bitterly over his afternoon cup of coffee at Chef's Cafe. "The Social Security Administration says it's running out of money and has to keep raising payroll taxes to support all the old folks. Meanwhile, there's plenty of us old-timers hanging around who'd like to earn our own living, and they won't let us keep on working. . . . It just doesn't make any sense," he says again, pausing to let his coffee cool.

For years Mike Shapiro was the kind of employee who came to work early and went home late without putting in for overtime. When he turned 65, he was forced to retire. "It's an awful thing to do to a person," he says. Still vigorous and active at 76, Shapiro lives modestly on his Social Security and a small pension in Superior, Wis. Although he once took peculiar pride in being the first one up on his block weekday mornings, in recent years he has learned to sleep late. "Otherwise," he says wistfully, "the days seem too long."

Like hundreds of thousands of other older Americans, Mike Shapiro considers himself more a victim than a beneficiary of compulsory retirement, the practice of making employees retire when they reach some predetermined age, regardless of whether they are willing and able to continue working. The retirement age varies—it's 55 for New York City firefighters, 56 for air traffic controllers, 70 for Harvard professors, and 65 for most people. According to a 1975 survey by Louis Harris & Associates, for 61 percent of those working, age rather than ability will dictate when they must retire. And for many older people, their later years are like their earliest ones: they find society unwilling to entrust them with any meaningful tasks.

COMPULSORY RETIREMENT AS POLICY

Several forces have come together to make compulsory retirement a common employer policy. Because older workers often receive higher wages and more benefits than younger workers doing the same job, companies are eager to oust them when times are tough. Then, too, many employers are convinced they couldn't keep talented employees without the prospect of promotions guaranteed by scheduled retirements.

This generational conflict is especially intense these days because members of the post-war baby boom are now in the labor force, dramatically swelling the ranks of younger workers eager to move up. Moreover, the women's movement has brought more and more women into the job market. While the female population of the United States has climbed 52 percent since 1947, the number of working women has risen 123 percent. Finally, minorities and women who were once restricted to dead-end jobs now have court-supported access to promotions. But as Illinois State Representative Alan Greiman notes, "They all see their paths blocked by 63-year-old white males who, they think, will keep on working forever if they're not forced to retire."

Because the issue of mandatory retirement cuts across the generations, the labor movement has had enormous trouble in dealing with it. In September 1975, the AFL-CIO Executive Council declared that "organized labor has opposed and will continue to oppose unilateral imposition of compulsory retirement by employers." But "unilateral" is a crucial word. Many union leaders have signed contracts permitting employers to retire high-salaried older workers in order to provide more jobs for younger workers.

Until this century, older people often kept on working as long as they could, and many never completely retired. But by the 1920's the growth of corporate employers first permitted and then required everyone to quit working at the same time. Adapting the rules to fit individual situations became too troublesome for the bookkeepers. Creation of the Social Security system in 1935 enshrined mandatory retirement at 65—a figure the United States Social Security Administration is reported to have borrowed from Germany, where Otto von Bismarck arbitrarily chose 65 as the age of eligibility for that country's first social welfare system in 1889. As a result, the proportion of men and women over 65 still working has dropped from 69 percent in 1890 to 22 percent in 1974.

Not only has compulsory retirement become widespread, says Canin Clauss, associate solicitor of the United States Department of Labor, "there is a growing trend toward compelling retirement prior to 65." Currently, more than 11 million Americans are locked into pension plans allowing them to be retired as early as age 55 at the employer's discretion.

WORKING AFTER AGE 65

Those who have thought about forced retirement recognize that it flies in the face of overwhelming scientific evidence about the increasing vigor and longevity of older Americans. There is no evidence that an average person's skills decline abruptly, nor is there proof that everyone ages at the same rate. There is no way of telling how long a person can do good work—or even when he or she will do it. When Prof. Ben Duggar retired from the University of Wisconsin at age 70, for example, he had a mildly distinguished academic career. After retirement, however, he became a consultant to Lederle Laboratories, where, at the age of 73, he isolated an antibiotic he called Aureomycin and then another called tetracycline, which has become the world's most widely prescribed antibiotic.

Most government and university research shows that employees from 65 to 70 and even up to 75 generally perform as well as younger workers in jobs not requiring heavy physical labor. While younger workers usually have more education and learn more rapidly, older employees are more likely to display better judgment and have stable work habits. "Most of the handicaps of oldness in our society are social, conventional and imaginary," says Dr. Alex Comfort, a gerontologist. "The physical changes are trifling by comparison."

The idea that retirement is necessary so that older people can "take it easy" in their twilight years is increasingly irrelevant in this era of desk jobs. Furthermore, says the American Medical Association, which has opposed mandatory retirement at 65 on health grounds, "There is ample clinical evidence that physical and emotional problems can be precipitated or exacerbated by denial of employment opportunities." According to the National Center for Career Life Planning, forced early retirement ranks ninth—after the deaths of various family members and divorce—among 40 major stress-producing events in life.

Supporters of compulsory retirement point out that that rule allows elderly employees whose work has not been satisfactory to leave in dignity. "It means nobody has to face saying, 'You can't cut it anymore,' " says Donald J. Povejsil, vice president of personnel and administration at Westinghouse Electric

Company. He adds, "Any other method of retiring people would be extremely difficult to manage."

Dr. Arthur S. Flemming, United States Commissioner on Aging and chairman of the Commission on Civil Rights, contends that mandatory retirement is simply a "lazy person's device for dealing with difficult personnel decisions." He goes on: "Certainly a manager would have to make some difficult decisions without compulsory retirement, but a good manager should always be making those kinds of decisions as he tries to raise the quality of his work force."

As for employers' fears that they would face endless legal wrangling if they had to establish standards to determine when each older worker should retire, Commissioner Flemming says that this will not happen. "It's much easier to apply tests at that end of a career," he says, "since the employer knows the person and his or her work. While hiring always involves some guesswork, termination can be based on actual performance on the job."

FLEXIBLE RETIREMENT POLICIES

Flemming's convictions have been borne out by a number of firms without mandatory retirement rules. At Paddock Publications in Arlington Heights, Ill., which employs 300 people, "it is working out very well," says executive vice president Robert Y. Paddock Sr. "Most of the time an employee feels ready to retire just about when we begin to think they're ready." He cites the case of an advertising salesman in his early 60's whose track record seemed to be worsening. Before the advertising manager could say anything, Paddock notes, "The man kind of lost interest in his work and retired." Paddock, which publishes nine daily and six weekly newspapers for Chicago suburbs, has several employees in their 70's, including some who were hired at 65 after retiring from jobs elsewhere. Robert Paddock, who is in his late 50's, says, "When I retire at about 80, maybe things will change, but I like the way we do it right now."

Most of the jobs not subject to mandatory retirement rules are at small organizations like Paddock, where the boss knows everybody and can respond humanely to individual situations. But big companies can also get along without mandatory retirement. At United States Steel, for example, compulsory retirement rules affect only 19,000 office workers out of a total work force of 172,000. The bulk of the firm's employees can keep on working as long as they can pass annual medical examinations geared to the nature of their jobs, says C. T. Spivey, vice president of personnel.

Even if an employee's medical examination raises questions, Spivey says, "We get the union in and find another job for him if he wants to keep working." At one of the company's plants near Pittsburgh, for example, an older worker recently moved from "second helper" in the open hearth department to the more sedentary job of "weigher" because of medical problems. Similarly, a worker who operated a bulldozer outdoors found his arthritis was bothering him more as he got older, but he didn't want to retire, so he transferred to an indoor job as a repairman.

Spivey says the bulk of United States Steel's employees retire as soon as they put in 30 years and are eligible for a pension, but the firm has no problems in finding work for those who want to stay on. The record-holder is Henry Baude, who retired as a price clerk on August 31, 1973, at the age of 77, after completing 61 years with the company. But United States Steel has had several other 60-year veterans.

An absence of mandatory retirement rules not only works successfully throughout the steel industry, but also at such varied large companies as Walt Disney Productions, the Bankers Life and Casualty Insurance Company, as well as the state governments of Illinois and Pennsylvania. Says John B. Martin, legislative counsel to the American Association of Retired Persons and its affiliate, the National Association of Retired Teachers, "We're not arguing against early retirement. We say an employee ought to have some options. If he wants to retire early—fine. If he wants to continue working—fine. What we're dealing with essentially is the concept of freedom of choice."

The current lack of flexibility in work schedules is hardly a necessity. When they have to, employers can adapt on a massive scale. In retailing, for example, as stores have begun to remain open 12 hours a day or seven days a week in an era of 40-hour workweeks, store managements have been receptive to varied schedules permitting some people to work full time, some part time and some overtime. There's no reason why other employers couldn't adapt in a similar fashion. The automakers, for example, who are plagued with absenteeism on Mondays and Fridays, could bring in retirees to work on those days. Allowing older workers who remain fit and productive to make adjustments in their workdays, workweeks or workyears could lengthen their working career.

ACTION BY THE ELDERLY

There is increasing organization and militancy among the elderly opposed to mandatory retirement. "Because of inflation, more and more older people are realizing that without employment they're just not going to make it economically," says John B. Martin. "Retirement will mean a descent into near poverty." But the complaint goes beyond economics. "This is really a moral issue," says Dr. Flemming, "because personnel policies requiring retirement at a given age without regard to an individual's abilities are in direct conflict with our Judeo-Christian concept of the dignity and worth of each human being."

Persons over 65 make up 14.8 percent of the registered voters and politicians are becoming attuned to "senior power." Major battles over retirement policies are beginning to be played out in courthouses and legislative bodies as well as offices across the country. Since the courts have been the cutting edge in overturning employment practices that discriminated against minorities and women, some senior citizens have hoped legal action would aid them as well. But last spring, the United States Supreme Court dismissed an age discrimination suit filed by Lt. Col. Robert Murgia, who was forced to resign from the Massachusetts State Police when he reached the mandatory retirement age of 50, even though a rigorous medical examination had shown him to be in excellent health. The Murgia case was the latest of several unsuccessful attempts to challenge the constitutionality of compulsory retirement in the courts. Thus, Carin Clauss says, "The only way to get rid of compulsory retirement rules altogether would seem to be through legislation."

LEGISLATION ON RETIREMENT

Several bills to end compulsory retirement were introduced in the United States Congress in the last few years. Representative Paul Findley, Republican of Illinois, first introduced a bill to end mandatory retirement in 1974; it disappeared rather quickly after it was introduced, but when he offered a similar bill in 1976, it gained 99 co-sponsors, ranging from liberal Democrats like Bella Abzug to conservative Republicans like John Rousselot of California. Moreover, Findley's bill was endorsed by Dr. Arthur S. Flemming and former Secretary of Labor Willard Wirtz. Although the bill didn't get out of committee, Representative Findley says he was encouraged by the increasing support and introduced the bill on the first day of the 95th Congress in January.

There are similar stories at the state level. In Illinois, a bill to abolish compulsory retirement passed the House of Representatives by a vote of 117 to 21 before it was killed in the upper house. Illinois Representative Alan Greiman introduced his bill again this year, and he reports increasing interest in such legislation in California, Pennsylvania and other states.

In New York, a bipartisan group of 52 Assemblymen and 21 State Senators introduced a similar bill last spring. That bill disappeared in committee, but was introduced last month. In a statement explaining the bill, Assemblyman Thomas R. Fortune, the chairman of the State Assembly committee on the aging, described mandatory retirement as unjust and economically unsound. He noted that such restrictions contradicted the principle behind prohibitions against sex and race discrimination in employment. "A person should only be forced to leave a job if that person cannot perform the assigned tasks," he said. "Under no circumstances should a person be removed because of physical characteristics that are irrelevant to job performance."

A Department of Labor official is not optimistic about legislative changes on compulsory retirement, however. Business and labor leaders can be expected to support the status quo, he says, and "there is strong unreasoned opposition on Capitol Hill to any tinkering with retirement right now because of ERISA." ERISA—the Employee Retirement Income Security Act of 1974—reformed the rules governing pension plans to help retirees, but it also increased the costs and complexity of maintaining pensions and was followed by a record number of plan liquidations. Thus, the Department of Labor official says older Americans don't have enough supporters at the present time to pass legislation banning compulsory retirement, although there's a good chance of passing a law to increase the mandatory retirement age from 65 to 68 or 70.

Ironically, the growing conviction that change is not far off is based on the plight of the young rather than the old. Though younger workers have generally assumed their interest lay in getting older workers to retire, the economics of the situation are working in the other direction now. As the retired elderly population grows in size, the balance between workers and retirees is tilting precariously. While there were seven workers paying Social Security taxes for every person collecting benefits in 1955, there were only four in 1960 and less than three in 1975. Within 50 years, there will be less than two Americans working for each Social Security beneficiary.

Since those working support those who are retired under Social Security, to raise enough money to pay all those retirees, Social Security taxes will have to rise to 25 percent of average incomes in a few years unless some changes are made. By the same token, private pensions are devouring huge sums that might have been available for wages. United States Steel spent over $200 million on its pension fund last year, and like many employers it is now supporting more people through its pension plans than its payrolls.

In November, former Treasury Secretary William Simon recommended raising the age at which people can retire and claim benefits in order to ward off bankruptcy of the Social Security system. If enough people think about the whopping deductions Social Security and pension costs are already taking out of their paychecks, they will conclude it is costing too much to discriminate against older workers. That many turn out to be a very persuasive argument for letting older people keep on working as long as they can. There's an even more persuasive reason for improving the treatment of the

elderly. The elderly are the only outcast group all of us can expect to join.

CHILDREN'S HOSPITAL NATIONAL MEDICAL CENTER

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, March 6, 1977, marked the dedication of the new Children's Hospital National Medical Center here in Washington. The result of nearly 10 years of planning and construction at a cost of $58 million, this innovative center is the most modern of its kind and provides a unique health resources for children across the Nation. Its advanced research and training facilities will provide an invaluable education for young physicians specializing in pediatrics and will help stimulate new medical breakthroughs in the treatment of children's diseases.

President Carter spoke at the dedication and said he expected Children's Hospital to make possible great advances in the treatment of children and encourage a return to an emphasis on innoculations and preventive medicine:

> I think every family . . . can breathe a little easier knowing that if their children are sick, that poverty or despair will not prevent their children from getting just as good medical care as the little daughter of the President of the United States.

The many dedicated individuals who contributed to the successful completion of Children's Hospital deserve the Nation's thanks. Not only have they set new standards for the future in hospital facilities and design but they have also focused needed emphasis on the total hospital environment for children. With its many playrooms and accommodations allowing parents to stay close by, Children's Hospital encourages its young patients to adjust more comfortably to what can sometimes be, for them, a lonely and frightening experience.

I would particularly like to commend Mr. John Sharon, president of the board of trustees of Children's Hospital, for his dedicated and untiring efforts to bring this project to fruition. Mr. Sharon has been an active leader over the years on issues affecting the health and well-being of children, and has offered valuable assistance to the Education Subcommittee I chair and other subcommittees of Congress on legislation in this important area.

DEPARTMENT OF EDUCATION ACT OF 1977

(Mr. HEFTEL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HEFTEL. Mr. Speaker, I have introduced a bill to be known as the Department of Education Act of 1977, which would create a Cabinet-level Department by consolidating all the various educational programs that are now contained in the Department of Health, Education, and Welfare and some 20 more Federal agencies.

Education in America is in trouble, Mr. Speaker. Our children know it; many of them only tolerate school, finding little relevance there to their present or their future. Parents know it; they see more and more of their tax dollars going into education with little to show for the added expense. Teachers know it; achievement scores among their pupils today are declining markedly.

And we in government know education is in trouble. Our Nation's educational programs are divided between more than 20 Federal agencies. The Department of Health, Education, and Welfare has grown to unwieldy proportions, spending approximately $9 billion on education alone, while trying to cope with the complexities of health and welfare as well.

A critical appraisal tells us that education is too important to fragment between the various agencies, too important to leave within HEW as only one of three major areas of concern. Now is the time to remove education from this morass of programs and install it in one Cabinet-level Department—the Department of Education.

Now is the time to streamline our education programs to help us to better cope with the results of poor educational systems and approaches—the offshoots of crime and the criminal, unemployment and the unemployable, substance abuse and the abuser. The Department of Education Act of 1977 would consolidate in one Department all our current education programs, including HEW's Education Division, ith its 138 programs within the Office of Education; the Head-start program, from the Office of Child Development; the operation of the Armed Forces dependents schools; the Education Directorate of the National Science Foundation; operation of the BIA Indian schools; HUD's college housing loan program; and HEW's grant programs for the construction of public broadcasting facilities.

The act calls for the creation of a National Advisory Commission on Education, with 15 members appointed by the President to assist the Secretary of Education in the formulation of Federal education policy. The commission would also review the operation of Federal education programs.

Mr. Speaker, I believe this act is a very important first step in providing sound control and guidance of our educational programs and administration in America. At this point, I am including for the RECORD the full text of the bill that I have introduced today:

H.R. 5113

A bill to establish a Department of Education, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Department of Education Act of 1977".

FINDINGS AND PURPOSES

SEC. 2. The Congress finds that—

(1) education is of fundamental importance to the Nation and it is appropriate to reassess the condition of education in our Nation to insure that all Americans have an equal opportunity for quality education;

(2) existing Federal programs in support of education are fragmented and often duplicative and should be better coordinated in order to promote quality education;

(3) the role and importance of education increases as our society becomes more complex and new technologies and advancements are developed to meet changing needs;

(4) public policy toward education is vital to the present and long-range interests of the United States;

(5) education must be broadly conceived in terms of all those forces, institutions, and agencies which function as educating influences in the United States; and

(6) it is essential therefor to establish a Department of Education to provide Federal leadership, to insure effective enforcement of equal opportunity legislation in education, to weigh and consider major educational policy issues confronting the Nation, and to facilitate a continuing renewal of the educating institutions and policies of the United States.

DEPARTMENT OF EDUCATION ESTABLISHED

SEC. 3. There is established an executive department which shall be known as the Department of Education (hereinafter referred to as the "Department").

OFFICERS

SEC. 4. (a) The Department shall be administered by a Secretary of Education (hereinafter referred to as the "Secretary"), who shall be appointed by the President, by and with the advice and consent of the Senate, and who shall receive compensation at the rate prescribed for level I of the Federal Executive Salary Schedule under section 5312 of title 5, United States Code. The Department shall be administered under the supervision and direction of the Secretary.

(b) There shall be in the Department an Under Secretary of Education who shall be appointed by the President by and with the advice and consent of the Senate. The Under Secretary shall perform such duties and exercise such powers as the Secretary shall prescribe. During the absence or disability of the Secretary, or in the event of a vacancy in the office of the Secretary, the Under Secretary shall act as Secretary. The Under Secretary shall receive compensation at the rate prescribed for level III of the Federal Executive Salary Schedule established under section 5314 of title 5, United States Code.

(c) There shall be in the Department a General Counsel and four Assistant Secretaries of Education as follows:

(1) Assistant Secretary of Education for Legislative and Public Affairs;

(2) Assistant Secretary of Education for Administrative and Management Policy;

(3) Assistant Secretary of Education for Evaluation and Planning; and

(4) Assistant Secretary of Education for Intergovernmental Relations.

Each of such Assistant Secretaries shall be appointed by the President, by and with the advice and consent of the Senate. Each such Assistant Secretary shall perform such duties and exercise such powers as the Secretary shall prescribe. During the absence or disability, or in the event of a vacancy in the office of the Secretary or of the Under Secretary, an Assistant Secretary determined according to such order as the Secretary shall prescribe shall act as Secretary. Each Assistant Secretary and the General Counsel shall receive compensation at the rate prescribed for level IV under section 5315 of title 5, United States Code.

POWERS AND DUTIES OF THE SECRETARY

SEC. 5. (a) The Secretary shall be responsible for the exercise of all functions of the Department, and shall have authority to direct and supervise all personnel and activities thereof.

(b)(1) The Secretary is authorized to appoint and fix the compensation of such officers and employees, and prescribe their

functions, as may be necessary to carry out the purposes and functions of this Act.

(2) The Secretary may obtain the services of experts and consultants in accordance with the provisions of section 3109 of title 5, United States Code.

(c) The Secretary may promulgate such rules and regulations as may be necessary to carry out the functions vested in the Secretary or in the Department, and may delegate authority for the performance of any such function to any officer or employee under the Secretary's direction and supervision.

(d) The Secretary shall cause a seal of office to be made for the Department, of such design as the President shall approve, and judicial notice shall be taken thereof.

FUNCTIONS OF THE DEPARTMENT

SEC. 6. (a) It is the principal function of the Department to promote the cause and advancement of education throughout the United States.

(b) In addition to any other function of the Secretary under the provisions of this Act, the Secretary is authorized to—

(1) advise the President with respect to the progress of education, including the recommendation of long-range goals and priorities;

(2) develop and recommend to the President appropriate policies and programs to foster the orderly growth and development of the educational facilities and resources of the United States especially in the light of long-range requirements;

(3) exercise leadership at the direction of the President in coordinating Federal activities affecting education;

(4) conduct continuing comprehensive surveys, and to collect, analyze, and disseminate relevant information, data and statistics, concerning education in the United States;

(5) provide information and such other assistance as may be authorized by the Congress to aid in the maintenance of efficient school, college, and university or other education systems;

(6) encourage comprehensive planning by State and local governments, especially with respect to coordinating Federal, State, and community educational activities at the local level; and

(7) provide leadership by conducting studies, making recommendations, and administering discretionary programs to facilitate the continuing development of the American educational system.

TRANSFER OF FUNCTIONS AND AGENCIES

SEC. 7. (a) There are transferred to the Secretary, all functions of the Secretary of Health, Education, and Welfare or the Commissioner of Education, as the case may be—

(1) with respect to and being administered by the Secretary of Health, Education, and Welfare through the Education Division of the Department of Health, Education, and Welfare;

(2) with respect to and being administered by the Secretary of Health, Education, and Welfare through the Office of Child Development of such Department regarding Head-start;

(3) with respect to any advisory committee in the Department of Health, Education, and Welfare giving advice to and making recommendations which primarily concern education;

(4) under section 394 of the Communications Act of 1934, relating to Federal grants for the construction of television and radio broadcasting facilities to be used for educational purposes;

(5) with respect to and being administered by the Secretary of Health, Education, and Welfare through the Office of Civil Rights for the enforcement of those provisions of law and Education Orders which apply to educational institutions, including title VI (insofar as it relates to educational financial assistance) and titles VII and IX of the Education Amendments of 1972 and Executive Order 11246 (insofar as it pertains to employer's holding Federal contracts in education);

(6) with respect to all functions of the National Foundation on the Arts and the Humanities including all functions of the National Endowment for the Arts and all functions of the National Endowment for the Humanities;

(7) with respect to all Federal laws concerning the relationship between Gallaudet College, Howard University, and American Printing House for the Blind, and the Department of Health, Education, and Welfare.

(b) There are further transferred to the Secretary all functions—

(1) of the Secretary of Defense with respect to the operation of schools for dependents of members of the Armed Forces;

(2) of the Secretary of the Interior with respect to the operation of schools for Indian children being administered through the Bureau of Indian Affairs;

(3) of the Secretary of Agriculture with respect to the National School Lunch Act, and the operation of the Graduate School, United States Department of Agriculture;

(4) of the Secretary of Housing and Urban Development with respect to title IV of the Housing Act of 1950 relating to college housing; and

(5) with respect to and being administered by the Director of the National Science Foundation, the Education Directorate.

(c) In any case where all of the functions of any agency or office are transferred pursuant to this Act, except any committee transferred under subsection (a)(3) of this section, such agency or office shall lapse.

(d) All officers, employees, assets, liabilities, contracts, records, property, leases, obligations, and commitments and unexpended balances of appropriations, allocations and other funds which the Director of the Office of Management and Budget determines are to be employed, held, or used primarily in connection with any office, agency, bureau, foundation, or function transferred under the provisions of this Act, are hereby transferred to the Department.

ADDITIONAL TRANSFERS

SEC. 8. The President is authorized to transfer to the Department of Education any other agency or instrumentality of the Federal Government which the President determines has functions relating to education and should be transferred to the Department of Education to promote efficiency in Government and to carry out the purposes of this Act. Such transfers shall incorporate, to the extent deemed desirable, the recommendations of the Federal Interagency Committee on Education as provided by section 12(c) and shall be completed within one hundred and eighty days after the date of enactment of this Act. A report describing such transfers shall be submitted to the Congress not later than thirty days thereafter.

TRANSFERRED PERSONNEL

SEC. 9. Each officer or employee of the United States or any department or agency thereof who is transferred at any time to the Department of Education shall be deemed, effective as of the date of such transfer, to be an officer or employee of the Department. No reappointment of any such officer or employee shall be required because of his transfer to that Department. Except as otherwise specifically provided by this section, no such officer or employee shall be reduced in rank, grade, seniority, or rate of compensation because of any such transfer.

PROVISIONS OF LAW APPLICABLE TO THE DEPARTMENT

SEC. 10. Except to the extent inconsistent with this Act, all provisions of law applicable to the executive departments generally shall apply to the Department.

REDESIGNATION OF THE DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

SEC. 11. (a) The Department of Health, Education, and Welfare is hereby redesignated the Department of Health and Welfare, and the Secretary of Health, Education, and Welfare is hereby redesignated the Secretary of Health and Welfare.

(b) Any reference to the Department of Health, Education, and Welfare or the Secretary of Health, Education, and Welfare in any other law, rule, regulation, certificate, directive, instruction, license, or other official paper in force on the effective date of this Act shall be deemed to refer and apply to the Department of Health and Welfare and the Secretary of Health and Welfare, respectively.

FEDERAL INTERAGENCY COMMITTEE ON EDUCATION

SEC. 12. (a) There is hereby established a "Federal Interagency Committee on Education" (hereinafter referred to in this Act as the "Committee").

(b) The Committee shall study and make such recommendations as may be necessary to assure effective coordination of Federal programs affecting education, including—

(1) development of Federal programs in accordance with the educational goals and policies of the Nation;

(2) consistent administration of policies and practices among Federal agencies in the conduct of similar programs;

(3) full and effective communication among Federal agencies to avoid unnecessary duplication of activities with respect to education;

(4) adequate procedures for the availability of information on educational matters requested by the Secretary;

(5) recommendations for the improvement of Federal programs for the purpose of aiding students in their transition from school to work; and

(6) full and effective cooperation with the Secretary on such studies and analyses as are necessary to carry out the purposes of this Act.

(c) The Committee shall, within 90 days of the enactment of this Act or the appointment and qualification of all Committee members, whichever is earlier, recommend to the President the transfer of such additional responsibilities as may be appropriate.

(d) The Committee shall be composed of the Secretary, who shall be the Chairperson, and one appropriate representative of each of the following agencies: The Department of State, the Department of Defense, the Department of Agriculture, the Department of Commerce, the Department of Labor, the Department of Health and Welfare (as redesignated by section 11 of this Act), the Department of Housing and Urban Development, the National Science Foundation, the National Aeronautics and Space Administration. The Committee shall also include the chairpersons of the National Endowment for the Arts, and the National Endowment for the Humanities of the Department.

(e) The Chairperson may invite Federal agencies, in addition to the agencies which are represented on the Committee under the provisions of subsection (d) of this section, to designate representatives to participate in meetings of the Committee on matters of substantial interest to such agencies which are to be considered by the Committee.

(f) The Director of the Office of Management and Budget, the Chairperson of the Council of Economic Advisers, and the Executive Director of the Domestic Council may each designate a staff member to attend meetings of the Committee as observers.

(g) The Committee shall meet at least six times in each year and shall prepare an annual report to the Secretary concerning its recommendations.

(h) Each Federal agency which is represented on the Committee under the provisions of subsection (d) of this section, shall furnish necessary assistance to the Committee in accordance with section 214 of the Act of May 3, 1945 (31 U.S.C. 691).

NATIONAL ADVISORY COMMISSION ON EDUCATION

SEC. 13. (a) There is established a National Advisory Commission on Education (hereinafter referred to as the "National Commission") composed of fifteen members appointed by the President, by and with the advice and consent of the Senate, from among individuals—

(1) who have a demonstrated commitment, in public or private industries or organizations, for the enhancement and development of the educational needs and goals of the Nation;

(2) who have competence in assessing the progress of educational agencies, institutions, and organizations in meeting those needs and achieving those goals; and

(3) who are experienced with the policies or administration of State and local educational agencies and of institutions of higher education.

Members shall be appointed for terms of three years, except that (A) in the case of initially appointed members, as designated by the President, five members shall be appointed for terms of one year, five members shall be appointed for terms of two years, and five members shall be appointed for terms of three years, and (B) any member appointed to fill a vacancy shall serve the remainder of the term for which the member's predecessor was appointed.

(b) The National Commission shall—

(1) assist the Secretary in the formulation of Federal policy with respect to the appropriate role of the Federal Government in each action;

(2) review the administration of, general regulations for, and operation of Federal education programs;

(3) advise the Secretary and other Federal officials with respect to the educational needs and goals of the Nation and assess the progress of the renewal of appropriate agencies, institutions, and organizations of the Nation in order to meet those needs and achieve those goals;

(4) conduct objective evaluations of specific education programs and projects in order to ascertain the effectiveness of such programs and projects in achieving the purpose for which they are intended;

(5) make recommendations (including recommendations for changes in legislation) for the improvement of the administration and operation of Federal education programs;

(6) consult with Federal, State, and local and other education agencies, institutions, and organizations with respect to assessing education in the United States and the improvement of the quality of education, including—

(A) areas of unmet needs in education, national goals, and changing education priorities, and the means by which those areas may be met, developed, and achieved;

(B) specific means of improving the quality and effectiveness of teaching, curriculums, and eduational media and of raising standards of scholarship and levels of achievement;

(7) conduct national conferences on the assessment, improvement, and renewal of education, in which national and regional education associations and organizations, State and local education officers and administrators, and other education-related organizations, institutions, and persons (including parents of children participating in Federal educational assistance programs) may exchange and disseminate information on the improvement of education;

(8) conduct, and report on, comparative studies and evaluations of education systems in foreign countries; and

(9) advise and assist in the coordination of all Federal educational advisory committees, councils, or commissions.

(c) The National Commission shall make an annual report, and such other reports as it deems appropriate, to the President and to the Congress, concerning its findings, recommendations, and activities.

(d) In carrying out its responsibilities under this section, the National Commission shall take, together with the Secretary, whatever action is necessary to carry out section 448 of the General Education Provisions Act, to devise a manageable and effective advisory structure for the Department. The National Commission shall advise the Secretary on the number of advisory bodies that are necessary and the manner in which such bodies relate to one another. The National Commission shall consult with the National Advisory Council on the Education of Disadvantaged Children, the National Advisory Council on Education Professions Development, the National Council on Educational Research, and such other advisory councils and committees as may be appropriate to carry out its functions under this subsection. All Federal agencies are directed to cooperate with the National Commission in carrying out its functions under this subsection.

(e) The National Commission is authorized to procure such technical assistance as may be required to carry out its functions and the Secretary shall, in addition, make available to the National Commission such secretarial, clerical, and other assistance and such pertinent data prepared by the Department as the National Commission may require to carry out its functions.

(f) Members of the National Commission who are not in the regular full-time employ of the United States shall, while attending meetings or conferences of the National Commission or while otherwise engaged in the business of the National Commission, be entitled to receive compensation at a rate fixed by the Secretary, but not exceeding the rate specified at the time of such service for grade GS–18 under section 5332 of title 5, United States Code, including traveltime, and while so serving on the business of the National Commission away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons employed intermittently in the Government service.

(g) The President shall nominate members to the National Commission not later than thirty days after the date of enactment of this Act.

OFFICE OF THE INSPECTOR GENERAL

SEC. 14. (a) As used in this section—

(1) the term "Inspector General" means the Inspector General of the Department;

(2) the term "Deputy" means the Deputy Inspector General of the Department; and

(3) the term "Federal agency" means an agency as defined in section 552(e) of title 5, United States Code, but shall not be construed to include the General Accounting Office.

(b) There is hereby established in the Department an Office of Inspector General.

(c) There shall be at the head of the Office an Inspector General who shall be appointed by the President, by and with the advice and consent of the Senate, solely on the basis of integrity and demonstrated ability and without regard to political affiliation. The Inspector General shall report to and be under the general supervision of the Secretary or, to the extent such authority is delegated, the Under Secretary, but shall not be under the control of, or subject to supervision by, any other officer of the Department.

(d) There shall also be in the Office a Deputy Inspector General appointed by the President, by and with the advice and consent of the Senate, solely on the basis of integrity and demonstrated ability and without regard to political affiliation. The Deputy shall assist the Inspector General in the administration of the Office and shall, during the absence or temporary incapacity of the Inspector General, or during a vacancy in that office, act as Inspector General.

(e) The Inspector General or the Deputy may be removed from office by the President. The President shall communicate the reasons for any such removal to both Houses of Congress.

(f) The Inspector General and the Deputy shall each be subject to the provisions of subchapter III of chapter 73, title 5, United States Code, notwithstanding any exemption from such provisions which might otherwise apply.

(g) It shall be the duty and responsibility of the Inspector General—

(1) to supervise, coordinate, and provide policy direction for auditing and investigative activities relating to programs and operations of the Department;

(2) to recommend policies for, and to conduct, supervise, or coordinate other activities carried out or financed by the Department for the purpose of promoting economy and efficiency in the administration of, or preventing and detecting fraud and abuse in, its programs and operations;

(3) to recommend policies for, and to conduct, supervise, or coordinate relationships between the Department and other Federal agencies, State and local governmental agencies, and nongovernmental entities with respect to (A) all matters relating to the promotion of economy and efficiency in the administration of, or the prevention and detection of fraud and abuse in, programs and operations administered or financed by the Department, or (B) the identification and prosecution of participants in such fraud or abuse; and

(4) to keep the Secretary and the Congress fully and currently informed, by means of the reports required by subsection (j) and otherwise, concerning fraud and other serious problems, abuses, and deficiencies relating to the administration of programs and operations administered or financed by the Department, to recommend corrective action concerning such problems, abuses, and deficiencies, and to report on the progress made in implementing such corrective action.

(h) In carrying out the responsibilities specified in subsection (g)(1), the Inspector General shall have authority to approve or disapprove the use of outside auditors or to take other appropriate steps to insure the competence and independence of such auditors.

(i) In carrying out the duties and responsibilities provided by this section, the Inspector General shall give particular regard to the activities of the Comptroller General of the United States with a view to avoiding duplication and insuring effective coordination and cooperation.

(j) The Inspector General shall, not later than March 31 of each year, submit a report to the Secretary and to the Congress summarizing the activities of the Office during the preceding calendar year. Such report shall include, but need not be limited to—

(1) an identification and description of significant problems, abuses, and deficiencies relating to the administration of programs and operations of the Department disclosed by such activities;

(2) a description of recommendations for corrective action made by the Office with respect to significant problems, abuses, or deficiencies identified and described under paragraph (1);

(3) an evaluation of progress made in implementing recommendations described in

the report or, where appropriate, in previous reports; and

(4) a summary of matters referred to prosecuting authorities and the extent to which prosecutions and convictions have resulted.

(k) The Inspector General shall make reports on a quarterly basis to the Secretary and to the appropriate committees or subcommittees of the Congress identifying any significant problems, abuses, or deficiencies concerning which the Office has made a recommendation for corrective action and on which, in the judgment of the Inspector General, adequate progress is not being made.

(l) The Inspector General shall report immediately to the Secretary and to the appropriate committees or subcommittees of the Congress whenever the Office becomes aware of particularly serious or flagrant problems, abuses, or deficiencies relating to the administration of programs and operations of the Department. The Deputy and Assistant Inspectors General shall have particular responsibility for informing the Inspector General of such problems, abuses, or deficiencies.

(m) The Inspector General (1) may make such additional investigations and reports relating to the administration of the programs and operations of the Department as are, in the judgment of the Inspector General, necessary or desirable, and (2) shall provide such additional information or documents as may be requested by either House of Congress or with respect to matters within their jurisdiction, by any committee or subcommittee thereof.

(n) Notwithstanding any other provision of law, the reports, information, or documents required by or under this section shall be transmitted to the Secretary and the Congress, or committees or subcommittees thereof, by the Inspector General without further clearance or approval. The Inspector General shall, insofar as feasible, provide copies of the reports required under subsections (j) and (k) to the Secretary sufficiently in advance of the due date for their submission to Congress to provide a reasonable opportunity for comments of the Secretary to be appended to the reports when submitted to Congress.

(o) In addition to the authority otherwise provided by this section, the Inspector General, in carrying out the provisions of this section, is authorized—

(1) to have access to all records, reports, audits, reviews, documents, papers, recommendations, or other material available to the Department which relate to programs and operations with respect to which the Inspector General has responsibilities under this section;

(2) to request such information or assistance as may be necessary for carrying out the duties and responsibilities provided by this section from any Federal, State, or local governmental agency or unit thereof;

(3) to require by subpena the production of all information, documents, reports, answers, records, accounts, papers, and other data and documentary evidence necessary in the performance of the functions assigned by this section, which subpena, in the case of contumacy or refusal to obey, shall be enforceable by order of any appropriate United States district court;

(4) to have direct and prompt access to the Secretary when necessary for any purpose pertaining to the performance of functions and responsibilities under this section;

(5) and directed, in the event that a budget request for the Office of Inspector General is reduced, before submission to Congress, to an extent which the Inspector General deems seriously detrimental to the adequate performance of the functions mandated by this section, to so inform the Congress without delay;

(6) to select, appoint, and employ such officers and employees as may be necessary for carrying out the functions, powers, and duties of the Office subject to the provisions of title 5, United States Code, governing appointments in the competitive service, and the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates;

(7) to obtain services as authorized by section 3109 of title 5, United States Code, at daily rates not to exceed the equivalent rate prescribed for grade GS–18 of the General Schedule by section 5332 of title 5, United States Code;

(8) to the extent and in such amounts as may be provided in advance by appropriations Acts, to enter into contracts and other arrangements for audits, studies, analyses, and other services with public agencies and with private persons, and to make such payments as may be necessary to carry out the provisions of this section.

(p)(1) Upon request of the Inspector General for information or assistance under section (o)(2), the head of any Federal agency involved shall, insofar as is practicable, and not in contravention of any existing statutory restriction, or regulation of the Federal agency from which the information is requested, furnish to the Inspector General, or to an authorized designee, such information or assistance.

(2) Whenever information or assistance requested under subsection (o)(1) or (o)(2) is, in the judgment of the Inspector General, unreasonably refused or not provided, the Inspector General shall report the circumstances to the Secretary and to the appropriate committees or subcommittees of the Congress without delay.

(3) In the event any record or other information requested by the Inspector General under subsection (o)(1) or (o)(2) is not considered to be available under the provisions of section 552a(b) (1), (3), or (7) of title 5, United States Code, such record or information shall be available to the Inspector General in the same manner and to the same extent it would be available to the Comptroller General.

(q) The Secretary shall provide the Inspector General and his staff with appropriate and adequate office space at central and field office locations of the Department, together with such equipment, office supplies, and communications facilities and services as may be necessary for the operation of such offices, and shall provide necessary maintenance services for such offices and the equipment and facilities located therein.

(r)(1) The Inspector General shall receive compensation at the rate provided for level IV of the Executive Schedule by section 5315 of title 5, United States Code.

(2) The Deputy shall receive compensation at the rate provided for level V of the Executive Schedule by section 5316 of title 5, United States Code.

(s) There are hereby transferred to the Office of Inspector General such of the functions, powers, and duties of the Office of Inspector General in the Department of Health, Education, and Welfare established under title II of the Act of October 15, 1976 (42 U.S.C. 3521; 90 Stat. 2429), as the Director of the Office at Management and Budget determines to be principally involved in education.

(t) The personnel, assets, liabilities, contracts, property, records, and unexpended balances of appropriations, authorizations, allocations, and other funds employed, held, used, arising from, available or to be made available, of any office or agency the functions, powers, and duties of which are transferred under subsection (s) are hereby transferred to the Office of Inspector General.

(u) Personnel transferred pursuant to subsection (t) shall be transferred in accordance with applicable laws and regulations relating to the transfer of functions except that the classification and compensation of such personnel shall not be reduced for one year after such transfer.

(v) In any case where all the functions, powers, and duties of any office or agency are transferred pursuant to this section, such office or agency shall lapse. Any person who, on the effective date of this section, held a position compensated in accordance with the Executive Schedule, and who, without a break in service, is appointed in the Office to a position having duties comparable to those performed immediately preceding such appointment shall continue to be compensated in the new position at not less than the rate provided for the previous position, for the duration of service in the new position.

SAVING PROVISIONS

SEC. 15. (a) All orders, determinations, rules, regulations, permits, contracts, certificates, licenses, and privileges—

(1) which have been issued, made, granted, or allowed to become effective in the exercise of functions which are transferred under this Act, by (A) any agency or office or part thereof, any functions of which are transferred by this Act, or (B) any court of competent jurisdiction, and

(2) which are in effect at the time this Act takes effect,

shall continue in effect according to their terms until modified, terminated, superseded, set aside, or repealed by the Secretary of Education by any court of competent jurisdiction, or by operation of law.

(b) The provisions of this Act shall not affect any proceedings pending at the time this section takes effect before any agency or office, or part thereof, functions of which are transferred by this Act; but such proceedings, to the extent that they relate to functions so transferred, shall be continued before the Department of Education. Such proceedings, to the extent they do not relate to functions so transferred, shall be continued before the agency or office, or part thereof, before which they were pending at the time of such transfer. In either case orders shall be issued in such proceedings, appeals shall be taken therefrom, and payments shall be made pursuant to such orders, as if this Act had not been enacted; and orders issued in any such proceedings shall continue in effect until modified, terminated, superseded, or repealed by the Secretary of Education, by a court of competent jurisdiction, or by operation of law.

(c)(1) Except as provided in paragraph (2)—

(A) the provisions of this Act shall not affect suits commenced prior to the date this section takes effect, and

(B) in all such suits proceedings shall be had, appeals taken, and judgments rendered, in the same manner and effect as if this Act had not been enacted.

No suit, action, or other proceeding commenced by or against any officer in the officer's capacity as an officer of any agency or office, or part thereof, functions of which are transferred by this Act, shall abate by reason of the enactment of this Act. No cause of action by or against any agency or office, or part thereof, functions of which are transferred by this Act, or by or against any officer thereof in the officer's official capacity shall abate by reason of the enactment of this Act. Causes of actions, suits, or other proceedings may be asserted by or against the United States or such official of the Department of Education as may be appropriate and, in any litigation pending when this section takes effect, the court may at any time, on its own motion or that of any party, enter an order which will give effect to the provisions of this subsection.

(2) If, before the date on which this Act takes effect, any agency or office, or officer

thereof in the officer's official capacity, is a party to a suit, and under this Act—

(A) such agency or office or any part thereof, is transferred to the Secretary of Education, or

(B) any function of such agency or office, or part thereof, or of such officer is transferred to the Secretary of Education,

then such suit shall be continued by the Secretary of Education (except in the case of a suit not involving functions transferred to the Secretary of Education in which case the suit shall be continued by the agency, office, or part thereof, or officer which was a party to the suit prior to the effective date of this Act).

(d) With respect to any function transferred by this Act and exercised after the effective date of this Act, reference in any other Federal law to any agency, office, or part thereof, or officer so transferred or functions of which are so transferred shall be deemed to mean the department or officer in which such function is vested pursuant to this Act.

(e) Orders and actions of the Secretary of Education in the exercise of functions transferred under this Act shall be subject to judicial review to the same extent and in the same manner as if such orders and actions had been by the agency or office, or part thereof, exercising such functions, immediately preceding their transfer. Any statutory requirements relating to notice, hearings, action upon the record, or administrative review that apply to any function transferred by this Act shall apply to the exercise of such function by the Secretary.

(f) In the exercise of the functions transferred under this Act, the Secretary shall have the same authority as that vested in the agency or office, or part thereof, exercising such functions immediately preceding their transfer, and the Secretary's action in exercising such functions shall have the same force and effect as when exercised by such agency or office, or part thereof.

(g) The Secretary, in addition to the authority to delegate or redelegate contained in any other Act in the exercise of the functions transferred in this Act to the Secretary, may delegate any of such functions to such officers and employees of the Department as the Secretary may designate, may authorize such successive redelegations of such functions as the Secretary may deem appropriate, and may make such rules and regulations as may be necessary to carry out functions of the Secretary.

ADMINISTRATIVE PROVISIONS

SEC. 16. (a) The Secretary is authorized to establish a working capital fund, to be available without fiscal year limitation, for expenses necessary for the maintenance and operation of such common administrative services as the Secretary shall find to be desirable in the interest of economy and efficiency in the Department, including such services as a central supply service for stationery and other supplies and equipment for which adequate stocks may be maintained to meet in whole or in part the requirements of the Department and its agencies; central messenger, mail telephone, and other communications services; office space, central services for document reproduction, and for graphics and visual aids; and a central library service. The capital of the fund shall consist of any appropriations made for the purpose of providing capital (which appropriations are hereby authorized) and the fair and reasonable value of such stocks of supplies, equipment, and other assets and inventories on order as the Secretary may transfer to the fund, less the related liabilities and unpaid obligations. Such fund shall be reimbursed in advance from available funds of agencies and offices in the Department or from other sources, for supplies and services at rates which will approximate the expense of operation, including the accrual of annual leave and the depreciation of equipment. The fund shall also be credited with receipts from sale or exchange of property and receipts in payments for loss or damage to property owned by the fund. There shall be covered into the United States Treasury as miscellaneous receipts any surplus found in the fund (all assets, liabilities, and prior losses) considered above the amounts transferred or appropriated to establish and maintain such fund.

(b) In addition to the authority contained in any other Act which is transferred to and vested in the Secretary as necessary, and when not otherwise available, the Secretary is authorized to provide for, construct, or maintain the following for employees and their dependents stationed at remote localities:

(1) emergency medical services and supplies;

(2) food and other subsistence supplies;

(3) motion picture equipment and film for recreation and training; and

(4) living and working quarters and facilities.

The furnishing of medical treatment under paragraph (1) and the furnishing of services and supplies under paragraphs (2) and (3) of this subsection shall be at prices reflecting reasonable value as determined by the Secretary and the proceeds therefrom shall be credited to the appropriation from which the expenditure was made.

(c)(1) The Secretary is authorized to accept, hold, administer, and utilize gifts and bequests of property, both real and personal, for the purpose of aiding or facilitating the work of the Department. Gifts and bequests of money and the proceeds from sales of other property received as gifts or bequests shall be deposited in the Treasury in a separate fund and shall be disbursed upon order of the Secretary.

(2) Upon the request of the Secretary the Secretary of the Treasury may invest and reinvest in securities of the United States or in securities guaranteed as to principal and interest by the United States any moneys contained in the fund provided for in paragraph (1). Income accruing from such securities, and from any other property held by the Secretary pursuant to paragraph (1) shall be deposited to the credit of the fund, and shall be disbursed upon order of the Secretary.

(d) Nothing contained in this section is intended to amend, modify, or repeal any provisions of law administered by the Department of Health, Education, and Welfare which authorize the making of contracts for research.

ANNUAL REPORT

SEC. 17. The Secretary shall, as soon as practicable after the end of each fiscal year, prepare a report to the President for submission to the Congress on the activities of the Department during the preceding fiscal year Each such report shall also contain—

(1) objective data concerning changing trends in education (including enrollments), expenditures, numbers of teachers and other categories of professional and related personnel;

(2) special needs of critical concern such as the disadvantaged, rural, and urban education, and progress made toward the continuing renewal of education;

(3) the results and outcomes of education and schooling, including the overall results on generally recognized standard examinations for entrance to undergraduate and graduate institutions;

(4) budget projections for five years based on actual or anticipated appropriations for the fiscal year in which the annual report is issued;

(5) recommendations with respect to the improvement of programs for the handicapped; and

(6) recommendations with respect to (A) the advisory structure of the Department, including the names and composition of advisory committees and councils and the relationships the committees and councils bear to one another and (B) the elimination of overlapping advisory committees and similar data.

CONFORMING AMENDMENTS

SEC. 18. (a) Section 19(d)(1) of title 3, United States Code, is amended—

(1) by striking out "Secretary of Health, Education, and Welfare"; and

(2) by inserting before the period at the end thereof a comma and the following: "Secretary of Health and Welfare, Secretary of Education".

(b) Section 101 of title 5, United States Code, is amended—

(1) by striking out "Health, Education, and Welfare." and inserting in lieu thereof "Health and Welfare."; and

(2) by adding at the end thereof: "The Department of Education.".

(c) Section 5312 of title 5, United States Code, is amended—

(1) by striking out

"(10) Secretary of Health, Education, and Welfare."

and inserting in lieu thereof

"(10) Secretary of Health and Welfare.";

(2) by striking out "(13)" and inserting in lieu thereof "(14)"; and

(3) by inserting immediately after

"(12) Secretary of Transportation."

the following:

"(13) Secretary of Education.".

(d) Section 5314 of title 5, United States Code, is amended—

(1) by striking out

"(6) Under Secretary of Health, Education, and Welfare."

and inserting in lieu thereof:

"(6) Under Secretary of Health and Welfare.";

and

(2) by adding at the end thereof the following:

"(66) Under Secretary of Education.".

(e) Section 5315 of title 5, United States Code, is amended—

(1) by striking out "Assistant Secretaries of Health, Education, and Welfare (5)" and inserting in lieu thereof the following: "Assistant Secretaries of Health and Welfare (4)";

(2) by striking out "General Counsel of the Department of Health, Education, and Welfare." and inserting in lieu thereof the following: "General Counsel of the Department of Health and Welfare."; and

(3) by adding at the end thereof the following:

"(114) Assistant Secretary of Education for Legislative and Public Affairs.

"(115) Assistant Secretary of Education for Administrative and Management Policy.

"(116) Assistant Secretary of Education for Evaluation and Planning.

"(117) Assistant Secretary of Education for Intergovernmental Relations.

"(118) General Counsel, Department of Education.

"(119) Inspector General, Department of Education.".

EXPENDITURES AUTHORIZED

SEC. 19. The Secretary is authorized to make such expenditures (including expenditures for personal services and rent at the seat of government and elsewhere, for lawbooks, books of reference and periodicals, and printing and binding) as may be necessary to carry out the provisions of this Act, and as may be provided for by the Congress from time to time.

APPROPRIATIONS AUTHORIZED

SEC. 20. There are authorized to be appropriated such sums as may be necessary to enable the Department to carry out the provi-

sions of this Act and to perform any other duties which may be imposed upon it by law.

EFFECTIVE DATE

SEC. 21. The provisions of this Act shall be effective on its date of enactment.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. YOUNG of Alaska, for March 21 and 22, on account of official business.

Mr. RAHALL (at the request of Mr. WRIGHT), for today, on account of official business.

Mr. JONES of Tennessee (at the request of Mr. WRIGHT), after 1 p.m. today on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. LEACH) to revise and extend their remarks and include extraneous material:)

Mr. QUIE, for 5 minutes, today.

Mr. CARTER, for 5 minutes, today.

Mr. BURKE of Florida, for 5 minutes, today.

Mrs. SMITH of Nebraska, for 2 minutes, today.

Mr. KEMP, for 10 minutes, today.

(The following Members (at the request of Mr. KOSTMAYER), to revise and extend their remarks and include extraneous material:)

Mr. COTTER, for 5 minutes, today.

Mr. ROSTENKOWSKI, for 15 minutes, today.

Ms. MEYNER, for 5 minutes, today.

Mr. CORNELL, for 5 minutes, today.

Mr. HARRINGTON, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. JONES of Oklahoma, for 5 minutes, today.

Mr. KOCH, for 10 minutes, today.

Mr. MCHUGH, for 10 minutes, today.

Mr. THOMPSON, for 15 minutes, today.

Mr. VANIK, for 60 minutes, March 22, 1977.

Mr. BONKER, for 5 minutes, today.

Mr. KRUEGER, for 5 minutes, today.

Mr. BURKE of Massachusetts, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. HEFTEL, and to include extraneous matter notwithstanding the fact that it exceeds two pages of the CONGRESSIONAL RECORD and is estimated by the Public Printer to cost $1,610.

Mr. RUDD, following the remarks of GARY A. MYERS on the amendment on H.R. 4088 today.

(The following Members (at the request of Mr. LEACH) and to include extraneous matter:)

Mr. DERWINSKI in two instances.

Mr. CONABLE.

Mr. JOHN T. MYERS.

Mr. ANDERSON of Illinois.

Mr. GOLDWATER.

Mr. WAMPLER.

Mrs. HOLT.

Mr. PURSELL.

Mr. SAWYER.

Mr. BOB WILSON in two instances.

Mr. KEMP.

Mr. FINDLEY.

Mr. PRESSLER.

Mr. BURGENER.

(The following Members (at the request of Mr. KOSTMAYER), and to include extraneous matter:)

Mr. EILBERG.

Mr. RICHMOND.

Mr. COTTER.

Mr. SOLARZ.

Mr. FORD of Tennessee.

Mrs. BURKE of California.

Mr. RODINO.

Mr. ANDERSON of California in three instances.

Mr. GONZALEZ in three instances.

Ms. MIKULSKI.

Mr. KOCH in two instances.

Mr. KILDEE.

Mr. ASHLEY in two instances.

Mr. JONES of Tennessee.

Mr. FARY.

Mr. RANGEL.

Mr. MOAKLEY in three instances.

Mr. LEHMAN in two instances.

Mr. CHARLES H. WILSON of California in two instances.

Mr. WOLFF.

Mr. NOLAN.

Mr. HARKIN.

Mr. BEDELL.

Mr. UDALL in two instances.

Mr. HARRINGTON.

Mr. OBERSTAR.

Mr. AMBRO in two instances.

ADJOURNMENT

Mr. KOSTMAYER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 29 minutes p.m.), under its previous order, the House adjourned until Monday, March 21, 1977, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1040. A letter from the General Counsel, U.S. General Accounting Office, transmitting a report on the release of budget authority for the Army Corps of Engineers, the rescission of which was proposed by the President but not approved by the Congress; to the Committe on Appropriations.

1041. A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting notice of the location, nature, and estimated cost of a construction project proposed to be undertaken by the Army Reserve, pursuant to 10 U.S.C. 2233a(1); to the Committee on Armed Services.

1042. A letter from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting proposed final regulations for the program of financial assistance in federally affected areas (impact aid) for treatment of payments under State equalization programs, pursuant to section 431(d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

1043. A letter from the Secretary of Health, Education, and Welfare, transmitting a report on the Department's activities under the Freedom of Information Act during calendar year 1976, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

1044. A letter from the President and the National Executive Director, Girl Scouts of the United States of America, transmitting the organization's 27th annual report, pursuant to section 7 of the act of March 16, 1950, as amended, and section 3 of Public Law 88–504 (H. Doc. No. 95–102); to the Committee on the Judiciary and ordered to be printed.

1045. A letter from the National Adjutant, Veterans of World War I of the U.S.A., Inc., transmitting the proceedings of the organization's 24th national convention and its annual report for the year ended September 8, 1976, pursuant to section 16 of Public Law 85–530, together with a financial report for the 9 months ended June 30, 1976 (H. Doc. No. 95–103); to the Committee on the Judiciary and ordered to be printed with illustrations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MAHON: Committee on Appropriations. Report on subdivision to subcommittees of budget totals agreed to in the third concurrent resolution on the budget (Senate Concurrent Resoluion 10) for fiscal year 1977 (Rept. No. 95–85). Referred to the Committee of the Whole House on the State of the Union.

Mr. PERKINS: Committee on Education and Labor. H.R. 3437. A bill to make certain technical and miscellaneous amendments to provisions relating to vocational education contained in the Education Amendments of 1976; with amendment (Rept. No. 95–86). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of ruleXXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. FINDLEY:

H.R. 5165. A bill to amend the Age Discrimination in Employment Act of 1967 to provide that the protection against discrimination established by such act shall apply to all individuals who are at least 40 years of age, to abolish certain Federal mandatory retirement requirements, and for other purposes; jointly, to the Committees on Education and Labor, Post Office and Civil Service, Armed Services, and the District of Columbia.

By Mr. MARTIN (for himself, Mr. BROYHILL, Mr. PREYER, Mr. CARTER, Mr. SCHEUER, Mr. WIRTH, Mr. MADIGAN, Mr. SKUBITZ, Mr. LUKEN, Mr. FRENZEL, and Mr. MAZZOLI):

H.R. 5166. A bill to amend the Federal Food, Drug, and Cosmetic Act to authorize an evaluation of the risks and benefits of certain food additives and to permit the marketing of saccharin until such an evaluation can be made of it; to the Committee on Interstate and Foreign Commerce.

By Mr. ANDERSON of Illinois:

H.R. 5167. A bill to provide Federal financial and technical assistance to the States to encourage the development and implementation of youth camp safety plans and programs; to the Committee on Education and Labor.

By Mr. ANDREWS of North Dakota:

H.R. 5168. A bill to amend section 4481 of the Internal Revenue Code of 1954 to

exempt single unit trucks from the highway use tax; to the Committee on Ways and Means.

By Mr. ASHLEY:

H.R. 5169. A bill to amend the Emergency Natural Gas Act of 1977 to extend for 3 years the emergency authorities granted by such act and to provide that in certain circumstances industrial use of natural gas shall be a high-priority use for purposes of such act; to the Committee on Interstate and Foreign Commerce.

By Mrs. BOGGS (for herself, Mr. BALDUS, Mr. BEVILL, Mr. CLAY, Mr. COUGHLIN, Mr. EDGAR, Mr. EDWARDS of Oklahoma, Mr. ERTEL, Mr. EVANS of Georgia, Mr. FARY, Mr. FASCELL, Mr. FRASER, Mr. FREY, Mr. HIGHTOWER, Mr. HILLIS, Mr. HUGHES, Mr. HYDE, Mr. KILDEE, Mr. KINDNESS, Mr. LEHMAN, Mr. LLOYD of California, Mr. LOTT, Mr. LUJAN, Mr. MCCLOSKEY, and Mr. METCALFE):

H.R. 5170. A bill to provide recognition to the Women's Air Force Service Pilots for their service to their country during World War II by deeming such service to have been active duty in the Armed Forces of the United States for purposes of laws administered by the Veterans' Administration; to the Committee on Veterans' Affairs.

By Mrs. BOGGS (for herself, Mr. MIKVA, Mr. MITCHELL of Maryland, Mr. MOAKLEY, Mr. MOLLOHAN, Mr. MOORHEAD of Pennsylvania, Mr. MURPHY of Pennsylvania, Mr. NEAL, Mr. PEPPER, Mr. PREYER, Mr. PRITCHARD, Mr. RODINO, Mr. SAWYER, Mr. SIMON, Mr. STEERS, Mr. STRATTON, Mr. UDALL, Mr. WHITE, Mr. WHITEHURST, Mr. WHITLEY, Mr. CHARLES H. WILSON of California, Mr. CHARLES WILSON of Texas, Mr. WOLFF, Mr. YOUNG of Florida, and Mr. EDWARDS of California):

H.R. 5171. A bill to provide recognition to the Women's Air Force Service Pilots for their service to their country during World War II by deeming such service to have been active duty in the Armed Forces of the United States for purposes of laws administered by the Veterans' Administration; to the Committee on Veterans' Affairs.

By Mr. BRODHEAD:

H.R. 5172. A bill to amend title 38, United States Code, to eliminate the time period in which a veteran has to use his educational benefits; to the Committee on Veterans' Affairs.

By Mr. BROWN of Ohio:

H.R. 5173. A bill to amend the Federal Food, Drug, and Cosmetic Act with respect to food additives; to the Committee on Interstate and Foreign Commerce.

By Mr. CHAPPELL:

H.R. 5174. A bill to amend title 28 of the United States Code, to provide for an exclusive remedy against the United States in suits based upon acts or omissions of U.S. employees, and for other purposes; to the Committee on the Judiciary.

By Mr. CONABLE:

H.R. 5175. A bill to amend the Tax Reform Act of 1976 to delay the termination date for deductions for certain transfers of property for conservation purposes, and to amend the Internal Revenue Code of 1954 to limit the recapture of amortization deductions for certain rehabilitation expenditures for certified historic structures to the extent that the deductions exceed otherwise allowable straight line depreciation; to the Committee on Ways and Means.

By Mr. CORMAN (for himself and Mr. STARK):

H.R. 5176. A bill to lower the duty on levulose until the close of December 31, 1980; to the Committee on Ways and Means.

By Mr. CORNELL:

H.R. 5177. A bill to encourage greater participation in Federal elections by designating Election Day a national holiday; to the Committee on Post Office and Civil Service.

By Mr. ROBERT W. DANIEL, JR. (for himself, Mr. ARMSTRONG, Mr. ANDERSON of Illinois, Mr. APPLEGATE, Mr. BROWN of Michigan, Mr. CAPUTO, Mr. CONTE, Mr. EDWARDS of Oklahoma, Mr. EILBERG, Mr. FINDLEY, Mr. GILMAN, Mr. GOLDWATER, Mr. KOSTMAYER, Mr. LAFALCE, Mr. OTTINGER, Mr. PANETTA, Mr. PEASE, Mr. SAWYER, Mr. STUMP, and Mr. WALGREN):

H.R. 5178. A bill to provide that the changes made by the Tax Reform Act of 1976 to the exclusion for sick pay shall only apply to taxable years beginning after December 31, 1976; to the Committee on Ways and Means.

By Mr. EVANS of Colorado:

H.R. 5179. A bill to amend the Clean Air Act to establish certain high altitude performance standards; to the Committee on Interstate and Foreign Commerce.

By Mr. FISH:

H.R. 5180. A bill to limit the power of the President to affect the Veterans' Administration in reorganization plans transmitted to the Congress under chapter 9 of title 5, United States Code; to the Committee on Government Operations.

By Mr. FISHER:

H.R. 5181. A bill to amend title 5, United States Code, to include as creditable service for purposes of the civil service retirement system certain periods of service of civilian employees of nonappropriated fund positions in special services recreation and morale programs of the Armed Forces; to the Committee on Post Office and Civil Service.

By Mr. FISHER (for himself, Mr. ANDERSON of California, Mr. HYDE, and Mr. LE FANTE):

H.R. 5182. A bill to eliminate the complete immunity from criminal, civil, and administrative jurisdiction currently given to all foreign diplomats and their staffs and to establish the Vienna Convention on Diplomatic Relations as the basis for diplomatic privileges and immunities in the United States; to the Committee on International Relations.

By Mr. FORD of Tennessee:

H.R. 5183. A bill to amend the Small Business Act to provide that the Small Business Administration shall, in assisting small business concerns in the sale of materials and services to the Federal Government, give special preference to small business concerns with 100 or fewer employees; to the Committee on Small Business.

By Mr. GEPHARDT:

H.R. 5184. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. HOWARD (for himself and Mr. HUGHES):

H.R. 5185. A bill to amend section 7(b)(2) of the Small Business Act to authorize the Small Business Administration to make loans with respect to disasters resulting from oil spills, fish kills, and certain sewage or sludge deposits; to the Committee on Small Business.

By Mr. JOHNSON of Colorado (for himself and Mr. WIRTH):

H.R. 5186. A bill to amend Public Law 92-314 to authorize appropriations to the Energy Research and Development Administration for financial assistance to limit radiation exposure from uranium mill tailings used in construction and for other purposes; jointly, to the Committees on Interior and Insular Affairs, and Interstate and Foreign Commerce.

By Mr. JONES of Oklahoma:

H.R. 5187. A bill to amend the Social Security Act to provide for nondiscriminatory reimbursement practices of the Social Security Administration in connection with utilization review of Medicare patients and to provide for fair reimbursement for carrying out such activities; to the Committee on Ways and Means.

H.R. 5188. A bill to amend the Internal Revenue Code to permit individuals to deduct all expenses for their medical care, and for other purposes; to the Committee on Ways and Means.

H.R. 5189. A bill to amend the Tax Reform Act of 1976, approved October 4, 1976, to provide for the continuation of a provision for the cancellation of certain student loans; to the Committee on Ways and Means.

H.R. 5190. A bill to amend an act to provide for the continuation of an exemption from the definition of income, for all persons so eligible pursuant to section 4 of Public Law 93-483; to the Committee on Ways and Means.

H.R. 5191. A bill providing that the tax treatment of certain transportation expenses between a taxpayer's residence and place of work shall be determined without regard to Revenue Ruling 76-453; to the Committee on Ways and Means.

By Mr. JONES of Tennessee (for himself, Mr. COLEMAN, Mr. MATHIS, Mr. WAMPLER, Mr. PANETTA, Mr. BAUCUS, Mr. JENRETTE, and Mr. JONES of North Carolina):

H.R. 5192. A bill to provide for an emergency feed program; to the Committee on Agriculture.

By Mr. KASTENMEIER (for himself, Mr. RAILSBACK, Mr. CORNWELL, Mr. COTTER, and Mr. ERTEL):

H.R. 5193. A bill to require candidates for Federal office, Members of the Congress, and officers and employees of the United States to file statements with the Comptroller General with respect to their income and financial transactions; to the Committee on the Judiciary.

By Mr. LEACH (for himself, and Mr. RAILSBACK):

H.R. 5194. A bill to establish requirements for notification of Congress before the closure of, or significant reduction in force at, a military installation is carried out; and to provide Congress, for 5 consecutive years following the closure of or significant reduction in force at a military installation, an analysis of the cost savings and efficiencies achieved; to the Committee on Armed Services.

By Mr. LEACH (for himself, Mr. STANTON, Mr. WYLIE, Mr. GRASSLEY, Mrs. FENWICK, Mr. STEERS, Mr. HOLLENBECK, Mr. HANLEY, Mrs. SPELLMAN, Mr. BADHAM, Mr. DUNCAN of Tennessee, Mr. STEIGER, Mr. SAWYER, Mr. RAILSBACK, Mr. MARLENEE, Mr. WALKER, Mr. QUIE, Mr. MARKS, Mr. PURSELL, Mr. SCHULZE, Mr. PRESSLER, Mrs. SMITH of Nebraska, Mr. HAGEDORN, and Mr. STANGELAND):

H.R. 5195. A bill to amend section 18 of the Federal Deposit Insurance Act; to the Committee on Banking, Finance and Urban Affairs.

By Mr. LEACH (for himself, Mr. MOAKLEY, Mr. SIMON, Mr. ICHORD, Mr. RICHMOND, Mr. BEILENSON, Mr. PEASE, Mr. FITHIAN, Mr. ENGLISH, Mr. DICKS, Mr. JENRETTE, Mr. PANETTA, Mr. ERTEL, Mr WALGREN and Mr. TRAXLER):

H.R. 5196. A bill to amend section 18 of the Federal Deposit Insurance Act; to the Committee on Banking, Finance and Urban Affairs.

By Mrs. LLOYD of Tennessee:

H.R. 5197. A bill to amend the Federal Food, Drug, and Cosmetic Act to revise the standard for regulating food additives found to induce cancer in man or animal; to the Committee on Interstate and Foreign Commerce.

By Mr. McCORMACK (for himself, Mr. PRITCHARD, Mr. AUCOIN, Mr. EDWARDS of California, Mr. BURGENER, and Mr. GOLDWATER):

H.R. 5198. A bill to provide temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976–77 drought; to the Committee on Interior and Insular affairs.

By Mr. McFALL:

H.R. 5199. A bill to provide temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976–77 drought, and to provide for emergency drought assistance loans; to the Committee on Inerior and Insular Affairs.

By Mr. MARKS (for himself, Mr. AMMERMAN, Mrs. CHISHOLM, Mr. MURPHY of New York, Mr. RAHALL, and Mr. VANDER JAGT):

H.R. 5200. A bill to offset the human and economic hardships created by critical shortages of energy supplies of unusually severe weather conditions; jointly to the Committees on Banking, Finance and Urban Affairs, Education and Labor, and Small Business.

By Mr. MARLENEE:

H.R. 5201. A bill to allow Federal employment preference to certain employees of the Bureau of Indian Affairs, and to certain employees of the Indian Health Service, who are not entitled to the benefits of, or who have been adversely affected by the application of, certain Federal laws allowing employment preference to Indians, and for other purposes; to the Committee on Post Office and Civil Service.

By Mrs. MEYNER:

H.R. 5202. A bill to amend the Internal Revenue Code of 1954 to exempt farm vehicles and soil and water conservation vehicles from the highway use tax; to the Committee on Ways and Means.

By Mr. MIKVA:

H.R. 5203. A bill to amend the Tariff Schedules of the United States in order to suspend until the close of December 31, 1978, the duty on certain field glasses, opera glasses, binoculars and other telescopes; to the Committee on Ways and Means.

By Mr. MITCHELL of Maryland:

H.R. 5204. A bill to amend the Internal Revenue Code of 1954 to provide individuals a credit against income tax if a taxpayer, his spouse, or any dependent of the taxpayer is handicapped; to the Committee on Ways and Means.

By Mr. MITCHELL of Maryland (for himself and Mr. D'AMOURS):

H.R. 5205. A bill to authorize the Secretary of the Treasury to invest public moneys, and for other purposes; jointly, to the Committees on Ways and Means, and Banking, Finance and Urban Affairs.

By Mr. PICKLE:

H.R. 5206. A bill to amend the Truth in Lending Act to provide that a creditor may not be held civilly liable under the act if the creditor is in substantial compliance with the provisions of the act; to the Committee on Banking, Finance and Urban Affairs.

By Mr. PRESSLER:

H.R. 5207. A bill to establish the National Diabetes Advisory Board and to take other actions to insure the implementations of the Committee on Interstate and Foreign Commerce.

H.R. 5208. A bill to amend the Revised Statutes of the United States to permit any Federal officer or employee to waive the receipt of any portion of his/her compensation; to the Committee on Post Office and Civil Service.

H.R. 5209. A bill to amend title 5, United States Code, to provide for a reduced retirement annuity for a Member of Congress who remains in office after becoming 70 years of age; jointly, to the Committees on Post Office and Civil Service, and House Administration.

By Mr. QUILLEN:

H.R. 5210. A bill to amend the Clean Air Act to establish certain motor vehicle emission standards, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. QUILLEN (for himself and Mr. EMERY):

H.R. 5211. A bill to provide recognition to the Women's Air Force Service Pilots for their service to their country during World War II by deeming such service to have been active duty in the Armed Forces of the United States for purposes of laws administered by the Veterans' Administration; to the Committee on Veterans' Affairs.

By Mr. RICHMOND (for himself, Mr. BADILLO, Mr. BEARD of Rhode Island, Mr. BINGHAM, Mr. CARNEY, Mrs. COLLINS of Illinois, Mr. CORNELL, Mr. DIGGS, Mr. DOWNEY, Mr. JEFFORDS, Mr. LEHMAN, Mrs. LLOYD of Tennessee, Mr. MCKINNEY, Mr. MIKVA, Mr. MITCHELL of New York, Mr. MITCHELL of Maryland, Mr. MOAKLEY, Mr. NEAL, Mr. NOLAN, Mr. PATTISON of New York, Mr. ROE, Mr. ROSENTHAL, Mr. ROYBAL, Mr. RYAN, and Mr. SCHEUER):

H.R. 5212. A bill to provide a comprehensive program of employment services and opportunities for middle-aged and older Americans; jointly, to the committees on Education and Labor, and Post Office and Civil Service.

By Mr. RICHMOND (for himself, Mr. SOLARZ, Mrs. SPELLMAN, Mr. STOKES, Mr. WEISS, Mr. YATRON, and Mr. FORD of Tennessee):

H.R. 5213. A bill to provide a comprehensive program of employment services and opportunities for middle-aged and older Americans; jointly, to the Committees on Education and Labor, and Post Office and Civil Service.

By Mr. ST GERMAIN (for himself and Mr. REUSS):

H.R. 5214. A bill to amend section 18 of the Federal Deposit Insurance Act; to the Committee on Banking, Finance and Urban Affairs.

By Mr. SARASIN (for himself, Mr. ANDERSON of Illinois, Mr. ASHLEY, Mr. BROWN of Michigan, Mr. BROWN of California, Mr. CEDERBERG, Mr. CLEVELAND, Mr. DOWNEY, Mr. DUNCAN of Tennessee, Mr. EDGAR, Mr. FRENZEL, Mr. GRADISON, Mr. HORTON, Mr. HYDE, Mr. JENRETTE, Mr. KEMP, Mr. MADIGAN, Mr. MAGUIRE, Mr. MIKVA, Mr. MOORHEAD of California, Mr. QUIE, Mr. ROSTENKOWSKI, and Mr. WALKER):

H.R. 5215. A bill to amend the Occupational Safety and Health Act of 1970 to further encourage industrial safety, and for other purposes; to the Committee on Education and Labor.

By Mr. SAWYER:

H.R. 5216. A bill to amend title 38 of the United States Code to make certain that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced because of increases in monthly social security benefits; to the Committee on Veterans' Affairs.

By Mr. SCHEUER (for himself, Mr. WAXMAN, Mr. BADILLO, Mr. JOHN L. BURTON, Mrs. CHISHOLM, Mrs. COLLINS of Illinois, Mr. CORRADA, Mr. DERWINSKI, Mr. DOWNEY, Mr. DRINAN, Mr. DUNCAN of Tennessee, Mr. FLOOD, Mr. FORD of Tennessee, Mr. HAWKINS, Mr. MAGUIRE, Mr. MITCHELL of Maryland, Mr. MOAKLEY, Mr. NEAL, Mr. PATTERSON of California, Mr. ROSENTHAL, Mr. ROYBAL, and Mr. SOLARZ):

H.R. 5217. A bill to establish equal employment opportunities for individuals over 40 years of age under a nationwide program for full employment and balanced growth; to the Committee on Education and Labor.

By Mr. SIMON (for himself, Mr. JENRETTE, Mr. KOCH, Mr. BONIOR, Mr. FLOOD, Mr. LE FANTE, Mr. BARNARD, and Mr. RYAN):

H.R. 5218. A bill to provide meaningful and productive work for the Nation's youths, and to provide comprehensive job counseling and placement services for youths, and for other purposes; to the Committee on Education and Labor.

By Mr. SIMON:

H.R. 5219. By Mr. WALKER:

H.R. 5225. A bill to permit the marketing of saccharin with labeling warning of evidence of its risk to health; to the Committee on Interstate and Foreign Commerce.

By Mr. WEISS (for himself and Mr. WAXMAN):

H.R. 5226. A bill to amend the Age Discrimination in Employment Act of 1971 to extend the protection against discrimination in employment to individuals who are over 64 years of age, and to make unlawful those seniority systems and employee benefit plans which require the retirement of individuals who are 40 years of age or older; to the Committee on Education and Labor.

By Mr. WHITEHURST (for himself, Mr. BADHAM, Mr. BAFALIS, Mr. BAUCUS, Mr. BEDELL, Mr. BUCHANAN, Mr. CLEVELAND, Mr. COCHRAN, Mr. CORNWELL, Mr. COUGHLIN, Mr. DAN DANIEL, Mr. EMERY, Mr. ERLENBORN, Mr. FAUNTROY, Mr. FINDLEY, Mr. FLOWERS, Mr. FLYNT, Mr. GLICKMAN, Mr. HANNAFORD, Mr. HIGHTOWER, Mr. HYDE, Mr. KEMP, Mr. KINDNESS, Mr. KOSTMAYER, and Mr. LAGOMARSINO):

H.R. 5227. A bill to give the Food and Drug Administration greater discretion in the control of food additives; to the Committee on Interstate and Foreign Commerce.

By Mr. WHITEHURST (for himself, Mr. LOTT, Mr. LUJAN, Mr. MAZZOLI, Ms. MIKULSKI, Mr. JOHN T. MYERS, Mr. NEDZI, Mr. REGULA, Mr. RUNNELS, Mr. SAWYER, Mrs. SMITH of Nebraska, Mr. CHARLES WILSON of Texas, and Mr. CHARLES H. WILSON of California):

H.R. 5228. A bill to give the Food and Drug Administration greater discretion in the control of food additives; to the Committee on Interstate and Foreign Commerce.

By Mr. PICKLE:

H.J. Res. 332. Joint resolution designating National Coaches' Day; to the Committee on Post Office and Civil Service.

By Mr. ROSTENKOWSKI:

H.J. Res. 333. Joint resolution relating to the publication of economic and social statistics for Americans of Balto-Slavic origin or descent; jointly, to the Committees on Education and Labor, and Post Office and Civil Service.

By Mr. BOB WILSON:

H.J. Res. 334. Joint resolution requiring that the Congressional Medal of Honor previously awarded to D. Mary Edwards Walker in 1865 be restored to her; to the Committee on Armed Services.

By Mr. YOUNG of Missouri (for himself, Mr. HYDE, Mr. SNYDER, Mr. EDWARDS of Oklahoma, and Mr. GEPHARDT):

H.J. Res. 335. Joint resolution proposing an amendment to the Constitution of the United States with respect to the right to life; to the Committee on the Judiciary.

By Mr. COLEMAN (for himself, Mr. BURLISON of Missouri, Mr. GEPHARDT, Mr. SKELTON, Mr. VOLKMER, and Mr. YOUNG of Missouri):

H. Con. Res. 164. Concurrent resolution providing for the printing of additional copies of memorial addresses delivered in the Congress in tribute to Jerry L. Litton; to the Committee on House Administration.

By Mr. FLOOD (for himself, Mr. ANNUNZIO, Mr. BURKE of Massachusetts, Mr. DELANEY, Mr. DERWINSKI, Mr. DODD, Mr. GIAIMO, Mr. KOCH, Mr. MOAKLEY, Mr. PATTEN, Mr. SARASIN, Mr. STRATTON, Mr. WALSH, and Mr. WYDLER):

H. Con. Res. 165. Concurrent resolution relative to rights of Ukrainian citizens; to the Committee on International Relations.

By Mr. PEASE (for himself, Mr. PRICE, Mr. ROE, Mr. OTTINGER, Mr. FITHIAN, Mr. JENRETTE, Mr. BLOUIN, Mr. PATTERSON of California, Mr. DOWNEY, Mr. CARNEY, Mr. WALGREN, Mr. KOSTMAYER, Mr. PANETTA, Mr. AUCOIN, Mr. NIX, Mr. ADDABBO, Mrs. FENWICK, Mr. JOHN L. BURTON, Mr. MURPHY of Pennsylvania, Mr. BINGHAM, Mr. BRODHEAD, Mr. KILDEE, Mr. BRADEMAS, Mr. HANNAFORD, and Mr. WIRTH):

H. Con. Res. 166. Concurrent resolution reaffirming the commitment of the United States to obtain full compliance with the human rights provisions of the Helsinki Accords and to press for global commitment to human rights; to the Committee on International Relations.

By Mr. PRESSLER:

H. Con. Res. 167. Concurrent resolution expressing the sense of the Congress in favor of diverting at least one-fifth of the funds which would otherwise be appropriated for foreign military assistance each year and using such funds instead to improve the financial condition of the social security program; to the Committee on Appropriations.

By Mr. HORTON (for himself, Mr. STEED, Mr. BROYHILL, Mr. ANDERSON of Illinois, Mr. LOTT, Mr. GLICKMAN, Mrs. SPELLMAN, Mr. ERLENBORN, Mr. CHARLES WILSON of Texas, Mr. OTTINGER, Mr. BARNARD, Mr. BLOUIN, Mr. BROWN of Michigan, Mr. LEVITAS, Mr. LLOYD of California, Mr. FISH, Mr. ERTEL, Mr. HANNAFORD, Mr. QUIE, Mr. KETCHUM, Mr. WALKER, Mr. ARCHER, Mr. WATKINS, Mr. MILLER of Ohio, and Mr. ANDREWS of North Dakota:

H. Res. 412. Resolution amending clause 7 of rule XIII of the rules of the House; to the Committee on Rules.

By Mr. HORTON (for himself, Mr. STEED, Mr. HANLEY, Mr. FASCELL, Mr. PEPPER, Mr. SIMON, Mr. MCKINNEY, Mr. AUCOIN, Mr. HEFNER, Mr. HIGHTOWER, Mr. LAGOMARSINO, Mrs. LLOYD of Tennessee, Mr. WINN, Mr. DAN DANIEL, Mr. THONE, Mr. WHITEHURST, Mr. IRELAND, Mr. GRADISON, Mr. MAZZOLI, Mr. SANTINI, Mr. LE FANTE, Mrs. SMITH of Nebraska, Mr. WIRTH, Mr. HALL, and Mr. KINDNESS):

H. Res. 413. Resolution amending clause 7 of rule XIII of the rules of the House; to the Committee on Rules.

By Mr. HORTON (for himself, Mr. STEED, Mr. SISK, Mr. MURPHY of Illinois, Mr. PIKE, Mr. TEAGUE, Mr. PICKLE, Mr. ICHORD, Mr. MOORHEAD of California, Mr. FORSYTHE, Mr. COUGHLIN, Mr. CAVANAUGH, Mr. RAHALL, Mr. YATRON, Mr. COLLINS of Texas, Mr. CLEVELAND, Mr. PRESSLER, Mr. GEPHARDT, Mr. EDWARDS of California, and Mr. PRITCHARD):

H. Res. 414. Resolution amending clause 7 of rule XIII of the rules of the House; to the Committee on Rules.

By Mrs. MEYNER (for herself, Mr. EDGAR, Mr. MURPHY of New York, Mr. METCALFE, Mr. FRASER, Mrs. FENWICK, Mr. MCHUGH, Mr. HUGHES, Mr. MICHAEL O. MYERS, Mr. BADILLO, Mr. KREBS, Mr. MAZZOLI, Mr. MITCHELL of Maryland, Mr. SIMON, Mr. PATTISON of New York, Mrs. SCHROEDER, Mrs. SPELLMAN, Mr. RICHMOND, Ms. KEYS, Mr. JENRETTE, Ms. MIKULSKI, Mr. WEISS, Mr. ROYBAL, Mr. BEDELL, and Mr. EDWARDS of California):

H. Res. 415. Resolution applauding the courageous efforts of the Women's Peace Movement to end the tragic sectarian violence in Northern Ireland; to the Committee on International Relations.

By Mrs. MEYNER (for herself, Mr. MIKVA, Mr. WAXMAN, Mr. SOLARZ, Mr. LEHMAN, Mr. BROWN of California, Mr. THOMPSON, Mr. KASTENMEIER, Mr. STARK, and Mr. QUIE):

H. Res. 416. Resolution applauding the courageous efforts of the Women's Peace Movement to end the tragic sectarian violence in Northern Ireland; to the Committee on International Relations.

By Mr. SCHEUER (for himself, Mr. ALEXANDER, Mr. ALLEN, Mr. BROOMFIELD, Mr. BOWEN, Mr. BRADEMAS, Mr. BROWN of Ohio, Mr. BROYHILL, Mr. BURGENER, Mr. BURKE of Florida, Mr. JOHN L. BURTON, Mr. BUTLER, Mr. DANIELSON, Mr. DEVINE, Mr. ECKHARDT, Mr. EDWARDS of California, Mr. ERLENBORN, Mr. FOUNTAIN, Mr. GIBBONS, Mr. GRADISON, Mr. GUDGER, Mr. HAMILTON, Mr. HARKIN, Mr. KASTENMEIER, and Mr. LONG of Louisiana):

H. Res. 417. Resolution to establish a Select Committee on Population; to the Committee on Rules.

By Mr. SCHEUER (for himself Mr. MADIGAN, Mr. MAGUIRE, Mr. MEEDS, Mr. MIKVA, Mr. MONTGOMERY, Mr. MOORHEAD of California, Mr. MOORHEAD of Pennsylvania, Mr. MURPHY of Illinois, Mr. PATTEN, Mr. QUILLEN, Mr. RAHALL, Mr. RONCALIO, Mr. ROSTENKOWSKI, Mr. RYAN, Mr. SHUSTER, Mr. SISK, Mr. SKUBITZ, Mr. SMITH of Iowa, Mr. STAGGERS, Mr. STEED, Mr. STOCKMAN, Mr. THOMPSON, Mr. WHALEN, and Mr. WIGGINS):

H. Res. 418. Resolution to establish a Select Committee on Population; to the Committee on Rules.

By Mr. SCHEUER (for himself, Mr. WINN, and Mr. ZABLOCKI):

H. Res. 419. Resolution to establish a Select Committee on Population; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. GEPHARDT:

H.R. 5229. A bill for the relief of Ebinger Electronics, Inc.; to the Committee on the Judiciary.

By Mr. QUAYLE:

H.R. 5230. A bill for the relief of Jung In Bang; to the Committee on the Judiciary.

PETITION, ETC.

Under clause 1 of rule XXII,

62. The SPEAKER presented a petition of Arthur J. Herrimann, Jr., West Warwick, R.I., relative to the Environmental Protection Agency's program for cleaning up municipal discharge, which was referred; to the Committee on Public Works and Transportation.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 4250

(Amendment in the nature of a substitute.)

By Mr. ALLEN:

Strike out all language which follows the enacting clause and substitute therefor the following language:

TITLE I—PROTECTION OF ECONOMIC RIGHTS OF LABOR IN THE CONSTRUCTION INDUSTRY

SEC. 101. (a) Section 8(b)(4) of the National Labor Relations Act, as amended, is amended by inserting before the semicolon at the end thereof ": *Provided further*, That nothing contained in clause (B) of this paragraph (4) shall be construed to prohibit any strike or refusal to perform services or any inducement of any individual employed by any employer primarily engaged in the construction industry on the site to strike or refuse to perform services at the site of the construction, alteration, painting, or repair of a building, structure, or other work and directed at any of several employers who are in the construction industry and are jointly engaged as joint ventures or in the relationship of contractors and subcontractors in such construction, alteration,

painting, or repair at such site: *Provided further,* That nothing in the above proviso shall be construed to permit a strike or refusal to perform services or any inducement of any individual employed by any person to strike or refuse to perform services in furtherance of a labor dispute, unlawful under this Act or in violation of an existing collective bargaining contract, relating to the wages, hours, or other working conditions of employees employed at such site by any of such employers, and the issues in dispute involve a labor organization which is representing the employees of an employer at the site who is not engaged primarily in the construction industry: *Provided further,* Except as provided in the above provisos nothing herein shall be construed to permit any act or conduct which was or may have been an unfair labor practice under this subsection: *Provided further,* That nothing in the above provisos, shall be construed to prohibit any act which was not an unfair labor practice under the provisions of this subsection existing prior to the enactment of such provisos: *Provided further,* That nothing in the above provisos shall be construed to authorize picketing, threatening to picket, or causing to be picketed, any employer where an object thereof is the removal or exclusion from the site of any employee on the ground of sex, race, creed, color, or national origin or because of the membership or nonmembership of any employee in any labor organization: *Provided further,* That nothing in the above provisos shall be construed to authorize picketing, threatening to picket, or causing to be picketed, any employer where an object thereof is to cause or attempt to cause an employer to discriminate against any employee, or to discriminate against an employee with respect to whom membership in a labor organization has been denied or terminated on some ground other than his failure to tender the periodic dues and the initiation fees uniformly required as a condition of acquiring or retaining membership, or to exclude any labor organization on the ground that such labor organization is not affiliated with a national or international labor organization which represents employees of an employer at the common site: *Provided further,* That nothing in the above provisos shall be construed to permit any attempt by a labor organization to require an employer to recognize or bargain with any labor organization presently prohibited by paragraph (7) of subsection (b): *Provided further,* That if a labor organization engages in picketing for an object described in paragraph (7) of subsection (b) and there has been filed a petition under subsection (c) of section 9, and a charge under subsection (b) of section 10, the Board shall conduct an election and certify the results thereof within fourteen calendar days from the filing of the later of the petition and the charge: *Provided further,* That nothing in the above provisos shall be construed to permit any picketing of a common situs by a labor organization to force, require, or persuade any person to cease or refrain from using, selling, purchasing, handling, transporting, specifying, installing, or otherwise dealing in the products or systems of any other producer, processor, or manufacturer. In determining whether several employers who are in the construction industry are jointly engaged as joint venturers at any site, ownership or control of such site by a single person shall not be controlling".

(b) Section 8 of such Act is amended by adding at the end thereof the following new subsections:

"(h) Notwithstanding the provisions of this or any other Act, where a State law requires separate bids and direct awards to employers for construction, the various contractors awarded contracts in accordance with such applicable State law shall not for the purposes of the third proviso at the end of paragraph (4) of subsection (b) of this section, be considered joint venturers or in the relationship of contractors and subcontractors with each other or with the State or local authority awarding such contracts at the common site of the construction.

"(i) Notwithstanding the provisions of this or any other Act, any employer at a common construction site may bring an action for injunctive relief under section 301 of the Labor Management Relations Act (29 U.S.C. 141) to enjoin any strike or picketing at a common situs in breach of a no-strike clause of a collective-bargaining agreement relating to an issue which is subject to final and binding arbitration or other method of final settlement of disputes as provided in the agreement.

"(j) The provisions of the third proviso at the end of paragraph (4) of subsection (b) of this section shall not apply at the site of the construction, alteration, painting, or repair of a building, structure, or other work involving residential structures of three residential levels or less constructed by an employer who in the last taxable year immediately preceding the year in which the determination under this subsection is made had, in his own capacity or with or through any other person, a gross volume of construction business of $9,500,000 or less, adjusted annually as determined by the Secretary of Labor, based upon the revisions of the Price Index for New One Family Houses prepared by the Bureau of the Census, if the employer within 10 days of being served with the notice required by subsection (g)(2)(A) of this section notifies each labor organization which served that notice in an affidavit that he satisfies the requirements set forth in this subsection.".

(c) Section 8(g) of such Act is amended by redesignating the present section 8(g) as section 8(g)(1), and adding at the end thereof the following:

"(2)(A) A labor organization before engaging in activity permitted by the third proviso at the end of paragraph (4) of subsection (b) of this section shall provide prior written notice of intent to strike, picket or to refuse to perform services of not less than ten days to all unions and the employers and the general contractor at the site and to any national or international labor organization of which the labor organization involved is an affiliate and to the Construction Industry Collective Bargaining Committee: *Provided,* That at any time after the expiration of ten days from transmittal of such notice the labor organization may engage in activities permitted by the third proviso at the end of paragraph (4) of subsection (b) of this section if the national or international labor organization of which the labor organization involved is an affiliate gives notice in writing authorizing such action provided the Construction Industry Collective Bargaining Committee under the provisions of Title II hereof does not disapprove and notify the labor organization of its disapproval prior to the expiration of said ten days, in which event such strike, picketing or refusal to perform services shall be postponed at least thirty days to give time to the parties involved to reconcile their differences or dispute by collective bargaining, with such assistance as the Federal Mediation and Conciliation Service of the Department of Labor may provide; *Provided further,* That authorization of such action by the national or international labor organization shall not render it subject to criminal or civil liability arising from activities, notice of which was given pursuant to this subparagraph, unless such authorization is given with actual knowledge that the picketing is to be willfully used to achieve an unlawful purpose.

"(B) In the case of any such site which is located at any military facility or installation of the Army, Navy, or Air Force, or which is located at a facility or installation of any other department or agency of the Government if a major purpose of such facility or installation is or will be the development, production, testing, firing or launching of munitions, weapons, missiles, or space vehicles, prior written notice of intent to strike or to refuse to perform services, of not less than ten days shall be given by the labor organization involved to the Federal Mediation and Conciliation Service, to any State or territorial agency established to mediate and conciliate disputes within the State or territory where such site is located, to the several employers who are jointly engaged at such site, to the Army, Navy, or Air Force or other department or agency of the Government concerned with the particular facility or installation, and to any national or international labor organization of which the labor organization involved is an affiliate.

"(C) The notice requirements of subparagraphs (A) and (B) above are in addition to and not in lieu of the notice requirements prescribed by section 8(d) of the Act.".

SEC. 102. The amendments made by this title shall take effect 90 days after the date of enactment of this title except (1) with respect to all construction work having a gross value of $5,000,000 or less which was contracted for and on which work had actually started on April 1, 1977, the amendments made by this title shall take effect one year after such effective date, and (2) with respect to all construction work having a gross value of more than $5,000,000 which was contracted for and on which work had actually started on April 1, 1977, the amendments made by this title shall take effect two years after such effective date.

TITLE II—CONSTRUCTION INDUSTRY COLLECTIVE BARGAINING

SHORT TITLE

SEC. 201. This title may be cited as the "Construction Industry Collective Bargaining Act of 1977".

FINDINGS AND PURPOSES

SEC. 202. (a) The Congress finds and declares that the legal framework for collective bargaining in the construction industry is in need of revision; and that an enhanced role for national labor organizations and national contractor associations working as a group is needed to minimize instability, conflict, and distortions, to assure that problems of collective-bargaining structure, productivity and manpower development are constructively approached by contractors and unions themselves, and at the same time to permit the flexibility and variations that appropriately exist among localities, crafts, and branches of the industry.

(b) It is therefore the purpose of this title to establish a more viable and practical structure for collective bargaining in the construction industry by establishing procedures for negotiations with a minimum of governmental interference in the free collective-bargaining process.

CONSTRUCTION INDUSTRY COLLECTIVE BARGAINING COMMITTEE

SEC. 203. (a) There is hereby established in the Department of Labor a Construction Industry Collective Bargaining Committee. The Committee members shall be appointed as follows:

(1) Ten members shall be appointed by the President from among individuals qualified by experience and affiliation to represent the viewpoint of employers engaged in collective bargaining in the construction industry.

(2) Ten members shall be appointed by the President from among individuals qualified by experience and affiliation to represent the viewpoint of the standard national labor organizations in the construction industry.

(3) Up to three members shall be ap-

pointed by the President from among individuals qualified by training and experience to represent the public interest, one of whom shall be designated by him to serve as Chairman.

(4) The Secretary of Labor, ex officio.

(5) The Director of the Federal Mediation and Conciliation Service, ex officio.

The employer, labor, and public members shall be appointed by the President after consultation with representative labor and management organizations in the industry whose members are engaged in collective bargaining . Any alternate members who may be appointed shall be appointed in the same manner as regular members. An organizational meeting of the Committee shall be held at the call of the Chairman at which there shall be in attendance at least five members qualified to represent the viewpoint of employers, five members qualified to represent the viewpoint of labor organizations, and one member qualified to represent the public interest. All actions of the Committee shall be taken by the Chairman or the Executive Director on behalf of the Committee.

(b) The Secretary of Labor may appoint such staff as is appropriate to carry out the Committee's functions under this title and with the approval of the Committee, may appoint an Executive Director.

(c) The Committee shall, without regard to the provisions of section 553 of title 5, United States Code, promulgate such rules and regulations as may be necessary or appropriate to carry out the purposes of this title including the designation of "standard national construction labor organizations" and "national construction contractor associations" qualified to participate in the procedures set forth in this title.

NOTICE REQUIREMENTS

SEC. 204. (a) In addition to the requirements of any other law, including section 8 (d) of the National Labor Relations Act, as amended, where there is in effect a collective bargaining agreement covering employees in the construction industry between a local construction labor organization or other subordinate body affiliated with a standard national construction labor organization, or between a standard national construction labor organization directly, and an employer or association of employers in the construction industry, neither party shall terminate or modify such agreement or the terms or conditions thereof without serving a written notice of the proposed termination or modification in the form and manner prescribed by the Committee effective sixty days prior to the expiration date thereof, or in the event such collective bargaining agreement contains no expiration date, sixty days prior to the time it is proposed to make such termination or modification. The notice required by this subsection shall be served as follows:

(1) A local construction labor organization or other subordinate body affiliated with a standard national construction labor organization shall serve notice upon such national organization.

(2) An employer or local association of employers shall serve such notice upon all national construction contractor associations with which the employer or association is affiliated. An employer or local association of employers, which is not affiliated with any national construction contractor association shall serve such notice upon the Committee.

(3) Standard national construction labor organizations and national construction contractor associations shall serve such notice upon the Committee with respect to termination or modification of agreements to which they are directly parties.

The parties shall continue in full force and effect, without resorting to strike or lockout, all the terms and conditions of the existing collective bargaining agreement for a period of sixty days after the notice required by this subsection is given or until the expiration of such collective bargaining agreement, whichever occurs later.

(b) Standard national construction labor organizations and national construction contractor associations shall furnish forthwith to the Committee copies of all notices served upon them as provided by subsection (a) of this section.

(c) The Committee shall prescribe the form and manner and other requirements relating to the submission of the notices required by this section.

ROLE OF THE COMMITTEE AND NATIONAL LABOR AND EMPLOYER ORGANIZATIONS IN COLLECTIVE BARGAINING

SEC. 205. (a) Whenever the committee has received notice pursuant to section 204 and a written request for its assistance from any interested party to the dispute, it shall take jurisdiction of the matter, and it may do so with or without the request or suggestion of any interested party, by transmitting written notice to the signatory labor organization or organizations and the association or associations of employers directly party to the collective bargaining agreement, during the ninety-day period which includes and immediately precedes the later of: (1) the ninetieth day following the giving of notice under section 204(a); or (2) whichever is applicable, (A) the thirtieth day following the expiration of the collective bargaining agreement, or (B) the thirtieth day following the date proposed for termination or modification of such agreement.

(b) The Committee shall take such jurisdiction in accordance with the standards set forth in section 206. When the Committee has taken jurisdiction under this section, it shall in order to facilitate a peaceful voluntary resolution of the matter and the avoidance of future disputes: (1) refer such matter to voluntary national craft or branch boards or other appropriate organizations established in accordance with section 207; (2) meet with interested parties and take other appropriate action to assist the parties; or (3) take the action provided for in both preceding clauses (1) and (2) of this subsection. At any time after the taking of jurisdiction, the Committee may continue to meet with interested parties as provided herein.

(c) When the Committee has taken jurisdiction within the ninety-day period specified in this section over a matter relating to the negotiation of the terms or conditions of any collective bargaining agreement involving construction work between: (1) any standard national construction labor organization, or any local construction labor organization or other subordinate body affiliated with any standard national construction labor organization, and (2) any employer or association of employers, notwithstanding any other law, no such party may, at any time prior to the expiration of the ninety-day period specified in this subsection, engage in any strike or lockout, or the continuing thereof, unless the Committee sooner releases its jurisdiction.

(d) When the Committee receives any notice required by section 204 it is directed to request in writing at any time during the ninety-day period specified in subsection (a) of this section participation in the negotiations by the standard national construction labor organizations with which the local construction labor organizations or other subordinate bodies are affiliated and the national construction contractor associations with which the employers or local employer associations are affiliated.

(e) In any matters as to which the Committee takes jurisdiction under subsection (a) of this section and makes a referral authorized by subsection (d) of this section, no new collective bargaining agreement or revision of any existing collective bargaining agreement between a local construction labor organization or other subordinate body affiliated with the standard national construction labor organization, and an employer or employer association shall be of any force or effect unless such new agreement or revision is approved in writing by the standard national construction labor organization with which the local labor organization or other subordinate body is affiliated. Prior to such approval the parties shall make no change in the terms or conditions of employment. The Committee may at any time suspend or terminate the operation of this subsection as to any matter previously referred pursuant to subsection (d) of this section.

(f) No standard national construction labor organization or national construction contractor association shall incur any criminal or civil liability, directly or indirectly, for actions or omissions pursuant to a request by the Committee for its participation in collective bargaining negotiations, or the approval or refusal to approve a collective bargaining agreement under this title: *Provided*, That this immunity shall not insulate from civil or criminal liability a standard national construction labor organization or national construction contractor association when it performs an act under this statute to willfully achieve a purpose which it knows to be unlawful: *Provided further*, That a standard labor organization shall not by virtue of the performance of its duties under this Act be deemed the representative of any affected employees within the meaning of section 9(a) of the National Labor Relations Act or become a party to or bear any liability under any agreement it approves pursuant to its responsibilities under this Act.

(g) Nothing in this title shall be deemed to authorize the Committee to modify any existing or proposed collective bargaining agreement.

STANDARDS FOR COMMITTEE ACTION

SEC. 206. The Committee shall take action under section 205 in order to—

(1) facilitate collective bargaining in the construction industry, improvements in the structure of such bargaining, agreements covering more appropriate geographical areas, or agreements more accurately reflecting the conditions of various branches of the industry;

(2) promote stability of employment and economic growth in the construction industry;

(3) encourage collective bargaining agreements embodying appropriate expiration dates;

(4) promote practices consistent with appropriate apprenticeship training and skill level differentials among the various crafts or branches;

(5) promote voluntary procedures for dispute settlement; or

(6) otherwise be consistent with the purposes of this title.

OTHER FUNCTIONS OF THE COMMITTEE

SEC. 207. (a) The Committee shall promote and assist in the formation of voluntary national craft or branch boards or other appropriate organizations composed of representatives of one or more standard national construction labor organizations and one or more national construction contractor associations for the purpose of attempting to seek resolution of local labor disputes and review collective-bargaining policies and developments in the particular craft or branch of the construction industry involved. Such boards, or other appropriate organizations, may engage in such other activities relating to collective bargaining as their members shall mutually determine to be appropriate.

(b) The Committee shall, from time to time, make such recommendations as it deems appropriate, including those intended to assist in the negotiations of collective-

bargaining agreements in the construction industry; to facilitate area bargaining structures; to improve productivity, manpower development, and training; to promote stability of employment and appropriate differentials among branches of the industry; to improve dispute settlement procedures; and to provide for the equitable determination of wages and benefits. The Committee may make other suggestions, as it deems appropriate, relating to collective bargaining in the construction industry.

MISCELLANEOUS PROVISIONS

SEC. 208. (a) This title shall apply only to activities affecting commerce as defined in sections 2(6) and 2(7) of the National Labor Relations Act, as amended.

(b) Nothing in this title shall be construed to require an individual employee to render labor or services without the employee's consent, nor shall anything in this title be construed to make the quitting of labor by an individual employee an illegal act; nor shall any court issue any process to compel the performance by an individual employee of such labor or services, without the employee's consent; nor shall the quitting of labor by an employee or employees in good faith because of abnormally dangerous conditions for work at the place of employment of such employee or employees be deemed a strike under this title.

(c) The failure or refusal to fulfill any obligation imposed by this title on any labor organization, employer, or association of employers shall be remediable only by a civil action for equitable relief brought by the Committee in a district court of the United States, according to the procedures set forth in subsection (d) of this section.

(d) The Committee may direct that the appropirate district court of the United States having jurisdiction of the parties be petitioned to enforce any provision of this title. No court shall issue any order under section 205(c) prohibiting any strike, lockout, or the continuing thereof, for any period beyond the ninety-day period specified in section 205(a).

(e) The findings, decisions, and actions of the Committee pursuant to this title may be held unlawful and set aside only where they are found to be arbitrary or capricious, in excess of its delegated powers, or contrary to a specific requirement of this title.

(f) Sevice of members or alternate members of the Committee may be utilized without regard to section 665(b) of title 31, United States Code. Such individuals shall be deemed to be special Government employees on days in which they perform services for the Committee.

(g) In granting appropriate relief under this title the jurisdiction of United States courts sitting in equity shall not be limited by the Act entitled "An Act to amend the Judicial Code and to define and limit the jurisdiction of courts sitting in equity, and for other purposes", approved March 23, 1932 (29 U.S.C. 101).

(h) The Committee may make studies and gather data with respect to matters which may aid in carrying out the provisions of this title.

(i) Notwithstanding anything in subchapter II of chapter 5 of title 5, United States Code, in carrying out any of its functions under this title, the Committee shall not be required to conduct any hearings. Any hearings conducted by the Committee shall be conducted without regard to the provisions of subchapter II of chapter 5 of title 5, United States Code.

(j) Except as provided herein, nothing in this title shall be deemed to supersede or modify any other provision of law.

(k) In all civil actions under this title, attorneys appointed by the Secretary may represent the Committee (except as provided in section 518(a) of title 28, United States Code), but all such litigation shall be subject to the direction and control of the Attorney General.

COORDINATION

SEC. 209. (a) At the request of the Committee, the other agencies and departments of the Government shall provide, to the extent permitted by law, information deemed necessary by the Committee to carry out the purposes of this title.

(b) The Committee and the Federal Mediation and Conciliation Service shall regularly consult and coordinate their activities to promote the purposes of this title.

(c) Other agencies and departments of the Federal Government shall cooperate with the Committee and the Federal Mediation and Conciliation Service in order to promote the purposes of this title.

DEFINITIONS

SEC. 210. (a) The terms "labor dispute", "employer", "employee", "labor organization", "person", "construction", "lockout", and "strike" shall have the same meaning as when used in the Labor-Management Relations Act, 1947, as amended.

(b) As used in this title the term "Committee" means the Construction Industry Collective Bargaining Committee established by section 203 of this title.

SEPARABILITY

SEC. 211. If any provision of this title or the application of such provision to any person or circumstance, shall be held invalid, the remainder of this title or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

AUTHORIZATION OF APPROPRIATIONS

SEC. 212. There are authorized to be appropriated such sums as may be necessary to carry out this title.

EXPIRATION DATE AND REPORTS

SEC. 213. (a) This title shall expire on December 31, 1982.

(b) No later than one year following the date of enactment of this title and at one-year intervals thereafter, the Committee shall transmit to the President and to the Congress a full report of its activities under this title during the preceding year.

(c) No later than June 30, 1982, the Committee shall transmit to the President and to the Congress a full report on the operation of this title together with recommendations, including a recommendation as to whether this title should be extended beyond the expiration date specified in subsection (a) of this section, and any other recommendations for legislation as the Committee deems appropriate.

FACTUAL DESCRIPTIONS OF BILLS AND RESOLUTIONS INTRODUCED

Prepared by the Congressional Research Service pursuant to clause 5(d) of House Rule X. Previous listing appeared in the CONGRESSIONAL RECORD of March 10, 1977, page 7088):

H.R. 451. January 4, 1977. Judiciary. Amends the Civil Rights Act of 1964 to prohibit discrimination based on affectional or sexual preference in: (1) public accommodations; (2) public facilities; (3) public education; (4) federally assisted opportunities; (5) equal employment opportunities; (6) housing; and (7) educational programs receiving Federal assistance.

H.R. 452. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Establishes a system of survey and certification, rate-setting and audit, and general regulation of long-term care facilities under the Medicaid programs of the Social Security Act. Creates a system of patient need assessment in order to determine the appropriateness of and the initial or continued need for post-hospital home health services, or intermediate health care services.

H.R. 453. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Titles XVIII (Medicare) and XIX (Medicaid of the Social Security Act to revise the conditions and limitations applicable to home health services under such titles.

Establishes a Home Health Patient Ombudsman in the Department of Health, Education, and Welfare.

Increases the amount of Federal funds which may be made available to public housing agencies for congregate housing under the United States Housing Act of 1937.

H.R. 454. January 4, 1977. Government Operations. Requires, under the Office of Federal Procurement Policy Act, that Federal agencies pay interest at an annual rate of at least 12 percent on any payment which is overdue by more than two weeks on a contract with a small-business concern.

H.R. 455. January 4, 1977. Post Office and Civil Service. Permits postage-free mailing of correspondence to any Member of Congress by residents of the State or district represented by such Member which is sent to the Member's official business address.

H.R. 456. January 4, 1977. Post Office and Civil Service. Amends the Postal Revenue and Federal Salary Act of 1967 to abolish the Commission on Executive, Legislative, and Judicial Salaries.

H.R. 457. January 4, 1977. Public Works and Transportation. Amends the Federal Aviation Act of 1958 to establish a minimum one-year period with respect to a Presidential suspension of an air carrier's right to engage in foreign air transportation with a country which has been determined to be aiding or abetting a terrorist group which uses the illegal seizure of aircraft as an instrument of policy. Removes the present authority of the President to suspend the right of an air carrier to engage in air transportation with a country which maintains air service with a country determined to be engaging in such activity. Sets forth criminal penalties for violation of this Act.

H.R. 458. January 4, 1977. Rules. Requires review of Federal programs to determine if they warrant continuation. Directs the President to conduct such review of the programs covered by the annual budget. Requires Congress to make such review every four years.

H.R. 459. January 4, 1977. Ways and Means. Authorizes any individual who has attained the age of 65 to take a nonrefundable tax credit, under the Internal Revenue Code, for a percentage of the amount of real property taxes or rent constituting real property taxes paid or accrued by the taxpayer during the taxable year.

H.R. 460. January 4, 1977. Rules; Judiciary. Requires any rule proposed by any Government agency to be submitted to Congress with a full explanation of such rule. States that such rule shall become effective no later than 60 days after submission to Congress unless either House adopts a resolution disapproving such rule.

H.R. 461. January 4, 1977. Education and Labor. Amends the Civil Rights Act of 1964 to include as an unlawful employment practice discrimination on the basis of physical handicap.

H.R. 462. January 4, 1977. Agriculture. Establishes a Commission on the Humane Treatment of Animals to study the treatment of animals.

H.R. 463. January 4, 1977. Armed Services. Authorizes the recomputation of the retired or retainer pay for specified members and former members of the uniformed services.

H.R. 464. January 4, 1977. Banking, Finance and Urban Affairs. Amends the National Housing Act to prohibit Federal Housing Administration insurance of blanket mortgages on condominium projects, and

Federal National Mortgages Association purchase of conventional condominium mortgages, where the developer retains a leasehold interest in the common areas and facilities of the project involved.

H.R. 465. January 4, 1977. Education and Labor. Amends the Age Discrimination in Employment Act to expand its coverage to include employers employing 20 employees and deems States and political subdivisions thereof "employers" for purposes of such act.

Directs that employment decisions in Government service be made free of discrimination based on age.

H.R. 466. January 4, 1977. Education and Labor. Amends the Older Americans Act of 1965 to entitle handicapped dependents of eligible individuals to participate in the nutritional programs for the elderly established under such act.

H.R. 467. January 4, 1977. Government Operations. Amends the Federal Reports Act of 1942 to prohibit the use of forms by a Federal agency to collect information from more than 10 persons unless such forms were approved by the Comptroller General. Allows approval only if such information gathering is reasonable, necessary and not overly burdensome on the persons to whom it is directed.

H.R. 468. January 4, 1977. Interstate and Foreign Commerce. Prohibits franchisors from prematurely canceling or failing to renew motor fuel franchises unless written notification is provided and the franchisee has failed to comply with reasonable terms of the agreement.

H.R. 469. January 4, 1977. Interstate and Foreign Commerce. Requires that electric utility rate charges for a subsistence quantity of electric energy provided to residential consumers not exceed the lowest rate charged any other electric consumer.

H.R. 470. January 4, 1977. Judiciary. Establishes within the judicial branch a United States Commission on Sentencing to promulgate sentencing guidelines.

Specifies factors to be considered by a sentencing court in imposing a term of imprisonment.

Requires courts to disclose in open court and in the record reasons for imposing imprisonment.

Sets forth guidelines for court of appeals review of sentences.

H.R. 471. January 4, 1977. Merchant Marine and Fisheries. Directs the Secretary of the Interior to regulate the trapping and capture of mammals and birds on Federal lands. Establishes an advisory commission to recommend to the Secretary acceptable methods for trapping and capture of mammals and birds.

Prohibits use of unacceptable traps in interstate or foreign commerce. Prescribes regulations to prohibit the interstate shipment of hide, skin, feathers, or resulting products of the use of unacceptable traps.

H.R. 472. January 4, 1977. Post Office and Civil Service. Applies to the United States Postal Service provisions requiring that buildings built, leased, or financed by the United States be designed and constructed to insure ready access to and use of such buildings by the physically handicapped.

H.R. 473. January 4, 1977. Public Works and Transportation. Amends the Federal Water Pollution Control Act to increase the maximum civil penalty for discharges of oil and hazardous substances. Imposes criminal sanctions for such illegal discharges.

H.R. 474. January 4, 1977. Veterans' Affairs. Provides that recipients of veterans' pensions and compensation will not have the amount of such pension or compensation reduced, or entitlement thereto discontinued, because of increases in monthly social security benefits. Applies to annual income determinations made for calendar years after 1974.

H.R. 475. January 4, 1977. Veterans' Affairs. Directs the Administrator of Veterans' Affairs to select and acquire land for a national cemetery in Broward County or Dade County, Florida.

Directs the Administrator of the General Services Administration to transfer to the Veterans' Administration without reimbursement or transfer of funds any Government-owned land in the named counties which the Administrator of Veterans' Affairs may determine suitable for a national cemetery.

Directs the establishment of such national cemetery.

H.R. 476. January 4, 1977. Veterans' Affairs. Ends the limitation on the period during which a veteran must use his education benefits. Extends the period of eligibility for such benefits.

H.R. 477. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to provide identical income tax rates for single persons and married couples filing joint returns.

H.R. 478. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to require certain public charities to pay out at least half of their gross revenues in charitable activities and to provide prospective contributors and the general public with detailed accounts of their past revenues and expenditures.

H.R. 479. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to provide a limited, refundable tax credit to persons age 65 or over for the real property taxes, or 25 percent of the rent, they pay for their principal residences.

H.R. 480. January 4, 1977. Ways and Means. Amends title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act by removing the limitation upon the amount of outside income which an individual may earn while receiving benefits.

H.R. 481. January 4, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to revise the eligibility requirements for disability insurance benefits for blind persons. Revises the method of computing the primary insurance amount for blind persons under such Act.

H.R. 482. January 4, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to provide that an otherwise eligible individual shall be entitled to old-age insurance benefits if such person has attained age 60 and has been required by his employer (after having been employed by such employer for five or more years) to retire at such age in compliance with an Executive order of the President, a regulation or order issued by a Federal department or agency and published in the Federal Register, or a Federal law.

H.R. 483. January 4, 1977. Ways and Means. Amends the Tariff Schedules of the United States to repeal the duty imposed on articles assembled abroad with components produced in the United States.

H.R. 484. January 4, 1977. Judiciary; District of Columbia. Empowers a judicial officer of a Federal or District of Columbia court to deny pretrial release to a person charged with a violent crime upon finding that no conditions of release can reasonably assure that such person will not flee or pose a danger to any other person or to the community.

H.R. 485. January 4, 1977. Small Business; Banking, Finance and Urban Affairs. Amends the Small Business Act to authorize the Small Business Administration to make loans to individuals and homebuilders for the purchase and installation of qualified solar heating or solar heating and cooling equipment from small business concerns.

Directs the Energy Research and Development Administration to: (1) establish procedures for inspecting and evaluating solar heating and cooling equipment; (2) review new equipment as developed; (3) periodically review certifications of such equipment for validity; and (4) transmit pertinent data to the Small Business Administration for its use in certifying equipment for purposes of the loan program created by this Act.

H.R. 486. January 4, 1977. Post Office and Civil Service. Reinstates civil service retirement survivors annuities for surviving spouses of employees whose annuities were terminated due to remarriage before July 18, 1966, and surviving spouses of Members of Congress who died before January 8, 1971, whose annuities were terminated due to remarriage.

H.R. 487. January 4, 1977. Banking, Finance and Urban Affairs. Authorizes the Secretary of Housing and Urban Development to make grants to local agencies for converting closed school buildings into community centers, senior citizen centers and specified educational, medical or social service centers.

Directs the Secretary to serve as a national clearinghouse for local agencies by providing information on possible alternative uses for closed school buildings.

H.R. 488. January 4, 1977. Public Works and Transportation. Makes it unlawful to operate a supersonic aircraft on a commercial basis within the navigable airspace of the United States until such aircraft has met noise, environmental, and safety standards equivalent to those already established for other commercial aircraft.

H.R. 489. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to provide a $5,000 tax exclusion for persons aged 65 or over for amounts received as an annuity, pension, or other retirement benefit.

H.R. 490. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow a limited income tax deduction for commuting expenses incurred by blind individuals, or individuals who can not use public transportation because of the loss of one or more extremities. Provides an additional income tax exemption for certain handicapped individuals.

H.R. 491. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow as a credit against the income tax a limited amount of specified higher education expenses, including tuition, fees, books and supplies, incurred by the taxpayer for himself and any dependents.

H.R. 492. January 4, 1977. Ways and Means. Amends the Tariff Schedules of the United States to temporarily suspend the import duty on menadione dimethylprimidinol bisulphite.

H.R. 493. January 4, 1977. Judiciary. Requires specified minimum prison sentences for any individual who uses or carries a firearm during the commssion of a Federal felonly and for whoever is convicted by a State court of a crime punishable by a term of imprisonment exceeding one year and used or carried a firearm transported in, or affecting, interstate or foreign commerce during the commission of such crime.

H.R. 494. January 4, 1977. Ways and Means. Amends the Social Security Act by removing the limitation upon the amount of outside income which an individual may earn while receiving Old-Age, Survivors and Disability Insurance benefits.

H.R. 495. January 4, 1977. Judiciary; Rules. Requires public notice of, and allows public participation in, rulemaking proceednge conducted by executive agencies. Requires all regulations promulgated by such agencies containing criminal penalties to be submitted to Congress for approval.

H.R. 496. January 4, 1977. Agriculture. Revises the eligibility requirements for food coupons under the Food Stamp Act of 1964 to exclude individuals who receive one-half

of their income from an individual who is not eligible for food coupons.

H.R. 497. January 4, 1977. Agriculture. Establishes in the Department of Agriculture a Bureau of Agricultural Statistics under the direction of a Commissioner appointed by the President. Directs the Bureau to obtain information about prices received by producers and processors of agricultural commodities used for food, and wholesale and retail food prices. Requires the Bureau to make recommendations to Congress twice a year regarding legislative action to lower retail food prices when such prices increase while the prices received by producers drop or remain constant.

H.R. 498. January 4, 1977. Agriculture. Establishes the Federal Farm Assistance Corporation, within the Department of Agriculture, and authorizes the Corporation to negotiate for and purchase farmland or units which may come on the market.

Allows lease of such farm units to eligible applicants, and directs the Corporation's Board of Directors to approve the sale to the lessee of such farm units upon a determination that the lessee can successfully manage and operate such farm unit.

H.R. 499. January 4, 1977. Armed Services. Prohibits the change in status of any member of the uniformed services currently in a missing status due to service in Southeast Asia until certain conditions have been met.

H.R. 500. January 4, 1977. Armed Services. Amends the Federal Civil Defense Act of 1950 to authorize the use of Federal civil defense funds by local civil defense agencies for natural disaster or civil disturbance relief. Increases the Federal contribution for travel expenses and per diem allowances for students in civil defense training programs and increase the Federal financial contribution to States for civil defense personnel and administrative expenses. Increases the authorization for appropriations under such Act for travel expenses, personal equipment for State and local workers, and personnel and administrative expenses.

H.R. 501. January 4, 1977. Banking, Finance and Urban Affairs. Amends the Truth in Lending Act to prohibit discrimination on account of age in credit card transactions.

H.R. 502. January 4, 1977. Banking, Finance and Urban Affairs. Amends the Flood Disaster Protection Act of 1973 to eliminate flood insurance and community participation in the national flood insurance program as prerequisites for Federal approval of financial assistance for acquisition or construction of, or for lending institution loans secured by, any building, mobile home, or personal property located or to be located in an area having special flood hazards.

H.R. 503. January 4, 1977. Education and Labor. Amends the National Labor Relations Act to include as an unfair labor practice an employer's discharge of or discrimination against an employee because such employee gave testimony before a Congressional committee or a Federal department or agency.

H.R. 504. January 4, 1977. Government Operations. Expands the membership of the Advisory Commission on Intergovernmental Relations to include two elected school board officials recommended by the National School Boards Association.

H.R. 505. January 4, 1977. International Relations. Authorizes the President to make grants to American land-grant universities to enable them to offer assistance to land-grant type universities in agriculturally developing nations.

Establishes an International Land-Grant University Advisory Board to assist the President in carrying out the purposes of this Act.

H.R. 506. January 4, 1977. International Relations. Restricts payments of the United States to the United Nations to the ratio of the population of the United States to the total population of member nations.

H.R. 507. January 4, 1977. Interstate and Foreign Commerce. Amends the National Housing Act to authorize the Secretary of Housing and Urban Development to make interest reduction payments with respect to a mortgage covering repair or rehabilitation of a nursing home in order to correct physical deficiencies and comply with Federal minimum standards. States that in order to be eligible for such payments the Secretary of the Department of Health, Education, and Welfare or his designee must certify that the nursing home is in substantial compliance with Federal and State standards except for those deficiencies the sponsor seeks to correct with such payments.

H.R. 508. January 4, 1977. Interstate and Foreign Commerce. Amends the Public Health Service Act to authorize the Secretary of Health, Education, and Welfare to make loans to any nonprofit organization, church, or association of churches to meet all or a part of the cost of construction or rehabilitation of a nursing home which will be owned and operated by such church, organization, or association.

H.R. 509. January 4, 1977. Interstate and Foreign Commerce. Amends Title XIX (Medicaid) of the Social Security Act to provide Federal payment of the entire cost of financial audits of skilled nursing and intermediate care facilities participating in Federal programs.

H.R. 510. January 4, 1977. Interstate and Foreign Commerce. Amends Title XIX (Medicaid) of the Social Security Act to provide that Medicaid payments to a State shall be dependent upon the operation in such State of an ombudsman program empowered to investigate nursing home complaints, inspect nursing homes, and recommend to the State health department license revocation or other disciplinary action against a nursing home.

H.R. 511. January 4, 1977. Interstate and Foreign Commerce. Prohibits refiners or distributors of petroleum products from cancelling franchises without prior notice. Prohibits distributors and refiners from cancelling petroleum franchises without cause.

H.R. 512. January 4, 1977. Interstate and Foreign Commerce. Amends the Public Health Service Act to authorize the Secretary of Health, Education and Welfare to make grants and enter into contracts with public or nonprofit colleges and universities for the purpose of developing graduate programs for nurses in geriatrics and gerontology.

H.R. 513. January 4, 1977. Interstate and Foreign Commerce. Reaffirms the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce. Reaffirms the authority of the States to regulate terminal and station equipment used for telephone exchange service. Requires the Federal Communications Commission to make specified findings in connection with Commission actions authorizing specialized carriers.

H.R. 514. January 4, 1977. Interstate and Foreign Commerce. Requires posting of the selling price and unit price on or near consumer products displayed for retail sales.

Transfers authority to promulgate rules under the Fair Packaging and Labeling Act to the Federal Trade Commission from the Department of Health, Education, and Welfare.

H.R. 515. January 4, 1977. Interstate and Foreign Commerce. Amends the Public Health Service Act to authorize the Secretary of Health, Education, and Welfare to enter into contracts and make grants for the establishment and operation of voluntary Tay-Sachs disease screening, counseling, and information services.

H.R. 516. January 4, 1977. Judiciary. Requires specified minimum prison sentences for felons using or carrying a firearm during the commission of a felony which may be prosecuted in a Federal court. Subjects such felons to possible increased sentence as dangerous special offenders.

H.R. 517. January 4, 1977. Judiciary. Requires candidates for Federal office, Members of the Congress, and certain officers and employees of the United States to file statements with the Comptroller General with respect to their income and financial transactions.

H.R. 518. January 4, 1977. Judiciary. Amends the Omnibus Crime Control and Safe Streets Act of 1968 to condition certain assistance to States, local governments, and agencies thereunder on the adoption of a law enforcement officers' bill of rights.

H.R. 519. January 4, 1977. Post Office and Civil Service. Applies to the U.S. Postal Service provisions requiring that buildings built, leased, or financed by the United States be designed and constructed to insure ready access to and use of such buildings by the physically handicapped.

H.R. 520. January 4, 1977. Public Works and Transportation. Amends the Tennessee Valley Authority Act to allow credits against required power investment return payments for expenditures for certified pollution control facilities.

H.R. 521. January 4, 1977. Rules. Requires Congress under the Congressional Budget Act of 1974 to review one-half of all Federal programs each year using zero-base budgeting techniques. States that any committee conducting such review shall report the service and cost effects of continuing such program at levels higher, lower, and the same as the preceding year. Prohibits the authorization of any appropriation higher than that of the previous year for any program not subjected to a review under this act.

H.R. 522. January 4, 1977. Science and Technology. Authorizes the Administrator of the National Aeronautics and Space Administration to: (1) conduct research and development programs on the nature, forecasting and detection of short-term weather phenomena, and on ways of disseminating information concerning such weather conditions to the public; and (2) prepare a plan for the establishment of an Office of Short-Term Weather Phenomena.

Requires the Administrator to coordinate all such activities with the National Oceanic and Atmospheric Administration.

H.R. 523. January 4, 1977. Ways and Means. Amends Title XVI (Supplemental Security Income for the Aged, Blind, and Disabled) of the Social Security Act to exempt, under specified conditions, residents in nonmedical shelter care facilities from the prohibition against payments to individuals in public institutions.

H.R. 524. January 4, 1977. Ways and Means. Amends Title XVIII (Medicare) of the Social Security Act to provide for the creation of an alternative, reimbursement formula which will allow specified hospitals to provide long-term care without applying proportional allocation of overhead costs to all patients in such facilities.

H.R. 525. January 4, 1977. Ways and Means. Declares all income tax returns to be confidential and prohibits the disclosure or inspection of such returns unless specifically authorized by this Act.

Increases the criminal penalties for unauthorized disclosure of the information contained in tax returns.

Makes it a felony to knowingly receive any such information or material which is criminally disclosed.

H.R. 526. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow the taxpayer either a tax credit or deduction for certain improvements in the thermal design of his principal residence.

H.R. 527. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to provide identical income tax rates for single persons and married couples filing joint returns. Limits the earned income that must be reported by a married person filing a

separate return to the amount actually earned by that individual.

H.R. 528. January 4, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to provide that an individual who would be fully qualified for benefits at age 62 may qualify for disability benefits under such program if such individual has 40 quarters of coverage, regardless of when such quarters were earned.

H.R. 529. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow as a deduction the ordinary and necessary expenses paid during the taxable year for the repair or improvement of property used by the taxpayer as his principal residence. Permits an owner of rental property to amortize expenditures for the restoration of rental housing.

H.R. 530. January 4, 1977. Ways and Means. Directs that the benefits received by an individual pursuant to a Federal plan or program, or a plan or program of a State funded by Federal funds, shall not be reduced as a result of a general increase in monthly social security benefits.

H.R. 531. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to extend to two years the maximum period which may elapse between the sale of a residence and the purchase of another in order that gain from such sale will not be recognized for Federal income tax purposes.

H.R. 532. January 4, 1977. Judiciary; Rules. Requires public notice of, and allows public participation in, rulemaking proceedings conducted by executive agencies. Requires all regulations promulgated by such agencies containing criminal penalties to be submitted to Congress for approval.

H.R. 533. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to establish a Long-Term Care Services program to provide home health, homemakers, nutrition, long-term institutional care, day care, foster home, and outpatient mental health services. Specifies that these services shall be delivered by community long-term care centers under the direction and control of a State long-term care agency.

H.R. 534. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Titles XVIII (Medicare) and XIX (Medicaid) of the Social Security Act to revise the conditions and limitations applicable to home health services and nursing home care.

Establishes a Home Health Patient Ombudsman in the Department of Health, Education, and Welfare.

Establishes procedures whereby the Secretary of the Treasury may collect debts owed by individuals to a State for certain medical assistance benefits.

Increases the amount of Federal funds which may be made available to public housing agencies for congregate housing under the United States Housing Act.

H.R. 535. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends title XX (Grants to States for Services) of the Social Security Act to direct the Secretary of Health, Education, and Welfare to provide for the continuing inspection of State inspection and enforcement programs with respect to facilities receiving payments under titles XVIII (Medicare) and XIX (Medicaid) of the Social Security Act.

H.R. 536. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends title XVIII (Medicare) and title XIX (Medicaid) of the Social Security Act to include in the coverage provided under such programs the services of licensed (registered) nurses.

H.R. 537. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends titles XVIII (Medicare) and XIX (Medicaid) of the Social Security Act by requiring skilled nursing homes participating in the medicare and medicaid programs to retain a medical director.

H.R. 538. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends title XVIII (Medicare) of the Social Security Act by requiring skilled nursing facilities participating in the medicare program to conclude a contract with each patient upon admission. Specifies that such contract shall cover the rights and duties of the patient and the facility.

H.R. 539. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends title XVIII (Medicare) and title II (Old-Age, Survivors' and Disability Insurance) of the Social Security Act to extend medicare hospital coverage to include drugs. Establishes a formulary committee within the Department of Health, Education, and Welfare to prepare and maintain a listing of qualified drugs.

H.R. 540. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to provide that only registered professional nurses or licensed practical nurses shall dispense and administer drugs and biologicals in skilled nursing homes participating in the Medicare program.

H.R. 541. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to provide that nursing homes participating in the Medicare program must furnish a physician who visits patients not less than once every 30 days and that a physician be available to furnish necessary care in case of emergency.

H.R. 542. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to require that nursing homes participating in the Medicare program have in effect procedures for prevention and reporting of epidemic diseases and accidents.

H.R. 543. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to include services provided by the intermediate care facilities among those covered under Medicare.

H.R. 544. January 4, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to provide that, in determining the reasonable reimbursable cost of inpatient nursing care, such coverage at a minimum shall include a salary cost differential of at least eight and one-half percent in recognition of the above-average cost of furnishing such care to aged patients.

H.R. 545. January 4, 1977. Interior and Insular Affairs. Authorizes the Secretary of the Interior to design and construct drainage works to alleviate high groundwater conditions in and adjacent to Moses Lake, Washington.

H.R. 546. January 4, 1977. Public Works and Transportation. Directs the Secretary of the Army to delegate authority to States with respect to planning and location of structures, and excavation, dredging, or filling of the waters of the United States where the Federal interest is minimal.

H.R. 547. January 4, 1977. District of Columbia. Amends the District of Columbia Code to apply provisions relating to pretrial detention of persons charged with capital crimes only to those defendants charged with first degree murder or forcible rape.

Limits the application of provisions relating to pretrial detention of defendants on parole, probation, or mandatory release pending completion of sentence to those persons charged with specified crimes.

Permits institution of pretrial detention hearings by a judicial officer on such officer's own initiative.

Extends the period after which certain defendants who are ordered detailed pending trial must be released.

H.R. 548. January 4, 1977. Judiciary. Makes it unlawful for any person to import, manufacture, sell, buy, transfer, receive, or transport any handgun. Authorizes the Secretary of the Treasury to exempt certain handguns from this prohibition.

H.R. 549. January 4, 1977. Judiciary. Revises the provision authorizing suits against persons acting under the color of State or Territorial law for the deprivation of constitutional and Federal statutory rights to permit suits against: (1) bodies politic, and (2) persons acting under the color of law of the District of Columbia or a United States possession.

H.R. 550. January 4, 1977. Judiciary. Establishes an office of the United States Correctional Ombudsman to: (1) investigate acts of the Bureau of Prisons or the Board of Parole pertaining to the treatment of Federal prisoners or parolees and conditions in certain correctional facilities; and (2) report to Congress on unfair or otherwise objectionable laws relative to corrections.

H.R. 551. January 4, 1977. Merchant Marine and Fisheries; Public Works and Transportation; International Relations; Science and Technology. Prohibits discharges of fuel by vessels into United States territorial waters.

Directs the Secretary of Commerce to initiate comprehensive research on the adverse effects of fuel discharges on coastal, territorial and oceanic waters.

H.R. 552. January 4, 1977. Ways and Means; Judiciary. Amends the Internal Revenue Code to provide reimbursement of all litigation expenses, including attorney's fees, incurred by a taxpayer who has substantially prevailed in any civil proceeding relating to a tax payment.

Requires the return of all subpenaed records obtained in any investigation of possible underpayment or tax law violations within 15 days after any administrative decision to close the investigation, or any final judicial decision in which the taxpayer has substantially prevailed, or after the expiration of the Statute of Limitations, whichever is the earliest.

H.R. 553. January 4, 1977. Education and Labor. Amends the Education Amendments of 1972 to exempt sex segregated gymnastics classes from the prohibition against sex discrimination contained within such Act.

H.R. 554. January 3, 1977. Education and Labor. Excepts musical and social programs and activities designed for parents and students from the prohibition against sex discrimination in federally assisted educational activities imposed by the Education Amendments of 1972.

H.R. 555. January 4, 1977. Banking and Urban Affairs. Sets national standards for the sale of condominium units and for the conversion of existing rental units into condominiums. Requires developers to disclose specified information concerning their condominium projects. Makes provisions for the enforcement of this Act by individual owners of dwelling units and by those who face eviction due to condominium conversions which do not adhere to the requirements of this Act.

H.R. 556. January 4, 1977. Government Operations. Requires the Office of Management and Budget to study the efficiency and effectiveness of each Federal agency every ten years and to recommend to the President and Congress reorganization or abolition of each such agency as may be necessary to improve such efficiency and effectiveness. Abolishes each such agency upon the due date of such report unless during the ten-year period since the last report Congress has passed legislation continuing such agency.

H.R. 557. January 4, 1977. Judiciary. Requires lobbyists to: (1) register with the

Federal Election Commission; (2) make and retain specified records; and (3) file reports with the Commission regarding their activities.

Requires specified officials of the executive branch to record their communications with lobbyists. Repeals the Federal Regulation of Lobbying Act.

H.R. 558. January 4, 1977. Judiciary. Grants a Federal charter to the National Opportunity Camps.

H.R. 559. January 4, 1977. Interstate and Foreign Commerce. Reaffirms the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce. Reaffirms the authority of the States to regulate terminal and station equipment used for telephone exchange service. Requires the Federal Communications Commission to make specified findings in connection with Commission actions authorizing specialized carriers.

H.R. 560. January 4, 1977. Post Office and Civil Service. Prohibits collective bargaining agreements between the United States Postal Service and labor organizations recognized as exclusive bargaining representatives for their respective postal employee units from containing procedures which would preclude employees from being represented in grievance and adverse actions arising under such agreements by representatives of their own choosing.

H.R. 561. January 4, 1977. Veterans' Affairs. Provides that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced, or entitlement thereto discontinued, because of increases in monthly social security benefits.

H.R. 562. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to provide identical income tax rates for single persons and married couples filing joint returns. Limits the earned income that must be reported by a married person filing a separate return to the amount actually earned by that individual.

H.R. 563. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to increase each of the standard personal exemptions to $1,000.

H.R. 564. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow as a credit against the income tax a limited amount of specified higher education expenses, including tuition, fees, books and supplies, incurred by the taxpayer for himself and any dependents.

H.R. 565. January 4, 1977. Ways and Means. Amends Title II (Old-Age, Survivors', and Disability Insurance) of the Social Security Act to allow a State to terminate social security coverage for policemen and firemen without affecting the coverage of other public employees.

H.R. 566. January 4, 1977. Ways and Means. Amends Title II (Old-Age, Survivors', and Disability Insurance) of the Social Security Act to allow the State of New Jersey to establish a divided retirement system for purposes of providing social security coverage of State and local employees under Federal-State agreements.

H.R. 567. January 4, 1977. Small Business; Government Operations; Banking, Finance and Urban Affairs. Amends the Small Business Act to expand assistance under such Act to minority small business concerns. Establishes the Office of Minority Small Business Assistance Personnel to work with all Government agencies having procurement powers. Provides statutory standards for contracting and subcontracting by the United States with respect to minority concerns. Creates a Commission on Federal Assistance to Minority Enterprise.

H.R. 568. January 4, 1977. Interstate and Foreign Commerce. Increases from three to five years the term for which a license to operate a radio broadcasting station may be issued, and for which such licenses may be renewed under the Communications Act of 1934.

H.R. 569. January 4, 1977. Veterans' Affairs. Extends veterans benefits to those persons recognized as members of the United States military forces serving between November 12, 1918, and July 2, 1921.

H.R. 570. January 4, 1977. Rules. Requires review of Federal programs to determine if they warrant continuation. Requires the President to conduct such review of the programs covered by the annual budget. Requires Congress to make such review every four years.

H.R. 571. January 4, 1977. Armed Services. Makes cash awards for suggestions, inventions, or scientific achievements available to individuals who made such suggestion or achieved such accomplishment while in an active reserve status of the armed forces, notwithstanding such individual's death, retirement, or separation from service.

H.R. 572. January 4, 1977. Armed Services. Stipulates that no veteran may be denied care or treatment under the CHAMPUS program for any service-connected disability solely because care or treatment for such disability is available at Veterans' Administration medical facilities.

H.R. 573. January 4, 1977. Education and Labor. Allows the children of parents employed on Federal property who attend school in a State contiguous to the State in which such property is located to be counted in determining the aid entitlement of the local educational agency having jurisdiction over such school.

H.R. 574. January 4, 1977. Veterans' Affairs. Entitles every person who served in the active military or naval service of the United States during World War I to a $100 a month pension, with right of survivorship in his or her spouse, and hospitalization and/or domiciliary care, free of charge, at any Veterans' Administration facility and/or, under certain conditions, medical services from a local medical doctor.

H.R. 575. January 4, 1977. Veterans' Affairs. Provides that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced, or entitlement thereto discontinued, because of increases in monthly social security benefits.

H.R. 576. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to exempt the identities of purchasers of .22 caliber ammunition from the purchase records required of vendors under the firearms excise tax.

H.R. 577. January 4, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to provide that an individual who would be fully qualified for benefits at age 62 may qualify for disability benefits under such program if such individual has 40 quarters of coverage, regardless of when such quarters were earned.

H.R. 578. January 4, 1977. Armed Services. Stipulates that National Guard technicians shall not be required to hold a particular military grade in order to be employed, or to continue to be employed, in any position.

H.R. 579. January 4, 1977. Education and Labor. Requires persons acquiring effective control of existing plants or business facilities to give notice to employees and the community of an intention to close or relocate such a plant or facility at least one year and 180 days prior to closing or relocating. Requires owners of plants or business facilities which have been in operation for ten years and employ 200 or more people to give such notice of a determination to close or relocate at least 180 days prior to closing or relocating.

H.R. 580. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow as a deduction the ordinary and necessary expenses paid during the taxable year for the repair or improvement of property used by the taxpayer as his principal residence. Permits an owner of rental property to amortize expenditures for the restoration of rental housing.

H.R. 581. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow a 15 percent investment tax credit for investments certified by the Secretary of Commerce as depressed area property.

Entitles every person to elect a deduction with respect to the amortization of any certified depressed area real property based on a period of 120 months.

H.R. 582. January 4, 1977. Merchant Marine and Fisheries. Amends the Fish and Wildlife Coordination Act to revise interagency coordination requirements with respect to fish and wildlife conservation for approval of federally assisted projects for impoundment, control, or diversion of waters.

Repeals exemptions from such procedures for water impoundment projects where the impoundment has a maximum surface area of less than ten acres, or for programs for land management.

Permits a citizen to bring a civil action in a district court of the United States against persons violating this Act or regulations issued thereunder or against any Federal department for failure to perform its duties under this Act.

H.R. 583. January 4, 1977. Armed Services. Extends the special enlistment and reenlistment bonuses for members of the uniformed services until September 30, 1978.

H.R. 584. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow as a credit against the income tax a limited amount of specified higher education expenses, including tuition, fees, books and supplies, incurred by the taxpayer for himself and any dependents.

H.R. 585. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow an income tax deduction for the expenses incurred in providing special education for a dependent handicapped child.

H.R. 586. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to provide an additional income tax exemption for taxpayers, spouses, or dependents with serious mental or physical disabilities which result in death, or which can be expected to result in death or be of long-continued or indefinite duration.

H.R. 587. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow a limited income tax deduction for food and lodging expenses incurred while receiving medical care away from home.

H.R. 588. January 4, 1977. Ways and Means. Repeals the tax exclusion of income earned by residents of Puerto Rico within the Commonwealth.

H.R. 589. January 4, 1977. Armed Services. Stipulates that no veteran may be denied care or treatment under the CHAMPUS program for any service-connected disability solely because care or treatment for such disability is available at Veterans' Administration medical facilities.

H.R. 590. January 4, 1977. Armed Services. Authorizes the establishment of Reserve Officers' Training programs at public community colleges.

H.R. 591. January 4, 1977. Armed Services. Authorizes the recomputation at age 60 of the retired or retainer pay for members or former members of the unifromed services whose retired or retainer pay was computed on the basis of pay scales in effect prior to January 1, 1972 in order to reflect any retired or retainer pay increases for other members which was based on changes in the Consumer Price Index since that date.

H.R. 592. January 4, 1977. Interior and Insular Affairs. Creates a National Geothermal Energy Commission to grant licenses for the

exploration and development of geothermal energy resources.

H.R. 593. January 4, 1977. Interstate and Foreign Commerce. Amends the Public Health Service Act to authorize the Secretary of Health, Education, and Welfare to establish a program under which epilepetics shall be provided medicine for the treatment of epilepsy.

H.R. 594. January 4, 1977. Judiciary. Repeals the Gun Control Act of 1968.

H.R. 595. January 4, 1977. Judiciary. Grants a Federal charter to the Gold Star Wives of America.

H.R. 596. January 4, 1977. Veterans' Affairs. Removes the time limitation within which programs of education for veterans must be completed.

H.R. 597. January 4, 1977. Veterans' Affairs. Provides veterans' benefits to veterans who served in or along the borders of Mexico from June 1, 1914, through May 8, 1916.

H.R. 598. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to increase each of the standard personal exemptions to $1,200.

H.R. 599. January 4, 1977. Ways and Means. Amends the Internal Revenue Code to allow an income tax deduction for the expenses paid for the higher education of the taxpayer, or a dependent, not exceeding $1,000 for each student.

H.R. 600. January 4, 1977. Amends the Internal Revenue Code to exempt nonprofit volunteer firefighting or rescue organizations from the excise tax on sales of special fuels, automotive parts, petroleum products, and communications services.

H.J. Res. 51. January 4, 1977. Judiciary. Constitutional Amendment—Provides that total appropriations shall not exceed estimated revenues. Authorizes the suspension of such prohibition in time of war or by a concurrent resolution passed by the Senate and the House that a national emergency so requires.

H.J. Res. 52. January 4, 1977. Judiciary. Constitutional Amendment—Permits prayer in public buildings.

H.J. Res. 53. January 4, 1977. Post Office and Civil Service. Authorizes the President of the United States to designate September 8 of each year as "National Cancer Day."

H.J. Res. 54. January 4, 1977. Interior and Insular Affairs. Relinquishes all powers and authority of the United States over the territory of Puerto Rico unconditionally and without reservations.

H.J. Res. 55. January 4, 1977. Government Operations. Authorizes and requests the President to reduce the volume of regulations, orders, decisions, studies, memorandums and other forms of paperwork generated by the executive branch of the Federal Government.

H.J. Res. 56. January 4, 1977. Judiciary. Constitutional Amendment—Amends the Constitution to require Congress to assure that the total expenditures of the Government, during any fiscal year, do not exceed the total receipts of the Government during such fiscal year. Permits an exception to such requirement in time of declared national emergency, but states that expenditures shall never exceed receipts by more than ten percent.

Sets forth a schedule for the elimination of the federal indebtedness.

H.J. Res. 57. January 4, 1977. Judiciary. Constitutional Amendment—Prohibits deficit spending and increases in the national debt. Sets forth a schedule for repayment of the national debt.

H.J. Res. 58. January 4, 1977. Judiciary. Constitutional Amendment—Lowers to 22 years the age requirement for membership in the House of Representatives and to 27 years for membership in the Senate.

H.J. Res. 59. January 4, 1977. Judiciary. Constitutional Amendment—Permits the Government to hold a person to answer for any crime against the United States either on the basis of a presentment or indictment of a grand jury or pursuant to an information signed by an attorney for the Government and stating the essential facts of the crime charged.

States that this amendment shall not affect the power of Congress to enact appropriate legislation to require a presentment or indictment of a grand jury to hold a person to answer for enumerated offenses or classes of offenses.

H.J. Res. 60. January 4, 1977. Judiciary. Constitutional Amendment—Permits the Government to hold a person to answer for any crime against the United States either on the basis of a presentment or indictment of a grand jury or pursuant to an information signed by an attorney for the Government and stating the essential facts of the crime charged.

H.J. Res. 61. January 4, 1977. Judiciary. Constitutional Amendment—Allows the Government to hold a person to answer for any crime against the United States only on the basis of an information signed by an attorney for the Government and stating the essential facts of the crime charged.

States that this amendment shall not affect the power of Congress to enact appropriate legislation to provide for the impaneling of, and procedures with respect to, any grand jury whose sole function shall be to investigate any crime against the United States.

H.J. Res. 62. January 4, 1977. Judiciary. Constitutional Amendment—Permits the Government to hold a person to answer for any crime against the United States either on the basis of a presentment or indictment of a grand jury or pursuant to an information signed by an attorney for the Government and stating the essential facts of the crime charged.

States that this amendment shall not affect the power of Congress to enact appropriate legislation to require a presentment or indictment of a grand jury to hold a person to answer for enumerated offenses or classes of offenses.

H.J. Res. 63. January 4, 1977. Judiciary. Permits the authority administering any school system, educational institution, or other public building supported in whole or in part through the expenditure of public funds to allow voluntary participation by students or others in prayer.

Prohibits such authority from prescribing the form or content of any prayer.

H.J. Res. 64. January 4, 1977. Judiciary. Constitutional Amendment—Provides that total appropriations shall not exceed estimated revenues. Authorizes the suspension of such prohibition in time of war or by a concurrent resolution passed by the Senate and the House stating that a national emergency requires suspension.

H.J. Res. 65. January 4, 1977. Judiciary. Constitutional Amendment—Requires the President and the Speaker of the House of Representatives to review Government revenues and expenditures at specified times and to determine a surtax rate when expenditures exceed revenues to insure that receipts will equal outlays.

Authorizes the suspension of such measures in the case of a grave national emergency declared by Congress.

H.J. Res. 66. January 4, 1977. Judiciary. Constitutional Amendment—Permits prayer in public buildings.

H.J. Res. 67. January 4, 1977. Judiciary. Constitutional Amendment—Permits prayer in public buildings.

H.J. Res. 68. January 4, 1977. Judiciary. Constitutional Amendment—Prohibits assignment of public school students to a particular school based upon their race, creed, or color.

Grants Congress the power to enforce this amendment by appropriate legislation.

H.J. Res. 69. January 4, 1977. Judiciary. Constitutional Amendment—Requires the President to review Government revenues and expenditures at specified times and to determine a surtax rate when expenditures exceed revenues to insure that receipts will equal outlays.

Authorizes the suspension of such measures in the case of a grave national emergency declared by Congress.

H.J. Res. 70. January 4, 1977. Judiciary. Constitutional Amendment—Provides for the direct popular election of the President and Vice President of the United States.

H.J. Res. 71. January 4, 1977. Judiciary. Constitutional Amendment—Prohibits deficit spending and increases in the national debt. Sets forth a schedule for repayment of the national debt.

H.J. Res. 72. January 4, 1977. Judiciary. Constitutional Amendment—Provides that the term of office of the President and Vice President shall be six years, and no person shall be elected to the office of President more than once.

H.J. Res. 73. January 4, 1977. Judiciary. Constitutional Amendment—Limits to six the number of consecutive Congresses in which Senators and Representatives may serve.

H.J. Res. 74. January 4, 1977. Post Office and Civil Service. Designates the period March 1, 1977, through March 7, 1977, as "National Weights and Measures Week."

H.J. Res. 75. January 4, 1977. Judiciary. Constitutional Amendment—Provides that no law varying the compensation for the services of Senators and Representatives shall take effect until an election of Representatives shall have intervened.

H.J. Res. 76. January 4, 1977. Judiciary. Constitutional Amendment—Prohobits deficit spending and increases in the national debt. Sets forth a schedule for repayment of the national debt.

H.J. Res. 77. January 4, 1977. Judiciary. Constitutional Amendment—Provides for a single six-year term for the President and Vice President. Limits to six the number of consecutive Congresses in which Senators and Representatives may serve.

H.J. Res. 78. January 4, 1977. Education and Labor. Expresses the sense of the Congress that the services and contributions of school volunteers be recognized, and requests the President of the United States to issue a proclamation in recognition of this fact.

H.J. Res. 79. January 4, 1977. Merchant Marine and Fisheries; Ways and Means. Amends the Fisherman's Protective Act of 1967 to direct the Secretary of the Treasury to place an embargo on the products of all foreign enterprises engaged in commercial whaling.

H.J. Res. 80. January 4, 1977. Post Office and Civil Service. Authorizes the President of the United States to designate the Sunday preceding the fourth Thursday in November of each year as "National Family Week."

H.J. Res. 81. January 4, 1977. Judiciary. Constitutional Amendment—Prohibits assignment of public school students to a particular school based upon their race, creed, or color.

Grants Congress the power to enforce this article by appropriate legislation.

H.J. Res. 82. January 4, 1977. Post Office and Civil Service. Authorizes the President of the United States to designate the last Friday of each year as "National Arbor Day."

H.J. Res. 83. January 4, 1977. Judiciary. Constitutional Amendment—Prohibits deficit spending and increases in the national debt. Sets forth a schedule for repayment of the national debt.

H.J. Res. 84. January 4, 1977. Judiciary. Constitutional Amendment—Declares the term "person", with respect to due process and equal protections, applicable to human beings irrespective of age, health, function or condition of dependency, including the

unborn. Prohibits the deprivation of life of an unborn person, except under laws permitting medical procedures required to prevent the death of the mother.

H.J. Res. 85. January 4, 1977. Judiciary. Constitutional Amendment—Permits prayer in public buildings.

H.J. Res. 86. January 4, 1977. Post Office and Civil Service. Authorizes the President of the United States to designate the fourth Sunday of November of each year as "National Grandparents' Day."

H.J. Res. 87. January 4, 1977. Post Office and Civil Service. Authorizes the President of the United States to designate February 20 of each year as "Postal Employees Day."

H.J. Res. 88. January 4, 1977. Judiciary. Constitutional Amendment—Prohibits abortion except under laws permitting medical procedures required to save the life of the mother endangered by continuation of pregnancy.

H.J. Res. 89. January 4, 1977. Judiciary. Constitutional Amendment—Permits any State or the Congress to enact laws with respect to the life of an unborn child from the time of conception.

H.J. Res. 90. January 4, 1977. Judiciary. Constitutional Amendment—Prohibits compelling a student to attend a public school other than the one nearest his residence.

Grants Congress the power to enforce by appropriate legislation the provisions of this amendment, and to insure equal educational opportunities for all students wherever located.

H.J. Res. 91. January 4, 1977. Post Office and Civil Service. Designates the John Philip Sousa composition known as "The Stars and Stripes Forever" as the national march of the United States.

H.J. Res. 92. January 4, 1977. Post Office and Civil Service. Designates the fourth Monday in March of each year as "National Agriculture Day."

H.J. Res. 93. January 4, 1977. Post Office and Civil Service. Declares the flower commonly known as the rose to be the national floral emblem of the United States of America. Requests the President of the United States to declare such fact by proclamation.

H.J. Res. 94. January 4, 1977. Judiciary. Constitutional Amendment—Declares vacant the office of any Senator or Representative who fails to be recorded in person on 60 percent of the rollcall votes taken during any regular session of Congress unless such rollcall votes were missed due to hospitalization required by illness or accident.

H.J. Res. 95. January 4, 1977. Judiciary. Constitutional Amendment—Prohibits deficit spending and increases in the national debt. Sets forth a schedule for repayment of the national debt.

H.J. Res. 96. January 4, 1977. Interstate and Foreign Commerce. Authorizes and directs the Secretary of Transportation to conduct a study of the costs, benefits, and methods of acquisition, operation, and maintenance by the Federal Government of all railroad tracks, rights-of-way, signal and train control systems, and other fixed facilities.

H.J. Res. 97. January 4, 1977. Judiciary. Constitutional Amendment—Lowers to 22 years the age requirement for membership in the House of Representatives and to 27 years for membership in the Senate.

H.J. Res. 98. January 4, 1977. Post Office and Civil Service. Designates the period March 1, 1977, through March 7, 1977, as "National Weights and Measures Week."

H.J. Res. 99. January 4, 1977. Post Office and Civil Service. Authorizes the President of the United States to designate the week beginning October 3, 1977, and ending October 9, 1977, as "National Gifted Children Week."

H.J. Res. 100. January 4, 1977. Post Office and Civil Service. Changes the dates of observance of Washington's Birthday, Memorial Day, and Columbus Day.

SENATE—*Thursday, March 17, 1977*

(Legislative day of Monday, February 21, 1977)

The Senate met at 10 a.m., on the expiration of the recess, and was called to order by Hon. ROBERT C. BYRD, a Senator from the State of West Virginia.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Let us pray today in the words of St. Patrick.

"May the strength of God pilot us. May the power of God preserve us. May the wisdom of God instruct us. May the hand of God protect us. May the way of God direct us. May the shield of God defend us.

"May the host of God guard us against the snares of the Evil One and the temptations of the world.

"May Christ be with us. Christ before us. Christ in us. Christ over us. May Thy salvation, O Lord, be always ours this day and for evermore. Amen."

(Prayer of St. Patrick, A.D. 439.)

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., March 17, 1977.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. ROBERT C. BYRD, a Senator from the State of West Virginia, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND,
President pro tempore.

Mr. ROBERT C. BYRD thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of Tuesday, March 15, 1977, be approved.

The PRESIDING OFFICER (Mr. BUMPERS). Without objection, it is so ordered.

COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all committees may be authorized to meet.

Mr. BAKER. Mr. President, reserving the right to object, I have not yet had time to speak with the majority leader on this subject, but I say that it is my intention to object to any committee meeting while the Senate is considering the so-called ethics package. I, therefore, reluctantly object.

Mr. ROBERT C. BYRD. Very well.

The PRESIDING OFFICER. Objection is heard.

Mr. ROBERT C. BYRD. Mr. President, let me see if we can resolve it this way, at least for the time being.

Mr. President, I ask unanimous consent that the Senate committees may meet during the session of the Senate today while the code of ethics is not being considered, prior to calling up the code of ethics resolution.

This would, perhaps, allow at least a couple of hours.

Mr. BAKER. Mr. President, I would not object to that with the exception of the Labor Subcommittee of the Committee on Human Resources.

I say to my friend, the majority leader, that beginning tomorrow I will object to all committee meetings.

Mr. ROBERT C. BYRD. Very well.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader for stating what his intentions are in advance, so that committees may govern themselves accordingly.

They will understand that during the Senate consideration of the code of ethics this afternoon, committees will not be permitted to meet, and tomorrow and henceforth as long as the Senate is considering the code of ethics.

I assume that while it is considering the code of ethics only, the Senator would interpose an objection to any committees meeting, just for the purpose of notice.

Mr. BAKER. Mr. President, I ask the majority leader, then, if it is his intention to set aside the code of ethics for any appreciable length of time to turn to other business during that time?

Mr. ROBERT C. BYRD. It might be, from time to time, depending upon the urgency of other business.

As much as I would foresee such events, I suggest that the other business would be taken up during the early part of the day so that committees, at least, could meet until noon, if there is such other business.

Mr. BAKER. Mr. President, I must say with reluctance to the majority leader that for today I will not object to committees meeting except for the Labor Subcommittee of the Committee on Human Resources until the Senate turns to the ethics package. But I cannot now say that I will not object to any committee meeting at all during the time the Senate is in session beginning tomorrow.

I will discuss the matter further with

the distinguished majority leader in the course of the day.

Mr. ROBERT C. BYRD. Very well. I thank the Senator.

ORDER FOR PERIOD FOR ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that after the orders for the recognition of Senators today, there be a period for the transaction of routine morning business for not to exceed 30 minutes, with statements limited therein to 10 minutes each, without any resolution coming over under the rule.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF WAIVER RESOLUTIONS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar orders numbered 46 and 47, both of which are waivers with respect to S. 650, the bill to provide temporary emergency assistance to wheat producers, which will be taken up after morning business today.

Mr. BAKER. Mr. President, I simply say that Calendar orders 46 and 47 have been cleared on our side. There is no objection to the waivers being adopted by unanimous consent.

The PRESIDING OFFICER. Without objection, it is so ordered.

WAIVER OF CONGRESSIONAL BUDGET ACT WITH RESPECT TO CONSIDERATION OF S. 650

The resolution (S. Res. 107) waiving section 303(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 650, was considered and agreed to, as follows:

Resolved, That pursuant to section 303(c) of the Congressional Budget Act of 1974, the provisions of section 303(a) of such Act are waived with respect to the consideration of S. 650. Such waiver is necessary to permit consideration of statutory authority for new entitlements for wheat producers to become effective in a fiscal year for which the first concurrent resolution on the budget has not yet been adopted. The special program authorized by S. 650 is of an emergency nature, and it is necessary that the producers affected receive the earliest possible assurance that they may use their wheat crop in the manner provided for in the bill.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–52), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE RESOLUTION

Section 303(a) of the Congressional Budget Act of 1974 provides that it shall not be in order in either the House or the Senate to consider any bill or resolution or any amendment thereto providing new budget authority, new spending authority, or changes in revenues or public debt for a fiscal year until the first concurrent resolution on the budget for such fiscal year has been adopted.

Since S. 650 provides for spending authority for fiscal year 1978, a resolution waiving section 303(a) of the Budget Act with respect to consideration of S. 650 must be adopted before S. 650 can be considered by the Senate. In reporting favorably on the resolution waiving application of section 303(a) of the Budget Act to S. 650, the Budget Committee is recommending that the Senate proceed to full consideration of S. 650, but is not prejudging the merits of the bill.

PURPOSE OF THE BILL

S. 650 amends the Agricultural Act of 1949, as amended, to provide for a special grazing and hay program for wheat acreage. The bill authorizes a wheat producer who elects to participate in the program to be paid for the wheat removed from commercial production and used for grazing or hay production. The program is designed to cover wheat planted prior to January 1, 1977, and becomes effective October 1, 1977, with provisions retroactive to cover payments for the 1977 wheat crop.

COMMITTEE CRITERIA

The Budget Committee is extremely reluctant to recommend the adoption of resolutions waiving section 303(a) of the Budget Act. One of the major purposes of the Congressional Budget Act was to bring the Federal budget under better control. Through the adoption each year of the first and second concurrent resolutions on the budget. Congress sets fiscal policy and national priorities for the fiscal year.

If legislation affecting spending or revenues for a future fiscal year is considered prior to the adoption of a first concurrent resolution on the budget for that year, to that extent Congress loses control of the spending and priority decisions for that year prior to adoption of congressional budget for that year. However, the Budget Act recognized that in some situations it may be appropriate to consider such legislation before the adoption of the first concurrent resolution.

The Budget Committee has concluded that it is appropriate to waive section 303(a) in the case of S. 650 because of the emergency crop conditions which cannot await the adoption of the First Budget Resolution for fiscal year 1978. Specifically, the Committee on Agriculture, Nutrition and Forestry reports that the affected farmers must make a choice within the next few weeks between harvesting the wheat under existing law and producing an oversupply at lower prices or, pursuant to S. 650 if enacted, utilizing a portion of their acreage allotments for grazing purposes or for hay rather than commercial production. Since the program expires with the 1977 crop, S. 650 will be subject to the discipline of the Congressional budget process beginning with the 1978 crop (i.e., fiscal year 1979) even if the waiver is approved by the Senate and the bill enacted.

The committee, in recommending the adoption of the resolution waiving the application of section 303(a) to S. 650, considered the estimated cost of $100 million, limited to fiscal year 1978. But it should be noted that the favorable recommendation on the resolution does not necessarily endorse the bill or its funding levels.

AMENDMENTS TO S. 650

The committee does not intend that this waiver resolution should be interpreted in any fashion as waiving the clear prohibition of section 303(a) against any amendment to S. 650 which would be out of order under section 303(a). Under section 303(a), any amendment to S. 650 will be out of order if it provides:

(1) New budget authority for a fiscal year;

(2) An increase or decrease in revenues to become effective during a fiscal year;

(3) An increase or decrease in the public debt limit to become effective during a fiscal year; or

(4) New spending authority described in section 401(c)(2)(C) to become effective during a fiscal year; before the first concurrent resolution on the budget for such year has been agreed to pursuant to section 301 of the Budget Act.

Thus, any amendment to S. 650 which will increase budget authority or spending authority or increase or decrease revenues or the public debt in fiscal year 1978, or any fiscal year thereafter, is not in order.

The purpose of the prohibition against such amendments to legislation upon which a waiver has been granted is to assure that, in adopting such waivers, the Senate does not open the door to amendments which would increase the levels of budget authority or new spending authority beyond those levels contained in the bill upon which a waiver was granted, nor permit the use of that legislation as a vehicle for amendments to increase or decrease revenues or the public debt other than as provided in the bill upon which the waiver is granted.
